Appendix

Spiritual Values in the Confederacy

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith a magnificent sermon by that peerless chaplain of The Citadel, Col. Robert Hall, titled "Spiritual Values in the Confederacy." Colonel Hall is one of the outstanding speakers ever to hold the position of chaplain at that venerable institution known as The Citadel—the Military College of South Carolina. The occasion of this sermon was at the centennial of the firing on the *Star of the West*. This incident precipitated the Confederate War.

SPIRITUAL VALUES IN THE CONFEDERACY

(Memorial address by Chaplain Robert S. Hall, Summerall Chapel, January 8, 1961)

In considering the clergy in the Army of the Confederate States, we are brought face to face with the most amazing display of spiritual power ever witnessed among fighting men on the American continent.

During the early days of the conflict, however, many of the chaplains in gray fell victims to the lowered ideals so often prevalent in a time of war.

The first months of the war were marked with romantic adventure—few felt that it would continue for more than a short time. Following the First Battle of Manassas, the tide of southern optimism rode high. During this period an unworthy type of chaplain put in his appearance. He was of the hail-fellow-well-met type. Caught up in the excitement, he rushed to the colors more from the thrill of being a soldier than from that of being a minister of God. The devout Gen. "Stonewall" Jackson could not restrain his criticism:

"Some ministers ask leave of absence for such trivial objects, that I fear they give occasion to others to think that such ministers do not believe that the salvation of the soul is as important as they preach. It is the special province of the chaplains to look after the spiritual interests of the army, and I greatly desire to see them evincing a rational zeal proportional to the importance of their missions."

The reverses of 1862 began a speedy riddance of this unworthy type of chaplain. It began to dawn on him that this was to be more than a holiday excursion; that it would hardly be a war among gentlemen. It was already shaping up as one of the bloodiest of conflicts. He disappeared as suddenly as he had come. Then from the ranks and from the churches came men of God from every denomination whose sole desire was a spiritual ministry, that of preaching the word of life to dying men.

Typical of such men was Rev. A. C. Hopkins, formerly pastor of the Presbyterian Church in Martinsburg, W. Va. Being a man of pronounced Southern sympathies, Mr. Hopkins voluntarily went into exile when Federal troops marched into Martinsburg in July 1861.

Because of the low repute into which the army chaplaincy had fallen in 1861 and early 1862, Mr. Hopkins offered his services to the Second Virginia Regiment as a soldier of the line. The officers of the regiment, however, had other plans for the preacher. Accordingly, on May 3, 1862, he received a commission as chaplain of the regiment.

Only 1 day after Chaplain Hopkins received his commission, General "Stonewall" Jackson opened his amazingly successful first Valley Campaign. The Stonewall Brigade, to which the 2d Infantry belonged, was destined to play a big part. As regimental chaplain he found that he was succeeding the valiant Chaplain McVeigh, who had recently been captured in battle.

Immediately the new chaplain found himself in the midst of battle. He entered his first combat at the little village of McDowell, W. Va., after only 3 days of service.

On May 16, 1862, Chaplain Hopkins led the regiment in a day of fasting, humiliation, and prayer as proclaimed by President Jefferson Davis. Two days later he conducted the regular Sunday services near Mossy Creek. He threw his whole heart into his work, for he realized that the men must be prepared spiritually for the hard battle ahead. On the following Monday morning, Jackson began a hard march to outflank General Banks at Front Royal. The fight lasted from May 23 through May 25, with Banks retiring in disorder. For 2 days the troops rested. General Jackson desired that all of his men might have an opportunity to attend divine services during this time.

When Jackson began his strategic withdrawal on May 29, Chaplain Hopkins, with less than a month in the army, was a confirmed veteran.

Entering immediately the bitterly fought Seven Days Battle near Richmond, the chaplain began to show fatigue. Having marched all day in the hot sun and having spent a sleepless night in ministering to the wounded soldiers, his strength was gone. The following day he attempted to preach to his men as they lay on the line. In the midst of his sermon he fainted. He was carried by the soldiers to the rear and was lost to his regiment for the next 10 days. When he returned, it was to find that two of his best friends, a colonel and a major, both officers of the regiment, had fallen at Cold Harbor.

The heavy losses his regiment sustained at Malvern Hill distressed him. He found that he must draw heavily upon the resources of the spirit if he were to be of service to his men.

The Second Battle of Manassas was fought from August 23 through September 1. Hopkins and the other chaplains of the brigade spent all that first night with the wounded. The fall of 1862 was spent in camp near Bunker Hill. It was there that the fires of revival began to give the promise of breaking out.

General Paxton took command of the brigade in November and urged the chaplains to build regimental chapels with volunteer soldier labor. The chapel finished, services were conducted daily. Bible classes were organized and flourished. By the end of February 1863, there was a noticeable increase in religious devotion throughout the brigade. Chaplain Hopkins said that chaplains became better acquainted, more interested in one another, and more cooperative. Scores made professions of religion and were baptized by the chaplains.

The first Chaplain's Association took form on March 16, 1863, and for the first time there was a planned and coordinated work. The spirit of revival did not leave the commanding general of the brigade untouched. After discussing the matter of religion with Chaplain Hopkins, he finally made a profession of his faith and united with his home church. Talking with the chaplain one evening, the general confided that he had a premonition of death. A few days later General Paxton was killed while leading his first attack as brigade commander. In the summer of 1863, Chaplain Hopkins organized prayer groups throughout his regiment. By Christmas he was supervising the construction of a chapel near Pisgah in Orange County. Materials were extremely scarce at this time, and the regimental chapel was not completed until January 31, 1864.

As spring came it was obvious that the Federal armies were planning new assualts. Chaplain Hopkins worked feverishly to win converts to Christ. On May 4 the Union armies, 118,000 strong, began their advance. Lee's 60,000 men steadied to receive the blow. For 2 weeks the "Stonewall" Brigade fought with all its strength. But when the Battle of Spottsylvania Courthouse was at an end, so was the famed brigade. Only fragments of the organization remained. These and remnants of other Virginia brigades were collected to form a new brigade under Gen. William Terry. Chaplain Hopkins was reassigned to the field hospital of the Second Corps and continued his service until the end of the war. He had faithfully carried out his duties to the bitter end.

When the call to arms rang through the South, the pastors were among the first and most enthusiastic to respond. Noted ministers who buckled on the sword were Gen. W. N. Pendleton, Episcopal minister, chief of artillery in the Army of Northern Virginia; the eminent Presbyterian theologian, Dr. Robert L. Dabney, who became Chief of Staff to General Jackson; the renowned Baptist minister, M. P. Lowery, of Mississippi, who became a general; the celebrated Lt. Col. D. C. Kelly, who served on the staff of Gen. Nathan Bedford Forrest and was a Methodist minister; and Leonidas Polk. He was born April 10, 1806, in Raleigh, N.C., and was a cousin of James Polk, president of the United States. He was educated at West Point but afterward studied theology and took orders in the Protestant Episcopal Church in 1831. In 1838, became missionary bishop of the Southwest, Arkansas, Indian Territory, Louisiana, Alabama, and Mississippi, and in 1841 he was consecrated bishop of Louisiana. His work in the church was largely of an educational kind, and he played a prominent part in movements for the establishment of higher educational institutions in the South. At the outbreak of the Confederate War in 1861, he resigned his bishopric and, like many other clergymen and ministers of religion, entered the army which was raised to defend the Confederacy, with the rank of major-general. He fortified the post of Columbus, Ky., the foremost line of defense on the Mississippi, against which Gen. U. S. Grant directed the offensive reconnaissance of Belmont in

the autumn. In the following spring, the first line of defense having fallen, Polk commanded a corps at Shiloh in the field army commanded by Albert Sidney Johnston and Beauregard. In October 1862 he was promoted to lieutenant-general and thenceforth he commanded one of the three corps of the Army of Tennessee under Bragg and afterward was in charge of the Department of Alabama, Mississippi, and east Louisiana. He was killed in the fighting in front of Marietta, while reconnoitering near Pine Mountain, Ga., on the 14th day of June 1864.

From the very first there were ministers in the field with the Confederate troops. Pastors of churches near Confederate army camps ministered to the needs of troops as best they could. Each organization requesting a chaplain was given a wide choice in the matter. First, it was determined by vote of the troops which denomination the chaplain would represent. Having settled this, the regiment or other unit sought out a minister considered suitable. Having located one, they "called" him. He might be called from a civilian pastorate, from the ranks of the unit, from the ranks of a neighboring organization, or from among ministers volunteering as chaplains. Having been so chosen, he was certified to the adjutant general for appointment. When called from a pastorate the minister might accept or reject. If he accepted, he must furnish his horse and pay his own transportation to the unit. At first there was a tendency for the chaplains to have little fellowship with ministers other than those of their own faith or denomination. This arose partly from their belief that the war would be of very short duration, partly from the fear that too close fellowship would bring the wrath of the civilian ministry down upon their heads. Such an attitude is not hard to understand in the light of the intense denominational rivalry of the day.

Gen. "Stonewall" Jackson was especially helpful in his suggestion concerning the work of the chaplains. Due largely to his own ardent personal exertions, his Second Corps was better supplied with chaplains than was any other of the Army of Northern Virginia. His standards were quite high, but simple: "Denominational distinctions should be kept out of view, and not touched upon. And, as a general rule, I do not think that a chaplain who would preach denominational sermons should be in the army * * *. I would like to see no question asked in the army of what denomination a chaplain belongs to; but let the question be, 'Does he preach the Gospel?' "

At war's end the rapid reconstruction of southern churches and institutions was due in part to the spirit of the returned chaplains. Defeat had indeed been a bitter experience, but it was interpreted as the will of God. Now they were returning to their penniless, heartbroken, scattered, disfranchised people. Many of their churches had been seriously damaged or destroyed. The Presbyterians alone reported 100 churches destroyed. In all, there were about 500. Practically all colleges and universities had been forced to close their doors.

The example set by Chaplain Benjamin Morgan Palmer, who was serving in South Carolina at the close of the war, was typical of the attitude of other southern chaplains and ministers in helping to rebuild the postwar South. Just as soon as the situation in Columbia permitted, he returned to his beloved First Presbyterian Church in New Orleans. The New Orleans Times carried an account of his return:

Yesterday was quiet and pleasant—a Sabbath of the soul. The churches were very largely attended, particularly the First Presbyterian Church, where Dr. B. M. Palmer had returned. He seemed to be more chastened, subdued, than he ever was before. With an humbler hope he looked up to the bow of promise which spanned the sky, and with a gentler persuasion, he called for a renewal of the covenant of grace. As for the dead past, he was anxious to hide it away in the solemn tomb. Henceforth, no word should escape his lips such as was meet for an humble servant in the temple of his God and King. Wherever called to minister in the land of his birth and of his love, he would emulate the example of Paul the Apostle, by preaching Christ and Him crucified, and his song should be the song of the angels: "Peace on earth, and good will toward men."

In 1886, while visiting in New York, he was invited to preach in the church of Dr. Henry van Dyke. He spoke on the text, "I Will Send You Another Comforter." After the service, a veteran of the northern army inquired as to the identity of the speaker. When he learned his name, he said, "An arch rebel of that name! He preaches like an archangel."

Just how successful were the efforts of southern religious leaders may be seen in the fact that 9 out of every 10 students for the ministry, immediately after the war, had determined to enter the ministry while serving as Confederate soldiers. Their former ranks ranged from private to general.

At The Citadel there were 13 clergymen out of 240 graduates from 1842 through 1864: S. B. Jones; A. Buist; P. F. Stevens, superintendent of The Citadel 1859–1861. First honor graduate of his class, he became Reformed Episcopal bishop of South Carolina in 1890; J. T. Zealey; O. A. Darby; J. B. Cottrell; J. W. Murray; W. P. Dubose, chaplain of Kershaw's Brigade; H. D. Moorer, chaplain, 12th Alabama Regiment; S. S. Kirby, killed at River's Bridge in 1865; Ellison Capers, who became an Episcopal bishop of South Carolina after entering the ministry in 1867. He later became Chancellor, University of the South. He was a brigadier general in the Confederate war. For his commencement address to The Cidadel, July 28, 1886, he spoke of the 240 graduates (and 18 who were within 3 months of graduating in 1865): "not a single idler appears." He was famous for his grace:

"Lord of love look from above
Upon this tainted ham
And give us meat that's fit to eat,
For this ain't worth a damn."

From 1842 to 1864, there were 240 graduates. Of these, there were 42 teachers, 36 merchants, 34 lawyers, 31 physicians, 27 farmers, 27 civil engineers, 13 clergymen, and 28 graduating in 1861, 1862, 1863, 1864 who died in the armies of the Confederacy.

The educational institutions of the land made a phenomenal recovery. New churches were erected over the ashes of the old. Mission efforts were greatly expanded. Denominational strength showed unprecedented gains.

The spirit of the Confederacy as best represented in the life of Sidney Lanier who was born in Macon, Ga., February 3, 1842. He was of Huguenot descent on his father's side and of Scottish and Virginian on his mother's. From childhood he was passionately fond of music. His subsequent mastery of the flute helped to support him, and greatly increased his reputation. At the age of 14 he entered Oglethorpe College, where, after graduating with distinction, he held a tutorship. He enlisted in the Confederate Army in April 1861, serving first in Virginia. After the Seven Days Battle around Richmond, he was transferred to the signal service. About this time the first symptoms of consumption appeared. He subsequently served in a blockade-runner, but his vessel was captured, and he was confined 5 months in a Federal prison. Exchanged early in 1865, he started home on foot, arriving in a state of exhaustion that led to a severe illness. Later he took charge of a country day school in Alabama and was married to Miss Mary Day of his native town. The next year he returned to Macon in low health. Finally, work had to be abandoned on account of growing feebleness, and in 1881 he was carried to Lynn, N.C., to try camp life, and there he died on the 7th of September. He is considered the leading writer of the New South, the greatest southern poet since Poe, and a man of heroic and exquisite character. He wrote:

"Into the woods my Master went,
Clean for-spent, for-spent;
Into the woods my Master came,
For-spent with love and shame.
But the olives they were not blind to Him,
The little gray leaves were kind to Him,
The thorn-tree had a mind to Him,
When into the woods He came."

Four Million Dollars Offered for GI Home Loans

EXTENSION OF REMARKS
OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. MATHIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article on veterans' home loans by S. Oliver Goodman, financial editor of the Washington Post, which appeared in the Tuesday issue of the Post, February 28, 1961:

FOUR MILLION DOLLARS OFFERED FOR GI HOME LOANS

(By S. Oliver Goodman)

In an effort to revive the GI housing program, the First Federal Savings & Loan Association of Washington yesterday announced it is immediately making available $4 million for veterans' home loans in this area.

The move, according to W. Franklin Morrison, executive vice president of the local institution, is in line with the Kennedy administration's effort to stimulate the housing industry.

Morrison revealed the action in a report to Chairman OLIN TEAGUE of the House Veterans' Affairs Committee, who had requested Morrison to review and analyze pending GI housing legislation.

"If other lending institutions will make a serious effort to make available private funds for the GI housing program," Morrison reported to Representative TEAGUE, "there will be no major need for congressional legislation to stimulate the veterans housing program this year."

During the past 2 years, the GI housing program has declined sharply due to what industry circles described as unattractive interest rates. Currently, a GI home loan carries a 5¼-percent interest rate and the maximum term is 30 years. Conventional home loans have been carrying 6 percent or better, although in recent months there has been a lower tendency.

To offset the 5¼-percent GI rate, some lenders have been demanding and getting "points." Five points on a $10,000 loan would mean that the borrower gets only $9,500, although paying interest on $10,000. Currently, the GI discount rate in this area is about 5½ points, and has been as high as 11 points.

Morrison declined to comment on the terms under which his institution will make the $4 million available for GI home loans,

except to say they will be "favorable in the present market."

He added: "The termination of the Government's tight money policy has produced a lowering in interest rates generally. In an effort to stimulate the economy, President Kennedy has called for lower mortgage interest rates to expand housing operations."

First Federal Savings made the first GI loan in the Nation in November 1944.

Textiles and the Import Threat

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following editorial published by the Winston-Salem Journal in its issue of February 25, 1961. A healthy textile industry is essential to the future well-being of our country and the editorial expresses the concern of many people connected with this industry. The Executive actions of the new administration, which are cited in the editorial, should add emphasis to the need for some realistic controls over textile imports. The editorial follows:

TEXTILES AND THE IMPORT THREAT

Textile industry visions of an administration receptive to demands for protection against low-cost foreign imports are beginning to pale. It is debatable whether the visions were widely shared or whether they had any solid foundation in the first place.

There is still reason to hope, however, that President Kennedy will go further than did President Eisenhower in using Executive authority to provide relief for segments of the industry badly damaged by unfair foreign competition.

More extensive use of such authority was promised by Candidate Kennedy—and he made much (during campaign talks with North Carolinians) of his textile-State background. It is too early in the new administration to determine whether the promise is to be kept, although Mr. Kennedy's first decision on a clear-cut question of free trade versus protectionism must have disappointed many textile people.

Earlier this month, the President, rejected a request from the two Senators of his own State—Massachusetts—that import restrictions on twine and cordage be continued. The decision reflected a turnabout; as a Senator, Mr. Kennedy successfully urged the U.S. Tariff Commission and President Eisenhower to impose the restrictions in 1956.

The twine and cordage import threat may have eased; we have no figures available to us. Yet the President's turnabout indicates that it will take a lot of convincing to impel him to use his authority.

Commerce Secretary Luther Hodges, an ex-textile industrialist, also had something to say about imports this month. He said the damage to the textile industry involved a few "isolated instances," and he referred industry complainants to the Tariff Commission.

Thus it seems that not even this week's hike in cotton support prices and cotton export subsidies is likely to result in a measurable gain for the textile industry's campaign for a country-by-country quota system. The emphasis remains on executive action for specific segments of particular industries, and that only after exhaustive research.

This is as it should be, provided the need for study and research is not an excuse for inaction. The rise in cotton subsidies gives the textile industry a basis for reopening its cotton case before the Tariff Commission (a case that was unsuccessfully presented last year) and for stepping up pressure for a large-scale appraisal of the effect of imports on the industry as a whole.

Restoring Patriotism

EXTENSION OF REMARKS
OF
HON. TOM V. MOOREHEAD
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. MOOREHEAD of Ohio. Mr. Speaker, the sustaining source of strength of any nation beset with the burden of leadership in an epic ideological struggle lies in the understanding and dedication of its people in the concepts which activate its historical progress. For want of a better word, this is patriotism, a term which has fallen strangely out of fashion. As the German-American Carl Schurz said, drawing upon his experiences with the tyranny of 19th century Europe and the challenge of the America of his day, "Ideals are like the stars; you will not succeed in touching them with your hands. But like the seafaring man on the desert of waters, you will choose them as your guides, and, following them, you will reach your destiny."

Today, we sorely need a reidentification of this Nation's faith in its purpose and its ideals. That our press and information media are speaking out to reawaken patriotic vigor meets a basic need. I, therefore, recommend to the Congress the following statement by Francis A. Emmert, in the February 23, 1961, issue of the Somerset Press, of Somerset, Ohio:

RESTORING PATRIOTISM

A number of editors, statesmen and military leaders are joining in an effort to restore patriotism to its proper place in the American way of life. This newspaper is more than willing to lend a hand in the campaign.

The greatest single piece of evidence showing what has happened in this country—what has happened to the burning patriotism and dedication of the American way of life—came during the Korean conflict. In that war many U.S. soldiers who turned obviously lacked an enthusiasm and an understanding of the Government and the country.

Some fell prey to Communist propaganda because they did not know enough about the United States and its history and government to refute clever Communist arguments. Others simply lacked patriotism and conviction when it came to the United States and the democratic system it represents.

This—many statesmen, military leaders and scholars have concluded—is the result of a period of deterioration in the homes, schools, movies, television, etc. which began in the 1930's, when it became popular to be cynical and to criticize the American system. And, of course, there is room for criticism of the American system. It is not perfect.

But it is possessed of many admirable qualities and features and is the best system of freedom and independence man has yet devised on the democratic level. The system has brought more things, materially, to more people, than any other system on earth—giving the American people the highest standard of living in the world.

The words of Commodore Perry—"Don't give up the ship," should stir a feeling of patriotism in every young heart. John Paul Jones' immortal words: "I have just begun to fight" are of the same vein. This is the spirit we need in the sixties. This is the spirit of devotion and dedication which will assure our survival as a nation.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. WIDNALL. Mr. Speaker, one of the problems of greatest concern to the American public is that of education. Many persons believe there is a critical need for Federal shoring up of our public school system. Many others are at least equally alarmed at remedial measures proposed by the new administration.

On this point, and with unanimous consent, I include in the RECORD two thought-provoking editorials on the subject of Federal aid to education, which appeared respectively on February 23 and February 25 in the Herald-News, published in Passaic, N.J.

THE PRESIDENT'S EDUCATION PROPOSAL

President Kennedy's aid-to-education program, if enacted into law, will be an expensive luxury for New Jersey.

The Federal aid will be distributed according to a formula which will give the so-called poor States a larger share than the so-called rich States. New Jersey is classified as one of the richest States and will be eligible for the minimum.

The aid program provides for the distribution of $5.6 billion over a period of 3 years. The first year, $666 million is to be distributed. According to the tax foundation, New Jersey residents are taxed to pay for 4.25 percent of Federal spending. That is their share of the burden of maintaining the National Government. Thus, New Jersey taxpayers will pay into the Federal Treasury the sum of $28.9 million to make possible the distribution of $666 million.

Our tSate will get back, however, only $14.4 million in aid. Each of those Federal aid dollars will cost us $2.

It is fair to ask why, under these circumstances, there is so much support in our State for Federal aid to education. The answer is that it is easier by this method to hoodwink the taxpayers. It makes life easier for the local officials and spenders.

Local officeholders are not blamed for high Federal taxes, like the income tax. It is relatively easy for them to obtain local approval, should it be necessary, to spend money which comes from Washington and, in the popular mind, is something for nothing. The same voters, if asked to approve the expenditure of money which would be collected directly from them in local taxes, might go on a rampage of protest.

Someday, New Jersey taxpayers may awaken to the realization that the Federal dollars are obtained at exorbitant cost to them. They will then understand that the $1 million school built with Federal aid has actually cost them $2 million, and that the $500 pay increase given to teachers with Federal aid is actually costing them $1,000.

President Kennedy's program is supposed to last 3 years. No reasonable person will believe that if it is enacted it will have that brief a life, however. It is more likely to become a permanent spending program, into which New Jersey taxpayers will continue to pour $2 to get $1 back.

Barnum was right.

THE DANGER IN FEDERAL SCHOOL AID

It is the sincere conviction of many opponents of Federal aid to education that it presents a very real danger of control of our schools by the National Government.

What difference would that make? The distinguished Washington commentator, Arthur Krock gives the answer:

"Yet it is a matter of record that nationalized public school systems in other countries have been successfully employed by the dominant political party to influence the thinking of pupils through teachers who look to the capital for promotion and pay. If therefore Congress * * * accepts this part of the President's proposed subsidy for education, then in that particular the United States will have become federalized beyond the concept of the founders of the party of that name."

The retort of the proponents of Federal aid to education is that the people do not need to worry, because the National Government does not want to control education. It does not make sense to accept the assurances of those who attempt to speak for all national administrations to come. It is safer to heed the warning in the bit of folk wisdom which goes, "He who pays the piper calls the tune."

Comment on the Chet Huntley-NBC Report on Employment and Unemployment Televised February 19, 1961

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. MICHEL. Mr. Speaker, on February 2 I read into the CONGRESSIONAL RECORD an analysis of the CBS show produced by Edward R. Murrow and entitled "Harvest of Shame." In this morning's mail I received a copy of a letter from a good constituent of mine addressed to Mr. Chet Huntley, of NBC, commenting on his February 19 report on "Employment and Unemployment." I believe the letter speaks for itself and since it is so well written, Mr. Speaker, I ask unanimous consent that it be reprinted in its entirety at this point in the RECORD. The letter follows:

PEORIA, ILL., *February 24, 1961.*

Mr. CHET HUNTLEY,
National Broadcasting Co.,
New York, N.Y.

DEAR MR. HUNTLEY: I have followed with considerable interest, and at times with some alarm, your weekly NBC-TV program which is sponsored by Kemper Insurance Sunday afternoons in the Peoria area.

What follows is not intended as a reflection on your capabilities as a reporter of news. I am concerned by the growing tendency on the part of reporters to project a news item into a special report for apparent propaganda purposes. Unfortunately, TV creates the opportunity for one man or staff to influence millions of listeners but, unlike the press, offers no means to reach these same people for purposes of rebuttal by those who disagree.

On February 19, 1961, the theme of your report was "Employment." For about 30 minutes you showed unemployment conditions and backed this up with reportorial comment which seemed designed to shape public opinion to accept the administration's plans for tampering with the economy. Your treatment of the subject was biased, ignored natural economic laws, omitted facts, and advanced illogical opinions.

For instance, you casually referred to technological advances and automation as contributing factors to unemployment as if these were strange new demons which have come to plague us. They are, in fact, as old as civilization. An economy is continually in transition and this is what makes for both progress and competition. Is the transition from the steam locomotive to the diesel locomotive any different, economically, than that from the horse and buggy to the automobile? Do not most new developments replace old ways because they are better and in the process thereof cause employment dislocations? Have we not, until the advent of the New Deal, weathered many such dislocations without Federal meddling with the economy and emerged stronger, richer and better in every way?

It is shortsighted and unfair to write off unemployment without thoroughly airing the complicated contributing factors. What about the effect of strikes, labor union tactics, featherbedding, pump priming, lower or static productivity by workers, spiralling wages, deficit spending, and taxation? These increase the cost of production and, hence, costs to the consumer.

The economics can be simply stated. Products must sell at a price the consumer is willing to pay. Labor must produce at a reasonable profit for the employer and shareholders. Labor is entitled to additional gain when accompanied by a proportionate increase in productivity or skill. When these factors are in balance, the economy is vigorous and healthy. When out of balance, we have recessions and depressions. Due to cumulative wage demands, the cost of production is out of balance because labor is being paid more but is not yielding a proportionate increase in output. Hence, the cost to the consumer exceeds what he is willing to pay. Business is caught in a profit squeeze, inventory accumulates, and production is cut back. This results in layoffs which further reduce purchasing power and so the stage is set to have the Federal Government intervene with a spending program, creating additional taxation on those still gainfully employed and again reducing total purchasing power.

The point is this: You are not honestly serving the public if, by incomplete coverage of an issue, you promote crisis psychology. If you choose to discuss "Unemployment" let's get down to all the hard, unpleasant, and unpopular components. What is the annual loss in purchasing power due to strikes? Why are workers staying in a locality after job opportunities are gone? Why do people ignore work which jeopardizes their unemployment income? What responsibility do labor unions share in our recent recessions? What is the inflationary aspect of profligate governmental spending and the creation of artificial demands for goods and services?

I contend that you, the network and the sponsor have a heavy responsibility when you present a broad issue to the public. This responsibility is to present all sides of the proposition fairly, factually, completely and impartially. If allocated time does not permit such coverage, then it should be given in serial form, handled by another media or not presented at all. Any other approach results in propaganda which oversimplifies the complex and overmagnifies the small things having special appeal to minorities.

I am taking the liberty of distributing copies of this letter as follows: Senator Everett Dirksen, Representative Robert Michel, Mr. N. J. Flanagan, president, Kemper Insurance.

Sincerely,

L. H. MELIZA.

Allan Sproul Says "United States Can Thread Way Through Tangled Situation of Payments Balance, Recession"

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech given before the Commonwealth Club of California on Friday, February 17, 1961:

ALLAN SPROUL SAYS "UNITED STATES CAN THREAD WAY THROUGH TANGLED SITUATION OF PAYMENTS BALANCE, RECESSION"

(By Allan Sproul, former president, Federal Reserve Bank, New York)

With the exception of 1957, when the Suez crisis distorted trade routes and capital movements, the United States has had a deficit in its balance of payments in every year since 1949. The deficits in the earlier years of the decade were welcomed as easing the dollar shortage.

Our interest in this reversal of our international position was intensified by the fact that the domestic economy lapsed into recession midway in 1960.

Our balance of payments is a set of statistics born of double-entry bookkeeping. When you enter all payments to foreign countries and foreign nationals by the United States and its nationals on one side of the ledger, and all payments received by the United States and its nationals from foreign countries and their nationals on the other side, the balancing items so far as current discussion is concerned are the increase or decrease in foreign short-term liabilities and in the gold stock of the United States.

TWO-PRONGED ATTACK

In 1960 we had a basic balance of payments deficit of $1.5 to $2 billion, and a deficit representing the ebb and flow of short-term funds of almost another $2 billion. This suggests a two-pronged attack on our problem.

The long-range goal must be to bring the basic balance of payments nearer to equilibrium, not every year of course, but on the average. The immediate problem is to reverse the influences which have led to a heavy outflow of short-term funds and accelerated our gold losses.

The special position of the United States in the world today, which has given our Government the responsibility of supporting large oversea military expenditures, and large loans and grants for foreign economic development, and which caused us for years to encourage an outflow of private capital,

has placed a heavy burden on our balance of payments. To help carry the load the United States has to develop a current account surplus proportionately greater than do most other countries.

WILL TAKE TIME

We made great progress on this score in 1960 when our surplus of exports of goods and services rose to $5.8 billion, as compared with $2.2 billion in 1959, primarily because of an increase in exports. But further gains will become increasingly difficult with advances in productivity in other industrial countries.

It is only idle conversation which finds a quick correction of our basic balance-of-payments deficit in sweeping admonitions to increase our export surplus and slash our programs of foreign military and economic aid. It is going to take more time to bring our basic international accounts back into equilibrium without abandoning major national goals.

We must expect an ebb and flow of short-term funds between countries in a world of convertible currencies, but it must not become all ebb.

SHOULD ACT QUICKLY ON GOLD SPECULATION

It is common knowledge, highlighted by the gyrations of the price of gold in the London gold market last fall, that the outward pull on these funds was increased by speculation and fears concerning the value of the dollar. The estimated outflow of such funds, on all counts in 1960, was between $2 and $2.5 billion.

Here is something we should do something about quickly. We cannot allow the dollar, the key currency of the free world, to remain as completely exposed as it has been recently to the special interests, vagaries and fears, of a variety of holders of dollar balances at home and abroad.

It has become a first task of economic statesmanship to dispel present fears about the value of the dollar, and to establish confidence in the resolve and ability of the nationals.

This suggests the kind of interrelated program, the constituent parts of which would not do violence to one another, which would accomplish the overall job.

There is no bar to our success if right and resolute action is taken.

Answers to written questions from floor:

Question. Could we return to the gold standard?

Answer. As to domestic gold standard, we neither can nor should. It would be a step backward in monetary evolution; but we should retain international gold bullion standard which we are preparing to defend.

Question (Robert Elkus). Why, economically, must we have a gold reserve?

Answer. Difficult to make logical case for unused gold reserve, though people still think our currency is better with it than without it, and that it restrains profligacy of politicians. Between maintaining a static reserve and using it to defend the dollar's international position, I would use it—not to the zero point but only to the point where the demand is reversed.

Question. Do you foresee a "buy American" campaign?

Answer. "Buy American" flared up recently with our change in balance of payments position. The larger view is whether we should seek the best use of available world resources by the least interference with goods and services. Any step backward from present policy of minimum trade barriers is not necessary for balance of payment problem.

Question. Do you favor Government subsidy to gold-mining industry?

Answer. To subsidize an industry because it is nonself-supporting is like subsidizing the buggy or horse industries.

Question. Re our gold position, are long-term U.S. investments abroad good or bad?

Answer. If the tax advantage is removed from investment in the advanced countries, I should not be too fearful. In underdeveloped countries, private capital often can do a better job than government and there is reason for a tax advantage.

Question. How does the Federal Reserve keep short-term interest high and long-term interest rates low?

Answer. It is a misconception that Board works to keep short-term rates high and long-term rates low. These rates fluctuate with money markets. There is no natural relationship and no need for a superintelligence to fix them. The Board may influence the trend of rates. The President has not suggested raising short-term rates but trying to prevent them from going lower so foreign rates will be less attractive. He has acted to reduce long-term rates through Federal Housing influence.

Forty-third Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. GARMATZ. Mr. Speaker, as they do every year, the Maryland chapter of the Ukrainian Congress Committee of America observes the anniversary of Ukrainian independence, to encourage those under the yoke of Russian oppression, and to explore every avenue of helping them to regain their independence and freedom. The occasion was commemorated this year on January 22, and again it was my privilege to be with them.

Under permission to extend my remarks in the RECORD, I would like to bring to the attention of the Members the resolutions which were adopted by the group at that time, and also my remarks to them:

RESOLUTIONS ADOPTED ON THE OCCASION OF COMMEMORATING THE 43D ANNIVERSARY OF THE JANUARY 22, 1918, PROCLAMATION OF UKRAINIAN INDEPENDENCE

INTRODUCTION

We, the delegates and representatives of the Ukrainian American organizations who are organized in the Baltimore chapter of the Ukrainian Congress Committee of America, have assembled on this historical day of January 22, 1918, proclamation of Ukrainian national independence, to discuss and deliberate problems which have a direct bearing upon us, as citizens of this great and democratic Republic, the United States of America.

On this occasion it is fitting to recall that our organization, founded in 1940, at the time when the world was gravely threatened by the totalitarian forces of nazism, fascism and communism, has proved to be one of the most spirited and ardent antitotalitarian and anti-Communist organizations in the country.

Even during World War II, while so many in this country recklessly glorified Stalin as a trusted ally and even a democrat, our organization never permitted opportunistic exigencies and political expediencies of the moment to besmirch its democratic ideology or to becloud its realization of the ever-growing universal menace of Russian colonial Communist imperialism.

Strongly supporting the efforts of our Government in maintaining peace, our organization boldly and without hesitation stated, that a lasting peace could not be achieved without granting freedom and independence to the nations enslaved by the forces of Russian colonial communistic imperialism, among which nations is Ukraine, the country of our fathers' origin.

President Harry S. Truman in the past, and President Dwight D. Eisenhower in recent years, have lauded the Ukrainian Congress Committee of America for its courageous support and assistance it has extended to the enslaved Ukrainian nation, which fights for its freedom and independence. Conversely, the Soviet press and Soviet officials have bitterly denounced the Ukrainian Congress Committee of America, castigating it as a "tool of Wall Street and American imperialists."

A. The United States of America

The United States of America has given shelter and refuge to many thousands of Ukrainians and other people from eastern and central Europe, proving once again that America is still the beacon of liberty and the hope of the oppressed. As in 1940, at which time our organization fully supported the peace effort of the U.S. Government, so do we now fully and unequivocally state:

"Whereas the present international peace is gravely threatened by the deadly tension created by the systematic aggressive and expansionist policies of the Kremlin, the self-appointed leader of a vast Communist conspiracy to enslave the world and to subordinate it to the dictatorial power of colonial Moscow, the traditional center of enslavement and despotism;

"Whereas the American people have long accepted the basic principles set forth in the American Declaration of Independence, which stresses the tenets that 'all men are created equal,' that they are entitled to the enjoyment and exercise of freedom and independence, and that they believe these principles are universal and applicable to all nations everywhere, at all times and under all forms of government: We do

"Resolve,

"1. To support fully and unhesitatingly the ever-increasing endeavors of the United States in its policy of maintaining peace in the world and in its growing determination to oppose and challenge the aggressive and imperialistic policies of the Soviets, whose ultimate goal is imposition of slavery upon this country and the destruction of its freedom and independence, as it has already done in Ukraine and in many other non-Russian countries of central and eastern Europe and Asia.

"2. To call the attention of the U.S. Government to the fact that the Soviet Union, with a population of 200 million is not a monolithic state of the Russian people, but a conglomeration of many nationalities, among whom the non-Russian peoples comprising 110 millions were conquered by Moscow by force and are kept in colonial slavery and subjugation against their will. Their desire for freedom and independence presents the weakest link in the Soviet system which if properly capitalized upon could greatly enhance our chances of success in combating Soviet imperialistic and colonial communism.

"3. It is extremely important for the American people to know that 103 years ago Taras Shevchenko, poet and prophet of the enslaved Ukrainian people, pointed to George Washington, Founding Father of our great Republic, as a symbol and liberator of the American people from the colonial rule of a foreign power, a liberator whom he con-

sidered a model and predecessor of a similar liberation of the Ukrainian people.

"The Ukrainians, through this reference of Shevchenko to the Father of Our Country, knew over a hundred years ago that George Washington liberated America and established a 'new and righteous law' that is a true democracy, a rule of the people, by the people and for the people.

In erecting a statue of Taras Shevchenko in Washington the United States will give full expression to its understanding and appreciation of Taras Shevchenko and all that he means to the Ukrainian people.

Such a step would constitute a great psychological weapon against the Communist propaganda systematically being disseminated among the Ukrainians to the effect that only Moscow is a friend of the Ukrainian people, while the United States and other Western Powers are capitalist enemies of the Ukrainian people, bent upon their enslavement and exploitation.

"This step is all the more important because in Ukraine under the Communist rule special preparations are underway now to observe the 100th anniversary of the death of Shevchenko with the usual Communist propaganda fanfare to the effect that Shevchenko was a true proletarin poet and fighter for Communist emancipation, which obviously would be a total misrepresentation of the great Ukrainian poet and fighter for freedom.

"In 1917 it was the poetry of Shevchenko that inspired the Ukrainian movement for independence and encouraged the Ukrainian National Republic (proclaimed on January 22, 1918) in its desperate struggle, alone and unaided, to protect itself against the aggression of the Russian Communists. It was Shevchenko's poetry that encouraged the Ukrainians, forced within the Soviet Union, to continue their struggle for freedom and in World War II encouraged and fostered the Ukrainian opposition to both fascism and communism. It is only fitting that the statue of such a national hero, who taught the American ideals of patriotism and service to man, should stand in the Capital of the United States as this is stated in the resolution of U.S. Congress No. 86-749. In 1961, Ukrainian people all over the free world will observe the centennial anniversary of the death of Taras Shevchenko. The U.S. celebration of the Shevchenko centennial will demonstrate to Moscow that we are perfectly aware of and sympathize profoundly with the freedom aspirations of the Ukrainian people and other captive nations in the present Red Russian colonial empire.

"4. That the 'Voice of America' be strengthened by increasing the number of non-Russian-language programs (Ukrainian especially) beamed to the Soviet Union and that the program content be governed by the overriding need to present to the peoples behind the Iron Curtain the unvarnished truth about world affairs, and above all, about national and cultural traditions and aspirations of the enslaved nations which are being subjected to communization and russification. If economy in this vital work is a pressing need and our psychological warfare is to be regulated by the ceiling of budgetary expenditures, then priority attention should be given to reducing the already overweighted broadcasts in the Russian language so as to make needed provision for more non-Russian-language broadcasts to central and eastern Europe and Asia."

B. The enslaved Ukraine

"The sufferings of the Ukrainian nation have been largely due to the brutal, colonial, and enslaving policies of Soviet Russia, which fact is recognized today by everyone save the stooges of Nikita Khrushchev and die-hard Russian imperialists. Mass deportation and executions of Ukrainian patriots, ruthless destruction of all Ukrainian churches, Russification of Ukrainian culture and language, the unrestricted genocidal policy of Moscow with respect to the Ukrainian people—all these crimes express the fundamental and traditional Russian policy aiming at the destruction of the Ukrainians as a nation, as separate ethnic entity.

"The Soviet Premier Nikita S. Khrushchev, in his article 'On Peaceful Coexistence' in Foreign Affairs, October 1959, described the resolution of the U.S. Senate and House of Representatives favoring the liberation of Ukraine, Byelorussia, Lithuania, Latvia, Estonia, Armenia, Azerbeijan, Georgia, Kazakhstan, Turkestan, and even a certain Ural area as 'an act of provocation.'

"In other words, Khrushchev has publicly denied the right of the above-mentioned non-Russian Republics" freely to secede from the Soviet Union, as is provided for in the Soviet Constitution.

Moreover, in comparing them to American States of the Union, such as Texas, Arizona, and California, Khrushchev attempted to convince public opinion of the integrity of Soviet Russia as a homogeneous nation.

"Today the homeland of Ukrainians, the Ukrainian Soviet Socialist Republic, is a member of the United Nations and its Russian Communist representatives vote consistently with the Soviet delegation in the solid bloc that stands opposed to the principles and ideals of the democracies of the world. The Soviet Union regards its representatives as on a par with those of Poland and Czechoslovakia as eligible for election to the Security Council. These representatives do not however, speak for the Ukrainian people, for the Soviet authorities lose no opportunity to stamp out Ukrainian nationalism, one of the worst doctrinal heresies to affect the Soviet Union. Ukrainian national independence, if it were to be achieved, would strike at the heart of Russian imperialism, be it red or white.

"The Ukrainian question is today one of the most important in Europe, for it involves the largest group of people with a share of European traditions that is compelled to be silent. It enters into all plans for the future of Europe, for the securing and maintenance of peace, for the welfare of the United Nations, for the welfare of the United States and of humanity.

"If Ukraine is only a creature of propaganda, as its enemies assert, why was it admitted to the United Nations? If it is an independent nation of independent people, why should it be dominated by Moscow, why should it be the colony of Moscow? Above all it is high time to understand, that Ukraine is not a "part of Russia" and the Ukrainian question is not an internal problem of the Russian nation or state which was yesterday called Tsardom and today the Soviet Union. All moral and material forces should be put in motion in order to help the Ukrainian national elements to keep alive their unconquered spirit, to prove by deeds that the Ukraine is not forgotten and that she stands equal in the thoughts of freemen with all other captive countries. This could be done by openly demanding her full sovereignty and by acknowledging her equality in the family of free nations.

"There are well over 2 million Ukrainians and their immediate descendants in the free countries outside enslaved Ukraine. They constitute a formidable force which constantly champions the cause of freedom. Among them are some 250,000 recent Ukrainian political refugees from all corners of the Ukrainian land, whose experience with tyranny is fresh and who work and strive for a common ideal: liberation of their native country.

"Whatever the future of Ukraine and the Ukrainian people may be, the Ukrainian community abroad is far more unified and consolidated than it has ever been before. It can be counted upon to play a major part in the undying movement to restore the freedom and independence of Ukraine, as a vital and indispensable element in a free Europe and in a free world.

"Meanwhile we salute those stalwart men and women who in 1918 made an independent Ukraine possible; and all those legions of heroes who have fought against hopeless odds these past 43 years.

"The heroes are dead or imprisoned, but the Ukrainian nation lives on. We do

"Resolve,

"1. To support fully and unswervingly the aspirations of the 45 million Ukrainian people in their efforts to regain their political freedom and national independence. We call the attention of the U.S. Government and the free world at large to the fact that the Ukrainian people had achieved their full freedom when on January 22, 1918, they proclaimed their independence, and on January 22, 1919, they united all the Ukrainian ethnographic territories into one independent and sovereign Ukrainian Democratic Republic, established through a due process of democratic election and endorsed by the overwhelming majority of the Ukrainian people.

"2. To make it known that the legal government of the Ukrianian Democratic Republic forcibly expelled from the country by the aggressive forces of Moscow and that today the Ukrainian National Council, which functions in Western Europe, is the continuation of the legal government of the Ukrainian people in exile. Therefore, the so-called Ukrainian Soviet government, installed by Moscow in Kiev, is not the representative government of the Ukrainian people.

"3. To call the attention of the U.S. Government and the free world at large that in Ukraine there exists and resists Russian domination an indomitable Ukrainian insurgent army (UPA) and its political leadership, the Supreme Ukrainian Liberation Council, as well as the entire network of underground resistance, which oppose the domination of Moscow and strive for the attainment of a free and independent Ukrainian democratic republic and a free world as well."

C. Appeal to the U.S. Government

"Whereas the U.S. Government is solely able to rally all the enslaved peoples behind the Iron Curtain toward a hopeful and meaningful free world of tomorrow; and

"Whereas the enslaved peoples of eastern and central Europe and Asia look forward to our moral and political leadership: We do

"Resolve, a. To appeal to and urge the U.S. Government to make it known to the enslaved peoples behind the Iron Curtain on the forum of U.N. that it upholds the rights of the non-Russian peoples within the present U.S.S.R. to their basic and inalienable freedoms which include the right of unqualified self-determination and independence. In so doing the U.S. Government will bring encouragement and hope to those peoples oppressed by Moscow (Ukraine in the first place) the most terrible colonial empire ever known.

"b. To appeal to and urge the U.S. Government to act frankly in accordance with the spirit of the Captive Nations Week resolution in ideologic offensive with a universalized declaration of independence that would insure for us a power of initiative and would place the Kremlin gangsters on a perpetual defensive."

REMARKS BY CONGRESSMAN GARMATZ ON THE 43D ANNIVERSARY OF UKRAINIAN INDEPENDENCE, YWCA—INTERNATIONAL CENTER, JANUARY 22, 1961

I am indeed grateful for the honor and privilege of again having been invited to join with the members of the Maryland branch of the Ukrainian Congress of America

and your other distinguished guests on this solemn occasion commemorating the 43d afiniversary of Ukrainian national independence.

It is fitting and proper that as we assemble this evening, we manifest our gratitude to Almighty God and to those freedom-loving people of the world who 43 years ago assisted the Ukrainian people achieve their national independence; and at the same time, express the sincere hope that the time will soon come when we may make this anniversary observance a cause for total rejoicing, because we know only too well that the yoke of oppression still exists for the people of the Ukraine under communistic domination—that the struggle continues and there is the need for each and every one to reassert and renew his efforts as well as encourage one another to work for the regaining of the independence proclaimed in 1918 at Kiev.

We know the Ukrainians have borne the yoke of the Kremlin longer than all other groups that are bent beneath its crushing weight—biding their time with smoldering patience, against the day of liberation which will surely come.

We know that despite every effort to suppress it, the yearning for liberty is unquenchable among Ukrainians and that tyranny has only served to stimulate it rather than stifle it.

As I have stated before, Ukrainians have suffered more than the other oppressed national groups in the Soviet Union—in concentration camps, slave-labor camps, in prison, and in the desolate Siberian wilderness.

But we take courage in the fact that these brave people are spiritually and physically endowed with the necessary strength and fortitude to withstand the tyranny to which they are still subjected.

In the end, truth and justice will prevail—that is our hope, that is our prayer, and, God willing, it will be so.

Let us unite with President Kennedy and the new administration which has just entered upon the solemn obligation of guiding the affairs and destiny of this Nation so that not only peace will prevail throughout the world, but freedom-loving people everywhere will be liberated and be able to live without fear of oppression of any kind. As your Representative in the Congress of the United States and as your fellow American, let me assure you that this beloved country of ours has not and will not abandon her interest in the news and welfare of the freedom-loving peoples of central Europe. We will carry on with every means at our disposal the efforts to resist further aggression and to lead the way toward the liberation of oppressed peoples everywhere.

School Aid Could Be Accomplished by Federal Tax Reform

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. SHORT. Mr. Speaker, the issue of whether or not the Federal Government should enter directly into the field of helping to finance our entire public school system was brought once more to the attention of the American people by the President's special message on education. I have a deep-seated fear of the Federal Government gaining control over and direction of our education system. It seems to me the very basic principle of the responsibility of American people to direct and finance the education of our children is involved here. The best argument for Federal aid is the tax burden presently on the shoulders of the local people. It always makes me suspicious of the objectives of the proponents of Federal aid that they never suggest as a solution to the problem a revision of our Federal tax system.

The Fargo Forum in its issue of February 24 carried a good editorial on the subject of Federal aid to education, which points up some of the realities of this question. Under unanimous consent, I insert this editorial in the Appendix of the RECORD, and I commend it to the attention of all House Members:

LET US KEEP THE CONTROL OF SCHOOLS AT HOME BASE

In presenting his $5.6 billion Federal aid to education program to the Congress, President John F. Kennedy makes the point that what he proposes is just a "limited beginning." That probably is the fact if the Federal Government is going to take over the direction of our schools. It cannot but be recalled that other Government programs started with a limited beginning have mushroomed into ever-expanding programs.

But aside from that, there are things about Federal aid to education that should cause the American people to stop, look and listen, before accepting change. The fact is, of course, that the President's proposal is a revolutionary one. It goes contrary to the long-held idea respecting American education—the fact that it should be under State and local control. True, Mr. Kennedy, in his message, stated that "education must remain a matter of State and local control." That undoubtedly is his intention. But his text says that the "educational base of our economic and military strength is a responsibility of the Federal Government and has been since the earliest days of the Republic." The Federal Government is concerned, of course, but it remains that until now, Federal support of our multibillion-dollar educational program is held to have amounted to less than 1 percent of the cost.

Those who favor Federal intervention in education always try to make it appear that those who cling to the long-held American principle of State and local control are against education.

That is a silly contention. It isn't supported by what State and local areas have done in the last few years to build new facilities and to promote the strengthening of educational instruction.

When Mr. Kennedy implied that a goal of building 600,000 new classrooms in the next 10 years could be reached only with the help of the Federal Treasury, it would seem that his sources of information have misled him. There are figures available which show that, without Federal aid, a rate of more than 70,000 new classrooms a year has already been attained. That would be 700,000 in a decade.

America's locally governed and locally financed schools are spending much more than in the past, and they will spend substantially more in the future. That is the trend—and it is a marked trend.

One opponent of Federal aid has put the matter succinctly. He says: "The important issue is not whether Uncle Sam proposes to pay $19.75 per pupil or $1.97 or $197. It is not whether the Federal money would be spent for school construction and teachers' salaries or to meet less justifiable school costs.

"The principle objection of Federal aid is that through it the Federal Government could and would buy its way into the Nation's locally run school systems."

After extensive research, Roger Freeman published a book in 1958 entitled, "School Needs in the Decade Ahead." This book, it is said, did more than anything else to forestall crash programs in Congress. He has now written another book entitled "Taxes for the Schools."

He says that in 1958 the public schools cost the States and local districts $12 billion. He estimates that with pupil-teacher ratios declining and teachers' salaries rising, by 1969–70 the annual school expenditures will reach $24 billion. His estimate is almost exactly that of the Rockefeller Fund and the Committee for Economic Development.

State and local communities, he contends, will have less difficulty in raising adequate money in the 1960's than in the 1950's, but the total will rise only 20 to 22 percent in the 1960's. In the 1950's the school expenditures rose faster than the national income. Since the States and local communities, he says, were able to increase their school expenditures by $1 billion a year in the past 10 years, there is no reason why they will not easily be able to raise the necessary funds in the 10 years ahead. He remarks, in explanation, that while there will be more children, there will also be more parents.

One commentator says, and what he says needs to be given serious thought: "Once a substantial part of school costs are placed on a national footing, wrapped into one bundle with defense and other Federal expenses, State and local concern about the school will decline sharply. As citizens pay and pay and pay the Federal collector, they will feel both irresponsible and helpless about local schools."

In this connection it may be interesting to note that Senator GOLDWATER, Republican of Arizona and ranking minority party member of the Senate Labor and Welfare Committee, has made a proposal. He suggests that every taxpayer be allowed to subtract from his Federal income tax the full amount of property taxes for schools up to $100 and to deduct from taxable income up to $2,000 a year for each child in college. Besides that, he would establish a thousand scholarships of up to $3,000 a year, to be awarded in a national competition.

It is Mr. GOLDWATER's contention that the amount of money thus made available for State and local taxing if needed would be greater than the sums contemplated under any of the other Federal aid to education bills which are under consideration.

Whether one agrees with any or all of Mr. GOLDWATER's suggestions or not, the fact remains that his direction is right.

In the final analysis, the people would have to pay for whatever the Federal Government would spend on schools under Mr. Kennedy's proposals. Our money would go to Washington and then come back to the schools, minus the brokerage fees.

Why not keep the money at home and spend the full amount on the schools?

Congressman Gilbert's Annual Report

EXTENSION OF REMARKS
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. GILBERT. Mr. Speaker, at the close of the present session of Congress, I shall prepare and include in the CON-

GRESSIONAL RECORD my annual report to my constituents. The report will cover legislative work done by the Congress, and my efforts in behalf of the people I represent.

Renegade Lao Kong Le Finally Trapped in Red Web

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. CHAMBERLAIN. Mr. Speaker, as we seek to maintain our best possible relations with friendly nations throughout the world in an effort to stem the tide of communism, and bring political freedom to everyone we can, it is distressing, indeed, to read a recent news story by Robert N. Branson, of Federated Publications, which appeared in the Lansing (Mich.) State Journal.

Mr. Branson has just returned to Washington from an extended trip to Asia, where he was able to judge, firsthand, the attitudes of many persons toward the United States.

I believe my colleagues in the House will also be much disturbed to learn of the defection of Kong Le of Laos, a stanch ally, trained at our Government's expense, who is somehow no longer interested in working for freedom in Laos. Under leave to extend my remarks in the RECORD, I include the news item. The reasons behind this failure to make a steadfast ally certainly should be of much concern to all of us:

RENEGADE LAO KONG LE FIRMLY TRAPPED IN RED WEB

(By Robert Branson)

VIENTIANE, LAOS, February 10.—The file drawer marked "Kong Le" contains dossier material that illuminates a puzzling human case.

Capt. Kong Le, 26, is the renegade paratrooper who now leads Lao rebels against the West. He has become a fiery new symbol in Asia—communism's latest pinup boy.

Less than a year ago, before some inner fuse ignited, he was regarded by U.S. officials as one of the most promising officers in Laos. He had been picked for special training and sent abroad at American expense.

Off duty, Kong Le strolled Vientiane in red beret and paratroop fatigues with U.S. magazines under his arms. He had many American friends with whom he enjoyed drinking beer and talking politics.

Among westerners who knew him, there seem to be few, if any, who did not like him, though some say he asked questions so naive that a long talk became wearing.

LOST ON ECONOMICS

"He was lost on economics and political science," says one U.S. official whom the captain used to visit. "The Kong Le speeches and manifestos now being broadcast by the Communists are obviously written by someone else."

On military ability and zeal, Kong Le rated high with westerners. Here is one extract from official files:

"He is considered honest and dependable, and an excellent leader."

That was before the day that Kong Le blew up.

At dawn last August 9 he led his 2d Paratroop Battalion in a blitz revolt that took Vientiane and the rival Lao Army by surprise. Odds against 400 soldiers seizing the Government seemed impossible but the coup succeeded.

Kong Le, all at once the most powerful man in the land, declared himself neither pro-Western nor pro-Communist. He said his aim was a neutral, peaceful Laos cleansed of corruption.

He said he was fed to the teeth with watching his superior officers riding in Mercedes-Benzes and playing tennis while he and his men beat the jungles in a hopeless war manipulated by foreign giants who made Laos a deadly plaything.

He had fought the Pathet Lao guerrillas as hard as he knew how, Kong Le said, but no more. The world must now leave Laos to itself. Corruption-fattened Lao generals and politicians must get out.

Western authorities are inclined to think Kong Le's revolution was sincere and that he meant well for his country. But they say he found himself in a game too big for him and broke under the strain.

In the 5 months his power held, he became psychiatric material.

Kong Le is a tiny man, 5 feet 2, 125 pounds. Friends who knew him as quiet, modest, and hard working found him starting to strut like an oriental Napoleon.

He assigned the tallest Lao he could find, a soldier about 5 feet 11, to walk behind him as he passed up and down the business section shaking hands and soaking up acclaim.

Never before a speechmaker, he began stopping his jeep wherever he found a crowd and delivering involved lectures.

Meanwhile Kong Le's own regime, fronted as premier by a basically pro-Western prince named Souvanna Phouma, was floundering as opposition by rival politicians grew. A new coup built steam and burst last December 16.

Kong Le and the prince fled Vientiane in a rain of artillery fire from Gen. Nhoumi Nosovan, the present strongman (who claims to be the West's best friend ever).

The December coup sent Kong Le north—straight into the arms of the Kremlin. Communist broadcasts announced he was taking over as head of his former adversaries, the Pathet Lao rebels, and Soviet aircraft have been shuttling war cargo to him ever since.

The bitter little captain today is considered too deeply enmeshed in the Communist web to extricate himself even if he wanted to.

OVER HIS HEAD

"He'll be a Pathet Lao figurehead as long as it suits the Russians and then you'll see him tossed on the scrap heap," an American predicted. "Too bad. He was an able officer and a nice guy. He got in over his head."

The record shows that Kong Le was born March 6, 1934, of peasant parents at the rice village of Muong Phalang. A good linguist, he learned French, English, and Thai but went into the French Army before finishing high school.

In 1952 he switched to the Lao Army as a captain. His ensuing failure to win promotion despite the outstanding record may have been one of the things that led to his blowup.

American military funds paid his way to Manila in 1957 for training in guerilla tactics at the Philippine Scout Ranger School. He got top grades.

Like many Lao, Kong Le has married more than once. He wed a general's daughter last year while reportedly still married to a northern country woman and perhaps others.

He also shares Lao beliefs in spirits, furies, and magic—a trait Americans found hard to reconcile with his grasp of military logic.

On his body Kong Le wears a tattoo said to protect him from being killed by any means except poison. It is widely stated that he can let a hand grenade explode in his palm without getting scratched.

Address by Senator Aiken Before the GOP Club of Frederick, Md.

EXTENSION OF REMARKS
OF
HON. CHARLES McC. MATHIAS, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. MATHIAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to draw to the attention of Members of the House a speech by the Honorable GEORGE D. AIKEN, senior Senator from Vermont, before the GOP Club of Frederick County, Md., Republican Club's Washington's Birthday dinner, February 18, 1961:

ADDRESS BY THE HONORABLE GEORGE D. AIKEN

I these days when the world is striving to prevent the tide of history from being reversed, it is a pleasure to be with you here in Frederick where more history has been made than in almost any other spot on the Western Hemisphere.

The first I heard of Frederick was when I was a very small boy and used to hear our old Union veterans refer to Monocacy, Gettysburg and, of course, to Frederick.

Monuments today stand in recognition of the prowess of soldiers from my State of Vermont both at Gettysburg and Monocacy.

And, then, when a little older, I studied about General Braddock who set out from Frederick on his ill-fated attempt to conquer the territory to the west.

The town of Frederick was indeed a new frontier in those days when the term had a real physical meaning and was not merely a catch phrase designed to lure the gullible voter into voting the Democratic ticket.

They had their "missile gap" in those days, too.

It was not merely another political catch phrase.

A missile gap in the days of Braddock was the difference in the time it took to fit two arrows to the bow and the time it took to reload a musket.

As it turned out, the missile gap was not in Braddock's favor.

And after Braddock, I learned how the first President of the United States, John Hanson, was from Frederick—of Francis Scott Key and Chief Justice Taney, whose famous decision in the Dred Scott case changed the course of history in the United States.

And, while we are commemorating the birthday of George Washington, let us not forget that it was a Frederick patriot, Thomas Johnson, who nominated Washington to be Commander in Chief of the Continental Army.

When I think of the part that the men and women of Frederick and of a thousand other communities in the United States have played in the struggle for freedom and equality and opportunity—how they sacrificed and worked and prayed down through the generations, it occurs to me that after all the fight of the American people for a freer and happier life did not begin on the 20th of January, 1961.

Another reason why I am glad to be here tonight is because here in the Sixth District

of Maryland you Republicans showed that determination and commonsense and hard work can win elections.

When that same brand of sound thinking permeates enough districts in the United States, the Republican Party will again come into power both in the Congress and in the executive offices of Government.

How do we win elections?

A few years ago, I was speaking to the Women's National Republican Club in New York and in the course of my remarks made this statement:

"To win elections we have to have candidates the people will vote for.

"All the way from the precinct up, we need candidates in whom the people have confidence.

"Whether we get this kind of candidate or not depends upon our willingness to attend party caucuses and conventions and to vote in primary elections and to serve when called upon."

Apparently you folks here in the Sixth District had a candidate the people would vote for and from what I have already seen of MAC MATHIAS you are going to keep him in Washington for a good long time.

In 6 weeks' time, he has impressed his colleagues with his ability, his friendliness, his courage, and his determination to follow the course of his conscience.

I congratulate you on your selection of MAC MATHIAS to the House of Representatives and GLENN BEALL and JOHN BUTLER to the U.S. Senate.

They work hard for you.

They are constantly watching out for your interests and they serve their country well.

Last November, we Republicans lost a national election.

We lost it by so small a margin that the Monday morning quarterbacks are still figuring out how many different plays we could have used to win it.

I can think of quite a few ways myself.

However, we lost, and the years 1962 and 1964 are coming up—and fast.

So let's not waste any time weeping over the last and lost election, but start looking ahead and plan and work for victories to come.

As the largest and strongest citadel of democracy in the world today, the United States is not in a particularly enviable position.

Why do so many people claim to dislike us?

As a matter of fact I don't believe that many people in other countries do hate us. They envy us.

There are mighty few in the world, even Mr. Khrushchev himself, who would not gladly change places with us if it were possible.

Those nations which are oppressed either by poverty or tyranny look to us for help which we are finding increasingly difficult to furnish.

Those nations whose aim is to destroy freedom in the world keep up an incessant attack upon our institutions by every Machiavellian method which they can devise.

The promoting of riots and revolutions has now become a well established commercial business in the world.

This business is so well organized that riots can be turned on or off in any country almost by pushbutton operations.

In meeting the threat posed by the cold war, we must be a united people.

There is little place for partisan politics when the security of our country or our democratic institutions is in danger.

The domestic economy of the United States which reached an alltime high in terms of production, employment, and income under President Eisenhower has shown some signs of decline during recent weeks.

However, if you remember back 8 years, we Republicans didn't find things all milk and honey when we took over.

We found a good sized war on our hands.

We are constantly being challenged by our own successes—technology reduces the need for manpower and increases our productive capacity; so in agriculture—in industry—in business and commerce and in the professions we have to constantly adjust to changing conditions.

There may be some who fear change. I happen to be one who welcomes it for change is the surest evidence of progress.

It should be a matter of pride to all Republicans that during the Eisenhower administration, our country not only reached its economic apex, but that the value of the dollar was fully protected during this period.

The sound dollar like a sound heart is not a glamorous subject for discussion.

In fact, it is almost a dirty word in certain circles.

Yet if it were not for the sound heart of our economy created by the Republicans all the mascara, rouge and perfume sold by the Democrats during the campaign wouldn't amount to a tinker's damn.

Besides the problems posed by the cold war and the need for continuing adjustments in our economic system, we have to jealously protect the political system under which this Nation has grown strong and its people have prospered.

In our zeal to find short cuts and easy solutions to our problems, we could easily take steps which would slowly but steadily undermine the very institutions which have made us what we are—the envy of the world.

With the foreign and domestic situations as they are today, what is the role of the Republican Party?

We have three important jobs to do.

First, the Democrats now control all departments and agencies of Government.

The President is asking for a lot of new legislation.

We may be sure that our opponents will try to shape that legislation in such a manner as to perpetuate themselves in office.

This is a perfectly normal reaction on their part. They wouldn't be human, and they certainly wouldn't be Democrats, if they don't make the most of this opportunity.

They will try to vest more power in themselves and create more dependency upon the Federal Government.

Efforts to scrap much of the Civil Service are already apparent, and let no one kid himself about that. Already 1,100 post office opportunities have been recalled. Who do you think will get these jobs?

Their efforts will become intensified as they become more settled in office, and as another election draws nearer.

As Republicans, we should spare no effort to see that the balance of power between branches of Government is preserved, that the constitutional rights of the citizen are protected, and that the strength of the Nation is promoted.

Although Congress will be the front line in this effort, it will be necessary to mobilize public opinion in order to succeed.

That is a job for the folks back home.

We may have to use a little mascara and lipstick ourselves to get this job done.

Second, as the opposition party, Republicans will be the guardians of clean government, constantly watching out for inefficiencies—inequities and malfeasance in the conduct of public business.

I do not advocate harassment of public officials, but prompt and fearless exposure of wrongdoing in government is important to the public interest.

Third, we have to do a selling job for America.

We have a lot to sell and have to counteract the impression that the American economy is on the rocks.

I do not understand the thinking of those who depict the United States as a poor business risk.

How can we expect people to invest in new business when the President himself paints such a discouraging picture of our economy?

In spite of the fact that right now much of our country has two feet of frost in the ground and employment is consequently adversely affected, the United States still offers the best opportunities in the world and, as Republicans, we have to demonstrate our faith to the world.

No less important than faith in our economy is our standing with the nations of the world.

We are not, as is frequently inferred, weaker than Russia militarily.

We have not relinquished our position of leadership in the free world.

We must maintain our standing in the eyes of other nations.

As George Washington said in 1793: "There is a rank due to the United States which will be withheld, if not absolutely lost, by the reputation of weakness."

It is time that every American demonstrates his pride in being an American.

It is time to tell the whole world of our faith in America.

It is time to serve notice of our determination to defend our country against all enemies from without or within.

If we do these things, we will find that the United States will retain the prestige to which we are entitled.

Looking to the States

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. WIDNALL. Mr. Speaker, as this Congress carries on its deliberations during 1961, legislatures in 47 States will be in session. Let us pause to consider the vital role the States play in our Government and the importance of their activities.

The first governments to arise on American soil were those of the 13 seaboard colonies. From them developed the governments of the Thirteen Original States and the general pattern of State government now prevailing from Maine to California and on to Hawaii and Alaska. At the time our Constitution was drafted, the States were the major governmental unit. The framers of the Federal Constitution wanted a National Government able to meet the country's needs, but they had no intention of condemning the States to obscurity. On the contrary, they anticipated that the States, with their deep historical roots and their broad undefined reserved powers, would continue as one of the principal theaters of governmental and political action.

The 10th amendment of the Constitution underscores the division of power under our federal system by stating:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

In the Federalist Papers, James Madison noted that—

the State governments may be regarded as constituent and essential parts of the Federal Government.[1]

[1] No. 45.

Practically all the drafters of the Constitution had been active in the governments and politics of their States. Many had helped frame constitutions, sat as members of legislatures, or held executive or judicial offices. The federal system they devised gave certain specific powers to the National Government while the remaining unspecified powers were retained by the States. This division of power between two levels of government established a tension that is necessary for each level to maintain its entity and not relinquish any of its prerogatives.

The strength of our federal system has been its flexibility as the needs of the people and the circumstances of government have changed. When Lane Dwinell, then Governor of New Hampshire, testified in 1958 before the House Subcommittee on Intergovernmental Relations, he observed:

> One of the great strengths of the American system of Federal Government is the singular opportunity it affords for periodic review of intergovernmental relationships. This in part is what makes us independent and free. As a consequence, the operation of the federal system requires continuing attention to insure its vitality and to retain, through strong State and local government, this elasticity of popular decision.[2]

It has been pointed out that:

> Our Nation is the United States of America; and while the activities of the National Government attract more attention and get more headlines in the newspapers, the States nowadays, on their part, make and enforce more regulations, render more services, employ more civil servants, and spend more money than ever before. Practically every citizen of the United States is at the same time a citizen of some State, as well as an inhabitant of a subdivision of a State called a county, and of some fraction of a county known as a town, township, village, borough, or city; and the governments touching him at the greatest number of points are those of his State and of local units which that State has created and endowed with power. Indeed, scarcely a period or an activity in the life of the average person is not in some measure, either directly or indirectly influenced, regulated, or controlled by State laws, or by local ordinances deriving their authority from such laws.
>
> Of practical uses served, three require a word of emphasis: (1) As primary jurisdictions, the States carry a heavy share of the load of government; (2) without the facilities which the States provide and the functions they perform, the National Government, on its existing constitutional basis, could not operate. The President is chosen by electors grouped by States and chosen by the people of States; Senators are chosen likewise by the people of States; Congressmen are chosen in districts laid out by States and under State election laws administered by State officials; and States determine who may vote in all of these elections. For amending the Constitution, also, State action is required. In a different field, political parties are organized on a State pattern, with national committees, conventions, and the like forming only a sort of superstructure; and persons who come to the top in National Government and politics usually have received their training and got their start on the State and local levels. Incidentally, too, county, city, and other local governments would lose all legal basis if the State constitutions and laws on which they rest were estinguished; (3) finally, the States provide means by which Vermonters, Virginians, Iowans, and Californians can have governments and laws to their own liking, instead of being forced to a single uniform pattern.[3]

Heading the executive branch in each State is the Governor. The State governorship has descended directly from the office of Governor in colonial times. Prior to the American Revolution, the Governor of each Colony, who had often been appointed by the king granting its charter, exercised great powers. When the colonial system ended and States were established, much of the Governor's power was delegated to the State legislature and to the council he had appointed to assist him became the popularly elected State senate. In all but 2 of the original 13 States the Governor was appointed by the legislature, and in 10 of the States his term of office was restricted to a single year. The office of Governor was largely a ceremonial one at that time, and the criterion imposed on candidates was how they would look on a horse.

Gradually, as State problems became more complex, the pendulum of power moved in the other direction. As new State constitutions were drafted, more and more duties were given to the Governor. The new constitution of my own State of New Jersey, which was adopted in 1947, typifies modern thinking in establishing a strong executive who appoints the other members of the executive branch.

Frank M. Bane, who for 20 years was executive director of the Council of State Governments and as such probably has known and worked with more Governors than any other man in American history, in discussing the qualifications a present-day Governor needs, stated:

> Every Governor should have—and if he is to be an outstandingly successful Governor he must have—the gifts of popular leadership, executive ability, decisiveness, studious inquiry, and the skill of political competence in the broadest and most constructive sense. * * * In order to lead, a Governor must have definite policies and he must have a dynamic program. His policies and his program are the keystones of his administration and everything else is built around them.
>
> Throughout his term of office, from beginning to end, the Governor will give most of his time and attention, inevitably, to the development of these policies—and to seeing to it that the legislature enacts the program he bases upon them. This requires of him initiative, imagination, understanding of the legislative process, and the ability to lead the major officials associated with his administration into a cooperative endeavor to seek legislative enactment of the essential measures. Above all, it calls for effective liaison and relations with legislators and legislative leaders.[4]

Today the Governor's office has expanded to such an extent that he is not only the chief executive, but he has also been called the chief legislator. Dr. Harvey Walker, professor of political science at Ohio State University, notes that this is due to many factors:

> (1) his uniqueness as the head of the executive branch, which makes him a prime source of news; (2) his power of veto * * * (3) his power to send messages to the legislature and to secure wide publicity for his recommendations; (4) his exclusive power to convene special sessions * * * (5) his power of appointment to executive posts, which may be used to influence legislative action or inaction; and (6) his power to initiate budget estimates * * *.[5]

In discussing his years as Governor of New York, Theodore Roosevelt commented that "more than half of my work as Governor was in the direction of getting needed and important legislation."

While the Governor has certain legislative tools at his disposal, the main legislative authority is given to the upper and lower assemblies in 49 of the States and to the unicameral legislature in Nebraska. Professor Walker has summarized that their role is threefold:

> (1) to serve as the defender of popular rights and liberties; (2) to serve as the guardian of the collective conscience; and (3) to serve as the primary decisionmaker.[6]

In the Federalist Papers Madison predicted that—

> The first and natural attachment of the people will be to the governments of their respective States. Into the administration of these a greater number of individuals will expect to rise. From the gift of these a greater number of offices and emoluments will flow. By the superintending care of these, all the most domestic and personal interests of the people will be regulated and provided for.[7]

Those of us here in the House of Representatives are well aware of the importance of the State legislatures in setting up congressional boundaries. However, our respect for these bodies and their members is much deeper. For many of us, including myself, State legislatures were the sites of our most intensive political experience prior to entering Congress. Five other members of the New Jersey congressional delegation, Congressmen CAHILL, GLENN, THOMPSON, DWYER, and OSMERS, and U.S. Senator CLIFFORD CASE also served in the New Jersey Legislature. U.S. Senator HARRISON WILLIAMS, JR., joined the Senate after experience in this House. A study of five Congresses, covering a 10-year period, showed that roughly one-third of all the Congressmen in each of the Congresses had been former State legislators.

[1] "The State Legislature as Training for Further Public Service," the Annals of the American Academy of Political and Social Science, January 1938, p. 178.
[2] No data.

In the accompanying article Dr. John Brown Mason, then a member of the Santa Ana Junior College faculty, commented:

We must recognize the fact that the various State governments, and especially the State legislatures with their thousands of members, are a prep school for further public service of a legislative, executive, and judicial character which also transcends State boundaries as the former State legislators invade the national political field. In this capacity, the State legislature performs a service of inestimable value to the Federal Government in all its branches, to the men holding elective or appointive positions in it, and to all citizens affected by it.[3]

Dr. Mason found that many Governors had graduated from State legislatures. In glancing through a list of chief executives of New Jersey I noted that our Governors with legislative background included Govs. Robert B. Meyner, Alfred E. Driscoll, Morgan F. Larson, and James F. Fielder. In Massachusetts Dr. Mason found that 74 percent of its Governors had served in its legislature while in Nebraska 70 percent had.

In discussing the value of their legislative background, Dr. Mason wrote:

It is the natural and strong desire of every Governor to work in harmony with the legislature. In his position, he is the logical leader of the legislators, and if he has been one of them he probably has gathered valuable experience in finding out their strong and weak points and in getting along with them—a knowledge which comes in handy when he occupies the executive chair. Having represented a smaller district himself, he should also have been closer to the needs and the sentiments of the average voter, the people in general, than nonpoliticians suddenly catapulted into the Governor's mansion. Generally speaking, we would conclude that legislative experience can only be an asset to a Governor or other high State official, and, further, that most State legislators have found appreciation in the form of higher positions in the State than is often believed.[3]

Mr. Speaker, it has been well stated by wise King Solomon in his proverb, "Where there is no vision, the people perish." Today I think we should acknowledge our debt to the States for their role in the Federal system and for providing a training ground where we have been able to grow in governmental wisdom.

Golden Anniversary of Marquette University College of Journalism: A Tribute to Dean J. L. O'Sullivan

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD an article which appeared in the February 25 issue of America magazine, about Dean J. L. O'Sullivan of Marquette University College of Journalism.

This is a fitting and timely tribute for at least two reasons: First, because Marquette University College of Journalism is this year celebrating its golden anniversary; and, second, because Dean O'Sullivan is completing 32 years of outstanding service as the dean of that college.

I am pleased to commend the article to the attention of the House, and to extend my congratulations to Marquette University College of Journalism and its famous dean, Dean O'Sullivan.

I may add that on Friday, April 14, in connection with the golden anniversary year program, four alumni of the college of journalism with long experience in writing foreign news will conduct a foreign correspondents institute at Marquette University Union. The alumni are: Mr. Wallace Carroll, Washington news editor of the New York Times; Mr. Fred Zusy, president of Continental Press; Mr. Paul McMahon, travel editor of the Milwaukee Journal; and Mr. Cack Casserly, Rome correspondent for Headline Service. The event promises to be very interesting and informative.

The article which I mentioned follows:

SECOND THOUGHTS
(By Donald McDonald)
HIMSELF ON PAPER

This year the Marquette University College of Journalism is noting its 50th anniversary, and I would be something of an ingrate were I to let the occasion pass without recording publicly my own debt to the college and to the great man who has been its dean for the last 32 years, Jeremiah L. O'Sullivan.

My first contact with Dean O'Sullivan was in October 1945. I was 25, just a month out of the Air Force, and determined to take advantage of the GI Bill of Rights to secure a college education. But I was undecided whether it would be journalism at Marquette or business and finance at Pennsylvania.

After weighing the matter, I followed natural inclination. I called Dean O'Sullivan just a few weeks before the opening of the November 1945 trimester. Could I still be admitted?

"Sure, come on down," boomed the deep voice of O'Sullivan at the other end of the long-distance line.

Even in those days of relatively little admission red tape, I was impressed by the ease and alacrity with which Dean O'Sullivan cut through it.

This mark of realism, of utter objectivity, of the dean and his school, the relegation of the administrative ritualism and formalism of the academy to a distinctly subordinate role in education, seemed to me then exactly right for 25-year-old, married, 4-year military veterans who were college freshmen and who had a lot of intellectual catching up to do. It seems to me now that it is also eminently right under any circumstances. Administrative rules and operating regulations in a university are not made to be broken. But they are made to serve the teaching and learning process, and if they do not do that, they must be set aside.

In those days, Dean O'Sullivan waived rules freely. The mature war veterans with demonstrable writing facility were excused from the freshman English composition course.

Students engaged in writing novels were excused from attendance in the reporting class, though they did have to make periodic progress reports to the dean.

A second and greater quality in Dean O'Sullivan is his compassion.

On one occasion when the heating system in one of the old postwar barracks classrooms broke down on a winter day, Dean O'Sullivan, overcoat and muffler still on, began lecturing to the students in the cold room. After a moment or two, he closed his notebook, reached for his hat and rasped: "Class dismissed. Let's go get a cup of hot coffee."

A student once made the mistake—in a personality-profile writing assignment—of poking fun at the physical features of the person he was describing. This occasioned an impromptu, unforgettable lecture by the dean on charity and the hideousness of its opposite.

We came to see, in the course of a year's time in O'Sullivan's reporting class, that the Negroes, the poor, all the little people whom a bourgeois society either despises or ignores, were of inestimable worth and dignity; indeed, that in a sense it was impossible to separate their dignity and their suffering which purified and fortified it. This understanding we received not in the form of sermons from Dean O'Sullivan but in the way he naturally responded, as a man, to persons and events that either challenged or supported his convictions.

When Richard Davis of the Milwaukee Journal wrote his classic editorial on the concert by Marian Anderson in Milwaukee, he described a concert that saw wealthy whites and the impoverished Negroes of the community united in the Milwaukee Auditorium for an hour in their mutual love of great art and a great artist, but then separated after the concert, the Negroes returning to their Sixth Ward ghetto and the whites to their comfortable homes. Dean O'Sullivan read the editorial the next day in class as an unequaled example of contemporary rhetoric, which it was. But it was also a powerful, burning lesson in the bitter irrationalities of racism.

One of the legitimate pleasures—needful stimulants, indeed—of college literary life is literary conversation, argument, and discussion, but this can also be fatal to literary production. It is temptingly easy to pretend

one is immersed in the mainstream of literary life when all one is doing is playing the crow, attracted to the glittering fascination of mere talk.

Dean O'Sullivan never discouraged literary conversation. But he kept it honest by demanding a piece of written work—short story, essay, poem, article—three times a week for every one of the 40 weeks in his reporting class. If he'd had a motto, I suppose it would have been: "Writing's the Thing."

It was Dean O'Sullivan who introduced us to the world of H. A. Reinhold, Dorothy Day, George Shuster and Don Sturzo, not to mention Milton Mayer, Heywood Broun and Gerald Vann, and Bernanos, Bloy and Peguy. Down in Chicago, John Cogley and James O'Gara were starting a Catholic monthly, Today, for high school and college readers; and Ed Willock and Carol Jackson were starting Integrity, which, before it published indefensible last-word tracts on technology, communications and advertising, printed incomparable translations of Cardinal Suhard's incomparable pastoral letters on postwar, post-Christian man in this century.

And Dean O'Sullivan was bringing all this very exciting material into class and into our lives and we began to see that writing, if it was to ring true, could not be merely a detached exercise of the man called Writer. It had to involve the man himself, his most fundamental convictions, but, at an even more elemental level, it had to be torn from him and be a part of himself on paper.

If writing is a vocation, Dean O'Sullivan seemed to be saying, then it is the man who is called, not simply his writing skill or technique. And it does matter, contrary to the cynical journalist's pretext of unconcern, it does matter how things turn out. The journalist is not, then, simply an observer of contemporary history, he is a part of it, and what he writes, or fails to write, helps to give that history its final shape and significance.

What Dean O'Sullivan was interested in producing was not neutralist technicians, but men who cared and who had the competence and craftsmanship to lead others to care. If he had not constructed and developed a curriculum for journalists that was 75 percent liberal arts and, even in its formally journalistic area, heavily weighted on the side of the principles of writing and publishing as these relate to man and society, I doubt whether many of the 2,500 or 3,000 young men and women who studied under Dean O'Sullivan would have learned to care or would have understood the radically spiritual nature and social irreplaceability of the journalist and his vocation.

Mission to Israel: Summer of 1960

EXTENSION OF REMARKS
OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. GLENN. Mr. Speaker, I wish to give a summary of impressions and observations of modern Israel by Rabbi Martin M. Weitz, who was invited to visit the State of Israel for the first 17 days of July 1960. This was his second visit to Israel—the first was made in the summer of 1955. The summary follows:

A second exposure to ancient and modern Israel, in a span of 5 years, changes an itinerary into a pilgrimage. Old sites, sacred in memories, are centries for the spirit, alongside the new sights, significant for human needs. An exhilarating example of this is a set of concrete reservoirs that tap and cap the subterranean sources, the underground streams, that flow from the veins of the Judean hills, not too far from Tel Aviv, where they form and flow to the Mediterranean as the Yarkon River. Here they are channeled for irrigation nearby and for the distant Negev, and harnessed too for the local stream to the sea, north of Tel Aviv. A medieval Crusaders' fortress stands as reminder of the past, while at the end of the stream, north of Tel Aviv, is the powerhouse and lighthouse that serves the present. At the southern tip of Israel is a similar reminder: Pillars of Solomon, near the ancient copper mines, utilized by King Solomon, astride the new copper factory-refinery that recovers the very ore latent in the surface rocks nearby. Ancient memories blend with contemporary creations almost everywhere to make us realize that time and space are one in ancient and modern Israel.

A second trip to Israel does more than recapture ancient phantasy and distill modern poetry: It sorts out impressions by comparison, for the old views one beheld 5 years ago are still there, cherished as before and even more, while the new is newer and larger and better than ever before. A second visit also widens horizons, deepens knowledge, and heightens perceptions. It helps clarify confusion and classify vital data, as well as recapture previous and almost forgotten responses with a new reference of values.

Israel, at the western window of Asia, covers approximately 7,882 square miles. It has a varied topography of mountains and hills, valleys and plains, lakes and deserts, rivers and seas, all in a matter of miles or minutes, depending on one's direction. Its storied and gloried rivers are the Jordan, Yarkon, Alexander Janai, and the Kishon, while its lakes are the Huleh (practically drained and dry), the Sea of Galilee, and the Dead Sea. Its highest point is Mount Jermak, almost 4,000 feet above sea level, while its lowest depression, the Dead Sea, is 1,290 feet below sea level. A Mediterranean climate pervades throughout Israel, even in winter, with many sunny days.

The population at the end of 1959 was 2,088,685, of which 229,844 were non-Jews. The Arabs—151,500 of the non-Jews—were Moslems largely, with 57,600 Christians, 21,500 Druzes, and 200 B'hais. Population has more than tripled in a short span of a dozen years.

The miracle of Israel is the ingathering of men, women, and children to the four corners of Israel, from the four corners of the earth. In a matter of a year or two, a medieval fragment of being is transmuted into a human being, with adequate housing, freedom from sickness, and sense of adequacy. The ingathering of the exiles truly is the miracle of the 20th century, where broken people are made whole and lives bereft of speech, gifted again with song in the lyric of rebirth.

Stern are the hills of Judea, and sacred is the citadel of Jerusalem, as a core of man's hopes. Here are great tombs of judges bereft of their coffins, but not their living hopes. Here shrines, sacred to three faiths, are benumbed by time into eternity.

To the south and west of Tel Aviv lies the future of Israel, as it did with our forefathers; the Negev, moving sands and empty lands, corrugated hills filled with flame, subdued with shadow, down to the Dead Sea and beyond that to the coral shores of the Red Sea.

Israel is the land of yesterday, yet translated into today for tomorrow. Memories and fears are redone into hopes in the golden fantasy of the faiths of mankind.

During the Jerusalem sojourn of 5 days, a number of outstanding visits and conferences helped the writer immensely in appreciating new values in modern Israel and their relationships to vistas of ancient Israel. Finest of these hours I shall always recall are: the early morning and evening conversations with Dr. Nelson Glueck, inspired and inspiring archeologist-author-president-prophet of the Hebrew Union College, who helped discover and uncover over 1,000 sites of the Jordan and who introduced me to the new Hebrew Union College in Jerusalem, next to King David Hotel; Dr. Yigael Yadin, General of the Israeli Army and also world-famous archeologist of the Hebrew University (whose father, the late Dr. Sukenik, helped decipher as well as discover value of Dead Sea Scrolls now in the University); Dr. M. Mazur, President of the Hebrew University, Dr. M. Rachmilewitz, dean of its medical college (with whom I discussed proposal of Ventnor Foundation to have annually five or so medical interns from Israel for a year's study in the United States); Ben Chorin, a founding father of Progressive Judaism in Jerusalem, who helps conduct its services and encourage its efforts; M. Ish-Sholom (Friedman), mayor of Jerusalem, who seemed proud of the golden key I brought from Mayor Joseph Altman of Atlantic City.

The cities of Israel are as members of a family. Each has its own personality, even though the Israeli household occupies so little area. Though they are in different sizes, they also have different tempers—and temperaments.

Tel Aviv is like a lady with a large brood. It's a home of small and fairly large businesses, and much activity. Its personality has variety as well as energy. It's the theater center, the Times Square, and the playground of the country. It has as many dailies as New York City and five full-time companies for theater.

Jerusalem is the patriarch, the man with the long beard, but is strong, erect, unbent, and unspent. It is quiet, meditative, reflective in its mood, with a long-range look to all its efforts. Here is the Kiryan, capital of government, the Hebrew University, center for learning, very little private business in contrast to Tel Aviv, the world-famous hospitals as Hadassah, Yeshivoth (academies for faith) and other cultural-religious storehouses.

Haifa is as a young dedicated man with an upward look and boundless energy. If Tel Aviv is the city of the present and Jerusalem, the city of the past, Haifa is the city of the future. It is a port city with a third of its people living off the water rather than the land, off the literal "littoral," as it were. It is anchorage for Jewish boats, Jewish longshoremen, and is crowned by a new technion, in which oils and chemicals are feature ingredients and basic for its worth to Israel and the world.

Beersheba is as a growing lovely maiden still with her mother, as a Biblical Ruth rather than her teenage counterpart in America. She has a number of suitors, and not all of them are as Boaz. Hers is an old story, with growth arrested during years of neglect, but with a sudden almost startling adolescence since a decade ago—in new Israel's saga of life. A new road and rail to the Negev, the Dead Sea and its minerals, are as a new lifeline for Israel itself and the dams and irrigation pipes and reservoirs are reflected glory of Abraham and the ancient wells he discovered in Beersheba.

Ashkalon is as a youngster in braids or curls, depending on her mood and what day it is. This seting recalls the deeds of Samson, and suggests "scallion," an English word that comes from "Ascalon" when it implied a source for green vegetables, notably onions. Ten years ago, this was all a memory, now it is reality, a marketplace, a factory for cement pipes, largest in the world. It's a youthful girl looking to the sea and looking to the desert.

Elath is the infant in the family of cities of Israel. It was not exactly left on its doorstep, as cradled in its commerce, culture, and conscience. It is the infant-hope of the story of the Red Sea and beyond it, world destiny. It is terminus of railroad to be, several oil pipelines in the making, alternates to Suez Canal, road already reality, as well as memory of Solomon's port and factorycity of Etzyon Geber. It is also a great port city for ships, and, because of that may become a winter resort, as an Israeli Riviera. All cities, as members of the family, are fondly coddling this lusty infant so that it takes its rightful place among them all.

The Bill of Rights

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a speech entitled "The Bill of Rights," which was written by Jay Knight, a sophomore at South Pasadena High School in the congressional district I represent.

Jay Knight wrote and delivered this talk to the South Pasadena Republican Women's Club Federated recently.

I feel that his talk displays a very keen understanding of the basic principles on which our great Nation was founded and therefore bring it to the attention of the membership of the Congress:

THE BILL OF RIGHTS

(By Jay Knight, South Padadena High School)

The first 10 amendments of our Constitution of the United States known as the Bill of Rights, have played an important part in the preservation of individual privileges. After the Constitution was finally completed, Jefferson and other patriots were still fearful of centralized government, so they demanded that a bill of state and individual rights be added. This bill insured three undisputed rights for man—life, liberty, and property.

Liberty is freedom from all but the laws of nature and those society has made for the preservation of man. Government enforces the manmade laws. The rewards for man's labors become his own private property to do with as he sees fit.

In order to protect life, liberty, and property, our forefathers formed government as a servant of the people. But what has happened to our Government? Is it serving the people or taking care of them? Is it helping them or robbing them? A strong Central Government tends to weaken individual responsibility.

A recent newspaper article told of an unskilled laborer capable of earning $28 a week. If he didn't work, the Government paid him $35 plus free milk for his seven children. He choose not to work. Is this the American way? Is this rugged individualism? Is this what the architects of the Bill of Rights and the Constitution sacrificed and fought so hard for?

One false theory for America's success is based upon the belief that we have greater natural resources than other less fortunate countries. But the key to our success lies in the ideas as set down in our Bill of Rights. Let's keep our key shining and bright for other nations to see and use as a model to free themselves. But can we keep our liberty?

I have always thought of the foundation of America as three great pillars—first a faith in God; second, private enterprise; and third, a constitutional government. Our country was founded on the belief of a supreme being. In their quest for freedom, our forefathers turned in prayer for guidance. Private enterprise stimulates the competition which improves man's way of life. Constitutional government insures individual freedom as stated in our Bill of Rights.

All three pillars are essential for the foundation and strength of our great country. It is this generation's responsibility to preserve our American heritage for generations to come.

A year ago, shortly before retiring as chief of the Army Ordnance Missile Command, General Medaris said: "We seem to feel that we have bought freedom and have a title to it which we can retain until the end of the world. But all we have is a lease on freedom, and if we won't pay the lease every year, we can very well lose it."

The choice is up to you.

Should State and Local Governments Look to Washington for Help?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in October, last year, I had the opportunity of addressing the annual conference of the Governmental Research Association, meeting in St. Louis. At that time my topic was "Should State and Local Governments Look to Washington for Help?" I should like to insert this speech in the RECORD at this time:

SHOULD STATE AND LOCAL GOVERNMENTS LOOK TO WASHINGTON FOR HELP?

(Remarks of Hon. THOMAS B. CURTIS, of Missouri, at the annual conference of the Governmental Research Association, Tiara Room, Park Plaza Hotel, Oct. 4, 1960.)

I always enjoy having a title for a speech picked for me, particularly when the title contains good negative and affirmative pregnants. In the process of picking out the overtones hidden in the semantics one sometimes can develop a much clearer presentation of the real issues involved. The title I have, "Should State and Local Governments Look to Washington for Help?" is a beauty. It contains just about all the overtones a speaker could ask for.

First, I believe almost everyone believes that State and local governments should look to themselves before looking anywhere else for help. So one of the issues hidden in the title is whether the State and local governments have done everything they can for themselves and therefore are appropriately in a position to look to Washington for help.

Second, I think almost everyone believes that there are many areas which by their nature may be essentially State or essentially local and yet require coordination or direct action on the part of each other and on the part of the Federal Government. There is considerable room for discussion and debate concerning the balance between Federal, State, and local governmental action, and may I add action by private enterprise in these areas. The essential point to drive home, however, it that it is not a question of black and white. I know of no one who wants to abolish the Federal Government on the theory that it has no place to play in the complex of our society. On the other hand if there are people who would abolish State governments they are certainly in the minority and would not admit it openly and therefore we may assume for the sake of debate there are none. Certainly there are none who would abolish local governments. Therefore, lest I be caught in a semantic trap by the title of this address if I were to answer its question by saying "No," which is my inclination, I have to make it quite clear that I believe there are many areas where the Federal Government must and should act and if it failed to act State and local governments would be hard pressed to meet the obligations I believe they have. Insistence on the part of local and State governments that the Federal Government meet its obligations would not fit under the term "Look to Washington for help." In these instances, they would look to Washington for fulfillment of its obligations.

What I am trying to say is that a large part of the discussion before us should relate to the pros and cons of where Federal, State, and local jurisdictional boundary lines should be drawn from the standpoint of present efficient handling of our social problems with regard to future abilities to meet these social problems. If one of the three layers of government is not meeting its responsibilities based upon whatever is agreed as the best division of responsibilities I suggest that the question should then direct itself to the layer of government which is derelict to see what if anything can be done to redeem it.

I have set forth the ground rules for a discussion, now let me see if by applying these ground rules to specific issues I can make what I have been trying to get across clear.

Before doing this, I want to get the whole situation of local, State, and Federal Government into better perspective. There has been so much loose talk about public squalor vis a vis private opulence, particularly by politicians with economic backgrounds, that a good look at a few statistics is necessary. I am indebted to the excellent paper of one of your panelists, Dr. Roger A. Freeman, entitled "Tax Burden in the 1960's, and the Means of Financing It," for getting this matter into better perspective. Dr. Freeman quotes an article in Harper's for July 1960, by Peter F. Drucker as follows: "This tremendous expansion of the (local) governments has gone more than half way toward restoring the prenew deal balance between the national and local governments in the domestic field. It has made the (local) governments at least potentially the really dynamic, expansionist, innovating organs in American social policy." I believe the statistics support this statement. As Dr. Freeman points out, the National Government share of all public revenues shrank from 79 percent in 1944, to 64 percent in 1959. Two other points from Dr. Freeman's paper: "During peacetime, State and local governments, with all their much vaunted disabilities, managed to expand their revenues at a more rapid pace than the National Government." "Two-thirds of the State legislatures raised taxes in 1955, and again in 1959. Counties, school districts, and other local governments have been pushing up their taxes, gradually and consistently year after year."

I must try to dispose of another misconception before moving to the meat of my discussion. The economic statistics completely belie the allegation of public squalor. Whatever indicator one would wish to take,

miles of highways, per capita, miles of sewer lines per capita, per capita number of homes serviced by sewage disposal plants, or miles of streams no longer contaminated, airport facilities per capita, parks per capita, or usage per park, hospital beds per capita, medical facilities of all sorts per capita, classrooms per school population, teachers per pupil capita, the record of recent years in all areas of the public realm shows a magnificent growth rate. Furthermore, the quality increase in all of these areas of public domain is equaly remarkable. There has also been a very healthy productivity increase of the worker in these areas which assures us in the long run of lower costs.

I find that each time I seek to set the record straight by responding to the critics of our affluent society they issue a barrage of non sequitur by alleging that I and those who hold my views by citing these figures showing progress are complacent and that we don't want more progress in these areas. This is completely false, of course. We certainly do not believe the United States is heaven on earth, although I will say it is the only society I know which has emerged from an economy of scarity to an economy of plenty. As a result we do have some entirely new problems and new bases upon which the solution to these problems must be found.

I believe the best way to get increased growth or progress in the field of community facilities and education is to examine those communities which have progressed to see how they have met their problems, and then examine those areas which have not progressed as well and see why they have failed to meet their problems. I recall at the time of the 1958–59 recession I was asked to be the Republican spokesman to address the jobless who had ridden, not marched, to Washington. I followed Senator JOHNSON, the majority leader of the Senate, who spoke in behalf of the Democratic Party. Senator JOHNSON said he was going to introduce a resolution immediately to create a joint committee which would go into the depressed areas of our country to see what was wrong. I rejoined that I thought a joint committee to look into the nondepressed areas to see what was right might be a more fruitful exercise in assisting the areas where things were wrong.

I might add neither Senator JOHNSON'S resolution nor my suggestion were implemented because the recession had already ended, it was April 1959. Regrettably, as usual, the Congress with the pressure off addressed itself to other things. I still think the time to repair a roof is when the sun is shining, and I regret that the subcommittee which has jurisdiction of unemployment insurance, of which I am a member, did not dig into the problems of present-day unemployment. I am certain we will find the best solution to depressed areas problems in improving the Federal-State unemployment insurance system rather than the direct approach which is contained in most proposals for Federal aid to depressed areas.

I want to call attention to an editorial appearing in last night's Post-Dispatch entitled "Encouraging Pollution Control":

"Missouri should give serious consideration to a proposal that it adopt an Illinois statute permitting mandamus proceedings to compel local governmental units to issue revenue bonds for sewage treatment and disposal.

"The proposal comes from the general counsel of the metropolitan sewer district, Charles B. Kaiser. Illinois has won national and even international recognition for its accomplishments in abating water pollution. It led the Nation last year in the amount of sewage treatment work under construction. Its antipollution laws have been adopted as a model by Japan. What are the legislative forces behind these brilliant results?

"The most telling force, Mr. Kaiser believes, allows the State water pollution board to apply to the attorney general for action. That official must then file suit in State court to compel municipalities or other local governments to issue the necessary revenue bonds. Illinois has used this power 25 times in the past 10 years. Its model statutes also provide that a governing body can issue revenue bonds without an election unless 15 percent of the voters raise an objection. If objection is raised, a simple majority vote decides.

"Some such force as the Illinois mandamus idea is probably going to be required to get things going in Missouri's worst problem spots. The job is estimated to cost more than $9 million in St. Joseph, $70 million in Kansas City, $60 million to $80 million or more in St. Louis. St. Joseph voters have twice rejected a bond issue and the U.S. Department of Justice has been asked to bring the first suit under the Federal Water Pollution Control Act against it. Kansas City is defying an order by the State water pollution board to issue no more sewer extension permits until it makes a start on a sewage program. St. Louis is so far best off of the three cities, though a year behind schedule.

"The Governor of Missouri will have a great deal to do with the way in which this large and growing problem is met. What do John M. Dalton, the Democratic candidate for Governor, and Edward Farmer, the Republican candidate, think of Mr. Kaiser's suggestions?"

I don't know what Mr. Dalton or Mr. Farmer have to say, but I know what I have to say, as a Federal legislator, I say, "Hurrah, let's get to it."

The Federal Government has an interest in the subject of controlling water pollution even though it is essentially a local and State problem. The Federal Government's concern arises from its jurisdiction over navigable streams. The Federal Government is taking an active part in abatement of water pollution both from the standpoint of meeting its responsibilities as they relate to this basic jurisdiction, but also from the standpoint of serving as a gatherer and disseminator of information of what is being done in the area of water pollution abatement by the States and local communities and by the private persons and businesses.

However, the recent bills before the Congress on Federal aid to assist the States and local communities in combating water pollution would have the Federal Government directly help to finance sewage disposal plants and other facilities which many of us believe are more efficiently financed by the local governments.

Just what happens to the citizens of the State of Illinois who have moved forward to assume their responsibilities if the Federal Government steps in and provides moneys taken from Illinois citizens as well as other citizens to meet the problems of Missouri? Is that the way to encourage States and communities in the future to face up to the problems they are best suited to meet? I hardly think so.

The issue should be determined, not by whether Federal funds can help the laggards, but by whether the Federal Government is better suited to handle the problems than the State or local government.

Incidentally, I have a bill I introduced to help in the water pollution problem which I believe would help more than 10 times the amount of money proposed be spent directly by the Federal Government in this area. My bill simply provides that business may amortize more rapidly for Federal income tax purposes the cost of building sewage treatment plants to properly care for industrial and other wastes which pollute the streams. There is no question that there is a great cost involved in building these disposal plants and more businesses could and would build them if they had a more adequate way of financing them. My bill would provide a practical answer.

The point I am making however relates not to the merits of my proposal or the Illinois program as set forth in the Post-Dispatch editorial, but rather to the question of whether our society meets social needs and problems and how do we most efficiently meet these needs.

May I now discuss the issue of Federal aid to education, whether it be school construction or teachers salaries or what, to get across a few points? Most Americans are of the opinion that education advances more surely and steadily in both quantity and quality by maintaining control of educational matters at the local level. Even those who have been advocating massive Federal expenditures to education give lip service to this doctrine. The arguments for Federal aid to education have been placed on the basis of the alleged inability of the communities to cope with the social needs for more and better education.

In 1956 I voted for Federal aid for school construction, rather reluctantly I might add. Let me tell you why I did. I felt we had an emergency situation which had been produced by four rather unexpected and unusual developments: (1) During World War II we had built practically no new schools, so we hadn't even kept pace with the normal population increase through births; (2) we had a phenomenal baby crop during World War II. The birth rate has remained high to the near present although quite recently it seems to be tapering off; (3) we experienced the rapid suburbanization which has been going on all over the country since World War II. Children moved out of interiors of cities and from rural areas into the suburbs so many school classrooms in existence were abandoned or not fully used; (4) we experienced a severe inflation which devalued the dollar.

The impact of heavy inflation on the real estate tax system was extremely damaging to education. The real estate tax system, of course, is the basic tax system for raising revenues for schools and local communities. The dollar expenditures in the budgets of the school districts rose with inflation, therefore it became necessary to increase real estate tax revenues to make up for this increase. Real estate taxation is based upon a system of real estate assessment which in almost all communities is a continuing process without any built-in provisions for reevaluation to reflect any fluctuation of the value of the dollar. Residences and buildings erected before 1946 had been appraised in terms of the pre-1946 value of the dollar. Residences and buildings erected after 1946 were appraised in terms of the inflated dollar. Any increase in the rate of real estate taxes therefore bore more heavily on the newer properties which already were being taxed inequitably because of the different dollar value with which they originally were appraised. Furthermore, the newer residences, by and large, were owned by the younger families who already were bearing the heavy cost of raising children and the heavy initial cost of starting a household. Increasing tax rates was a very difficult burden on the "little people" whom all politicians love.

There was only one real fair answer to the situation and this was a difficult job both mechanically and politically. The answer was to reevaluate all the real estate on the assessment books in terms of the new dollar. Many communities faced up to this difficult task and are now over the hump as far as this problem is concerned. Many communities have still failed to face up to the task and they are still experiencing difficulties.

I felt the Federal Government through its fiscal policies was largely responsible for some of the difficulty the local communities

and school boards were experiencing right after the war. I felt that the danger to local control of our schools by the Federal Government assisting in meeting the emergency situation by providing funds for school construction until the communities could make the necessary adjustments was minimal if it were, by definition, temporarily tied to the emergency. Education to me is always an emergency. Kids are kids such a short time and temporizing with the problems of their education leaves us with untrained adults or possible juvenile delinquents which is real waste.

I was shocked to find some of the most stalwart supporters of Federal aid to education who claim they are not interested in getting the Federal Government into education on a permanent basis resisting the two amendments offered by those who went along with the emergency theory to be certain that it was temporary and did relate to an emergency. These amendments were: (1) To base the allocation of Federal money upon need rather than upon per capita student population; (2) to require matching funds on the part of the State and local governments. I can only conclude from the actions of these federalists that they sought to use the emergency as a device to get the Federal Government further into the field of education on a permanent basis. Why won't they argue their case openly? There is plenty of fair argument, although I disagree with it, that can be advanced in behalf of the Federal Government moving further into the field of education permanently. Let's start debating the issue.

Let me pose another problem that has created difficulties for some communities in meeting their educational and other problems. Many of our new residential suburbs have become what have been called bedroom communities. These communities failed to zone their municipality to permit industry, business, and sometimes even commerce and professions to enter. The result is that the entire tax base is the real estate tax on family residences. It requires a very wealthy community to finance education and community facilities on such a narrow tax base. Many communities have zoned themselves with a great deal more intelligence. Let me illustrate by a local community in St. Louis County almost nonexistent 10 years ago, now having a population of over 10,000, almost all in the medium-income brackets. The village of Crestwood. Crestwood zoned itself with great understanding and care. A passing visit to the community would make one think it was just another bedroom community, so well have they zoned their industrial and commercial areas. Yet Crestwood derives 75 percent of its revenue from the tax on its industries and commercial enterprises. Crestwood has little or no bonded indebtedness, and yet it has met its obligations for education and community facilities in a commendable fashion. Its residential tax rate is relatively low.

The pressures on the Congress to assist local communities and school districts largely come from those communities and districts which have failed to reset up their real estate tax systems to correct for the damage of the World War II inflation, which have failed to zone or rezone with care and intelligence, which have failed to consolidate with other districts or communities when they are in their very nature too small a base upon which to operate community facilities.

I pose this question. Just what effect does Federal aid to these grasshopper communities have on the ants * * * those who have faced up to their problems and responsibilities? Under the Federal tax system the ants who have already paid for their own facilities will have to assist in paying for the grasshoppers who have not paid and yet still have it in their power to pay.

I appreciate the argument of the federalists who state that there are certain communities that do not have the ability to pay even if these corrections were made. For years I have been challenging that statement as it referred to alleged poor States, particularly States in the South. I have examined into the tax base and the industry of these States and I don't believe a case can be made for anyone of them. They all have it within their abilities to meet their problems if they desire to do so. However, a real case can be made for equalization within a State, and I believe all States have equalization laws. The need for equalization laws, particularly for education at the State level, is rarely disputed anymore. Yet, here is where a great deal of improvement is needed to meet the problems of certain communities and certain areas within a State in our dynamic economy. There is a basic inability of certain areas to meet the costs of modern education and up-to-date sewage facilities, among other things. The Ozark areas of Missouri is an example. But Missouri with the metropolitan complexes of Kansas City and St. Louis is certainly in a position to handle the job.

Due to the racial problem we have many other areas where proper zoning has been thwarted. The communities where the problems exist are experiencing real difficulty in providing the facilities needed to meet the desired high standards. However, this is not really a cost problem. It is a difficult social problem and though some people may regard it as too difficult to handle, it still must be handled. Certainly, to pass it off as a cost problem, as we have done in many of our Federal housing problems, tends to aggravate rather than to relieve the problem.

The Federalists argue that the States cannot meet these problems because of a built-in error in their political structure. They point to the unequal representation of urban areas vis-a-vis rural areas in the State legislatures. There certainly is this unequal representation, but an analysis of the development of America or any industrial society would reveal why this is so at any given point of time, and will continue to do so, unless our society stabilizes. America started out 90 percent rural. Today it is only 20 percent rural. Political institutions reflect what was, not what is, and we are always catching up with what is. I don't find it alarming to find representation on the basis of what was 20 years ago if I can be fairly certain that it will be modified although I, too, may become impatient with its slowness. Our entire history shows that we do modify our political structure to reflect the switch in populations. I regard this argument, to a large extent, as an excuse on the part of the Federalists as to why States should not deal with the problems right at hand. Furthermore, reapportionment within the State so that representation catches up with population changes and shifts is fully within the power of the people including the Federalists who are people of the State to implement. States are constantly facing up to this problem and meeting it. I know of no States except our very newest which have not had reapportionment laws in their histories.

Let me revert to the problem of education to make another point. A great deal of the problems of the increased costs in education regretably reflect the basic human resistance to change on the part of those who are in control of the institution which needs to grow. The NEA which has become a great lobby group for Federal aid to teachers salaries has to a large degree been responsible for the inability of communities to increase teachers' salaries as much as we all would like to see. First, the State components that go to make up the NEA have a stronghold, a stranglehold in some States like Missouri, on the teaching profession at the primary and secondary school levels. College graduates cannot become teachers by passing examinations or meeting other reasonable standards; they can only become teachers if they go to State-run teachers colleges.

The graduates of some of our finest private schools find it difficult, if not impossible, to become primary or secondary teachers in Missouri's public schools. This downgrades quality and productivity in the teaching profession itself. The Teachers Union has been resisting for years the innovation of teachers aids. By utilizing persons with lesser skills for the routine type work connected with teaching, we could increase teacher productivity greatly and increase salaries within the present budgets for the competent teachers in the process. The innovation of educational TV, which many top educators have hailed as being as great a revolution in teaching as the innovation of movable type was in the beginning of the 14th century, has also been resisted. I have heard professors, as well as secondary and primary teachers, present their objections to educational TV this way: "Does anyone believe that TV and visual aid can replace the lecture and the book?" This is a false presentation. The printed book did not replace the lecture, but it certainly provided such an amazing supplement that it is difficult for us today to realize that the first academy had no books and was all lecture. So it is with educational TV. It will not replace books, or lectures, but it certainly will nobly supplement them. Through educational TV all our students all over the country can hear the best lectures of our brilliant teachers, not just a limited few, even after the teachers have died. Just imagine the increased productivity in the teaching profession from the development of this new and amazing teaching mechanism and skill. I dwell on increased productivity because through increased productivity we can increase not only our quality of education but also the salaries of our teachers without the need to increase the budget.

There is another area of basic reform and progress which would permit us to upgrade education, both to increase its quality, extend it quantitatively, and lessen its cost. Presently we use our school plants and overhead only 9 months out of 12 months each year. The reason for this obvious uneconomic situation has its origin in another more basic social need which existed in the past, though it no longer exists today. We needed our children in agriculture enterprise 3 summer months each year.

Today we are no longer an agricultural society and there is no longer any reason for operating our schools in such an inefficient manner. I hasten to state that I am not talking about extending the school year for teacher and pupil from 9 months to 12. Perhaps for good educational reasons we may wish to keep the 3 months leisure for the individual pupil and teacher. However, Dartmouth College has gone away from the traditional two 4½-month semesters to the three, 3-month trimester in order to lay the groundwork for four 3-month quarters each year. So our primary and secondary schools can easily do the same. We might have to air-condition our school buildings in order to utilize the summer months, but we would have more than enough immediate savings, let alone future savings, from this kind of efficiency to take care of these costs. Right off the bat we would have an easing of need for new classrooms. We would also have additional funds with which to pay teachers and increase their salaries.

By delving in deeply into one of the areas where there are great pressures today for State and local governments to look to Washington for help, I have tried to point up my main thesis. Do they need help from Washington? Is the real help they need right at hand in analyzing and facing up to the

problems that confront them? Have other communities faced the same problems and met them? I believe we must answer these questions first before there should be any looking to Washington for help.

On the other hand, there may be areas where the Federal Government should be doing a job. Let's look into this briefly. I believe the Federal Government has a big job to do in education which, by the way, it is doing to some degree. A failure of the Federal Government to do its job may indeed put the communities in a position not to ask for help; but rather, to raise cain because the Federal Government is not meeting its responsibilities. I think the Federal Government must be a gatherer of information and a disseminator of information about what is going on in education. In other words, if a local school board is thinking about an educational innovation and wonders whether it has been tried any place before and, if so, with what success or with what failure, the Federal Government should be able to supply the answer. I believe the Federal Government has a big job today, which it has hardly touched, of developing nomenclature for the skills that exist and are needed in our society and relating those skills to whatever training or educational processes there may be for creating and improving these skills.

This is a continuing process and it is more difficult the more rapidly our society is advancing technologically. New skills come in, old skills become obsolete and of no social value. It is in this area that we should grapple with what is referred to as distressed areas. These areas are almost invariably areas where frictional or technological unemployment has hit a basic industry of the area. The greatest area of frictional unemployment today is our rural areas where the amazing technological advancement in agriculture has occurred so rapidly that millions of people who used to be able to depend upon their agricultural skills for a livelihood find that these skills have become obsolete and unneeded. One man and 1 acre can provide the food and fiber that five men and 5 acres formerly could provide. This continuing social problem could be handled admirably by tying it to our excellent Federal-State unemployment insurance system. We must relate frictional unemployment to retraining, rehabilitation, and education and treat it as an essential economic cost of doing business.

Whenever I try to tackle this subject I feel frustrated. I have spent most of my time defining what I believe are the real issues and exposing those which I believe to be false issues. In this process I end up finding I have had little time to debate that which I would love to debate. At which level of government do we best handle these various social problems we have placed in the public sector of our economy? This kind of debate can only come about when we have eliminated the stagnation which today exists in public discussion. This stagnation arises when one school of thought alleges that only that school is interested in meeting the social problems of the day and those who are in disagreement with the proposed solutions are thereby uninterested in the problems or are so blind or calloused that they are unaware of the problems. I would also call for a cessation of the kind of discussion which emanates from the other extreme group which dubs any suggestion of the Federal Government doing this or that as "socialism." I must confess that my sympathies are much more with those who utter the cry "socialism," because this term at least has a dictionary definition which we can refer to for intelligent debate and accurate rebuttal. And, indeed, a further expansion of the Federal Government can rightly be called socialistic, however, not with the nasty overtone that the user of the word frequently seeks to impart.

May we start discussing the questions of the part the Federal Government is playing, should play, or might play in various areas of the public domain from the standpoint of efficiency in getting the job done with proper regard for retaining the necessary posture to meet the continuing aspects which most social problems present. May the day soon come when we can begin this type of adult discussion. Too long have we been in the never-never land of TV westerns, the good guys against the bad guys.

Highway Progress: Past, Present, and Future

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. MILLER of New York. Mr. Speaker, I would like to call to the attention of the House of Representatives an excellent address by our very able former Federal Highway Administrator, Bertram D. Tallamy, before the 16th annual convention of the National Limestone Institute, Inc., Washington, D.C.

I am sure the contents of Mr. Tallamy's remarks will prove to be most interesting and of benefit to us all.

Mr. Tallamy's address follows:

HIGHWAY PROGRESS: PAST, PRESENT, AND FUTURE

(Remarks of B. D. Tallamy, Federal Highway Administrator, Bureau of Public Roads, U.S. Department of Commerce, at 16th annual convention, National Limestone Institute, Inc., Hotel Statler Hilton, Washington, D.C., Thursday morning, January 19, 1961)

This is a busy week in Washington. The city is the center of one of our periodic, American-style revolutions, when one set of officeholders is bowing politely out, and another set is bowing politely in. Convention delegates such as you can combine business with pleasure, and enjoy ringside seats at one of the great pageants of American history.

Tomorrow we are inaugurating a new President, and his administration is almost certain to bring new and different approaches to foreign relations and domestic affairs. We also will have a new Federal Highway Administrator. But the expanded highway program he will direct will not be new. It has already been 4½ years on its way, and has been eagerly accepted by the country as a whole. In its broad outlines, it is unlikely to change. The program was bipartisan in its conception and execution, and was not an issue in the presidential campaign. Everybody wants good roads, no matter what his politics, and there is general agreement that the country has been using the right methods to get them.

The subject assigned me is "Highway Progress: Past, Present, and Future." So far as the past goes, I think this audience would prefer that I begin with July 1, 1956, when the historic Federal-Aid Highway Act of that year went into effect.

Let's take a look at the job that the legislation gave us—meaning by us, the Federal Government, the States, the contractors, and the suppliers—and see how well we have done. The order was to accelerate the construction of the Federal-aid highway systems, since many of them were inadequate to meet the needs of local and interstate commerce, and the national and civil defense. One of the principal objectives the law put into words was early completion of the National System of Interstate and Defense Highways. Congress said its intent was that the Interstate System, 41,000 miles in length, be brought to simultaneous completion in all States. The assumed date of completion was 1972; the system was to be designed for the types and volumes of traffic forecast for 1975.

That was the chief assignment that we undertook in 1956, and it was quite definite. Let's see how far we have got with it. More than a quarter of the 41,000 miles of the system are open to traffic today. The precise year-end figures are not available yet, but telegrams from the field tell us that cars and trucks are now traveling over more than 10,400 miles of the system. Over 5,500 of these miles have been completed with Federal aid since July 1956. The remainder represents mileage of toll and free roads incorporated into the Interstate System as provided by law. In addition, another 4,500 miles of the system are under construction, while engineering and right-of-way acquisition are proceeding on an additional 10,000 miles. Thus nearly 25,000 miles of Interstate System are improved or have work underway as of now.

The second assignment was to accelerate the work on the primary Federal-aid highways (other than interstate), and on the secondary, or farm-to-market roads, and the extensions of both in urban areas. Since the middle of 1956, improvements have been made on more than 110,000 miles of such roads, and at last reports work was underway on another 24,000.

Statistics may be the heart of democracy, as somebody has said, but they are lifeless figures. If you look around, you will see more meaningful results of the highway program. The changes in the landscape include not only the new stretches of pavements and new bridges that are part of the growing systems but new industrial parks, new shopping centers, new housing developments, and revitalized central cities.

The visible changes have been accompanied by a strong stimulus to the economy. Highway building has been good for business.

And I think we have proved a number of things. We have demonstrated, for example, that the roadbuilding partnership of the States and the Federal Government, which was founded in 1916, can be efficient and successful even on the tremendous scale of the interstate program. This great roadbuilding team, of course, includes the construction industry and the suppliers of equipment and materials.

So far as the Federal financing goes, we have paid for our 90 percent of the interstate costs and our half of the costs of the other systems on a sound, pay-as-you-go basis.

We have shown the American public that highways can be built that will handle the country's rising traffic problem. And the State highway departments have overcome much of the public misunderstanding and opposition that arose at first when, in order to serve all the people, it was necessary to inconvenience the few.

In the four and a half years there have been substantial advances in highway technology. Research sponsored directly by the Bureau of Public Roads or jointly with the States has brought steady improvements in engineering and in equipment. To the extent possible, routine calculations have been turned over to electronic brains, thus releasing engineering talent for more important work.

In its own headquarters, public roads has set up a computer program library, which

contains some 30 programs that have been converted into library versions, expressed in English and mathematical terms, so that they may be coded for use in any digital computer. It is planned to increase the number of library versions to about 80 covering the problems most frequently encountered in highway building.

The largest research project ever undertaken in the study of highways is the AASHO road test near Ottawa, Ill. The traffic phase of the test was completed late last year with the application of the one-millionth truck axle load on the sample pavements.

The date so far available have been useful in the preparation of reports that Congress ordered to be submitted at the opening of the present session. When the analysis of the records has gone far enough, the Secretary of Commerce will be able to make recommendations to Congress on the maximum desirable weights and dimensions of vehicles operated on the Federal-aid systems.

Besides its research and its support of the construction programs conducted jointly with the States, the Bureau of Public Roads does important work that rarely receives attention. In the nearly 4 years since I became Administrator, we have helped many foreign countries with their highway problems. It will soon be possible to drive in all weather from the United States to Panama City, over the Inter-American Highway. The Bureau has worked since 1930 in cooperation with the six Central American republics toward completing the section south of the Mexican border. Since 1956 it has supplied technical missions to some 15 foreign countries elsewhere, and has purchased in the United States and shipped to those countries $40 million worth of road-building equipment and supplies. Congress has provided direct funds for the inter-American work, and the missions overseas have been supported by the International Cooperation Administration and several other agencies.

In the last 4 years, the Bureau's direct construction projects in the Federal domain areas have involved about 5,000 miles of highway, and are estimated to cost $260 million. One of Public Roads' own propjects still underway is the $15 million Woodrow Wilson Bridge across the Potomac not far from this hotel.

In its direct work and in the Federal-aid programs, the Bureau has done its best to safeguard the taxpayer's dollars. In 1957 we set up a Project Examination Division to audit and spotcheck the Bureau's field offices and the State highway departments. The Bureau has referred to the Department of Justice a number of cases of irregularity it has uncovered, and has held up Federal reimbursement to the States concerned.

This brings me to the rash of rumors and allegations about corruption in the highway program. There has been no general reform in human nature, and it would indeed be surprising if cases of poor judgment and misconduct has not cropped up in a program the size of ours. Perhaps a million and a half people have been involved in one way or another. In the irregularities reported, a few State employees and contractors have been implicated, but I am glad to say that no charge has been made against a Federal employee. And in proportion to the magnitude of this, the greatest peacetime public works undertaking in history, the misdeeds have been remarkably few.

Naturally the Bureau has been disturbed at any possible loss, however small, and has tightened its inspection and other safeguards. Likewise, carrying out the partnership concept, the States have moved to plug any possible leaks.

To measure the importance of these actions it is necessary to go back to the statistical record. For example, it may come as a surprise to some of you that Federal funds paid to the States during these 4½ years have exceeded Federal-aid highway payments in all the preceding 40 years of the Federal-State partnership. Total apportionments to the States since July 1, 1956, have amounted to $16.6 billion, or more than one and one-half times the total of all prior apportionments since the beginning of Federal aid.

On the interstate program alone, more than $9.6 billion has been put to work, with the Federal share 90 percent. Work completed has cost $4.66 billion, and as of December 31, work estimated to cost $5.24 billion was under way or authorized.

On the ABC systems, construction contracts completed have cost $7.06 billion; and others costing $2.54 billion were underway December 31. In addition, $466 million of engineering and right-of-way work has been completed, and $326 million more is in progress.

So much for the present. The future starts tomorrow, when my successor, Rex M. Whitton, takes over. He is an excellent choice as Administrator, a fine highway official with 40 years of experience in the Missouri State Highway Commission. He will take over a smooth-running machine, comprising the Bureau of Public Roads, the State highway departments, and the highway construction industry. I am sure that all of us will give him our full support.

His real problems, I am sure, will be fiscal, not administrative. As a magazine writer recently put it, "the highway program has always been underfinanced." Secretary of Commerce Mueller sent to Congress last week a revised estimate of the total cost of completing the Interstate System, prepared by the Bureau with the cooperation of the States. The total remains at $41 billion, unchanged from the previous estimate.

The Federal share of this $41 billion amounts to $37 billion. Toward this Congress has authorized $25.4 billion in the Federal-Aid Highway Acts of 1954, 1956, 1958, and 1959. To complete the Interstate System as planned, another $11.6 billion in authorizations will be necessary.

The choice confronting Congress and the new administration, is between providing additional funds and allowing the interstate program to stretch out possibly through calendar 1976.

The decisions will not be easy to make. However, I am confident that ways will be found not only to keep up the present revenues of the highway trust fund, but to raise the additional sums needed to achieve completion by 1972.

In this connection, you are naturally interested in the demands that may be made upon you for materials. Highway construction expenditures (excluding right-of-way and preliminary engineering costs) are estimated to exceed $5.9 billion in 1961, an increase of about $511 million from 1960. Construction expenditures on the Interstate System will account for slightly less than one-third of the total this year, and nearly three-fourths of the total will be expended on the various Federal-aid systems.

The suppliers of aggregates, including crushed limestone, may expect a substantial demand for highway construction during the remainder of the accelerated highway program. I am told that 579 million tons of aggregate were used in all highway building during 1960, and that the estimate for 1961 is 600 million tons. For the period 1961 through 1972, the total is expected to be 13 billion tons. Crushed limestone, I believe, constitutes about 25 percent of all aggregates used in highways.

These really have been challenging years, but rewarding years. All the members of the highway team—the States, the Federal Government, contractors, labor, and the suppliers of material and equipment—have done their job well. All may take considerable pride in what has been accomplished since 1956. Also, I believe we may look forward with confidence to completion of the Interstate System by the target year 1972. And what is of enormous importance, I believe that the highway program will continue to flourish under the historic partnership between the State highway departments and the Bureau of Public Roads.

With these comforting observations and the knowledge that the program is entrusted to the leadership of such a fine, dedicated Highway Administrator as Rex Whitton, we can really tighten our belts and continue our efforts with enthusiasm. We are sure to reach our goal.

Norstad's NATO

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address made by that great military leader, Gen. Lauris Norstad, commanding general, Supreme Headquarters, Allied Powers, Europe, which we commonly refer to as NATO, on February 4, 1961.

General Norstad visited my city of Charleston, S.C., at which place he was given an honorary degree by our incomparable military college, The Citadel. His thorough knowledge of the conditions in Europe, and his complete understanding of the mission of NATO, coupled with his brilliant military genius, qualify him to speak with authority. No living American or representative of the free world is better qualified to occupy the difficult position he now holds. America and the world are fortunate to have Lauris Norstad.

GEN. LAURIS NORSTAD'S REMARKS BEFORE THE SOUTH CAROLINA CORPS OF CADETS, THE CITADEL, CHARLESTON, S.C., FEBRUARY 4, 1961

This is my first visit to Charleston—a city well known, not only in the United States, but also throughout the world wherever our American past is studied, wherever the effect of our present actions are felt, and wherever the aims and ideals of our country bring hope and confidence. It is a particular pleasure for me to be here at The Citadel—whose reputation first impressed me when I was a cadet at West Point and whose record for producing citizens and soldiers has kept me well impressed ever since. The honor you have done me today is doubly appreciated because it comes as recognition from a place which I admire and respect; it also serves to give me a lasting personal association with you and with this fine school. I thank The Citadel, and particularly those who have been instrumental in making my visit here today something that I shall always remember.

It also gives me great pleasure to meet again with a friend of many years, Gen. Mark Clark. It is certainly not necessary for me to speak of General Clark to the people of Charleston or to the cadets of The Citadel. You read about him before you knew him, and now that you have known him directly for the last 7 years you must

believe what you have read; you have seen in action those qualities which made him such an outstanding contributor to his country and to the free world as commander of the 5th Army and the Allied 15th Army Group in Europe during World War II; and, almost 10 years later, as commander of the United Nations forces in Korea. As a man and as a soldier his life reflects the highest standards of personal conduct and public service. We are grateful to him for the lesson of his example.

As I stand here today I feel quite close to you cadets—close in time as well as in space. This is perhaps a folly of my age; it is the wisdom of yours which tells you clearly that something more than 30 years separates us. But, in spite of those years, I am struck by how much we have in common; I am impressed by the similarity of the questions and the problems of today and those current when I was a cadet, or even when I was a small boy.

One of my earliest recollections is of discussions in my father's study during which I overheard frequent references to "new threats," "these changing times," "the promise of the future," and other expressions which we hear almost constantly today. Although these early memories of mine go back in this case to before the First World War, thinking people were concerned then, just as we are now, with such things as peace and freedom. Today these subjects are, indeed, our main preoccupation, as they should be. I would like to discuss with you this morning, as we look to the future, one aspect of these great issues.

When the last war ended, we all hoped that we and our children could live in a world free from the threat of war—a world of normal, friendly relationships between men and between countries. But little more than a year later we were shocked by the Soviet use of political aggression and military threat to emphasize their fundamental intentions—to gain their ends. By 1948, when Czechoslovakia was forced behind the Iron Curtain and when the brave people of West Berlin were beseiged by a blockade, 12 free nations of the West, who saw a common danger and who felt a common sense of responsibility, moved to unite their efforts for collective defense and for the preservation of peace and security. This led to the creation of the North Atlantic Treaty Organization, which was formally established by the signing of the treaty in Washington in April 1949. Later, just 10 years ago this April, the political authority of this alliance, the NATO Council, decided to create an organization to develop and to unify our defense means, and for this purpose organized Allied Command Europe and the Supreme Headquarters Allied Powers Europe—SHAPE.

What is NATO? What does it mean? To some it means armed forces—army, navy, and air forces—deployed on or near the Iron Curtain for the purpose of defending the people and the territory of the Atlantic Community. This is certainly correct, but perhaps incomplete. When NATO is mentioned, others seem to think only in terms of great and growing atomic armaments. Although it is true that such weapons do exist and must exist within the NATO arsenal, to think only in these terms presents a tragically distorted picture. These many and varied reactions suggest that NATO has many facets; that what each of us sees is affected by the particular position from which he looks. I think balance was introduced into the composite idea of the alliance by a writer in a London newspaper a year or two ago, who said that "NATO has itself come to be synonymous with other combinations of letters which also stir deep emotions in the hearts of men—freedom, peace, independence, human comradeship, and the will to survive."

I think of NATO first as a set of principles to which we have dedicated our efforts, and then as responsibilities which correspond to or derive from these principles—responsibilities which we are firmly committed to meet.

In the simplist and most direct form, the aims of the alliance are stated in the preamble of the North Atlantic Treaty. In that document, the member countries reaffirmed "their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments." They voiced their determination "to safeguard the freedom, common heritage, and civilization of their peoples, founded on the principles of democracy, individual liberty, and the rule of law." They expressed their desire "to promote stability and well-being in the North Atlantic area" and, as I have said, they "resolved to unite their efforts for collective defense and for the preservation of peace and security."

This morning I do not propose to discuss the achievements of the last 10 years; I will not trace the development of our concept and strategy, nor give you the details of the strength, the very real power, which has been created and maintained since 1951. We must note, however, that the increased effectiveness of weapons has permitted us to think in terms of a true forward strategy, and this has given an expanded function, a greater opportunity, to the armies, the navies, and the air forces deployed in Europe—our shield forces. These shield forces have become an active and essential ingredient of the deterrent. As military forces deployed along the NATO frontiers, they contribute directly to the prevention of war by their presence and by their power. Added to the moral strength of which they are a symbol, they give us confidence that freedom can be preserved, hope that war may be prevented. This, as I have reminded you, was the concern of responsible men early in this century; it is now, as then, the aim of U.S. policy; it is the purpose of the Atlantic alliance.

The deterrent of which I have spoken is made up of several essential elements. One is, of course, the retaliatory forces with which we are all generally familiar, and for this reason I shall not discuss them at length. In this connection, I wish only to remind you that both defense and deterrence require that our military posture be built upon a foundation of an adequate strategic striking force, in being and effective. Another element of the deterrent is the allied shield force, made up of the soldiers, sailors, and airmen of 14 nations who serve in allied command Europe.

This shield covers a long line, from the North Cape of Norway, well above the Arctic Circle, to eastern Turkey—a distance of more than 4,000 miles.

Among the missions of this command is the traditional or classic one of defending the people and the territory of the NATO countries. To crib from something I said a year or two ago, the presence of allied forces in the forward areas—perhaps particularly the presence of the American element of these allied forces—supplies silent but constantly visible evidence of allied strength and determination.

Just by being there, for peaceful men and women to see as they pursue their normal life, they nourish the spirit of the Alliance; they give reality to the hope for peace; they certify to the watch being kept over their lands, their villages, their cities.

Another most important task of Allied Command Europe is to contribute to the prevention of war—to complete the deterrent. To do this, we must be prepared to meet with appropriate means the demands of any incident, intentional or unintentional, from the smallest consequence of an aggressor's miscalculation to conditions approaching those of all-out general war. If we have the forces in the forward area in Europe strong enough to meet an action while it is developing, we can force a pause before we pass the point of no return. During this pause we must be able to compel an aggressor to make a deliberate choice between ending the action or permitting it to grow. He must face this decision, realizing that expanding the incident will place on him the moral responsibility for starting general war, and will bring to bear the full weight of the retaliatory forces and the full strength of an alert and ready Shield. These forces, with their ability to meet a threat with a strength in men and weapons appropriate to the situation, to provide a response adequate to the challenge, have a unique quality. They can create this pause, gain some time for thought, and, we would hope, prevent force and reason from parting company.

A third purpose of the Shield Forces is to contribute validity and credibility to the great strategic retaliatory forces. If, because of insufficient strength, inadequate equipment or improper deployment, we were permitted no option, no choice of response between all-out, full-scale retaliation and no response at all, doubt could be cast on the deterrent value of all forces, perhaps particularly on the heavy strategic forces. Designed to meet the requirements of all situations up to those approaching general or total war without necessarily depending upon the intervention of the strategic element of the deterrent, the Shield's purpose is to bridge the gap between all or nothing. It should provide a means of defense appropriate to the measure of the threat, and thus give validity to the principle of deterrence and credibility to the role of the heavy strike forces.

It is NATO policy, and I believe a sound one, that we must not use more strength than is necessary but we must meet an attack with a counter effort that is clearly adequate. The force to do this, as defined in our plans and programs, consists of army, navy and air force elements of suitable types and provides a balance of conventional and nuclear weapons. Our plans reflect the substantial dependence which we must place on nuclear weapons; nevertheless, as conventional capabilities improve or increase, I believe it may be possible in many cases to raise the level of involvement at which such weapons would have to be introduced into the battle. Certainly, where the military situation permits, our forces must be able to operate without resorting to arms and weapons equipped with nuclear warheads. This will require Shield Forces of at least the general magnitude being provided under our present programs. It is perhaps no secret that I wish for even more.

It is my own opinion that the basic combat elements should be so organized, trained and equipped that, in the event of an incident, they would normally respond with conventional weapons.

If, however, nuclear weapons must be introduced into the battle, the threshold of action at which this step would be taken should be a high one and the use of these weapons should result only from a specific and deliberate decision made at a level consistent with the policies and plans of NATO. This level should, under any circumstances, be above that of the commander of the basic combat elements.

Throughout our planning and our training we must give greater emphasis to the need for conventional forces, the need for adequate manpower and for nonnuclear weapons and equipment of the most modern type; but we must also have suitable atomic units associated with our conventional forces, units which could be used if the situation requires, thus forming a balanced team to force the pause, to halt the aggression.

The mobile force which SHAPE is now organizing is an interesting illustration of this balanced team. This force has recently been activated, and we are now pressing vigorously to give it real life and substance.

The purpose of this mobile force is to provide a prompt reinforcement to any point within NATO where a threat might have developed and where the force could be effective in countering such a threat. The general principle of being there "firstest with the mostest" is, of course, even more applicable today, more important than in the days of Forrest. While in the mobile force application, the "mostest" may be relatively small in numbers, in terms of timeliness, in terms of potential firepower, it could be more than the most which has ever been employed in this manner up to this time.

There is also a political function which such a force could serve. The NATO political authorities could direct its use to demonstrate NATO solidarity and unity of purpose in a threatened area, to make it clear to an aggressor that an attack against one is an attack against all, not only in the abstract words of the North Atlantic Treaty, but also in solid reality.

We are making up the mobile force of land, sea, and air elements which may operate separately or in combination. Four of the nations now deploying forces in the central European region have assigned the initial components. Eventually we hope that all or nearly all the nations of the alliance will be represented.

Each land force element will consist in general terms of a reinforced battalion of infantry with light conventional military weapons and supporting arms and services, all of which would be air transportable. There would be available, if required, atomic support units, equipped with Honest John or similar battlefield type weapons. Air and naval transport units will be earmarked to give strategic mobility for the mobile force. Naval and air forces will also be available to provide such fire support as may be necessary. When completed, this will give us a mobile force made up of appropriate land, sea, and air components, representative of the alliance, trained and ready.

The decision as to the exact size and composition of the force required for a particular occasion would not be taken until the time the need arises. In fact, the different components of the force may be regarded as building blocks which would be put together for the specific task at hand. This provides a high degree of flexibility within the force; flexibility in the choice of nations providing units, the political coloration; flexibility in the number and type of combat and support elements.

In speaking to you thus far, I have emphasized conventional forces and weapons with the hope that in this way, I might contribute to a balanced consideration of the important weapons question. But, I am aware that this very emphasis may tend to distort. In order to bring the nuclear-conventional balance back into sharp focus, as well as to establish again my own views, I would like to refer to a statement made in the press about a year ago. A very respected European newspaper stated that Saceur—that is I—believed "that any penetration of the land frontiers ought to be stopped decisively, at once, if necessary, by the use of nuclear weapons." This is what I believe. Can anyone who bears responsibility for the defense of millions of free people take as a goal anything less than this? I think not.

It is all very well for us to talk in terms of grand strategy, but the planners, political and military, must never forget that their plans have no purpose but to serve people, and that people's hopes and fears are and must be factors of the greatest weight in the calculation of our country and of the alliance. The military planner's idea of where a defense line might best be drawn may not always accord with the geography established by the facts and habits of life. In principle the only line on which a strategy can morally stand is one that shelters people and protects their homes. If we as a Nation or as an alliance are to deserve confidence, we must believe this and, believing, we must keep the watch on the forward line.

I would like to summarize what I have said to you this morning by giving to you some of the facts, some of the assumptions, some of the objectives which I have stated in directives to my planning staff.

1. The particular purposes for which the NATO forces are being created in Europe and the general principles which govern their deployment and use are not only valid but may be of even greater importance in the period of nuclear plenty and missile delivery into which we are now moving.

2. The forces presently planned for deployment in Europe should be generally adequate to meet the minimum requirements, but their weapons and their survival posture must be improved. Substantial dependence must be placed on nuclear weapons under almost any circumstances. Nevertheless, as conventional capabilities improve even within the proposed program, it may be possible to raise the level of involvement at which such weapons would have to be introduced into the battle. If additional forces are made available above the proposed requirements, even greater latitude in the choice of response should be achieved.

3. The forces of allied command Europe must be organized, equipped, trained, and deployed to permit them to react promptly and effectively with:

First, conventional weapons, when such weapons are adequate to the military situation.

Second, atomic weapons when the use of such weapons is necessary.

4. Except in certain well-defined cases, where authority has been clearly established, atomic weapons should be introduced into battle only after a particular decision to do so has resulted from the operation of an established decisionmaking process. Such a process should insure that such a decision would, in all cases, be taken by an authority at a level higher than that of the basic combat unit, and that the level of the threat would have been raised above that which could be dealt with by conventional weapons.

5. Midrange ballistic missiles, sea based and land based, and with great mobility, should be made available to NATO as part of the weapons modernization program to meet the requirements of the present functions of Allied Command Europe.

6. Consideration should be given to guaranteeing to the alliance the availability of the atomic weapons essential to the direct defense of Europe and to giving to the alliance a greater role in nuclear defense.

7. Finally, I would like to emphasize that the threat continues. It is, by its nature, political, economic, and military. It is found throughout the world. Until other real guarantees can be found, the security of the West demands military strength, and this is particularly true in the critical European areas.

I am a military commander, and I have spoken of manpower and weapons, of capabilities and of requirements, because these subjects fall to my direct responsibility. But there are other aspects of defense, perhaps even more important, such things as the courage to face the problem, the wisdom to make the right decision, the energy to create the means to carry out policy, the ability to believe in something, to hope.

I have always been impressed with the words of a great American, the Secretary of War during World War II, Henry Stimson. He said, "We must not let ourselves be engulfed in the passing waves which obscure the current of progress. The sinfulness and weakness of man are evident to anyone who lives in the active world. But men are also good and great, kind and wise. Honor begets honor; trust begets trust; faith begets faith; and hope is the mainspring of life. I have lived with the reality of war, and I have praised soldiers; but the hope of honorable, faithful peace is a greater thing, and I have lived with that, too. That a man must live with both together is inherent in the nature of our present stormy stage of human progress, but it has also many times been the nature of progress in the past, and it is not reason for despair."

Referring, then, to the generations who must bear the active part in the work ahead—and this has particular relevance for you in this audience—Mr. Stimson continued, "Let them have hope and virtue, and let them believe in mankind and its future, for there is good as well as evil, and the man who tries to work for the good, believing in its eventual victory, while he may suffer setback and even disaster, will never know defeat."

These words encourage us, but, more important, they charge us to face the future with courage and with strength. My best wish for you is this: When 30, 40, 50 years from now, you look back, I hope you will not think of your life in terms of success or of failure. I hope each of you will be able to say, "In my entire life there has been no fighting in a military sense, but I have known battle to the very limit of my strength, and it's been fun.

The Foreign Aid Program and Its Increasing Cost

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MY DEAR COLLEAGUE: As chairman of the Foreign Operations Subcommittee on Appropriations, I must through necessity familiarize myself with the many aspects of the foreign aid program and its increasing cost. Believing that the verified information I have put together will be of interest to you, I am attaching, hereto:

1. Recapitulation of the amount of foreign aid funds available for obligation and expenditure for the present fiscal year 1961, and

2. Recapitulation of budget receipts for a period of approximately 172 years.

Notwithstanding the fact that Federal revenues for the past 8 years exceeded by $53 billion the total revenues received in the 164 years from President George Washington to President Harry Truman, inclusive, we borrowed an additional $23 billion during the same 8-year period and spent that.

Certainly the documented information in the attached tables is sufficient proof that the mutual security expense outlay is excessive and should be drastically reduced.

Your committee has endeavored to improve

the foreign aid program by reducing the amount available to controllable proportions. The results of our efforts may be creditable but leave much to be desired when we take into account that dollar assets of foreign nations have more than doubled in the past 8 years. During the same period, gold holdings in foreign nations have increased approximately 50 percent, while our gold reserves have been dangerously depleted and the balance of payments deficit remains alarming.

Assuring you that it is a privilege to furnish this information, and with best wishes.

Sincerely yours,

OTTO E. PASSMAN,
Chairman, Foreign Operations Subcommittee on Appropriations.

FOREIGN OPERATIONS SUBCOMMITTEE ON APPROPRIATIONS, OTTO E. PASSMAN, CHAIRMAN

Foreign aid funds by program and amount available for expenditure, fiscal 1961

		Total available for expenditure
1. Military assistance:		
Unexpended, June 30, 1960	$2,044,246,000	
New funds:		
Fiscal 1961	1,800,000,000	
Reappropriated	35,000,000	
Other	40,000,000	
		$3,919,246,000
2. Defense support:		
Unexpended, June 30, 1960	758,601,000	
New funds, fiscal 1961	675,000,000	
		1,433,601,000
3. Development Loan Fund:		
Unexpended, June 30, 1960	830,598,000	
Unobligated, June 30, 1960	326,398,000	
New funds:		
Fiscal 1961	550,000,000	
Loan repayment	14,300,000	
		1,721,296,000
4. Development assistance: Unexpended, June 30, 1960	57,769,000	57,769,000
5. Special assistance:		
Unexpended, June 30, 1960	223,489,000	
New funds, fiscal 1961	231,500,000	
		454,989,000
6. President's Asian fund: Unexpended, June 30, 1960	61,247,000	61,247,000
7. President's contingency fund:		
Unexpended, June 30, 1960	138,695,000	
New funds, fiscal 1961	250,000,000	
		388,695,000
8. Technical cooperation, bilateral:		
Unexpended June 30, 1960	168,417,000	
New funds fiscal 1961	150,000,000	318,417,000
9. Technical cooperation, United Nations:		
Unexpended June 30, 1960	14,400,000	
New funds fiscal 1961	33,000,000	47,400,000
10. Technical cooperation, Organization of American States:		
Unexpended June 30, 1960	$1,308,000	
New funds fiscal 1961	1,300,000	$2,608,000
11. Joint control areas: Unexpended June 30, 1960	14,000	14,000
12. Atoms for peace:		
Unexpended June 30, 1960	9,423,000	
New funds fiscal 1961	1,500,000	10,923,000
13. North Atlantic Treaty Organization: Unexpended June 30, 1960	89,000	89,000
14. Intergovernmental Committee for European Migration:		
Unexpended June 30, 1960	9,200,000	
New funds fiscal 1961	6,700,000	15,900,000
15. United Nations Refugee Fund:		
Unexpended June 30, 1960	900,000	
New funds fiscal 1961	1,300,000	2,200,000
16. Escapee program:		
Unexpended June 30, 1960	4,520,000	
New funds fiscal 1961	3,350,000	7,870,000
17. United Nations Children's Fund:		
Unexpended June 30, 1960	10,926,000	
New funds fiscal 1961	12,000,000	22,926,000
18. United Nations Relief and Works Agency:		
Unexpended June 30, 1960	10,957,000	
New funds fiscal 1961	16,500,000	27,457,000
19. Ocean freight:		
Unexpended June 30, 1960	1,473,000	
New funds fiscal 1961	2,000,000	3,473,000
20. NATO science program: New funds fiscal 1961	1,200,000	1,200,000
21. Administrative expenses, ICA:		
Unexpended June 30, 1960	7,056,000	
New funds fiscal 1961	38,000,000	45,056,000
22. Administrative expenses, State:		
Unexpended June 30, 1960	839,000	
New funds fiscal 1961	8,000,000	8,839,000
Total funds available for expenditure in fiscal year 1961		8,551,215,000

RECAPITULATION

1. Unexpended funds (from previous years) June 30, 1960	$4,713,665,000
2. New funds (appropriated) fiscal 1961	3,781,350,000
3. New funds (from sales receipts) fiscal 1961	56,200,000
Total funds available for expenditure	8,551,215,000

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 1, 1961.

To Whom It May Concern:

The following verified recapitulation of Federal revenues, from the beginning of our Government's accounting, is submitted in the belief that it will be of interest to you:

Total tax receipts

157 YEARS—(WASHINGTON TO TRUMAN)

Apr. 30, 1789–Jan. 1, 1946, total	$233,124,696,392

7-PLUS YEARS—(TRUMAN)

Jan. 1, 1946–Jan. 20, 1953:	
1946	42,867,772,454
1947	42,911,827,900
1948	43,098,474,025
1949	39,833,226,896
1950	40,510,854,464
1951	56,842,879,512
1952	69,336,974,951
1953 (to Jan. 20)	2,259,855,220
Total	337,661,865,422
Total revenues received, George Washington to Harry Truman (inclusive), 164 years	570,786,561,814

8 YEARS—(EISENHOWER)

Jan. 20, 1953–Jan. 20, 1961:	
1953 (from Jan. 20)	65,811,590,850
1954	66,894,388,427
1955	69,613,680,692
1956	78,233,911,713
1957	82,091,696,351
1958	79,285,472,618

Total tax receipts—Continued

8 YEARS—(EISENHOWER)

----------	$84,515,760,844
1960	94,877,939,172
1961 (to Jan. 20)	3,163,831,564
Total revenues received, Eisenhower—8 years	624,488,272,231
Eisenhower revenues over all other Presidents	53,701,710,417

Sincerely yours,

OTTO E. PASSMAN,
Member of Congress.

Address by Maj. Gen. Keith R. Barney

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1961

Mr. SMITH of Mississippi. Mr. Speaker, on February 4 the Vicksburg Harbor was dedicated. This was a significant occasion for Vicksburg, for Mississippi, and for the Midsouth. Harbor development is an integral part of our program for economic development.

The importance of the occasion was well expressed by Maj. Gen. Keith R. Barney, the Deputy Chief of Engineers for Construction, in his remarks at the dedication, which I here include under unanimous consent:

REMARKS BY MAJ. GEN. KEITH R. BARNEY, DEPUTY CHIEF OF ENGINEERS, U.S. ARMY, DEDICATION OF VICKSBURG HARBOR PROJECT, VICKSBURG, MISS., FEBRUARY 4, 1961

INTRODUCTION

It is a pleasure to return to the historic city of Vicksburg and meet with my many friends here and those from elsewhere in the lower valley. This project which we dedicate today is a monument to the foresight and determination of the people of Vicksburg. It is an honor, indeed, to be invited to participate in this ceremony.

I might say, too, that we have a fine dedicated group of Corps of Engineers employees here as has been the case for a number of years. I feel that their participation in this project was with an extra sense of pride that one has when he does something for his hometown. We are proud of that participation.

Your congressional delegation is well represented here today. I would be remiss if I did not remind you of the effort that has been expended by them over the years to make this harbor a reality. I can say, too, that they have contributed in no small way to all of the many projects in the great Alluvial Valley.

The contractors are to be complimented, also, for their part on the project. The Ford Construction Co. did an excellent job in providing the retaining dikes for the industrial fill, even though they had adverse weather and high river stages at times. The

dredge *Paul F. Janche*, owned and operated by Janche Services Corp., completed the dredging with no serious delays.

THE VICKSBURG HARBOR

This facility that we dedicate today is certainly a far cry from those it replaces. It has a large industrial fill with an elevation sufficient to render it free from floodflows. The ultimate development of its full potential will provide you with an industrial park that would be a credit to any community. The harbor and approach channels are adequate to serve the needs of navigation for many years to come.

Even with the inadequate facilities now replaced, you have been able, in the last decade, to virtually double the waterborne commerce handled at Vicksburg. With this new modern facility you are in a position to share a larger portion of the ever-increasing waterborne commerce on the Mississippi River. Furthermore, you have been able to attract several large industries even though you had inadequate facilities for shipment by water. Your task of attracting other large industries should now be easier. I must say, however, that this new habor was a challenge from the beginning—its future development will remain a challenge. The enthusiasm you display here convinces me that you will certainly do your share to realize the harbor's full potential.

When you have done this you will gain, and the State and Nation will gain, from the addition of this new link in an expanding navigation system throughout the country. We now estimate that this project will provide benefits of $2.80 for each $1 spent to provide it. It can provide greater benefits, but that will require much effort. It is up to you and I believe you can do it.

I note that you intend to spend almost three-quarters of a million dollars initially to construct and operate adequate terminal facilities and necessary public utilities open to all on equal terms. Ultimately, you intend to spend an additional $2 million for other facilities to provide an adequate harbor installation. These expenditures are a part of the challenge I spoke of for the future.

ELSEWHERE IN THE VALLEY

Many of you here are vitally interested also in other features of the overall Mississippi River and tributaries project of which this harbor is an important part. Work throughout the valley is moving steadily forward on a realistic schedule. Measured in terms of costs of construction, it will be about 70 percent complete in June. The levees are well advanced. The four reservoirs here in the Yazoo Basin and Wappapello in the St. Francis Basin are complete except for recreation facilities which are being constructed now. The floodways are ready except for a portion of the Atchafalaya Basin in Louisiana. Foundation conditions there require slower construction schedules. The cutoffs on the main river are complete and our large channel improvement program is proceeding well. Over $70 million is now being appropriated annually for this important program in the seven alluvial valley States.

CONCLUSION

In conclusion, as we dedicate this new project here, I would like to emphasize that over the years there will be other harbor projects completed here in Mississippi and elsewhere in the country. There will be other water resource projects also. This is necessary if we are to achieve the economic growth essential to our proper role in the free world. This has been emphasized to the new administration by our mutual friend, Congressman FRANK SMITH, whose district borders Warren County. The report of his Natural Resources Advisory Committee which he recently submitted to the President also points out that the economic growth required will accompany full development of our water resources for all purposes.

Furthermore the report of Senator KERR's Select Committee on National Water Resources, released this week, concludes that there are five major categories of effort needed in the future for meeting prospective demands on a long-range basis so as not to inhibit national or regional economic growth. These are streamflow regulation, pollution abatement, better use of underground storage, increasing efficiency with which water is used, and increasing water yield by artificial means. Appropriate recommendations to accomplish these aims are contained in the report.

Accordingly, this dedication here should be a rededication of ourselves to the task of carrying forward the great programs required for the full improvement and control of our water resources to provide for the common good of all of our people. May the Vicksburg Harbor project serve you and your children well and increasingly for countless years to come.

U.S. Plan Revives Poor Rural Area

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article dealing with depressed rural areas, which appeared in the New York Times on February 26, 1961:

U.S. PLAN REVIVES POOR RURAL AREA—JOB SURVEY DRAWS INDUSTRY TO ARKANSAS BACKWOODS

(By Donald Janson)

BATESVILLE, ARK., February 23.—There is a new climate of hope in one of the country's most depressed rural areas.

An unusual Government project has paved the way to new jobs here for people who seemed overrun by the technological revolution in agriculture.

This town of 6,000 in the scenic White River Valley is the trade center for four counties of marginal farmland in the Ozark foothills. The farms are too small and unproductive to compete in an age of bigness brought on by mechanization and advancing technology.

The terrain keeps them small because mountainous ridges separate the fields. Lack of capital keeps them poor.

Per capita income in the four counties was $780 in 1958, a third of the national average.

Twenty percent of the labor force, including those who could no longer make a go of it on thet farm were unemployed last year. Another 20 percent got by on part-time work. Farmers had long been reduced to uprooting their families annually to join the stream of migrant workers that harvests fruit and vegetable crops in other States.

Each year a few of the migrants stayed away. Each year boys graduating from high school were obliged to leave the area if they were to make a living.

The rate of departures now is half of the graduates annually. The average age in the area is moving up.

The counties—Independence, Sharp, Izard, and Stone just south of the Missouri border—lost 22 percent of their population in the last decade. Sharp lost all its physicians and dentists and all but one of its nine cotton gins.

All four counties seemed to be dying when the Federal Departments of Labor and Agriculture stepped in last year to see what could be done. At the same time the departments started similar projects in single economically depressed counties in Wisconsin, Kentucky, and Tennessee.

The effort has been productive here. The employment security division of the Arkansas Department of Labor took on the monumental task of interviewing all the unemployed, underemployed, and unsatisfied workers, as well as potential new workers among wives and students, in the four counties.

The response was good and the result was a mass measurement of skills and potential skills on a scale never before attempted in a rural area. Along with the men, hundreds of women, some of them nursing children, submitted to hours of testing in the hope of becoming family breadwinners.

LABOR SUPPLY INVENTORIED

The survey provided a fuller inventory by far than any part of Arkansas had ever had before on a commodity bound to be of interest to outside industry—the area's supply of eager, inexpensive labor.

The information that the zone had 6,750 persons of considerable aptitude ready to work was turned over to the Arkansas Industrial Development Commission, a branch of the State government under the chairmanship of Winthrop Rockefeller, who lives on a mountain near Morriton.

Although the commission sells the merits of all of Arkansas, it was now armed with its most reliable set of facts—the labor and household inventory of the four counties in the pilot project. As a result, an Ohio company has begun construction of a small plant in Batesville that will manufacture rubber soles and heels for shoes.

A St. Louis company is building a factory here that will make gas tube burners. A food concern has purchased a local creamery for expansion to make cheese products.

Some of the area's former unemployed are now on the construction forces building the plants. Others are receiving training in special skills that will be needed in the plants. Hundreds will be on a payroll, some for the first time in their lives, by the end of the year.

Cave City, a town of 500 in Sharp County north of here, nearly landed the area's biggest prize of all. A New York garmentmaker wanted to produce shirts there if the locality could guarantee a work force of 3,000 women.

There were not enough housewives and daughters available in the surrounding hills, and the plant went to Gaffville in a county adjacent to the pilot area. But it will hire some of the zone's jobless women.

SEEK WORK IN ARKANSAS

One of the construction workers at the new rubber plant here is Glen Horn, a rugged middle-aged farmer in the Cave City area who five times had been forced by the economics of life in his hills to take wife and children on the 2,450-mile trek to the orchards of the State of Washington. This time he did not have to go.

"It's a hard trip," he said as he stood in his yard of red Ozark clay. "We'll stay here as long as I can get work. It's home."

Others who had undertaken the journey, or traveled north to the tomato fields of Indiana or the canning plants of Wisconsin or even endured the privations of the migratory life of the cottonpicker in the Arkansas bottoms to the east, agreed almost to a man.

"Wish we could all find something so we didn't have to go," said Calvin Stone, a strapping young man who now has no other way than migrant work to support his wife

and three children. "I don't believe there's anybody around these parts who wouldn't work right here if they had a chance."

The pilot project has resulted in giving some of his neighbors a chance and its initial success has stimulated hope that more small industries will come.

And under the impetus of the success of the labor survey, the State department of education has broadened its biennial all-household pupil enumeration to provide the Rockefeller commission with statewide information on labor potential.

The pilot project has also stimulated an interest in vocational adult education to capitalize on demonstrated aptitudes for acquiring skills.

Inequity in Wheat Import Regulations

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. SHORT. Mr. Speaker, the Legislature of the State of North Dakota has just adopted a concurrent resolution urging more restrictions on importations of seed wheat from Canada. It seems rather inconsistent for this country to maintain a wheat production control and price support program and at the same time allow the importation of around 10 million bushels of wheat per year from Canada.

The point under consideration in this resolution is the provision and import regulations carrying a lower import duty on wheat classified as being "unfit for human consumption."

Inadvertently, the present methods of treating seed wheat for the prevention of smut and other diseases, because of the poisonous nature of the treatment, actually renders the wheat which is to be used for seed unfit for human consumption. The fact that it is brought into this country for seed and not for consumptive purposes does not eliminate the loophole which allows the lower import duty. I have joined with other members of the North Dakota congressional delegation in introducing legislation which would prevent this abuse of our existing regulations. This concurrent resolution just passed by our State legislature points up and emphasizes the concern of our State and the need for legislation to correct this unintended inequity. Mr. Speaker, under unanimous consent I include this Senate Resolution B passed by the 37th Legislative Assembly of the State of North Dakota in the Appendix of the RECORD:

SENATE CONCURRENT RESOLUTION B

Whereas seed wheat imports are increasing annually with approximately 7 million bushels of seed wheat being imported the past 2 years in the one customs district consisting of North Dakota and part of Minnesota; and

Whereas such abnormal importations of seed wheat, over and above the established import quotas, is extremely harmful to the economy of North Dakota, Minnesota, South Dakota, Hard Red Spring wheat farmers, and U.S. wheat farmers generally; and

Whereas this commodity is presently in surplus and is supported in price and storage costs by the U.S. taxpayers; and

Whereas the present seed wheat is being imported at about one-half the regular duty rate of 21 cents per bushel: Now, therefore, be it

Resolved by the Senate of the State of North Dakota (the House of Representatives concurring therein), That the U.S. Secretary of Agriculture, Secretary of State, and National Congress are hereby urged to take all possible action in raising the import duty rates in relation to U.S. market prices on seeds that are in surplus supply in the United States and being subsidized by the U.S. taxpayer, particularly in the case of seed wheat; be it further

Resolved, That copies of this resolution be forwarded to the U.S. Secretary of Agriculture, Secretary of State, chairmen of the U.S. Senate and House Agriculture Committees, and the North Dakota, Minnesota, and South Dakota congressional delegations.

ORVILLE W. HAGEN,
President of the Senate.
HOWARD F. DOHERTY,
Secretary of the Senate.
R. FAY BROWN,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.

Hon. Walter M. Mumma

SPEECH
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1961

Mr. GOODLING. Mr. Speaker, on Monday of this week many Members of the Congress paid eloquent testimony to the high esteem in which WALTER MANN MUMMA was held by his colleagues.

An editorial appearing in the Harrisburg Patriot, Tuesday morning, February 28, would appear to refute the statement "A man is not without honor save in his own country."

As a further tribute to WALTER, I insert the editorial in the Appendix of the RECORD, at this time:

[From the Harrisburg (Pa.) Patriot, Feb. 28, 1961]

WALTER M. MUMMA

A good many years ago, WALTER M. MUMMA started from scratch—all on his own—and built up one of the major construction companies of midstate Pennsylvania.

A self-made man in business, Mr. MUMMA turned in his later life to politics and public service. And he made good there, too, all on his own.

Last November, this newspaper endorsed Mr. MUMMA's candidacy for his sixth consecutive term in the U.S. House of Representatives in recognition of his political independence and courage and because of his decade of experience at Washington. We emphasized that these traits of character and this seniority, which meant so much to his district, far outweighed the differences we had had with the Congressman on past legislative issues.

Mr. MUMMA's greatest legacy to the congressional district he represented and the Congress in which he served, it seems to us, can be the realization that political independence and political courage, even to the extent of opposing legislation heavily favored by many constituents because he thought it was wrong, count for so very much.

At a time when many bemoaned the passing of rugged individualism, WALTER MUMMA remained a rugged individualist to his dying day. He never was afraid to "fight city hall." He never was an organization man—in business, or politics, or private life. He was simply his own man.

This showed up in the character of Congressman MUMMA, and it was reflected in his personality. No great shakes as a stump orator, the Congressman was at his best in a person-to-person contact. Nobody could know WALTER MUMMA and not like him, whatever political or philosophical differences they might have with him. You could argue with Congressman MUMMA's viewpoint on some issues and you could challenge his voting on some legislation, but you always wound up liking and trusting and respecting him.

This is an extraordinary achievement for any man, let alone one who plunged into the rough and tumble of business and the even rougher tumble of politics throughout his adult life, as Congressman MUMMA did.

There was a shining simplicity to Congressman MUMMA's life. He liked people very much, and people liked him. We will miss him very much.

Minority Views

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to an excellent editorial appearing in the February 25, 1961, edition of the Monterey (Calif.) Peninsula Herald, entitled "Minority Views":

Some of the opponents of the House Un-American Activities Committee have been stressing the importance of minority views.

Mrs. Milton Mayer, of Carmel has written us: "I need not argue that a majority of the American people, or of any people, may be wrong; this is democracy's classic disadvantage which freedom for unpopular opinion tries to offset."

Another correspondent has reminded us of the old saw that minority views of today may be the majority views of tomorrow.

We are in full agreement. We believe that minority views are entitled to careful, respectful and critical examination. This is precisely the treatment we have been according the minority views in the case of the Un-American Activities Committee.

We haven't questioned the right of people to hold such views. We have merely questioned their right to impose their will on the majority through a sustained campaign of attacks on the committee backed by little or no evidence.

It is true, of course, that minority views, unpopular when first expressed, have sometimes come to be accepted as right.

We can all recall the cases of Galileo and Columbus.

The minority idea that utlimately becomes a majority idea is the one we hear about. But certainly there have been many other minority ideas which were discarded and forgotten by later generations.

In fact, we'd estimate that less than one-tenth of one percent of minority ideas ever

became majority ideas. Let's consider a few cases.

In the 1840's there was a minority idea in this country that the world would come to an end on October 22, 1844. It was accepted fully and devoutly by the Millerites, a sect numbered at between 50,000 and 100,000 people. That was a quite sizable minority for that time. Some of them gathered on hills in white robes in upper New York State on the appointed day.

In that case the minority did not prove to be right.

The Ku Klux Klan, Single Tax, Popularism, Technocracy, Free Silver, Wilber Glenn Voliva's theory that the earth is flat, the Greenback Party, the Whisky Rebellion and the cause of slavery all have represented minority views at one time or another in this country. None has ever become a majority view, at least not yet.

On the other hand, if we look over our majority views, we shall find that a great many of them have been generally accepted since the beginning of recorded history.

So on the basis of the evidence, we wish to propound a two-point law which may shock and astonish some of the opponents of the Un-American Activities Committee:

1. Majority views are not necessarily wrong but will usually be found to have stood the test of time.

2. Minority views are entitled to a hearing, but are not invariably right, and will usually be a laughing matter in the future.

Hospital Ship "Hope" Lends Hand: Two Doctors To Attend 500,000

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. SANTANGELO. Mr. Speaker, on February 16, 1961, and on February 23, 1961, I had the privilege of inserting in the CONGRESSIONAL RECORD the first and second series of news articles by Dr. Alex Sahagian-Edwards, a constituent of my district, who is an instructor in medicine at Columbia University College of Physicians and Surgeons. Dr. Sahagian-Edwards, together with other medical men, completed a tour of duty abroad the mercy ship *Hope*, a privately sponsored hospital ship, staffed by medical men bringing their talents and medical knowledge to newly developed countries.

In his first article, Dr. Sahagian-Edwards described his experiences in Djakarta and Surabaja. In his second article, he described the work and his experiences in Bali, Indonesia. In his third article, Dr. Sahagian-Edwards describes his work in Sumbawa, Indonesia, a little island in the Java Sea. The trials and tribulations of two doctors attending 500,000 people are detailed, and Dr. Sahagian-Edwards describes the assistance that this ship of mercy rendered to this teeming population. The newly arrived benefactors were overwhelmed by sheer numbers. On this Java Sea island, this hospital clinic was flooded with patients with advanced diseases. The difficulties encountered by the doctors on this *Hope* ship point out the desperate need of medical doctors and medical treatment. The third report by Dr. Sahagian-Edwards follows:

SUMBAWA, INDONESIA.—We were sandbagged in Sumbawa. This little island in the Java Sea was our next port of call after Bali. It has a population of 500,000 served by 2, count them—2, physicians.

We dropped anchor off the capital, Sombawa Pesar, on December 28 and within 24 hours had admitted 50 patients to the ship's hospital. After another 24 hours we were organizing an outpatient clinic on the beach which also served as a screening and admitting operation.

The events leading up to this operation rival "exodus" in scope and that's being modest. As soon as we set foot on the island we were met by a German doctor who is here under contract to the Indonesian Government and is responsible for all the medical problems of 180,000 people. He is very thin.

PALACE CONVERTED

Taken to the Sultan's palace, we saw it had been converted to an emergency infirmary in anticipation of our arrival. These patients had been selected in the hinterlands and brought to the capital city for immediate attention.

The sight that greeted our eyes was enough to make strong women faint and weak men join civil defense. The palace rooms had been emptied of furniture and on the floor on bamboo mats were 150 patients in various stages of far-advanced disease.

Most of them were accompanied by their families and as far as the eye could see there was a mass of half-naked, bandaged bodies. It looked like the Atlanta scene in "Gone With the Wind." There was no place to examine these people so we set up the corners of the rooms as examining areas.

GOITERS SIZE OF MELONS

There were patients with goiters the size of large melons hanging under their chins. Some had generalized skin eruptions that were bleeding and infected. Others had huge hernias. One woman had such tremendous abdominal swelling from an ovarian tumor that she couldn't lie down but had to be transported by chair. She was subsequently relieved of a 48-pound mass by surgery. It was a little less than half her total body weight.

At the pier some of these patients were placed on the ship's launches. We were warned that the monsoon season was due to start any day and the *Hope's* captain, Jack Windas, announced that Sumbawa Bay was notoriously treacherous. There would be no recourse but to pull up anchor and go out to sea if the weather got bad.

We began to envision a ship full of frightened sick patients as they found themselves sailing away from their island. Nevertheless, we loaded them on and started surgical operations immediately.

In the meantime, it was decided that we could best handle the nonsurgical patients on shore, but as close as we could get to the ship. This meant the harbor area, so we "liberated" a wooden shed used by the customs officials and set up a clinic. There was no electricity, no running water and no toilet facilities.

We solved these problems by using gasoline lamps, bringing our own supply of water from the ship, and erecting a metal latrine. The latter was accomplished by one of our Indonesian nurses who collared a group of dockworkers and pressed them into service. They not only set up a lovely "water closet" 150 yards from the shed, but magically produced the equipment to build it. The mysterious East.

As in Bali, when the word spread that the *Hope* had set up a polyclinic, the number of patients increased in geometric progression. From 20 patients a morning the total increased to more than 60. We then invoked the assistance of Dr. Poch, the German resident physician, to screen patients before being sent to us.

Oddly enough, with all of the real disease around us, we began to see psychosomatic disorders and hypochondriasis. It was a little difficult to maintain clinical equilibrium when one saw a case of tropical yaws followed by a military policeman who just wanted a checkup.

NO INSULIN ON ISLAND

One of many heartbreaking discoveries was that insulin is not available here. A diabetic is doomed unless he is lucky enough to have the kind of diabetes that responds to diet and oral hypoglycemic agents. We tried to workup as many of these patients as possible and control their disease but most required insulin. The only thing we could do was to recommend they move to the only area of Indonesia where insulin is available, i.e., Jakarta.

The department of radiology organized a chest survey and more than 200 schoolteachers were brought on board for chest X-rays. The whole island should be screened for tuberculosis contacts since this disease is almost endemic here. Since this was not feasible, we decided that adults working with children should be the priority group.

Fortunately, streptomycin and isoniazid are obtainable, but the word sanitarium is not in the Sumbawa dictionary. Speaking of dictionary, we were faced with a new problem. Up to now, our Indonesian nurses had acted as interpreters, but the natives in Sumbawa speak a different language from Bahasa, Indonesia, and the language barrier loomed taller than ever. A three-way translation was required for many patients. English to Bahasa to Sumbawa and back again. It took 5 minutes just to find out the patient's chief complaint.

Our reception here was even more dramatic than in Bali. These people never see Americans. Yet English is taught in the high schools. There were welcome signs on the pier and on the road leading into town. The religion here is Islam and the atmosphere is entirely different from Bali.

There is very little exposure of the body, indeed, most of the women wear heavy head veils. Those of us wearing Bermuda shorts were regarded with considerable bemusement. (Much like people walking down Madison Avenue in their underwear.)

We are known mainly by the impact of the movies. There is no question that the United States is regarded with awe and admiration. Even Elvis Presley is known here. Children of 10 know the results of our recent elections and one little boy volunteered the information that President Kennedy is 44 years old. Attention U.S. Information Service:

We leave soon for the Celebes. There is fighting there between the Sukarno government and the revolutionary guerrillas. There is a rumor that doctors are popular prey for kidnapers ($10,000 apiece—alive). Of course, these reports are usually exaggerated and it's only a coincidence that I'm leaving for the States the day after we arrive in Makassar. Project Hope continues for another 3 months in Indonesia.

The schedule reads Ambon, Timor, Bima, Lombok, and back to Java. In May, the ship goes to Singapore for servicing, and the last 3 months of the maiden voyage will be spent in South Vietnam.

There is no question in my mind that the mission has been an unqualified success. Never before has an entire American hospital with highly trained personnel

visited these areas and gained direct insight to the medical problems. No agency or organization has worked in closer contact with doctors and patients.

We have experienced a few "Ugly Americans," but the sorry state of medicine and health in Indonesia is not due to them. If the United States wants to play an effective role in providing medical help to this country, I urge a long session of conferences with the medical officers of the *Hope* when it sails back to San Francisco in the fall of 1961.

Unemployment and New Jobs

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1961

Mr. ULLMAN. Mr. Speaker, the following editorial from a recent edition of the East Oregonian does an excellent job of setting forth the need for action on the problem of long-term unemployment:

[From the East Oregonian (Pendleton, Oreg.), Feb. 17, 1961]

UNEMPLOYMENT AND NEW JOBS

Special aid for the long-term jobless and their families was urged by President John F. Kennedy in his message to Congress on January 30 as the first step to combat the current recession. Kennedy reported that "During each month some 150,000 workers are exhausting their already meager jobless benefits." To meet this situation, he promised to submit to Congress within 14 days "a measure to improve unemployment compensation through temporary increases in duration on a self-supporting basis."

While the President did not go into detail, it seems clear that his proposal will closely follow provisions of the Temporary Unemployment Insurance Act of 1958. That measure offered the States loans to finance extension of benefits, under the Federal-State unemployment insurance system, from 26 or fewer weeks to a maximum of 39 weeks. Seventeen States took advantage of the offer and five additional States independently financed an extension of their benefit payments. Altogether, temporary benefits totaling more than $500 million were paid to 2 million workers.

Unemployment compensation has been the economy's first line of defense against the loss of income that accompanies loss of jobs. Paul A. Samuelson, economics professor at the Massachusetts Institute of Technology, said in a special task force report to Kennedy on January 5 that "For the immediate future, emergency legislation is needed to permit all States to continue paying unemployment benefits for at least 39 weeks, regardless of the condition of their insurance reserves." Samuelson emphasized that Federal standards were needed to provide for adequate financing and solvency of a revised insurance system.

The executive council of the AFL–CIO agreed with Samuelson that longer term measures needed to keep down unemployment should include, among others, aid to depressed areas, expansion of urban renewal and public housing program, Federal assistance for school construction, and a large public works program.

The chronic unemployment that may be caused by automation and by migration of industry confronts the new administration with harder problems than those posed by the acute unemployment of recession periods. And the long-term problems are compounded by the steady growth of the labor force. It has been said that it will be necessary to create more than 1¼ million new jobs in each of the next 4 years merely to keep the gap between the supply of jobs and the demand for them from getting wider.

Unemployment, following a generally raising trend in the past decade, has become a problem even during periods of relative prosperity. Within the past 7 years the labor force has grown by more than 6 million persons, but total employment has increased by fewer than 4 million and many of those holding jobs have been working only part time. Farm employment has declined by over a million in 10 years, and factory production and maintenance jobs have declined by nearly 1.6 million.

During the next decade, the total labor force (including the Armed Forces) is expected to rise from the current level of 74 million to about 87 million. Projections indicate that 58 million members of the present labor force will be working in 1970, when they will have been joined by 26 million new workers and 3 million women formerly in the labor froce. This expansion will be about 40 percent greater than that of the past decade.

Jobs for the 14 million young workers who will enter the labor force during the coming decade will not be forthcoming unless the growth rate of the economy is stepped up. President Eisenhower agreed in his last economic report, January 19, that output in the next 10 years would have to be increased at "a still higher rate than has been experienced in the years since the Employment Act (of 1946) was passed." Economists consider that a growth rate of 5 percent a year is necessary to create enough new jobs in a period of rising productivity and technological change.

Kennedy, speaking as a presidential candidate at Flint, Mich., last September 5, said that "We must greatly expand our job training programs to prepare men out of work in new skills and techniques that will help them find new jobs." He advocated assistance to industry to provide job-training programs to prevent "undue hardship to employees" in factories introducing automation.

As new industrial processes are perfected, the demand for skilled technicians may be expected to increase, but youths entering the labor market without adequate training will not be able to meet the requirements. Jobs in industries such as aircraft, chemicals, communications and electronics all require highly developed skills. It has been estimated that by 1975 the United States will need 75 percent more professionals and technicians than are now available.

A Blow to Home Rule

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. FINDLEY. Mr. Speaker, I believe in unemployment compensation. As a citizen of Illinois, I expect my State government to take action in this field, and it has. For several months, Illinois has had a 39-week program for unemployment compensation. I am confident the fine people in the Illinois Department of Labor will carry out this program efficiently and well.

I oppose Federal activity in this field. Federal aid has already weakened State control of unemployment compensation and altered its original concept. This bill would be one more step toward destruction of States rights, and that is why I vote negative.

If we are to protect home rule and curb the wild growth of our Central Government, the place and time to start is here and now.

House Un-American Activities Committee: A Calm Review

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. OSMERS. Mr. Speaker, so long as the Communist bloc continues its efforts to undermine our form of government and to subvert the minds of our people, I feel that we must have the House Un-American Activities Committee on the alert to expose these insidious threats to our way of life and to recommend legislative action.

My constituent, Thomas F. Coon, of Dumont, N.J., has written an excellent factual review of the activities of the Un-American Activities Committee. It appeared in the February 11, 1961, issue of the magazine, National Review.

Mr. Coon has made a careful study of this subject and his statements go straight to the heart of the controversy about the future of the committee. In view of the wide national interest in the subject and pending House action at this time, I include the article in the Appendix of the RECORD:

HUAC: A CALM REVIEW

Seldom has any organ of the National Government been as bitterly criticized, denounced and buffeted around as the Committee on Un-American Activities. The Communists, who know better, and their dupes, who should know better, have strained every fiber to eliminate this committee which has done so much to embarrass the party by throwing publicity on its goals and methods. They have been so successful that today many Americans unconsciously assume that there must be something intrinsically evil about the committee and its activities.

Why was the committee created? How does it operate? How valuable is its work?

The present House Committee on Un-American Activities came into being in 1945 and has continued as a standing committee of the House to the present time. It consists of nine members—five from the majority party and four from the minority party. The chairman is a member of the majority party, and regardless of whether his name is Harold H. Velde or FRANCIS E. WALTER, whether Republican from Illinois or Democrat from Pennsylvania, is a prime target of the Communist Party.

The Committee on Un-American Activities is authorized to investigate (1) the extent, character, and objectivity of un-American propaganda activities in the United States; (2) the diffusion in the United States of subversive and un-American propaganda; (3) all other questions related thereto that will aid

the Congress in drafting remedial legislation. In addition, under the House rule XI, section 26, the committee is assigned certain watchdog functions. It is its job to ride herd on those administrative organs charged with carrying out the provisions of the Internal Security Act of 1950, the Communist Control Act of 1954, and various provisions of the Immigration and Nationality Act and the Foreign Agents Registration Act.

It is often charged (1) that the committee has never revealed any important espionage activities and (2) it accomplishes nothing that the FBI could not do better. Such remarks are uttered out of naiveté or, in many cases, with the deliberate objective of deluding the public and lessening HUAC's effectiveness. It was this committee which brought to light, to state just a few, the espionage activities of Arthur A. Adams, J. Peters, Gerhart Eisler, Nathan Gregory Silvermaster, Harry Dexter White, William W. Remington, Alger Hiss, as well as the atom bomb spy ring at the University of California Radiation Laboratory. Concerning the second charge that there is no need for HUAC, it is argued that the FBI is the investigative agency of the executive branch of the Government which is primarily charged with responsibility for developing evidence upon which to base criminal prosecutions. This overlooks the fact that in our system of government, it is the responsibility of a committee of the Congress to seek and receive public information upon which to base legislative recommendations either to strengthen our present laws or suggest new laws to plug vacuums in our internal security program in general.

A recent research study conducted by the Legislative Reference Service of the Library of Congress reveals among others the following legislative recommendations by HUAC:

1. Legislation to bring about the immediate mandatory deportation of alien spies and saboteurs.

2. Legislation to outlaw every political organization which is shown to be under the control of a foreign government.

3. Legislation to stop all immigration from foreign countries that refuse to accept the return of their nationals found under American law to be deportable from this country.

4. Added legislation to place restrictions on the distribution of totalitarian propaganda, when that distribution involves any cost to the American taxpayers, and when such propaganda emanates and is shipped from foreign sources.

5. Legislation to restrict the benefits of certain tax-exemption privileges now extended to a number of Communist fronts posing as educational, charitable and relief groups.

Recommendations by HUAC in the past have brought about enactment of the Internal Security Act of 1950, the Communist Control Act of 1954 and various provisions of the Immigration and Nationality Act of 1952. Many other recommendations covered such diverse fields as: increased penalties for seditious conspiracy; single espionage statute for peace and war; foreign agents registration; publication of names of foreign agents; compulsory testimony in congressional investigations, etc.

As one by-product of its activity, the committee has produced a series of research studies. These include collections of original documents of the Communist movement, and the more recent multivolume project, "Facts on Communism," which has begun with outstanding monographs on Communist ideology by Prof. Gerhart Niemeyer and on Soviet history by Prof. David J. Dallin.

Is the committee fair to those who come before it? Any witness may consult with his lawyer whenever he so desires during the course of a hearing, and submit any statement he wishes. Before a scheduled hearing, the witness may confer with the committee in confidence. If any citizen feels he has been in any manner wronged, he can demand and get a public hearing in which to state his case.

Finally, how about the cost? It is, as Committee Chairman FRANCIS E. WALTER pointed out in the 1959 annual report, relatively insignificant. "A nuclear submarine," said WALTER, "costs $49 million, an attack carrier $280 million, a guided missile destroyer $34 million. The committee operated last year—and made its contribution to our defense effort in the vital field of information and legislation—on a budget of $327,000, a small fraction of the cost of any major weapon in our military arsenal."

Aufbau Reports on an Interview With Prime Minister Ben-Gurion, of Israel

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. ZELENKO. Mr. Speaker, with unanimous consent, I have the pleasure of placing in the RECORD an article which appeared in the outstanding German-language newspaper of the United States, Aufbau, on January 6, 1961. The article is of great significance and will give millions of Americans an opportunity to become acquainted with the views of Prime Minister Ben-Gurion, of Israel, on certain subjects which he has not heretofore expressed in public.

Prime Minister Ben-Gurion is one of the world's most respected statesmen, and his views carry considerable impact throughout the free world and other areas as well. The report in Aufbau is based upon an interview held with the Prime Minister in the fall of 1960 by the staff of Maariv, the most widely read newspaper in Tel Aviv. Through the interest of Maj. Gen. Julius Klein, U.S. Army, retired, of Chicago, I have been furnished with a translation of the interview.

The substance of the document in relation to certain important subjects follows:

NO VISIT TO THE UNITED NATIONS

Since the interview took place shortly before the 15th General Assembly of the United Nations, with a participation of heads of state, prime ministers, princes, and one king—a precedent for a U.N. meeting—the Prime Minister of Israel was asked if he intended to go to New York for the Assembly. "No," replied Ben-Gurion, "I have not considered it. With regard to the leaders of the new African states, the old leaders and the new ones, whose participation in the Assembly would afford an opportunity for direct negotiations, this trip would not be necessary as we are already in close contact with Nkrumah and the others. Only today, one African, who is shortly going to become prime minister of his country, came to see me."

COMMUNISM CONTRA THE BIBLE

On which side is Israel in the global quarrel between the Communist and the Western bloc? Shouldn't we define this quarrel as an ideological struggle between the Communist bloc and the world of the Bible?

Prime Minister Ben-Gurion: "Yes and no. The word of the Bible is not united. In one passage the Bible says of God that he is avenging the sins of the fathers on the children. Ezekial and Jeremiah, however, teach that each sinner has to suffer for his own sins. The anti-Communist world is itself not united. It cannot be said that the philosophy of life and the statesmanship of the English are the same as those of the Americans. They are only the same on one point: namely, freedom of mankind. We firmly believe in the proverb of the Bible about the rise of a world of "chessed," mercy and charity. This is more than just "zedek," justice. As it says in the book of the prophet Micha, "The Lord is asking you to keep the word of God and to practice love." Ben-Gurion is well read in the works of the Greek philosophers, which he reads in the original texts. Does he share the view of Plato that men of intellect should be the heads of state?

A PHILOSOPHER IS RULING BURMA

"This," replied Ben-Gurion, "has been realized in our days in only one state, namely, Burma. Plato teaches that the philosophers should rule their people; philosophers not in the sense we understand today; those who do not want to rule of their own accord but are being made to do so. This is what happened in Burma. It is a true miracle since all around Burma military dictators are in control." What is the situation in Israel in this respect?

Ben-Gurion: "First, one has to define the term 'man of intellect.' What does it mean? Someone who is practicing an intellectual profession? There are people who do not practice an intellectual profession but who are, nevertheless, men of intellect. For instance, we have in the Knesset one Sholomo Labie, an old Kibutznik of Ain-Charod. I have known this person since his childhood. We come from the same town. Maybe my thesis will not be accepted by the university professors, but I consider Labie a man of intellect, an ideologist, and a creative thinker, who moreover is living in accordance with his convictions.

"We are in close contact with the intellectual men of our people. Important books in world literature are being published in the Hebrew language. Many meetings and congresses of scholars often take place in Israel. I intend to organize in Israel in the near future a congress of representatives of Jewish students from America. America has today approximately 200,000 to 250,000 Jewish students. The majority is not familiar with Jewish living. I have suggested that each college should send one delegate to this congress, which will deal with two subjects: 'The Jewish People in World History,' and 'Israel of Our Days.' I hope that this congress will take place next year."

MEETINGS IN GERMANY

Events of last year were discussed. The meeting between Ben-Gurion and Chancellor Adenauer in New York last year was mentioned.

"It is no secret," remarked the interviewers, "that this meeting has set off contradictory feelings among the Jewish people. What did you feel when you met Adenauer?"

"I felt," replied Ben-Gurion, "that I was going to a meeting which might turn out to be a blessing for Israel. Up to the present, I have no reason to believe that it was a mistake. I have the highest esteem for Adenauer and bear him no ill feeling. With regard to the crimes committed by the Nazis against us, I feel like any other Jew. But toward those Germans who condemn these crimes, I bear the same feelings as I would toward anyone else. I met Heuss and Carlo Schmidt, the latter saying with tears in his

eyes, 'The horrible crimes of the Nazis should never be forgotten.' I know that this was no pose, but spoken from the heart. So to me he is just like anyone else. One should never forget the past; but one must see reality as it really is. To me, a decent German is no different from a decent Englishman, Frenchman, or anyone else.

"I know that Chancellor Adenauer has never been a Nazi. I have had the opportunity to speak to others—Germans and Austrians—who hate Adenauer. But they were all of the same opinion that he has always been correct toward the Jewish cause. Therefore, I bore him no ill feeling when meeting him in New York. I felt that it could become a blessing for Israel. And I still believe so today. It would be too early to say anything more in this matter. But as soon as a cornerstone has been laid for this project, the world will get to know more about it."

The New Rules Committee

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published February 27, 1961, in the Glens Falls Times, Glens Falls, N.Y.:

THE NEW RULES COMMITTEE

The American people were sadly misled on a most important issue by Government leaders. Even President Kennedy joined in the strong chorus calling for democracy in the House of Representatives through liberalization of the Rules Committee. We were assured that the packing of the committee would halt that group's stop light action on measures to be considered. Important matters would no longer be held back from the entire House by a small group.

The actions of that committee on Tuesday clearly indicate that all the fuss over the Rules Committee and its hampering of the democratic process was nothing but a cover-up for seizure of power by the liberals. In important votes on that day, the committee killed two resolutions which were, strangely enough, opposed by Speaker RAYBURN.

On identical 8–6 rollcall votes, the measures were bottled up by the committee, and the entire House will never have a chance to consider them, at least in this session. One bill would have authorized House committees to permit coverage of their proceedings by radio and television. The second would have outlawed backdoor spending procedures under which continuing programs are financed through authorizations that do not depend on regular appropriations. Both bills have merit. It might be noted, with regard to the broadcasting measure, that the Senate already permits such practices. In the second case, it seems as if a sound fiscal policy would be difficult to maintain in view of these spending procedures. At any rate, the bills were well worth consideration by 437 Representatives, not just 14.

It is now clear that the democratic motives for packing the Rules Committee were in reality just so much hogwash. And any bill which does not satisfy his majesty, Speaker RAYBURN, will remain forever in that new-found liberal limbo, never to see the light of House consideration.

Advertising and the Open Mind

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 23, 1961

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, and notwithstanding the fact that the Public Printer estimates there will be an additional cost of $182.25, I ask unanimous consent to include in the Appendix a talk by the president of the Sperry & Hutchinson Co., William S. Reinecke, entitled "Advertising and the Open Mind":

ADVERTISING AND THE OPEN MIND

Mr. Chairman, honored guests, ladies and gentlemen, I am greatly honored to have been invited to appear before this distinguished group here in Boston today.

As you know, I am president of the Sperry & Hutchinson Co. The Sperry & Hutchinson Co. is a trading stamp company. It was founded some 65 years ago, back in 1896. The trading stamp, while originally conceived as a discount or reward for the payment of cash, has essentially a promotional effect. It attracts customers. It is not, as some people have believed in the past, a form of advertising in the ordinary sense of the word. We view trading stamps as something to be advertised.

I say this so that we can clear up any misconception there may be that my firm competes with advertising. The fact is that normally where stamps are used, the result is an increase in advertising lineage. We have carried out numerous studies documenting this fact.

You may wonder why I accepted this invitation to talk to you here today about advertising. My answer to that is that both advertising and trading stamps have historically been the victims of attacks based more often than not upon prejudices and emotions, attacks which challenge our very right to exist. To the extent that this kind of attack succeeds against either trading stamps or advertising, each has been hurt because we both make essentially the same kind of contribution.

I am not alarmed, and I am sure you are not, over resourceful critics who direct their energies at improving advertising as it appears on television, on the radio, and in our magazines and newspapers. I consider this to be healthy. It is part of the process by which we grope toward greater skill and competency in our various fields.

My concern has arisen out of attacks which are directed against the basic process of advertising, against advertising as a legitimate, necessary, and constructive function in our social and economic scheme of things.

Whether trading stamps or advertising is the target, any criticism aimed at questioning the very functioning itself must include a very careful appraisal. Advertising cannot be judged as an isolated phenomenon. It must be judged in total context.

So let us take a fresh and thorough look:

First, at what our society is all about as it relates to you and me. What it is trying to accomplish.

Second, we can then examine the part our economic system plays in contributing to the total scheme of things.

Third, it will then be possible for us to examine the role of advertising as a part of our economic system—where it fits and what it contributes.

Fourth, we will look briefly at the nature of some of the current, intense criticism.

Fifth and finally, we can ask the question: what is needed to assure constructive contributions from critics and to assure a healthy development of advertising?

"THE END OF MAN IS MAN"

So, first let us take a brief look at what our society here in America, taken as a whole, appears to be all about. What is its purpose? What does it appear to be trying to accomplish?

A great deal of discussion has been going on within the last year or two pertaining to this fundamental question. I do not consider myself to be by any manner of means a philosopher. I am a lawyer and a businessman. At the same time, like any conscientious American, I have spent a fair share of time pondering some of the problems of fundamental purpose. Any serious businessman must do so if he is to satisfy his own sense of purpose.

I think that the Commission on National Goals, in reporting to President Eisenhower last week, expressed in clear terms what our society is all about. I quote:

"Our enduring aim," the Commission said, "is to build a nation and help build a world in which every human being shall be free to develop his capacities to the fullest."

This idea is neither new nor complicated. It is, however, a fundamentally important idea.

During the course of the past year, the Columbia University Press published a volume by Shepard B. Clough, entitled "Basic Values of Western Civilization." In this book, Mr. Clough raises some of the same questions we are asking here. He answers them by saying, "The end of man is man." He continues:

"The evidence which we have marshaled indicates that the West holds the individual—his life and his development toward a higher good—to be the basis of its value system. It is the individual, in the last analysis, who is glorified above all else and for whom the energies of society are employed. His welfare is considered to be above the welfare of any one group or any human institution."

Mr. Clough asserts that this attachment of importance to individual man by a society is not nearly so common as we who have long been accustomed to it might imagine. In fact, he holds it to be unique to present-day Western culture.

So, we have here an idea which, while obvious to us, which while simple as to concept, has had a profound effect upon what we do and how we do it.

Certainly we do not have to dwell upon the fact that our political system is built upon a belief in the importance and integrity of the individual. This belief is built into our Constitution. It is the very basis of the Bill of Rights. It is manifested in the process by which we govern ourselves. Therefore, man, his freedom, his ability to choose among alternatives, is the rock upon which our political system is erected.

Mr. Clough declares also that the Christian ethic is built upon this principle. Our legal system, our medical practices, our educational systems—all are consistent with acceptance of this fundamental regard for the individual and the idea that his development and fulfillment are our fundamental purpose—a justification for what we do.

Out of our deep respect for this end comes our passion for freedom, our guarding of individual choice. And out of this likewise comes persuasion as the chief tool for implementing man's exercise of freedom—in

contrast to the coercion which is fundamental to totalitarian societies.

Each of us is free to do what he wishes, just so long as in the exercise of his freedom he does not impinge upon certain fundamental rights of others. I might here paraphrase a remark attributed to one of your former fellow citizens, Justice Holmes, who said that every man has the right to swing his fist, just so long as its stops short of another man's nose.

BUSINESS AND THE INDIVIDUAL

Our economic system, commonly called the free enterprise system, makes a contribution, which, because we are accustomed to it, can escape notice unless carefully reexamined from time to time.

Our system rewards the individual for individual effort. This is the profit system. Each man benefits by participating in creating a product or service helpful to others.

To operate successfully, the system must permit a wide range of choice for men—choice of what they are to do to make a living, choice as to how they shall enjoy the rewards of successful individual enterprise.

Money as the means of common exchange offers a tool which can be converted, once acquired, into many things to satisfy man's wants and desires. It can be converted into charitable contributions. It can be converted into the possession of a famous painting. It can be converted into products, such as washing machines, automobiles, radios, television sets. Or it can be converted into the pure enjoyment of recreation—or for that matter, just lolling about.

Man thus contributes to the economic system as an individual and takes from it as an individual.

As we all know, today this system, with the development of business enterprise, has brought about mass production of goods, transportation to get goods to people, mass communications to tell people about the availability of goods and services, and thus mass distribution.

The system is based upon competition. Producers of goods and services must compete first to win people's attention and then their patronage. As producers vie with one another to make personal profit, they are contributing toward accomplishing the fulfillment of man's needs. And, as in the political system, the only weapon at their disposal is persuasion—expressed in terms of an attractive price, better quality, or of other attributes the producer feels will attract the consumer seeking to satisfy his needs.

Man is in constant search for the new and the better. What satisfied him yesterday is only the starting point for tomorrow. The economic system is perfectly adapted to man's needs in this respect. As it works under the pressures of competition it, too, is marked by a constant search for the new and the better.

As an economic system it has not only worked, it has become the marvel and envy of much of the civilized world. It has provided more of everything for more people than any preceding or contemporary system.

ADVERTISING AND INDIVIDUAL FREEDOM

Let us look at the function of advertising.

We have said that under our system aimed at serving the individual, we are free to act just so long as our actions do not impinge upon certain fundamental rights of others.

As our system has grown increasingly vast and complex, our organized individual acts have come to have an impact upon an increasing number of others—not only in the United States, but throughout the world. In one sense this ever-increasing interdependence has required restricting individual action. We naturally need more rules for a team game like baseball than for checkers. In a more basic sense, however, this added complexity and interdependence has brought greater freedom for all. For the complexity is a product of our vastly expanded well-being, enjoyed by every segment of our society. The American standard of living has doubled every generation for the last century, and will continue to do so. Virtually every household has had enormously growing opportunities to exercise initiative and action as the result of the facilities of modern transportation and communication, together with rising real incomes.

No amount of scornful criticism, based upon prejudice and emotion, can truly belittle any of the key elements in our economic system.

Advertising is beyond any shadow of doubt one such key element.

If we are to strive to provide all men with opportunity, with freedom of choice, with a selection of goods and services to satisfy their ever-emerging desires, we are confronted with a stupendous task.

However, we human beings make do as we go. We do the best we can. The test can never be that we are doing an adequate job. Even as we meet adequacy today, it becomes inadequacy tomorrow. New demands arise from man's constant search for something new and better. Moreover, new consumers are coming along every day.

It is impossible under today's circumstances to know every individual desire, and to meet it perfectly.

Marketing really involves two fundamental research processes. One of them uses public opinion research to try to measure existing needs and to fulfill those needs. The other involves industrial and scientific research in an effort to come up with new and better products which will once their merits become known, create consumer demand.

Advertising as a communications device has the job of carrying to potential customers the story of old and broadly accepted products and the story of new products.

The role of advertising is thus part information and part persuasion. Its task is gigantic. The simple job of effectively bringing home to our vast population awareness of a new product is staggering.

Moreover, people have not only to be initially reached, but constantly reminded. However, as our production machinery has grown, so have our means of marketing and distributing. The newspapers, the periodicals, radio, television, handbills, direct mail, subway posters, car cards and billboards—all of them are carrying out a never-ending job of attempting to inform and persuade.

This function of advertising, the instrument of mass communications, is of course far from perfect. As advertising men themselves would be the first to admit, they are learning as they go. The process has many shortcomings ind imperfections. Even so, the function of advertising is a part of a circle involving respect for and assertion of individual freedom, involving man's livelihood, his standard of living, involving mass production, speedy communication, swift transportation; in a word, our entire marketing system. As a function, therefore, advertising cannot be eliminated without imperiling the system itself.

SOME CRITICISMS—AND PREJUDICES

Constructive criticism of advertising, like constructive criticism of any institution in our society, is part and parcel of the very system itself. Our strength lies in the very fact that as individuals we are seeking constantly to improve whatever we do. This applies to advertising as well as to anything else. So criticism of advertising does go on, and it will go on. And it should go on. It is not this kind of healthy, constructive criticism which we need fear.

The astonishing thing about a great deal of the current criticism of advertising as a function is its origin. Much of it appears to spring from a welter of emotion, prejudice, and frustration.

To understand the criticism some background must be taken into account.

First, part of the criticism springs from some of the thinking about what economists call perfect competition. Perfect competition is a model of our system built by systematically assuming away one element of reality after another, until far from the reaches of daily living, a model of how competition might work if men didn't participate in it emerges. It envisages producers with perfect knowledge of consumer needs, consumers with perfect knowledge of all goods and services available to meet their needs, perfect mobility of all production resources, with all producers and consumers in effortless contact with one another. Fundamentally, scholars recognize that while such a model has an analytical use, it does not represent what happens in the marketplace.

Some, conceiving this model of perfect competition to be a realistic possibility, view any activity that intervenes between production and consumption as waste. Thus, they come to the view that advertising is waste.

Second, many of the present critics grew up in the depression era and imbibed deeply of then popular antibusiness attitudes.

Third, another element of background springs from the nature of the human mind, and its constant search for order. Order realized is simplicity. Complexity at times represents fatiguing challenge. Complexity partakes of the unknown. It is fraught with hidden and possibly perilous problems. It is a short step from this to the view that the complexities of modern society with its advertising is something undesirable. Compounding this are vague moral elements arising from our puritanical traditions. Before we know it, the undesirable has become the bad.

Fourth and finally, is an element which can be termed a form of nostalgia. The simplicity of yesterday takes on all the charm of a lost love. All of its hardships disappear, and only the pastoral simplicity remains.

Out of this welter of background, come the following kinds of criticisms today.

First, is the charge that much of our advertising dwells upon differences among products that are inconsequential, and at times ridiculous—and thus advertising represents a form of waste. This leaves out of account that while growth and progress cannot be perfect, men vying in competition must seek, if they are to attract the customer, to provide some desirable distinction to their product. Differences that seem small to some people are important to others. These critics fail to recognize that this road, while it at times does manifest itself in differences of little consequences, also leads to the major breakthroughs of progress—the new invention, the new drug, the revolutionary new piece of machinery.

A few among this group of critics look about them and see areas needing significant improvement—our schools and our highways, for example—and proceed to compare the money spent on advertising with that spent in other areas. The group goes on to suggest that the money might be better spent on public projects.

This criticism, sincere though it may be, makes the mistake of assuming that the situation is "either-or." It fails to take into account that only by growth and increase in our national production, only by the creation of more and more wealth, can more and more money be moved into our tax reservoirs for public purposes.

A second major criticism insists that advertising, in its manifestations, is debasing man's tastes. One critic may be quoted as saying, "Without doubt, the advertisers are partly responsible for the American worship of goods, and any kind of goods for the savage emulation, for the cheap, shallow,

noisy, blatant, bombastic, materialistic spirit of the people." That is quite a statement—and reflects intense emotional feeling.

Third and finally, some critics of advertising view with a jaundiced eye the use of persuasion at all in advertising. They feel that the lure of advertising is overwhelming the common sense of the common people.

It is impossible to provide any documented answer to these last two criticisms—first, because the charges are fundamentally expressions of fear and, second, because no final answer can be made until the future itself has revealed our destiny. We could bring out figures concerning the increasing numbers who are being educated in our schools; we could bring out the dramatic increases in statistics on symphony and theater attendance; we could point to our growth and development in the Arts, and to any of the other encouraging signs of a soundly developing culture; but none of this would satisfy such critics because what they say reflects a lack of faith in a process involving individual choice.

These latter criticisms are in their way an ironic commentary on those who make them; for most of the critics view themselves as lovers of human freedom. Many designate themselves as "liberals." It is ironic that they of all people should profess a fundamental lack of faith in the ability of men to carve out their own destinies under a democratic system designed for that purpose.

THE OPEN MIND—A CONTRIBUTION

The preceding analysis has demonstrated that advertising is an essential function, an integral part of a total system linked to the very fundamental and serious purpose of serving mankind. No amount of criticism should ever make us lose sight of this basic fact.

Looking toward the future, I am optimistic.

Nothing I have said should detract one iota from the fine and constructive critical work embracing the field of advertising that is going forward in scores of universities under the guidance of very able men.

I admire the academic mind and the constant, continuing contribution it makes in analyzing and criticizing our system. Our aim must be to encourage this kind of criticism and analysis.

I would issue a plea for the open mind in all the circles that judge advertising in its basic role—as it manifests itself imperfectly but, hopefully, with increasing competence, skill, responsibility, and service as part of the total society in which all of us live and work—in which we are privileged to carve out our individual destinies.

Looking ahead, I would expect a second thing to come about. I would expect that people like yourselves and other advertising leaders would spend an increasing amount of time and energy in bringing an understanding of the role of advertising to an ever-widening segment of our society. A great deal of effort can profitably be spent among our own ranks. Some vigorous, constructive, and laudable work has been done along this line by such magazines as Printers' Ink and Advertising Age.

It has been my experience that the best advertising men are those who go about their jobs with a clear understanding of where advertising fits, with a deep conviction concerning the importance of its role, and with deep and abiding pride in the work they do.

May I thank you for your patience, and again express to you my deep pleasure at having been with you today.

Remarks of Robert F. Ellsworth

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I ask permission to insert an editorial column from the Lawrence (Kans.) Daily Journal-World, date of February 25, 1961.

Mr. Dolph Simons, Jr., writing the Saturday Column, discusses business conditions in the thriving mid-American city of Lawrence. The businessmen of that city admit that they are having to work hard to maintain their volume but they are optimistic about business prospects. This note of cheer and determination is most welcome in the midst of the gloom and despair which is more frequently voiced.

THE SATURDAY COLUMN

(By Dolph C. Simons, Jr.)

How is business in Lawrence?

If someone were to estimate local conditions based solely on business, employment, and economic reports from Washington, he would probably guess Lawrence was rocking along pretty much the same as last year. Along with the same sales figures, costs have gone up, consequently the average Lawrence businessman probably would not be expected to be as well off today as he was the same time last year.

Washington reports indicate business in general is not likely to show an upturn until sometime this fall. These economists continually point to the large number of unemployed persons. Congressional legislation is being prepared for distressed areas and there is even some talk of a tax cut later in the year to help get sales back on the upswing.

Secretary of Labor Goldberg recently made a highly publicized trip in the eastern half of the United States to study the bad labor situation and to see the effect of this on the areas he visited.

It is a shame Mr. Goldberg did not visit Lawrence.

About the best way to find out how business is in Lawrence is to talk to the merchants. Judging from these reports, Lawrence must be one of the garden spots in the country—if things are as bad as the Washington experts say they are.

No firm names will be used in the reports below and no specific businessmen will be quoted by name, but if there is any doubt as to the figures quoted, this reporter will be glad to give the firm names to those doubters so the latter can check them.

How about the car business? If conditions are bad the car industry certainly would be one of the first to notice any buyer reluctance to spend a sizable amount of money.

Three of the largest car dealerships in Lawrence were contacted. The first said, "Business is good. January was a good month, better than January 1960—and February has been the best February since I've been in the business in Lawrence. The first 10 days of February were real good, the middle 10 days were slow and now the last part of the month we've really been humming. Profits are better, I've cut out some overhead and I'm tickled with business." The dealer reported the increased number of units he had sold so far this year and then said, "Lawrence is a great place in which to be in business. The city is growing, we have more people working than ever before, and we look for 1961 to be real good for us. I'm very optimistic."

Perhaps this might be a case of just one dealer being happy, how about another?

The second dealer reported similar conditions.

This man said, "The used car business is excellent, our truck business is 50 percent better than at the same time last year and the new car business is good enough that we are having trouble getting some specific models." He added that collections and repossessions are a good barometer in the car business and he said, "Collections are in good shape, and in 1960 we only had two repossessions. I'd have to say Lawrence is in a sound business position and we are certainly looking forward to a good business year."

The third dealer said he was expecting a good sales and profit year for 1961, "unless we let ourselves be talked into not buying. We're having a better February than last year, in fact we are heading for the best truck month we have ever had. The whole month has been well balanced. January was an average month—but we are looking forward to a fine year."

How about farmers living in the area. Are they buying? A farm equipment dealer answered, "Great, great," when asked how business had been. "Nationally our company is running about 61 percent ahead in tractor sales this year over the corresponding period last year. I wouldn't be surprised if I'm ahead of this figure."

A local resident in the grain and feed business said there is every indication 1961 is going to be a good year for the farmer, and if it is a good business year local businessmen are sure to benefit. "The moisture situation is good," he said. "The 1960 crops were excellent in this area, our livestock men are getting good prices and the price of eggs is good. I can't see how 1961 can keep from being a good year for everyone in this area. It sure is starting out that way."

What do the retail merchants along Massachusetts Street say about business? Are their sales figures going up? The manager of one large department store said, "February will be approximately 12 percent better than February 1960, and for the year we are running 14.3 percent ahead of a year ago. I'm budgeting a 15 percent gain in sales for the year. I'm real optimistic." Another department store manager said, "So far this year we have shown a moderate gain over a similar period last year—and 1960 was one of our best years. We anticipate a good gain for the year."

Some doubters might say, "Well it's obvious he only picked out businesses which are doing well. How about others?" The manager of one of the city's largest department stores said, "Business is pretty good. January was very fine, and February is nip and tuck. In fact the last couple of days in February may make the difference of topping last year's figures. I don't see any assurance or guarantee that business is going to come easy, as we are going to have to work for it. But what's wrong with that? It's the ones who are not willing to work for the business that usually do the complaining. We plan to work hard for increases and we are budgeting for a nice sales increase during 1961."

A men's clothing merchant said he had an 8 percent sales gain January and was heading for a 10 percent or better gain in February. "I don't think there's any doubt but

that we'll have a good year. Of course, the guys who sit around and cry about their business being poor should perhaps sit down and analyze themselves. Perhaps the blame should be on them rather than on poor business conditions. It's still up to the individual merchant himself to run a good business operation."

The first druggist contacted said his business had shown a 20-percent gain in January, with February likely to create a 24-percent increase over last year.

A shoestore owner reported a 30-percent gain in business in January, with February's business about the same. "I'm budgeted for a 12- to 13-percent gain for the year" he said, "and I think we will hit it."

A large supermarket reports business is running "above last year" and he said, "we are looking forward to a good year. We are going to have tough competition, nevertheless we're aiming for an increase."

An appliance dealer said, "Last year was extremely good. So far this year business has been good—in fact we're ahead of last year."

These remarks show that business is good in Lawrence. This also points up the fact that none of those quoted above thought good business in the coming months is "in the bag." They do think, however, they can have a good year if they work for it rather than sitting around worrying because some other areas of the United States are in a business slump.

The only worry expressed by the merchants is that people will begin to base their actions on the reports of bad business and unemployment in other areas of the country.

It is too bad there are so many unemployed across the United States and it is to be hoped this number can be reduced—but at the same time everyone should be aware that even with this high unemployment figure, more people are working and taking home paychecks in the United States than ever before.

Maybe it's time to quit singing the blues and start shouting about all the good things such as high-employment figures and record-breaking paychecks.

Address of Hon. John S. Gleason, Jr.

EXTENSION OF REMARKS
OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1961

Mr. LIBONATI. Mr. Speaker, the members of the American Legion National Rehabilitation Conference were privileged to hear the Honorable John S. Gleason, Jr., recently appointed by our great President, to the office of Administrator of Veterans' Affairs, at their conference held at the Legion headquarters in Washington on February 28.

His treatment of the problems confronting the Administrator of Veterans' Affairs was interesting and informative. He approached a subject, which ordinarily would be dull and uninteresting, with a spicy oratorical treatment that held the undivided attention of his audience and impressed them with his down-to-earth statistical approach to the subject.

The Illinois Members of Congress are proud and happy to welcome their fellow Illinoisan to his new duties, although for many years Comrade Gleason has functioned in services to veterans in the field that he now administers. The veterans of the United States are fortunate in having one of their own, who understands the problems of the veteran so that there will be no delay in the administration of veteran matters within the jurisdiction of the Veterans' Administration.

His address to his comrades reflects the greatness of past national commander of the American Legion, John S. Gleason, Jr., and reveals his high sense of humility as a dedicated servant to the Nation:

REMARKS BY HON. JOHN S. GLEASON, JR., ADMINISTRATOR OF VETERANS' AFFAIRS, BEFORE THE AMERICAN LEGION NATIONAL REHABILITATION CONFERENCE, FEBRUARY 28, 1961

I am very happy to be here among so many men I am proud to call my friends.

I hope you will still consider me one of your friends, 1, 2, or more years from now, for our relationship will be a little changed—officially, at least.

A few years ago I had the great honor to serve as your national commander. I now stand before you as the Administrator of Veterans' Affairs, a post that I am proud and humble to have been appointed to by the President of the United States.

And so our official relationship shifts. Although I certainly count on continuing to be a part of your family, there may be times when you view me as something of an in-law.

But I hope you don't ever think of me the way one of our bank tellers thought of his mother-in-law.

His boss confronted the teller and said: "Joe, you're a liar. You asked for yesterday off to bury your mother-in-law, and yet I met her walking in the park this morning."

Joe thought fast, then said, "Sir, I didn't actually say she was dead. I just said I would like to go to her funeral."

My job is new to me, and as I view my assignment it will be to work as hard as I can—to the very best of my ability—to serve all veterans who fought for the United States of America.

But to do this I'll need all the help, all the cooperation, all the understanding I can possibly get from the American Legion and from other responsible veterans organizations.

And I am not too proud to go hat in hand to ask for it. For I know that the American Legion—and especially, you men sitting here today are the very embodiment of service to veterans.

Yet, today there are those who charge that leaders of veterans organizations are self-servers who continually lobby so that veterans may gorge at the public trough, or ride a perpetual gravy train of underserved benefits.

Such irresponsible allegations have been heard before, and they will be heard again. These charges are not new—and certainly they are not true.

Those who voice them should acquaint themselves with the facts. They should learn—as I have—that men like you and other leaders in this work have a sense of responsibility, high purpose and sincere dedication that is unexcelled in any walk of American life. To claim a disregard of national interest by veterans organizations is not to know—or to simply ignore—your many programs which are aimed at a stronger and better America.

For the past few weeks I have been learning about this vast Veterans' Administration I now head. Although I was not absolutely green about the agency, I have been amazed by its dimensions—up, down, in, out—measure it in any direction and the VA represents one big package.

The Veterans' Administration employs about 170,000 people—more people by the way, than live in Pasadena, Calif., Bridgeport, Conn., or Topeka, Kans.

The Veterans' Administration receives more mail each year than all of the people living in a city the size of Pittsburgh.

VA hospitals use more sheets and pillowcases per year than the combined amount used by 150 of our biggest hotels.

I've learned that the Veterans' Administration purchases more than 100 million eggs each year, and over 22 million aspirins annually.

Our people provide guardianship services for mere babes-in-arms, and pensions for Civil War widows and old Indian war fighters, to say nothing of benefits and services for millions of veterans of more recent wars.

As Administrator I find that I even hold title to some 66 cargo vessels that were torpedoed by U-boats in World War I. This makes me, I suppose, VA's Admiral of the Sunken Fleet—which is quite a title for an Army man.

I knew that the VA had to keep lots of records, but I was a little surprised to find that we have master index record cards on more than 30 million veterans, living, and dead. As you might expect, there are lots of Smiths on this roster—300,000 in fact—and about 13,000 of them are named Bill; 12,000 named Bob, and 11,000 named John.

I learned that I am keeping good company on the list along with 394 other John Gleasons, and there are 133 John F. Kennedys, including a former PT boat commander who now lives across the park from the VA building.

(Despite all this duplication, we found only eight Robert M. McCurdys, which just proves what I have always believed—you have to go a long way to find people like Bob McCurdy.)

Now, my purpose in detailing these statistics of magnitude and complexity is not to impress you. It is to ask your indulgence.

This I ask, because in an agency as vast as the VA there have always been and there always will be problems.

I am just beginning to get a closer look at some of the present areas of concern—at questions that deserve earnest consideration. Knowing the short time I've been on the job, it would be an insult to your intelligence for me to presume to know all the answers.

But I do want to emphasize this:

We will recognize and never hide from our problems, and.

We will identify the areas of concern whenever and whatever they might be.

Above all, we plan to meet our problems head on, and do our level best to achieve proper and reasonable solutions.

The very foundation of the Veterans' Administration is a sound and durable structure of benefits built by the Congress, in response to the will of the American people.

At the very core of this entire structure stands this single fundamental principle—service to veterans.

For in the Veterans' Administration, our job is to serve veterans, their widows, and their orphans in keeping with the laws of the land.

It may be that I'm old fashioned—or call me a fundamentalist if you will—but I happen to believe that service to veterans is the very reason for our existence. I believe that all projects and undertakings in the VA must be aimed at this goal of service.

Earlier this month when I first came with the Veterans' Administration I received my initial marching orders personally from President Kennedy. The President said he wanted a "speed up" in the payment of the quarter-billion dollar 1961 GI insurance

dividend as an aid to some 5 million veterans and as a stimulus to the Nation's economy. It is early in the game, but I have learned already that when the President wants action—he does mean action—and he means right now.

Considering that it normally takes a full 12 months to pay the dividend, the question we asked ourselves was, "How fast can we do it?"

At first we set our sights on completion by not later than June 30—which would cut in half the normal payment schedule—but we were determined to beat that date if we could.

Let me now give you the very latest report, which in my mind stands as a tremendous tribute to the willingness and energetic enterprise of all the people associated with our Department of Insurance.

As of today—VA employees who are working overtime—have completed the processing of over 3 million dividend payments.

Right now—at this moment—this program has pumped over $140 million into the American economy at a time it needed a lift.

What's more, it looks now like we will have this crash program completed by March 17, St. Patrick's Day, begorra.

This would mean completion of the crash program within about 6 weeks from the time President Kennedy ordered full speed ahead.

The VA has problems and challenges, but it also has friends and supporters, and you men in this room are typical of them.

And speaking of friends and supporters, I personally—the Veterans' Administration and veterans everywhere have lost one of their stanchest friends in the death of Watson B. Miller. He was a man of abiding wisdom and great understanding, truly a standard bearer for veterans of America.

But his spirit will go on, his great pioneering work will be carried forward by the Bob McCurdys, the John Corcorans, and by all of you.

Any Administrator of Veterans' Affairs needs lots of help and assistance to do his job. Fortunately, I have good help and great assistance right in the VA family, and at this time I would like to salute the loyalty, the dedication, and the competence of my coworkers that make the VA the great organization it is.

An administrator needs the cooperation and guidance that Congress can provide, and here again I consider myself blessed. The chairmen of the committees especially important to us—Senator BYRD, Senator MAGNUSON, Senator HILL, Senator YARBOROUGH; Congressman ALBERT THOMAS—and members of these committees are men of stature and sincere interest in the welfare of veterans.

But the veterans of America owe an even greater personal debt to Congressman OLIN TEAGUE, chairman of the only congressional committee devoted entirely and exclusively to their affairs. OLIN TEAGUE is tough, he is honest, he is kind, and he is fearless. The Veterans' Administration and its Administrator are most fortunate to have this man, and the dedicated members and staff of the House Committee on Veterans' Affairs as our advisers on the Hill.

Perhaps most of all, however, I need the grassroots kind of understanding and constructive criticism that only the American Legion and other responsible veterans organizations can provide.

I am counting on your support, and I assure you that I will perform my job as Administrator to the very best of my abilities in order to merit your support.

Even with all this help, I might still need just a wee bit of the luck o' the Irish.

With my name and my face, it doesn't seem to me that this is too much to ask.

Thank you for inviting me to join in your sessions. It is good to be with old friends once again.

Revaluing Gold

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. BARRY. Mr. Speaker, one of the smaller, but better, newspapers in this country is the Feather River Bulletin of Plumas County, Calif. Its editor is Rodney Alden, a man for whom I have great respect. Today an editorial of his came to my attention which was so thought provoking it seemed appropriate to bring it to the attention of the Congress:

REVALUING GOLD

When in 1934 the Roosevelt administration raised the price of gold to $35 an ounce it was to the accompaniment of dire predictions that the country would be ruined. After the fact, however, the prevailing sentiment was generally favorable—and in a great many cases the same voices that had been raised in opposition were now raised in approval. It illustrates one of the peculiarities of human nature, which instinctively assumes, as Voltaire put it, "that everything is exactly as it should be in this best of all possible worlds."

We have not the slightest doubt that voices of those opposed to increasing the price of gold again will again be heard largely in praise of the move—if it is ever taken. Indeed they indicate clearly, as they did before, that their opposition is based on instinct rather than reason. They tell us that to increase the official value of gold "would be, er, well, it's inflationary; I don't think it would be good for the country's economy."

There no doubt are those who, if the price of gold is to be boosted, would like to get their hands on as much of the stuff as possible and move it outside the United States until the new price becomes effective. Aside from that we see no evidence of any special interests at work, sitting behind the scenes and pulling strings, as the popular notion often has it in situations like this. It is simply a widespread instinctive opposition to change.

A recent headline on the financial page of the San Francisco Chronicle caught the eye. It said, "San Francisco Poll Opposes Gold Price Boost." Examination of the accompanying article disclosed it was about a poll taken by the Commonwealth Club of California among its members. Seven questions had been asked, the seventh being, "Should gold be revalued?". To this question 748 had answered yes, 1,187 no.

This is only about 3 to 2 against revaluing gold, which considering everything indicates a much more favorable sentiment than might have been expected. Take the same group a month after gold has been revalued and ask, "Was this the right thing to do?" and a good three quarters of the group would say yes.

As long as no change is made in the price of gold, just so long will the notion persist among some—probably the majority—that it should not be changed. The notion that somehow, in some way that can't be described or defined, control of the price of gold controls the economy, rather than the opposite. The notion that the gold is a symbol, or something, not a commodity—whereas in truth and in fact it is the commodity. The notion that to revalue gold is a basic, fundamental step to tinker with values, rather than the true fact values already have adjusted themselves. The notion that by being stubborn, by standing in defiance of the truth and the facts, bureaucracy can effectively prevent the workings of the law of supply and demand.

The truth is Uncle Sam's gold supply is draining away at an alarming rate. The truth is the price of gold is so artificially depresed that very little new gold is being mined in the United States. The truth is that if this situation is allowed to continue there will come a time when the U.S. Government has virtually no gold at all—when the real laws of economics prevail against the theories of the bureaucrats. When that time comes our bureaucrats in all probability will place a new official value on gold—and everybody who then holds gold, all over the world, will make a tidy profit. It's a pity the revaluation can't come before that happens—so as to solve a crisis before rather than after it arrives, and so as to make a little profit for Uncle Sam rather than for other people throughout the world.

Chicago Vote Frauds: Fact or Fiction?

EXTENSION OF REMARKS
OF
HON. EDWARD R. FINNEGAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. FINNEGAN. Mr. Speaker, now that the furor has died down over the "alleged" vote fraud in Cook County, Ill., in the November election, it is possible to appraise with some objectivity the allegations that were sprayed with less than shotgun accuracy in the press across the United States. For those who prefer hearing both sides of a dispute before adjudging the defendant, our fair city of Chicago, guilty or innocent, I commend to them the following article by Mr. Robert Lerner of Lerner Home Newspapers of Chicago entitled, "Political Scientists Take Chicago Daily Newspapers to Task for Building Vote Fraud Allegations Into Fact," as published on February 14, 1961.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Three University of Chicago political scientists have concluded an exhaustive study of the November 8 general election in Chicago, and concluded that the charges of vote fraud were unsubstantiated in fact and amplified by the Republican bias of Chicago's four daily newspapers.

Profs. Herman Finer, Jerome Kerwin, and C. Herman Pritchett made the study, admitting that they were Democrats, saying their goal was to make a sober evaluation of the "charges which have created such an adverse image of Chicago."

In the 13-page introductory statement, the professors wrote, "the 1960 election in Chicago was, in fact, according to Republican U.S. District Attorney Robert Tieken, 'cleaner than usual.'"

"And yet," the statement continues, "this election was made the occasion for an unjustified and unsubstantiated attack of extraordinary violence on Chicago's civic reputation. The assault was led by the official heads of the Republican Party in Illinois and especially Cook County, and was aided by the Republican National Committee.

"But indiscriminate and irresponsible charges of thievery, corruption, and fraud are not an acceptable method of contesting election results. This fact was recognized by the Vice President (Richard) Nixon at his farewell press conference (when he said), 'I believe, first, that the time to work for correcting such evils is before election day. And, second, I must point out that no party has a monopoly on this type of cheating.' "

However, the professors see Chicago's four daily newspapers as almost solely responsible for the image of fraud built up to nationwide proportions.

"The Chicago newspapers printed these charges," the introductory statement concludes, "seldom pointing out the lack of supporting evidence for them. Moreover, the newspapers themselves became participants in the campaign to picture the election as fraudulent, and on their own account repeated, multiplied and pyramided the charges of fraud in day-to-day crescendo.

"To meet the requirements of the campaign, minor incidents and irregularities were repeatedly blown up into the appearance of major and intentional frauds. (The report) covers an ample and representative sample of the stories that appeared, and shows the pattern and technique of the propaganda campaign conducted by the metropolitan press."

The heart of the professors' charges against the newspapers lies in one paragraph in the introduction:

"The newspapers may argue that they only carried the quotations of officials, candidates and others who were active in the election—that they did not themselves make the charges and accusations. But what actually happened in many cases was that the newspapers would carry stories of the allegations; then make the allegations charges; then make the charges facts; then make the facts conclusions—the conclusions being that the election was stolen in Chicago."

The statement recapitulated five facts about the 1960 election, facts that are intended to support the claim that the impressions given by Chicago's daily newspapers are erroneous.

They are:

1. A recheck of the voting machines gave Nixon a net gain of 312 votes out of 1,780,000 cast, "an amazingly accurate reporting of the vote."

2. The recheck of the voting machines in the State's attorney's race resulting in a net gain of 435 votes for Adamowski.

3. On the "discovery recount" of paper ballots, Adamowski gained a net of 6,342 out of 417,000 votes, leaving him 20,000 votes short of victory.

4. The State electoral board of four Republicans and one Democrat certified the Kennedy victory in the State on the grounds that there was not sufficient evidence of fraud in Cook County to change the results of the canvass.

5. The first assistant U.S. attorney, Albert F. Manion, was quoted extensively in the press regarding the possibility of a number of indictments being returned by the Federal grand jury, and hundreds of complaints were reported as having been referred to the grand jury for possible prosecution. Yet the December grand jury returned only two indictments and the January jury didn't return any.

The 35-page actual report is entitled "Analysis of Chicago Newspaper Stories in the 1960 Election," and rips apart the meanings of the headlines appearing in all four newspapers between November 9, 1960, and December 15, 1960.

To quote a few of the examples made in the report:

"One of the first charges of election irregularities was made by the Committee on Honest Elections headed by David H. Brill. This committee claimed to be nonpartisan and permanent. In fact, practically all its members were Republican. It seemed to have been set up just before the election for the purposes of the November 8 election alone.

"On November 8 and 9, in the Daily News, the committee alleged its clean election drive had prevented a minimum of 100,000 fraudulent votes in Cook County. The very word fraudulent prejudged the case, and no basis for the 100,000 figure was ever given, although it became a figure often repeated by top Republican officials and newspapers."

"The term 'fake votes' was used in a very heavy headline by the Daily News on November 9, giving the reader the impression that fake votes were proven, whereas they were only an allegation made by interested parties."

On November 9, "the Chicago Tribune began to participate. Its headline article put the word 'error' in quotes in the allegation that 10,000 had been denied the right to vote. Without any evidence it charged 'names illegally taken from lists.'

"In the body of the article thus headlined, all that appeared was that Mrs. (Marie) Suthers (the one Republican on the three-man board of election commissioners) charged that the names were omitted from the lists. She blamed laxity on the part of precinct captains during October, and so far she did not charge fraud."

On November 10, the American's heavy headline said, "Hundreds Face Vote Fraud Quiz." To that, Professors Finer, Kerwin, and Pritchett comment, "It would have been more faithful to the public to have said, 'hundreds face possible vote fraud quiz.'

"The tentative nature of the information actually at its disposal may be seen from some subsequent lines in the same article (quoting Manion). The American says, 'Entire first ward precinct may be summoned before jurors to answer complaints about chain voting, multiple voting, and the buying of votes.' "

"The reader should notice," says the political scientists, "the terms 'may be' and 'complaints.' What has been done here is to call names by false information in the headline and then to hedge in the body of the article."

Later in November, when the seal had been broken on a ballotbox, and it was revealed that it had been broken simply because ballots were in the wrong place and had to be removed, the Sun-Times headlines screamed, "Voting Records Disappear" and "Grand Jury Begins Fraud Search Today."

This indictment of the headlines and stories in the four daily newspapers is a powerful one, coming close to accusing the newspapers of out-and-out use of propaganda techniques in its news columns. None of the daily papers is exempted from blame, and the professors indicate that the papers intentionally played light with the facts in order to lead the public into the Republican camp.

The professors cite a number of people as being responsible for the "irresponsible and unsubstantiated charges" that gave the newspapers constant fuel. Among them are Adamowski, Francis X. Connell, George Dapples, Ralph Berkowitz, Manion, William Fetridge, Frank Durham, Homer Hargrave Jr., Thruston Morton and Elroy Sandquist Jr. All are Republican leaders.

At one point the report attempts to investigate the motives that prompted the newspapers to "keep up the attack" even though there was no proof, no substantiation, and possibility of changing the results of the election.

"On November 27," the report declares, "the Sun-Times gave away the motive for the many accusations of fraud. It printed a story headed 'Illinois GOP Has an Issue for 1962: Vote-Fraud Charges.' This article, written by Art Petacque, states:

" 'The party has a ready-made issue for 1962, when Illinois will again elect a U.S. Senator and a slate of Congressmen.' And then the reporter points out what he believes to be the motive for the vote fraud charges.

" 'If their recount effort comes to naught, and if their charges produce not a single indictment, Republicans, nevertheless, can sit back and watch the Democrats juggle the sizzling vote fraud issue, and make plans for its use in 1962 by keeping it in the public eye.' "

This statement, which indicates that the Republicans are yelling vote fraud—with the newspapers' help—simply to discredit the Democrats in the hopes of improving the GOP position in 1962, is considered an accurate one by Finer, Kerwin and Pritchett.

The efforts at raising issues without reference to fact is represented by the November 12 Daily News, which quotes Fetridge (chairman of the Midwest Volunteers for Nixon-Lodge), as having recalled that "in 1952 Secretary of State Carpentier was an apparent loser by 10,000 votes, but the recount made him a winner by 9,000."

The professors chide the Daily News with this statement: "But the fact is that there was no recount in the 1952 election for Secretary of State. Surely the files of the Daily News would have readily revealed this fact."

Col. Roger Taylor: A Distinguished Soldier

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial which appeared in the Charleston, S.C., News and Courier on February 28, 1961, extolling the fine character of Col. Roger Taylor.

Charleston has lost one of its outstanding citizens. As a distinguished military leader Colonel Taylor possessed the unusual ability of handling one of the most difficult military assignments in our section of America during World War II. In his retirement, he was one of Charleston's most valued citizens.

The character of Col. Roger Taylor made him singular among men. The memory of the life he lived will endure in my community as long as this community itself endures.

COL. ROGER TAYLOR

A soldier in two wars, Col. Roger Taylor commanded the Army Ordnance Depot at Charleston from 1937 to 1944 during a period of great expansion. After retirement he settled here as a permanent resident. Colonel Taylor and his wife, a native Char-

lestonian, were welcome additions to Charleston society.

A gentleman in all the best senses of the word, Colonel Taylor also was a man of keen intellect, conservative judgment and patriotic motives. Along with these qualities he had a sense of humor and courtesy of manner that made his company always agreeable. A metallurgical engineer by profession, Colonel Taylor had a notable business career before entering military service in World War I. He remained in the Army, and even after retirement toward the end of World War II, served his country in a civilian capacity in New Caledonia, until 1946.

The News and Courier expresses in behalf of the community a sense of profound regret at the death of this good citizen at the age of 82. We shall miss him and cherish his memory.

The Crisis in the Precious Metals

EXTENSION OF REMARKS
OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an address delivered by Dr. Elgin Groseclose, of Washington, D.C., before the Colorado Mining Association in Denver on February 18. The title of the speech is "The Crisis in the Precious Metals." I am sure the remarks of Dr. Groseclose will be of great interest to the Members of the House. The speech follows:

THE CRISIS IN THE PRECIOUS METALS

(By Elgin Groseclose)

Members and friends of the Colorado Mining Association, I welcome this opportunity to be in Denver again to meet many old friends and to make new friends.

I welcome this occasion to discuss recent monetary developments affecting the precious metals, gold and silver, and the industry that produces them. I will speak first of the happenings as they affect gold producers. The gold drain from the United States that is now troubling statesmen is, of course, front-page news. What is not so generally known is that the drain has been in progress for over 10 years and that the decade is the first in American history to record a net loss in the country's gold reserve. What heightens the gravity of these facts is that the drain has been going on in a period of extraordinary commercial and industrial activity accompanied by an expansion of monetary transactions that required increasing the gold reserves to maintain their validity.

THE SITUATION SUMMARIZED

Here are some of the basic facts of the situation:

1. Industrial output in the Western World has been expanding at the rate of about five percent per annum.

2. In the decade 1950–60 free world currency supply increased by about 60 percent. In North America this increase was 16 percent, in Latin America 400 percent, and in Europe 100 percent.

3. Free gold supply to support this currency expansion has increased less than 15 percent.

4. To provide acceptable reserves for these currencies, governments have been turning more and more to dollars, in the form of deposits in U.S. banks and holdings of Treasury bills. Such holdings by foreign central banks and institutions increased from less than $3 billion in 1949 to $10 billion currently.

5. Further to strengthen their reserves foreign banks have been buying gold from the United States to the total of $7 billion since 1949.

6. Foreign private interests, not completely trusting their own currencies, have been leaving their money on deposit here and have been buying Treasury securities, long-term bonds, stock market securities, or even currency. The total of such holdings, including the official holdings referred to above, have increased by $27 billion since the end of the war and currently stands in excess of $31 billion net of corresponding short-term assets held abroad by U.S. citizens. This $31 billion represents the size of the potential claims upon U.S. gold stock, since all of these assets are relatively liquid and convertible through the international banking mechanim.

SOURCE OF PAYMENTS DEFICIT

At this point the question arises: Where did foreigners get the money to buy all those gold and dollar assets? Year after year we have continued to export more merchandise than we have bought. It is true that we spend sizable sums abroad on sightseeing and souvenir buying, and our churches and charities are continually remitting large sums for various worthy causes. But these expenditures have not been important enough to offset our favorable trade balances, investment, and other income. The explanation, long denied in official quarters, but now reluctantly admitted, is the heavy international commitment for the maintenance of world peace by bases and garrisons abroad and a global program of foreign aid.

Total expenditures under various postwar programs is in excess of $80 billion. This is not the place to argue the validity of much of this expenditure, but we may remark on the quixotic nature of a policy that finds merit in balancing the international accounts of other countries at the cost of our own balance, and in incurring budget deficits at home to meet budget deficits of other countries.

THE U.S. GOLD POSITION STATED

It is what all this has done to our own monetary and fiscal position that is here of interest. Let me summarize a few points:

(a) In 1949 the Treasury held a gold stock of $24.4 billion as final reserves against banking and currency liabilities of $170 billion; currently a gold stock of $17½ billion supports banking and currency liabilities of $260 billion. The gold reserve ratio, less than 7 percent, is now at the level just preceding the great crash of 1933.

(b) The deficit in the balance of payments in 1960 was $3.8 billion, plied on top of a $7.3 billion deficit for the preceding 2 years, all contributing to a continuation of the gold drain and further weakening of the U.S. monetary position.

FATUOUS AND FEEBLE REMEDIES

We now turn to some of the proposals that have been put forward to correct the condition and stem the deterioration of the dollar. Because of the eminence of their advocates they deserve careful examination.

The first proposal is one so seemingly reasonable, innocuous, and touching so few interests, that it was promptly put into execution by means of a Presidential order on January 14. This order forbids any U.S. citizen or resident of the United States to acquire, hold in his possession, earmark, or retain any interest in any gold coin, gold certificates, or gold bullion situated outside of the United States, or even to buy or hold securities substantially secured by gold.

This order should be examined in the light of our historic tradition, and its conformity with the national tendencies and purposes. These purposes, since 1776, have been to proclaim and establish a more perfect liberty among human beings.

The process of extinction of human liberty always begins at the fringes. Tyrants, autocrats, dictators, and bureaucrats never assault the citadel; they begin in areas of agreement, or where the deprivation of liberty affects only a few and these, generally, who seem to be the privileged few. Once the principle is accepted by which the minority are squeezed from their foothold, a larger step is taken.

GOLD ORDER AND BRITISH NAVIGATION ACTS COMPARED

I mention these considerations because of the similarity between the Presidential order forbidding U.S. residents to acquire gold abroad and British legislation of the 17th century enacted with almost identical purpose. The imposition upon human liberty that finally led to the Battles of Lexington and Concord began with a seemingly appropriate measure to prevent a drain on the British monetary resources. This was the Navigation Act of 1651, which required the products of the colonies to be transported in British ships, thereby saving this much for the national account.

The reasoning behind the Presidential order is deceptively logical and appealing. Residents of the United States, it is explained, have been prohibited since 1934 from holding gold in this country, and it is only natural that the prohibition be extended to prohibit the holding of gold anywhere by U.S. residents. A collateral reason, one distinguished exponent of this viewpoint stated, is that "the purchase of gold abroad is, in practice, a privilege of rather limited availability".

The Presidential statement frankly conceded that the measure is one of limited effect. "It is not believed that a large amount of gold is being held abroad in this manner", it said.

One wonders, in the light of this admission, at the growing effrontery of officialdom is encroaching upon individual liberty.

Here, I respectfully submit, is an illustration of the process by which a free people are skillfully maneuvered into a state of submission to bureaucratic tyranny without their being aware of it.

Since only a few persons are in a position to buy gold abroad, it is easy to rouse an emotional resentment against them by means of a superficial logic. Once they have been compelled to submit to a fiat from Washington it is a simple matter to extend the power and authority of Washington to other classes of the citizenry.

PRECEDENT SET FOR OTHER SEIZURES

Now, I have heard of a well-to-do gentleman in Washington who is the proprietor of a French vineyard, acquired while living abroad. Surely this is a privilege of rather limited availability. I have heard of other well-to-do citizens who hold expensive grouse shooting preserves in Scotland and Kenya. If holders of gold may be compelled to divest themselves of their ownership in the hope that it will solve the embarrassment of a monetary regime in Washington, may we not expect the next step to be a prohibition of Americans owning vineyards and hunting preserves abroad, and after that lands and estates of any sort, or art objects, or even Paris gowns? And what shall we say of the branch factories and installations of U.S. business abroad? To what ends may this autocratic exercise of power proceed?

Let us touch upon another dilemma in this ill-conceived regulation, as carelessly thought through as the order compelling families of our troops in Germany to return home—now happily rescinded.

How do you go about enforcing such an order? Let us note that the vineyard owner

in this country must pay a stamp tax on the wine he makes from his grapes. Adopting the logic of the Presidential order, shall the Internal Revenue Service attempt to compel the unlucky proprietor of a French vineyard to buy revenue stamps for each gallon of wine produced from his grape harvest?

Note a further absurdity of the order. It applies to any person "subject to the jurisdiction of the United States." This includes French citizens and other foreigners resident here. Will the Treasury attempt to compel a French citizen here to divest himself of any gold he may have in his bank over in France?

GOLD AND THE NATIONAL INTEREST

It is argued that gold stands in a special category, that national policy is involved in gold as in the case of no other commodity. Let us examine this viewpoint. A few years ago it was national policy to forbid the manufacture or sale of alcoholic beverages. During the era of the most fervid enforcement of prohibition, did any one rise to assert that an American citizen should also be forbidden to have a cellar in his London club, or to ferment, bottle, consume, or otherwise dispose of the product of his French vineyard, assuming he were the fortunate proprietor of a French vineyard? It is generally believed that with the repeal of prohibition the country passed from an era of irrationality into one of sanity. It may be noted that the same year that witnessed the repeal of prohibition witnessed the suspension of currency redemption and the disappearance of gold from private posession. In the fanaticism with which the prohibition upon the ownership and trade in gold is being enforced, we may rightly conclude that we are still in an era of irrationality.

Here is what a distinguished banker says: "When people living here buy gold in foreign markets, observers abroad tend to exaggerate the significance. The buying of speculators and eccentrics is likely to be mistaken for signs of concern among responsible investors."

Speculators, you will note, are equated with eccentrics and both are likely to be confused with responsible citizens. This would suggest that Europeans are sadly lacking in discrimination or that the difference between responsible citizens and eccentrics is a hairline.

GOLD AS A GOVERNMENT MONOPOLY

The fact is that the monetary theories in vogue today lead to such absurdities as to justify the conclusion that the monetary theories themselves are absurd. Let us examine the basic absurdity behind these lesser absurdities. This is the notion that gold is good for governments to possess but not for individuals.

"We should make clear," says a leading banker and exponent of the new monetary economics, "what our gold is for, namely, for making international settlements, not for redeeming our currency and deposits."

Upon this logic, it is being urged in several high circles that we abolish our 25-percent gold reserve requirement against notes and deposits and use the whole gold reserve to settle our foreign balances.

Now, the obvious question is, if gold is of no use to individuals, of what use is it to governments? Why should governments continue to buy up annually about 85 percent of new mine production of gold? Why don't they use this money to pay social security benefits, pay off the debt, or whatever governments use money for?

The answer is that gold is valuable because it is the ultimate form of wealth, and the monopoly of gold is the most effective monopoly of power so far available. The monopoly of gold is, in short, the denial of all democracy and individual liberty, and all the traditions of our history that assert that the monopoly of power should rest with people, rather than the government.

The monopoly of gold in central bank vaults is not only the essence of political tyranny but in practice is a political absurdity. In theory, the monopoly is for the purpose of stabilizing the currents of economic life; practically it fosters inflation by means of speculation and hoarding of other forms of wealth, notably securities. May I illustrate the process by an example from personal experience?

During World War II, Iran faced a condition of runaway inflation, caused by flooding the country with paper currency to meet the financial costs of the British, Russian, and American troops, then occupying the country. From the standpoint of monetary theory, the paper rial was the most highly backed in the world, secured as it was with all the financial power of the three greatest sovereignties of the world, and with dollar and sterling exchange as well as with gold in New York and South Africa. Moreover, it was freely exchangeable with dollars and sterling at a fixed rate. Actually, it was becoming well nigh worthless.

The trouble was that the sterling and dollar exchange were of no immediate value, since they could not be used for buying goods, and the gold was in South Africa and New York, instead of Iran, where it was needed. Distrusting the depreciating rials, the well-to-do were buying up coils of copper wire, or copper bars,and jars of wheat, as a means of conserving their savings. Copper was in need for firearms and wheat was so scarce that near famine prevailed. Such, however, is human nature, and money is an instrument for dealing with the exigencies of a world filled with imperfect human beings.

In January 1943, I went to Iran as one of a group of advisers to the Iranian Government, and was appointed to the statutory post of Treasurer General by action of the Iranian Parliament. My chief task was to devise means of combating the inflation, and my chief resource was my experience 20 years earlier in the hard money economy in Iran and a fantastic inflation in the nearby Soviet Caucasus.

On examining the situation against the background of this earlier experience, I recommended that gold be put to its historic use as a store of value. I proposed that instead of financing the occupation costs with dollar and sterling exchange, gold be brought out and put on the market. Happily, my recommendation was adopted. Gold was freighted out by air and put on sale. People began to turn in their coils of copper, their Ali Baba jars of wheat, for pieces of gold, which in any case, were better for the purpose of hoarding. Goods began to reappear in the market, the value of the Iranian rial steadied, the inflation was curbed, and the fiscal policy of financing military costs by gold was extended throughout the Middle East war theater.

The point will be made that we in the United States are in an advanced stage of civilization that no longer requires gold in circulation as a store of value, a medium of payments. This view ignores two fundamentals of history—one, the psychology of prestige; the other, the services of the precious metals in times of emergency.

IMITATION OF BAD EXAMPLE

As to the first, we must note the profound influence throughout the world exercised by the policies and practices followed in this country. Potentates in remote areas of Africa must have motorcycle outriders as they drive through their dusty capitals, because the President of the United States has motorcycle outriders. "My Fair Lady" is as much a standard of musical excellence in Moscow as in New York. And the policy of a government holding 40 percent of the world's gold stock that forbids its citizens to hold gold or trade in gold is regarded as the epitome of political wisdom among emerging and inmature sovereignties of Asia, Africa, and the Middle East. In imitation of our managed money practices they institute central banks of issue and hold symposia on reserve ratios, exchange quotas, and the balance of payments while their children run naked in the bush and their servants puzzle over the incomprehensible hieroglyphics on the paper they receive as their wages.

The attempt to operate managed money systems is a major cause of the economic ills we are seeking to cure by our multibillion-dollar aid programs. We can see the disaster of managed money wherever we look, but we will direct your attention to one country only. Brazil is a land of fabled wealth; its cities are places of enchanted beauty; from its fields and mines pour a wealth of products into the export markets. But Brazil is in chronic economic difficulties and has been bailed out repeatedly by Export-Import Bank loans and other financial assistance from abroad.

If you seek an explanation of the recurrent crises you can do no better than to examine the hodgepodge of exchange rates by which business is compelled to make its transactions, and note the erratically downward tendency of the Brazilian cruzeiro, which has slipped during the past decade to about a sixth of its former value.

The Export-Import Bank and the International Monetary Fund have repeatedly pressed the Brazilian authorities on their currency mismanagement, but to what effect? What example of sound money practice do we offer them? I am reminded of Aesop's fable of the two crabs. The mother crab scolded her offspring for walking continually sideways. "Do you show me how to walk straight, and I will follow", said the wise young one.

The International Monetary Fund was organized by some 28 nations as a mutual provident association to provide a hospital bed for sick currencies. Promptly 28 currencies jumped into bed leaving the dollar to act as nurse. Now that the dollar is sick, who is to act as nurse?

PRECIOUS METALS AS STRATEGIC RESERVES

Second, the precious metals are the most important reserves in the economic arsenal of a sovereignty. While mercantilism—the direction of the economy of a nation to the accumulation of precious metals—has passed off the scene since the industrial revolution, its basic premise has not lost validity. In times of national and personal emergency, forms of movable wealth are highly convenient. They sustain a country's credit, they maintain the independence and security of the individual.

DEPLETION OF GOLD AND SILVER RESERVES

In this era of peace, our stocks of gold and silver are being depleted at a rate that would suggest that we are in the midst of a life and death struggle with a mortal enemy. Since I have mentioned silver, let me illustrate my meaning with a few recollections from history. Beginning in 1871, the sovereignties of Europe and the United States demonetized silver, replacing the metal with gold as the standard and paper notes for circulation. Beginning in 1900, those powers demonetized silver in their colonial dependencies, and good silver coinage became scarce throughout Asia. When World War I broke out, the population of India lost confidence in the paper money secured by British sterling. To save India from collapse, the British Treasury was compelled to provide the Indian authorities with large quantities of silver for the purchase of needed war mate-

rials and services. To find this silver the British Government had to appeal to the United States, and under the Pittman Act some 250 million silver dollars were melted down and shipped to India.

WARTIME DEMAND FOR SILVER

Following World War I, the process of demonetization was resumed, and much of this demonetized silver found its way to the U.S. Treasury through the Silver Purchase Act of 1934. At the maximum on May 6, 1942, the Treasury held 1,366 million ounces of seigniorage silver—that is, silver not included in the monetary reserve. With the outbreak of World War II, the conditions of 1918 returned. Throughout Asia, people refused to accept paper money at its face. Fearing Japanese invasion, fearing famine or unemployment, and the necessity of flight, they wanted easily movable wealth. Rajahs and maharajahs might sew diamonds and rubies in the lining of their clothes when they had to flee; the wealthy could perhaps hide a few bars of gold; but for the peasant, the servant, the cobbler, and the carpenter and the little shopkeeper in the alley, a few pieces of good silver would serve. To meet the insistent demand from these inchoate millions, the Treasury vaults were again opened and over 400 million ounces were shipped abroad.

More than this, it was suddenly discovered that in our electronic and nuclear age, silver was a metal of vast strategic potential, and over 900 million ounces were lent to industry for various war uses.

MONETARY REVOLUTION IN SILVER

Now, in the years since the war, to the great surprise of economists who have long denigrated silver as money, a monetary revolution in silver is in progress. Parking meters, automats, coin laundries, and vending machines are voracious users of silver. To fill their capacious maws over 46 million ounces of silver were minted last year. All over the free world, coinage and industrial demand require over 320 million ounces annually or over 1½ times the new mine output, estimated for 1960 at 202 million ounces.

Silver mining, as you, of course, know, has been depressed for close to a century. Some two-thirds of newly mined domestic silver comes as a byproduct of copper, lead, and zinc production. Silver has been depressed because of the competition it has had to face since 1870 from melted-down silver coinage coming into the market. Very little of that now remains. Handy and Harman identify something like 150 million ounces of demonetized coins in India and Mexico. Silver prices have been gradually moving upward since the end of the war, until they bumped against a ceiling 3 or 4 years ago. Since 1956 the Treasury has been a seller in the market at 91 cents an ounce under the discretionary authority given the Secretary by the act of 1946.

TREASURY SALES OF SILVER DECRIED

As a consequence of its sales to industry and its own coinage requirements, Treasury free stocks have now dropped to a tenth of their 1942 maximum and today stand at less than 120 million ounces, or about 3 years supply at current rate of outgo.

Silver miners are justified, I think, in their position that the interests of the Government, both in maintaining an adequate reserve of silver for its coinage and its stategic needs, and a virile domestic mining industry, demand a cessation of sales to industry. My own view goes somewhat further. While I have never supported a bimetallic standard, I have long been convinced that silver continues to have a monetary role as significant as that of gold. In the Northern Hemisphere this role is as subsidiary coinage, but among the vast populations of Asia, Africa, and Latin America, silver should be restored to the standard of value.

We are spending billions of dollars every year to stabilize the economies of their regions, to meet the deficits in capital formation and to promote greater capital formation.

Now capital formation is simply an economist's 5-dollar word for "a penny saved is a penny earned." People will not save—as we know in this country—when they see the value of their savings eroded by the depreciation of their money. And in those countries where the paper note issues have been expanding at rates of up to 40 percent a year, there is no incentive to save.

SILVER AS AN AGENCY OF ECONOMIC REFORM

But you can encourage saving—capital formation—if you give them good money. Among people so generally poverty stricken as these a piece of silver the size of a quarter represents wealth. In the old days these pieces were accumulated, one by one, to form a necklace or an anklet, and the man's wife became his savings bank against the day of famine and disaster—or happily the day of opportunity to buy a shop, or a piece of ground. We could do much to put these countries again on the road to prosperity and political contentment, and save ourselves billions of dollars in aid money, if we would encourage their governments to restore good silver money to circulation in place of the fiat and depreciating paper issues that now so inadequately serve the purpose.

Regrettably, I am pessimistic about the outlook. I find no appreciation in official circles of the tremendous potential which good silver money can exercise in promoting healthy, expanding economies. Nor do I find any serious effort toward abating the burden on the American economy and stopping the gold drain by reducing our foreign aid and military commitments. I am not hopeful that the measures so far offered will meet the condition. They all reveal an unwillingness to face the realities.

From the standpoint of the producer of precious metals, these conditions are a forecast of a better relationship between revenue and expense, and more profitable operations. It is becoming generally evident that the Treasury cannot much longer maintain a ceiling on the market price of silver through its policy of sales at 91 cents. When the Treasury's silver stock is exhausted, in the course of the next year or so, we may look for silver prices to move upward to the level of $1.29 an ounce. Some fear that this upward movement may be explosive or erratic, to the disruption of markets and hardships of all including the miner. They would like to see the Treasury taper off its sales and use its remaining stock of free silver not to supply the market, but to stabilize the market and to maintain an orderly movement of prices.

At the $1.29 level, a new factor enters. At that price the nearly 2 billion ounces of monetary reserve silver becomes available. At that price, or a little above, it will become profitable to turn in silver certificates for silver. When this situation arrives, we may hope that the higher price will have brought sufficient new production into being to satisfy the industrial demand and to keep the silver mining industry in a state of modest profitability.

OUTLOOK FOR GOLD

The timetable for gold is not so predictable, but the signposts are plain as to where we are headed.

There is a scarcity of gold in the world to meet the monetary commitments based on gold. Some further successes may be achieved in economizing gold—to use the sophistry of monetary economists—but a revaluation of currencies in terms of gold is inevitable. The U.S. gold stock is diminishing and the claims on it continue to increase. The burden upon the falling U.S. gold stock is heavier than in 1932.

We can watch the clouds gathering; we can foretell the storm, we cannot foretell the hour; but we can be certain it will not pass.

Birmingham's Festival of Arts

EXTENSION OF REMARKS
OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. HUDDLESTON. Mr. Speaker, since 1961 is the centennial year of the War Between the States the "Festival of Arts" in Birmingham chose as its theme "Salute to the South." This Festival of Arts is an annual event and consists of a number of cultural and social events.

This year the principal event of the Festival was a "Celebrity Homecoming" to which a number of Birmingham natives and southerners with Birmingham connections were invited. All of these people have achieved considerable success in their chosen fields of endeavor and are widely known for their accomplishments and renown.

The list includes people who have had success in the entire gamut of human activities from sports to Nobel prize winners. Included are artists, actors, architects, admen, journalists, writers, and window dressers. It is a list which reflects the cultural vitality of a city of which the Nation can indeed be proud.

I include herewith the list of distinguished guests at the 1961 Birmingham Festival of Arts:

CELEBRITIES INVITED TO THE FESTIVAL OF ARTS, 1961

Hugh Abernathy, drama; May Allison (Mrs. Carl Osborne), Cleveland, Ohio, movies; Mel Allen, radio; Mary Anderson (Mrs. Leon Shamroy), Hollywood, Calif., movies; Buddy Anderson, in care of Lou Snitzer and Al Fritiz, Hollywood, Calif., movies.

Tallulah Bankhead, drama; Jack Barefield, New York, N.Y., playwright; John Baragray; Gene Bayliss, Westport, Conn., drama; Reuben Bell, Sylacauga, Ala.; Bill Berney; Nash Burger, New York Times; Gage Bush (Mrs. Richard Englund), New York, ballet; J. K. Buttersworth, Mississippi A. & M. College, Starksville, Miss., writer, "South of Appomatox"; Jimmy Britton, Manhattan Beach, Calif., drama; Joe Braswell, New York, decorator; Joe Bell, Alpha Portland Cement Co., New York; Johnny Mack Brown, Hollywood, Calif., movies; Ben Baldwin, Chicago, designer; Barrett, dean of School of Journalism, Columbia University, New York, journalism; Betty Baldwin, Denver, Colo; Bonnie Bolding, Corpus Christi, Tex., movies.

Jerry Cadek (Mrs. George Lucktenburg), Conservatory of Music, Chattanooga, Tenn., violin; Hodding Carter, Greenville, Miss., journalism; Alice Chalifoux, Cleveland, Ohio, harpist; Mr. and Mrs. Valentine Crescenzi, Dallas, Tex., decorators; George Cornish, journalism, ex-managing editor, Herald-Tribune, New York; Helen Claire, Montgomery, Ala., drama; James Saxon Childers, Tupper & Love, Inc., Atlanta, Dunwoody, Ga., writer; Frank Moore Cross, Jr., Lexington, Mass., oriental scholar.

Jeff Davis III.; Mr. and Mrs. Borden Deal, Tuscaloosa, Ala., both writers; Martha Dean; Evelyn Dahl, Mobile, writer.

Genie Earle, Crestline; Douglas Edwards, Columbia Broadcasting Co., New York, radio-TV; Lehman Engel, New York, composer.

Wilson, Folmar, New York; William Faulkner, University of Virginia, writer; Louise Fletcher (Mrs. Jerome Bick), Los Angeles, Calif., TV; Peter Flourny, Dick Fitzpatrick, Mr. and Mrs. Scott Forbes, London; Ray Furr, Mississippi State College for Women, Columbus, Miss., radio-TV.

Lili Gentle (Mrs. Richard Zannuck), Beverly Hills, Calif., movies; Eddie Gilmore, London, England, journalism, Associated Press reporter; Virginia McDavid Goodson, Miss Alabama, TV; Mrs. Sterling Graydon, Greenwood, S.C., writer; Alex Grammas, St. Louis Cardinal, St. Louis, Mo., baseball.

Gwen Harmon, Hollywood, Miss Alabama, singer; Ossie Hawkins, Metropolitan Opera, New York; Sarah Henderson Hay (Mrs. Nikolai Lopatnikoff), Pittsburgh, Pa., poet; Bob Hiden, London, England, decorator; Senator and Mrs. Lister Hill, Washington, politics; Sally Hill, Progressive Farmer, journalism; William Bradford Huie, Hartselle, Ala., writer; Congressman and Mrs. George Huddleston, Birmingham; Frank House, Cincinnati Reds, Cincinnati, Ohio, baseball; Emmett Holcomb, New York, florist, decorator.

Charles Ireland, Ambassador East, Chicago, Ill., vulcan materials executive; Colleen Ireland (Mrs. Charles Henri Sevene), Versailles, France—La Filolie, St. Amand de Coly, Montignac, Dordogne, France, winemakers of France.

Scott Jackson; Irene Jordan (Mrs. Arnold Caplan), New Rochelle, singer.

Harnett Kane; Charles Kleibacker, New York, designer.

Douglas Leigh, New York; Harper Lee, New York, writer; Arthur Lipkin, Hotel Sachur, Vienna, conductor; Nan Leader, Pasadena Playhouse, Beverly Hills, Calif., actress.

Ellen and Hugh Martin, Asa Maynor, Linda Meade, Natchez, Miss., Miss America; Mary Ann Mobley, Brandon, Miss., Miss America; Gene Moore, in care of Tiffanys, New York, window decorator; Martha Moore, King Merritt, New York, Sally Lee Maloney, Mobile, Ala., drama.

John Newfield, Columbia Motion Pictures, Publicity Dept., New York, Lula Jean Norman, Dale Nunnlay.

Gail Patrick, (Mrs. Cornwell Jackson), Hollywood, Calif., actress; Gov. and Mrs. John Patterson, Montgomery, Ala.; Sylvia Pizitz, New York; Robert Kelly Posey, Office: Skidmore, Owings & Merrill, Scarsdale, N.Y., architect, Skidmore, Owings & Merrill.

Nell Rankin, New York, Wayne Rogers, Beverly Hills, Calif., actor on TV, Stagecoach West; Catherine Rogers, Camp Hill, Ala., Rella Rudolph, Paris, France, artist; James H. Rives, Fauquier County, Va.; Dr. Paul Rudolph, dean of architecture, Yale School of Fine Arts.

Elise Ayres Sanquinetti (Mrs. Philip Sanquinetti), Pittsburgh 13, Pa.; Jack Smith, Washington, D.C., architect; Zeke Smith, Baltimore Colts, Baltimore, Md., football; George Kitter Smith, architect; Senator and Mrs. John Sparkman, Washington, D.C.; Bill Sprating, Taxco, Guerro, Mexico, ceramics; Arthur Stewart, Cannarie Island, artist; Hudson Strode, University, Ala., writer; Hugh Stubbins, Jr., Cambridge, Mass., architect; Syd Ricketts Summer; Robert E. Sessions, Evansville, Ind., Mead-Johnson vice president.

Mary Elizabeth Talmadge, New York, advertising executive Young & Rubicam, New York; Guy Taylor, Phoenix Symphony, Pheonix, Ariz., conductor; William Taylor, airlines executive; Raymond Teague; Frances Tillotson, Tuscalooso, Ala., writer; Harry Towne.

Allen J. Wade, Schenectady, N.Y., vice president, General Electric; Elise Sparrow Watts (Mrs. Harry D.), New York, Miss Alabama; Rebecca Webb, dancer; Dorothea Warren (Mrs. Chas. Fox), R.F.D. No. 3, Newfield, Conn., illustrator; Mildred Martin Welden, TV set designer; Eudora Welty, Jackson, Miss., writer; Lois Wilson, Beverly Hills; Andrew B. White, Music School, Drake University, Des Moines, Iowa, singer.

Unions Meet Automation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues, the following report by AFL–CIO President George Meany to delegates at the conference on automation of the New York City Central Labor Council, AFL–CIO, on November 29, 1960:

Change is about the oldest problem which mankind has had to grapple with since the dawn of civilization. Conceivably, the day the caveman began to use the lever, or manufactured his first crude wheel, or discovered fire, the problem of social change became an impulsive force in human society.

Today, we describe the new era of industrial change by the word, "automation." In and of itself, automation is not the problem. After all, in any industrial society there is always the problem of technical change. Automation is merely the third industrial revolution in human history; an era of a faster rate of change affecting more types of workers.

The first industrial revolution came with the substitution of the machine for manual labor and tools, the rise of mass production techniques, and the organization of the factory.

The second industrial revolution, beginning with the 20th century, introduced the techniques of scientific management to factory administration. That meant specialization of workers into limited functions, as on the modern assembly line. Measuring devices and procedures such as, time study, budgeting, and accounting, were applied to all branches of production. These innovations meant a swift increase in man-hour productivity in this country.

AUTOMATION: THE THIRD INDUSTRIAL REVOLUTION

The industrial revolution in the second half of the 20th century is symbolized by the replacement of men in the performance of mental operations. The tools include the transfer machine, servomechanisms, electronic computers. But whatever their fancy names may be, their purpose is fairly simple—displacement of clerical, manual, technical, and professional workers by machines which take over human jobs.

The machines, however, don't make the problem for human society. The problem is the adaptation of human society to change. Where the adaptation process lags and the automation process proceeds without any social controls, then worker-consumers become victims of irresponsible change and all of society naturally suffers.

The great depression of the thirties was not produced by mechanization. It was produced because American society and Government were unaware that significant deteriorating changes in the economy were taking place and laborsaving devices were disgorging employees at a faster rate than new jobs and buying power were being created.

SCIENCE AND AUTOMATION CHANGE JOBS

Today, workers and employers are feeling the consequences of a higher rate of industrial change. Older skills and experience have become obsolete. Blue- and white-collar workers, must find jobs in new fields of employment. Automation is hurrying the birth rate of new products and industries. Competitive industries, such as synthetic fibers, plastics, aluminum, and natural gas are displacing older industries.

Just think of how American industry has been changed already and how it will be changed tomorrow with the developments in space technology, atomic power, solar energy, instrumentation, industrial research, electronic, and communication revolutions.

Just think of what computer automation means—the automatic handling of information by use of electronic systems. Or, "Detroit automation," whereby machines in production are linked together by means of automatic transfer devices. Or, the meaning of process control systems whereby computer servomechanisms operate oil, chemical, and atomic plants. Or the use of numerical controls which by the use of tape and other automatic devices can direct the operation of machines and whole machine systems.

TECHNICAL AND AUTOMATION CHANGES ARE INTERNATIONAL

One of the things to keep in mind about these new changes is that other advanced or some underdeveloped countries are equally capable of introducing computers and electronic controls and devices. A backward country may be unable to build a computer but there is no reason why, if it gets a computer, somebody can't be trained to run it and, even possibly, maintain and repair it.

And not only can democratic countries use automation but Communist countries as well. The Soviet Union, which has long suffered from a shortage of skilled labor, has been introducing automated assembly lines to meet that problem.

RATES OF PRODUCTIVITY ARE RISING

These technologically revolutionary changes have led to significant increases in the physical output per man-hour. Although the percentage increases may seem small, in total effect they have meant enormous increases in the output per worker. In other words, in the same 8 hours, a worker today can produce far more than he could have 70 years ago.

The annual rate of increase in physical output per man hour is:

Years:	*Increase (Percent)*
1889–1919	2.0
1919–47	2.4
1947–57	3.4

EFFECTS ON EMPLOYMENT

When a nation's economy is on the upgrade, as in the immediate postwar period, automation is faced confidently by most people. A worker who loses his job to a machine can go out and get another one and even, perhaps, a better one, at a brand new plant. But when the economy gets stuck in the mud of stagnation, then there are no new jobs, no new plants. Laborsaving investment dominates rather than new growth, depressed areas increase, unemployment keeps rising and the jobless worker becomes immobilized because he has no other job to go to.

AMERICA IS NOW STAGNATING

The United States is now in an era where the only figure which shows an increase is unemployment. Gross national product is declining. Whatever increase is visible in the employed work force is primarily due to an increase in part-time workers.

Let's look at some of the figures so that we can understand what has been going on in the United States over the past 7 years.

TABLE 1.—*The United States is now in an era of economic stagnation*

Real per capita gross national product (1959 dollars):

Year:	Amount	Index (1953=100)
1953	$2,617	100.0
1959	2,725	104.1
1960 (1st 9 months)	[1] 2,768	[1] 105.7

UNEMPLOYMENT

Year:	Number (millions)	Rate percent of labor force
1953	1.9	2.9
1959	3.8	5.5
(1960 (1st 9 mos.)	3.9	[1] 5.3

[1] Seasonally adjusted annual rate.

TABLE 2.—*Rise in work force primarily, part-time workers*

INCREASE IN LABOR FORCE, FIRST HALF 1953 AND FIRST HALF 1960

Type:	Million
Total	6.0
Full-time workers	.7
Part-time workers	2.9
Not at work (because unemployed, vacations, illness, etc.)	2.4

THE JOBS AMERICA WILL NEED

Demographers are people who study the statistics of population, the probable increases and the declines. The demographers tell us that at the next census in 1970, the population of the United States will be 208 million as against 180 million in 1960. The work force which is estimated today as 74 million people will increase by 1970 to 87 million people. Where are the jobs going to come from?

If you take a pencil, you can figure out the problem America will face. Between 1960 to 1970, the work force will increase by 13 million people who presumably, will be looking for jobs. Divide 13 million by the 10-year difference between 1960 and 1970 and you get an increase of 1,300,000 persons in the work force each year—or to put it simply—we will need almost 4,000 new jobs each day just for the people entering the army of job-hunters. More jobs will be needed for people displaced by automation, in addition.

Will the American economy have these jobs available? They certainly are not available right now. Will they be available tomorrow?

NEW YORK UNEMPLOYMENT EXCEEDS NATIONAL RATE

Rates of unemployment

	United States	New York City
1955	4.4	5.5
1956	4.2	5.0
1957	4.3	5.3
1958	6.8	7.6
1959	5.5	6.0
1960	5.5	5.8
(9 months)	(3,830,000)	(263,000)

Source: New York State Department of Labor.

The rate of unemployment in the New York metropolitan area since 1955 has been above the national level. In New York City, unemployment is higher than in the surrounding districts in the region.

The unemployment problem in this region has been more serious than that of the country as a whole.

What can we do about it?

A LABOR PROGRAM FOR MEETING AUTOMATION

1. Plant and unit collective bargaining goals

A. Advance notification of union and workers by management on a regular, scheduled basis of all innovations in machinery, methods of production, work complements, and assignments of work force to provide for internal adjustments to minimize displacement of workers.

B. Policies to facilitate adjustment:

1. Restrict new hirings to allow for transfer of displaced employees to other jobs to be provided at no cost to workers.

2. Establish refresher and retraining programs to qualify employees for new jobs.

3. Prescribe specific transfer rights of present employees to new jobs.

4. Provide organized training programs for jobs to which transferred.

5. Guarantee former earnings to employees transferred to new jobs.

C. Jobs, department and plant seniority systems which insure maximum security for long-service employees.

D. Job, wage-rating systems which compensate for increased responsibility, higher conceptual skills, and greater productivity.

E. A specific job transfer and placement program for older employees.

F. Benefits for displaced employees:

1. Guarantee all accrued holiday and vacation pay benefits and medical and hospital benefits while unemployed.

2. Supplementary unemployment benefits.

3. Severance pay for permanent employees.

4. Full vesting of pension benefits for employees released for technological reasons irrespective of length of service.

5. Preferential rehiring rights under company or industry agreement.

2. Company and industry collective bargaining goals

A. Transfer and rehiring rights for employees to jobs in other plants of a company or other companies of an industry with provision for covering costs of relocation and retraining.

B. Limitation on the hiring of new employees to absorb the displaced employees of a company or industry.

C. Establishment of a joint labor-management development agency to promote introduction of new products, and development of new uses for old products, derived from active basic and applied research.

3. Community facilities and services in New York area

A. Identifying physical sites and civic services stimulating outmigration of industry and institute corrective measures.

B. Identify further possibilities for advancing New York City and metropolitan area as headquarters for the American economy, fashion, travel, and service center and take steps to implement them.

C. Assure adequate educational facilities for preparing the young, and updating and retraining adults for the changing job patterns in our society.

D. Improve facilities for helping new Americans adjust to our social and economic society.

E. Eliminate all vestiges of color, ethnic, or religious discrimination in our midst to assure adequate economic opportunity for all.

F. Improve public and private welfare agencies to assist individuals and families adjust to changing economic status.

G. Initiate additional programs for accelerating improved housing.

4. State and national governmental programs

A. The Federal Government must be dedicated to the maintenance of a full employment economy.

This demand cannot be subordinated to any other domestic objective.

The New York City Central Labor Council dedicates itself to demanding Federal policies and programs to realize this goal.

Besides initiating needed Federal programs for modernizing our public and communal facilities and developing our resources, the Federal Government must stimulate research and development activities to provide new materials, products and services to help the American people lead a fuller life and assist the newer countries attain economic and political security and higher living standards for their people.

B. Federal Government must guide and assist financially in the redevelopment of distressed urban and underdeveloped rural areas.

C. Adequate adjustment program for displaced workers:

1. Improved insurance benefits for at least 39 weeks.

2. Relocational allowances.

3. Improved interstate job notification system.

4. Programs of technical and vocational retraining.

D. National standards or minimum guarantees:

1. $1.25 minimum wage.

2. Adequate unemployment benefits.

3. Disability benefits.

4. Hospitalization and medical benefits.

5. Pensions.

E. Early retirement benefits for technologically displaced persons under the social security system.

5. The shorter work week

We urge the American people and Government to take immediate steps to provide productive work for all who desire.

Let us make a reality of the Employment Act of 1946. A shorter work week will permit Americans to share in our higher output and assure jobs to all.

America needs the added production that automation makes possible—to provide an adequate national defense; to improve living conditions, particularly of low-income families; to provide public services; to provide financial and technical assistance for the people of the less-developed regions of the world.

But the mere existence of automatic and semi-automatic machines provides no assurance that the new technology will be used fully and wisely. America needs government and private policies that will encourage full employment and the maximum use of productive equipment.

Organized labor insists that the burdens of rapid technical change must be cushioned, that government and business assume their responsibilities to minimize social dislocations and to provide adequate cushions that will protect workers, their families and communities against the hazards of radical technological advances.

A Vote in Favor of Continuing the House Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. CORMAN. Mr. Speaker, the Director of the Federal Bureau of Investigation, Mr. J. Edgar Hoover, has stated that "we are already at war with the Communist world, and that we are losing that war." This is a dire statement, and one which should give all loyal, freedom-loving Americans reason for pause. This struggle, which may go on for our lifetimes, or which could end in a thunderclap of nuclear horror in a few minutes, must not be lost.

We can best wage this war against communism with the weapons given to us by our forebears and a beneficient providence: truth, moral and military strength, and a profound faith in the legal machinery of our Republic. This is no time for amateur or hysterical anti-communism. The Soviets face us with an advance guard of skilled, ruthless professionals. Their lines are manned by quiet, coldly cynical men—diplomats, propagandists, and experts in subversion.

We must counter their professionalism with quiet, unstinting efficiency, their skill with greater skill, their ruthlessness not with greater ruthlessness but with vigilance, strength, and a profound regard for the democratic processes we defend. They must be met head-on by men like Mr. Hoover and his superb organization, who know communism's means and deceit. They must be challenged by a vigorous Justice Department, working within the framework of a Constitution that has protected us from domestic and foreign tyranny for nearly 200 years.

The job of waging this war belongs in these hands, but these hands must ever be guided and restrained by the rule of law, not of men. Thus, the Congress, the lawgivers, must be responsive to the need for safeguarding both our Nation's security and its tradition of freedom and equality. The fine line which we must tread in fulfilling these responsibilities is sometimes lost sight of in our zeal to turn back a frightening menace. In this event, we are backstopped by the courts, which maintain a lofty and unfettered vantage from which to judge and determine constitutional right or wrong.

I suggest, however, that this need for coolness, for judgment, for efficiency, and—yes, for restraint—is ignored too often by men whose loyalties, if not judgment, could never be questioned. I ask if our Nation, faced with its most perilous challenge, can long afford the luxury of such irresponsibility. Can we long afford to have high-placed officials calling for suspension of constitutional safeguards when the uncommitted nations of the world cry out for greater, not less, freedom?

I do not accuse the members or body of the House Committee on Un-American Activities of being witch hunters. They have made serious errors in judgment, in my opinion, but such error is always a threat when you are trying to combat so awesome and deceitful an enemy as communism. But this fact does not undo the harm, or retract the ill-considered pronouncement of the committee and its members in the past.

Actually, the greater harm comes, not from within the committee, but from without. For the committee, by its mere existence and the nature of its public image, stimulates among many impressionable Americans an unhealthy and sometimes frightening super-patriotism. This superpatriotism manifests itself in causes of questionable Americanism and loyalty. I speak of such causes as the impeachment of our Chief Justice and his fellow jurists on the Supreme Court. I speak of groups like the swastika-banded new Nazis, offspring of a scourge which 30 million people died to eliminate less than two decades ago. I speak of every advocacy or attempt to overthrow the constitutional traditions of our Republic by any group, whether they call themselves American Nazis, or the Committee To Impeach the Supreme Court, or the American Communist Party.

I submit that the House Committee on Un-American Activities helps create just the sort of hot, dank atmosphere in which these frightful spores can grow and thrive. I cannot agree that this is the atmosphere we need to successfully combat communism. Need one un-Americanism be fought only with other un-Americanism?

Least of all do I accuse the membership of these organizations of being disloyal. I feel they are being misled, in many cases, by wild-eyed extremists. They are home-loving and freedom-loving Americans, most of these followers, who are deafened by the strident cries of these leaders, who ride out armed with ammunition provided too often by the committee whose appropriation we consider here today: an arsenal of half-truths, generalities, irresponsible accusation, and inconclusive findings.

But probably the greatest harm is that done to the serious struggle against communism. The superpatriots have done nothing but cloud the atmosphere of enlightened anticommunism. Control of subversion is not a matter of emotion and brute force, except perhaps in the Soviet Union. Under our system of government, it is a matter of detection, surveillance, and above all law. Nobody wants to see our way of life swept aside by godless communism. But neither do responsible Americans want to see our freedoms lost or suspended by irresponsible anticommunism. I would hope one day that this distinguished body would see this clear danger and act accordingly, in the interest of a better America.

With your permission, Mr. Speaker, I should like to extend my remarks further with two editorials, one from the Los Angeles Times entitled "Criticism and the Committee," and another from Concern, a publication of the general board of Christian Social Concerns of the Methodist Church, entitled "Operation Abolition: An Honest Film?" I suggest that these two publications uphold positions of unchallenged patriotism, but point out nevertheless some of the clear dangers in the committee which I feel need expression as I cast my vote in favor of the appropriation for the House Committee on Un-American Activities:

[From the Los Angeles Times, Jan. 20, 1961]

CRITICISM AND THE COMMITTEE

The Congress is again being deluged by demands that the House Committee on Un-American Activities be abolished, that a halt be called to this controversial legislative inquiry into the shape and extent of the Communist threat.

It has been suggested by the committee's defenders that all of its critics are subversives or dupes. They are not. There has been responsible and justified criticism of both the personnel and procedures of the committee.

The issue, however, is not whether the performance of the committee has been ideal but whether its imperfections justify its elimination. We think not.

No thoughtful person would seriously state that the danger of Soviet subversion has ended or even lessened. It is a constant aim and continuous effort of the Communists to try to undermine this Nation by any means possible.

If the threat then persists, it is surely the obligation of the Congress to concern itself with the problem and to seek information and remedies.

Many opponents of the Committee on Un-American Activities would say that the combatting of subversion should be left entirely to the FBI and Central Intelligence Agency and similar bodies. Does this mean that they want their elected representatives to abandon any direct interest in the matter?

We would not argue that the committee has fulfilled its difficult task perfectly—any more than we would claim this for any other congressional group. HCUA members have demonstrated overzealousness and an overconcern for the publicity value of their hearings and findings. Yet this is hardly something unique in a committee of the Congress.

Nor should this committee, in the final analysis, be judged solely according to some arbitrary formula that states that X number of hearings should produce Y number of proposed bills. The function of legislative inquiry is too vital to be circumscribed by such specious criteria.

To concede the committee's faults is not to condone them. They should be corrected but not by abolishing the committee. The potential usefulness of the Committee on Un-American Activities outweighs, we feel, any responsible argument for its elimination.

[From Concern, Jan. 15, 1961]

"OPERATION ABOLITION"—AN HONEST FILM?

(By the Reverend Robert W. Moon, pastor of the First Methodist Church, Fresno, Calif.)

A dangerous piece of propaganda is being distributed throughout the country in the form of a movie called "Operation Abolition." It is being widely shown at schools and clubs and churches, usually under the sponsorship of a patriotic organization.

WHAT IS IT ALL ABOUT?

The incident it describes happened in May 1960, in San Francisco at a hearing called by the House Un-American Activities Committee. The HUAC subpenaed several alleged Communists for public interviews.

Students from several bay area colleges and universities decided to exercise their lawful rights of protest and petition by picketing the hearings. Among other things they were concerned about the committee's refusal to publish their sources of information and the refusal to allow witnesses the opportunity to cross examine their accusers.

The students took careful precautions to guard against infiltration of their ranks by outsiders. Each wore an identifying arm band. They agreed that there was to be no violence, that they would follow their own chosen leaders and not be misled by any subversive persons who might be around.

Some of them were provoked beyond their ability to maintain their self-imposed disciplines. Provocative factors included the failure of officials to keep a promise that some of the students would be allocated seats in the hearing room and the fumbling and brutality of policemen. The students became noisy, too noisy. Finally officers dragged and washed them out of the building with fire hoses.

THE MOVIE, "OPERATION ABOLITION"

After it was all over, the HUAC subpenaed films of the demonstration taken by bay area

television stations. Without compensating the people who took and owned the films, they were turned over to a private commercial organization, Washington Video Producers, Inc. The film company deleted and edited the films into a movie, "Operation Abolition."

The movie carries no credit lines. Apparently no organization is willing to admit responsibility for it. Congressman FRANCIS E. WALTER, Democrat, of Pennsylvania, the chairman of the HUAC, is shown at the opening of the film and appears as one of the commentators. An employee of the committee is the narrator.

The movie sets out to prove that the students were inspired and led by Communists. It is a very disturbing film and often has provoked in the viewers fascistic tendencies which may be innate in each of us.

IS IT AN HONEST MOVIE?

It is not an honest movie. The men with the scissors cut out all pictures of the provocative acts by police officers. A reporter for the New York Post said: "Never in 20 years as a reporter have I seen such brutality." Police brutality was also reported in the stories carried by the New York Times, the San Francisco Chronicle, and the Oakland Tribune.

The film does not show the care taken by the students to prevent infiltration, violence, and rioting. The narrator of the movie talks about violence on the part of the students, but there are no pictures of student violence. With a few minor exceptions, there was none. By the use of scissors the producers were able to change the chronology of events so that acts that did not happen consecutively are shown as if there were a casual relationship between them, when there was not.

In the introduction to the film, Congressman WALTER dramatically warns that the audience will see known Communists at work. He names them. He deliberately plants the implication that the Communists were there to inspire and lead the student demonstration. The truth is that the Communists were there because the committee had subpenaed them.

DISTORTED TRUTH

Our concern is not to defend the students. Some of them were provoked into doing things they should not have done.

Our concern is that an agency of our Government has so grossly distorted the truth of what happened that the net effect is a lie. The HUAC has had a great deal to say about the dishonesty of Communists. Yet the committee has resorted to the same tactics. It has been subversive of the American ideals of truthfulness, fair play, and justice. This kind of propaganda does not contribute to an informed public.

We are also concerned about the emotional response provoked in viewers of the movie. The response is often fascistic in nature and doubly evil since it is inspired by a deliberate misrepresentation of the truth. The chief investigator for the HUAC on the west coast has publicly admitted, on the Goodwin Knight television show, that the film contains inaccuracies and distortions.

WHAT CAN YOU DO?

There are several things that you can do about this film.

1. Get additional information. See the article in the Reporter magazine for November 24, 1960. Send 15 cents to the Bay Area Student Committee, 2317B McGee Avenue, Berkeley 3, Calif., for a copy of "In Search of Truth."

2. If you hear that an organization is planning to show the movie, go to the leader and tell him the facts, trying to persuade him not to show the film. If the film is shown try to get permission for an informed person to appear on the program to give the other side of the story.

3. Ask your Representative in Congress to join with others who are seeking public rebuke for House Un-American Committee and its part in this un-American activity.

Speaker Sol Blatt, Great Jewish American, Honored

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, it is with great pride that I insert in the RECORD at this time a newspaper article from the Charleston (S.C.) News and Courier concerning Solomon Blatt, speaker of the South Carolina State House of Representatives, honoring his 65th birthday. Coming, as I do, from a State that espoused the cause of freedom long before 37 other States of the Union were born, you will excuse my immodesty in pointing out to this House that Solomon Blatt, the great speaker of the House of Representatives of South Carolina, is of Jewish faith.

We have been accused of many things in South Carolina because of our beliefs in the fundamental rights of man and the basic principles of the cause for which our Founding Fathers fought.

Thus I cannot refrain from calling to the attention of those who seek to implant ferment and discord in our State, based upon little understood or false impressions of the heritage and traditions of South Carolina, the greatness of a State which elects as her speaker a man of a minority faith and a man from a minority ethnic origin, who has risen to one of the highest offices in the State of South Carolina. Let those who cry bigotry and discrimination look to the State of South Carolina and observe democracy in action. We do not shout our accomplishments from the rooftops, nor do we cry "wolf" on every occasion, as do those who do protest too much. Instead, we place men of honor and men of accomplishment in positions of high importance in all walks of life in South Carolina, based upon their ability, their devotion to their own beliefs, and their patriotism to America.

I hope those from some of the other States will one day be able to approximate the State of South Carolina in its acknowledgment of the dignity of man.

[From the Charleston (S.C.) News & Courier, Feb. 28, 1961]

MR. SPEAKER REACHES 65 BUT PLANS TO STAY ON JOB

COLUMBIA.—Solomon Blatt, gavel-pounding speaker of the State house of representatives, observed his 65th birthday Monday, but "Mr. Speaker" is giving no thought to retirement.

"My greatest wish," says Representative Blatt, "is to continue to serve as long as my people want me and I'm physically able. It is a great comfort to know that I have served as speaker of this legislative body longer than anyone in the entire Nation has served in such a post."

Mr. Blatt has filled the speaker's chair for the last 21 years, but only in a figurative sense, for most of the time he is on his feet guiding the house through its legislative business and reminding house members why they were elected.

A portrait of Mr. Blatt hangs in the hall of the house in the State capitol. Blatt, a son of Jewish immigrants from Russia says, "The fact that my portrait hangs in this chamber is the highest evidence of the fine qualities of South Carolinians and damns the tongues of evil men who call us intolerant.

"South Carolinians don't care which side of the tracks a man comes from or what his religion is. They accept a man for what he really is," states Blatt fervently.

Mr. Blatt received his law degree from the University of South Carolina in 1917, and thereafter served with the 81st Division of the U.S. Army during World War I. After the war he returned to his native Barnwell County and opened a law practice which has achieved great success throughout the years.

The biggest change in his 21 years as speaker of the house, says Blatt, is "the rise in caliber of our State government," which he asserts is "the soundest State government in America."

Replying to the question of how he has been able to maintain such a great popularity with house members, Blatt says, "always telling the truth and never saying I would do something when I would not. You cannot mislead men of the ability of our representatives."

A Statement on Our Unemployment Situation

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I include my recent statement on our unemployment situation.

Fourteen years ago one of the important statements of public policy ever adopted was enacted into law. The Employment Act of 1946 declared that it was the continuing policy and responsibility of the Federal Government to promote maximum employment, production, and purchasing power. Despite this explicit directive, unemployment continues at a dangerously high rate throughout the Nation with no Government action to counter it.

Now, during a time of supposed prosperity, this terrible human problem continues with unemployment hovering at 5 percent of the work force month after month. If this period of recession is prolonged, the effects could be disastrous. Some economists have predicted that as many as 8 million could be unemployed.

The fixation about inflation and budget balancing has measurably fostered continued unemployment. The tight-money policy of the Federal Re-

serve Board has badly hampered the normal growth of business and industry. As a result, the annual rate of growth of our economy has been only about 1.5 percent in the last 6 years—too little expansion to employ all who seek work.

The Government can stimulate our economy by giving more aid in such badly needed areas as housing, education, health, and slum clearance. Older persons can be helped by more adequate social security benefits. The minimum wage rate can be increased. By increasing purchasing power through such efforts, the economy would be put back into full operation.

The age groups in our population which are increasing at the greatest speed—the young and the old—are also the groups among which there is the most unemployment.

The older worker finds it very difficult to obtain new employment. In a fast moving age, skills quickly become dated. Industry is less willing to train an older worker even though his capacity may be equal to that of a younger man, and his experience may be greater.

Technological advances and changing demands in a dynamic economy are bound to cause the decline of some industries and the growth of others. Some temporary dislocations and unemployment are bound to occur.

Unemployment is caused by other reasons too—shifting markets, the inability of a firm to compete, and decentralization. Sometimes the closing of a plant is prompted by motives less worthy or compelling than economic necessity. Many industrial moves are made solely because another State offers "come-on" taxes, or to escape to an area where wages are lower because unions are prevented from organizing.

One answer to this challenge is area redevelopment legislation whereby millions of dollars are appropriated for relief in areas of substantial unemployment. The money would be used as both loans and grants for the rehabilitation of existing industrial facilities or the creation of new facilities for the retraining of workers, for technical assistance, and for the improvement of public facilities.

One of the Three

EXTENSION OF REMARKS
OF
HON. TOM V. MOOREHEAD
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. MOOREHEAD of Ohio. Mr. Speaker, the people of the 15th Congressional District of Ohio, which I have the honor to represent here, are tremendously proud that Lt. Col. John H. Glenn, of the Marine Corps, has been selected by the National Aeronautics and Space Administration as one of its three astronauts to be considered for our Nation's first space flight. Glenn's career has been marked by outstanding achievement which has already brought great credit to himself, his family, and his Nation in the advancement of science. We know that, regardless of whether this seasoned modern pioneer or one of his two colleagues is selected for the first flight, Glenn will have contributed the limit of his skills to the success of Operation Mercury.

I wish to commend to the House of Representatives the following tribute to Lieutenant Colonel Glenn, which appeared in the February 26, 1961, edition of the Times Recorder of Zanesville:

ONE OF THE THREE

The first manned space flight, expected to be attempted by the United States in the next couple of months, holds more than normal interest for the people of southeastern Ohio because the man in the capsule may be Marine Lt. Col. John H. Glenn, who was brought up at New Concord.

The balding speed flier was one of three Mercury astronauts selected last week from a list of seven as candidates for the historic mission.

Colonel Glenn, highly skilled, physically fit and eager to get on with the big test, naturally is aware of the risk involved but this is overshadowed, no doubt, by his complete confidence in American scientists and engineers.

Possibly as early as April one of the select three will be tucked into a bell-shaped capsule mounted on top of a Redstone rocket for a flight 115 miles into space and about 290 miles over the Atlantic from Cape Canaveral, Fla. The same flight plan was tested last month by the flying chimp named Ham.

The attention of the whole world will be centered on the great venture and Col. John Glenn could be the man to write a great page in history.

Communist Strategy and the High Seas Sequel

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. FLOOD. Mr. Speaker, in an address to the House on January 16, 1961, I stressed the relation between the movement to extend the width of territorial seas and the operations of the so-called international Communist conspiracy.

In this address was quoted an illuminating article on this subject by George Winder in the December 1960 issue of American Opinion, which I commended for study by all concerned with the matter of territorial sea width and a protection of our vital interests.

It is highly gratifying, therefore, to read the resolution on "Territorial Sea Width," adopted on February 2, 1961, by the American Coalition of Patriotic Societies at its annual meeting in Washington, which I quote:

TERRITORIAL SEA WIDTH

Whereas a fundamental principle of international law, developed over centuries by experience and agreement among civilized nations, and affirmed in 1930 at the Hague Codification Conference, is the 3-mile limit for territorial seas; and

Whereas Afro-Asian nations, with Communist support, are endeavoring to extend the present 3-mile limit to a 12-mile limit, which extension, by transforming more than 3,000,000 square miles of international sea into territorial waters closable at the will of its sovereigns, would impair the principle of freedom of the seas; and

Whereas the United States delegation to the 1960 United Nations Conference on the Law of the Sea, in substantial degree conforming to Soviet strategy for the high seas, voted to compromise with this principle by agreeing to a 6-mile limit, which move was defeated by only one vote; and

Whereas any such compromise in principle would affect adversely the vital interests of the United States and other maritime nations by making strategic sea routes and air above subject to closure, among them such important arteries of trade as the Straits of Gibraltar, Bab-el Mandeb, and Malacca;

Resolved by the American Coalition of Patriotic Societies, Inc.,

1. That the United States adhere to the fundamental principle of international law providing for a 3-mile limit as the width for territorial seas; and

2. That the Congress conduct comprehensive inquiries into the influence in the Department of State responsible for the attempted compromise of this principle in favor of a 6-mile limit; and

3. That copies of this resolution be sent to (a) All Members of the Congress; (b) the President; (c) the Secretaries of State, Defense, Army, Navy, and Air Force.

Address of President John F. Kennedy

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. STAGGERS. Mr. Speaker, on February 13, President Kennedy delivered an address at the luncheon meeting of the National Industrial Conference Board that I believe should be called to the attention of every businessman in the United States. It is no secret that many in our business community were not only highly skeptical but actually honestly afraid of what a Kennedy administration might do to them.

While only time can fully convince many with these doubts and misgivings I am confident that any reasonable man after reading this address will understand the President's goal—a full partnership between businessmen and Government to bring this Nation and all of its citizens to the highest standard of living, the greatest era of prosperity and the greatest defense potential the world has ever known. As the President points out, this can only be done by sound businesslike methods which maintain a strong dollar and equal opportunities for all. Attaining these goals under proper governmental supervision can not help but improve the Nation's business in my opinion:

Under unanimous consent I insert the President's address in the RECORD at this point:

ADDRESS OF THE PRESIDENT TO THE LUNCHEON MEETING OF THE NATIONAL INDUSTRIAL CONFERENCE BOARD, SHERATON-PARK HOTEL, WASHINGTON, D.C.

Mr. White, Dean Sayre, distinguished guests, gentlemen, I want, first of all, to express my personal thanks to all of you for having come to our city, and for participating in what I hope will be a most useful and helpful proceeding which will benefit this Government and our country.

It has recently been suggested that whether I serve one or two terms in the Presidency, I will find myself at the end of that period at what might be called the awkward age—too old to begin a new career and too young to write my memoirs.

A similar dilemma, it seems to me, is posed by the occasion of a Presidential address to a business group on business conditions less than 4 weeks after entering the White House—for it is too early to be claiming credit for the new administration and too late to be blaming the old one. And it would be premature to seek your support in the next election, and inaccurate to express thanks for having had it in the last one.

I feel, nevertheless, that I can claim kinship here, and have that claim allowed. For I am convinced that the real spirit of American business is not represented by those involved in price fixing, conflict of interest or collusion. The real spirit is in this room—in your recognition of your public responsibilities, your pursuit of the truth, your desire for better industrial relations, better technological progress and better price stability and economic growth. And because your organization portrays that picture of American business, I am delighted and proud to be here with you.

The complaint has often been made in business circles that the Federal Government is a "silent partner" in every corporation—taking roughly half of all of your net earnings without risk to itself. But it should be also realized that this makes business a not always "silent partner" of the Federal Government—that our revenues and thus our success are dependent upon your profits and your success—and that, far from being natural enemies, government and business are necessary allies.

For example, the 1960 drop in expected corporate profits of some $6 to $7 billion also caused a loss in Federal revenues of over $3 billion—enough to pay the Federal share of all of our anti-recession, health, and education proposals for the next fiscal year and still have enough left over to start closing what the Democrats in this administration used to call the missile gap.

An equally critical gap separates the tax revenues of a lagging economy from those which are potentially within our grasp: A gap of at least $12 billion. Even after we are able to launch every program necessary for national security and development, this amount of revenue would still leave a substantial surplus—a surplus essential to help defend our economy against inflation—and, equally important, a surplus that, when applied to the Federal debt, would free additional savings for business investment and expansion.

In short, there is no inevitable clash between the public and private sectors—or between investment and consumption—nor, as I have said, between Government and business. All elements in our national economic growth are interdependent. Each must play its proper role—and that is the hope and the aim of this administration.

If those of you who are in the world of business, and we who are in the world of Government, are necessarily partners, what kind of partnership is this going to be? Will it be marked by mutual suspicion and recrimination, or by mutual understanding and fruitful collaboration?

On behalf of my associates in the Cabinet, I want to be very precise: We will not discriminate for or against any segment of our society, or any segment of the business community. We are vigorously opposed to corruption and monopoly and human exploitation—but we are not opposed to business.

We know that your success and ours are intertwined—that you have facts and know-how that we need. Whatever past differences may have existed, we seek more than an attitude of truce, more than a treaty—we seek the spirit of a full-fledged alliance.

Today, I would briefly mention three areas of common concern to which that alliance must be devoted in the next few years: economic growth, plant modernization, and price stability.

I

First. Economic growth has come to resemble the Washington weather—everyone talks about it, no one says precisely what to do about it, and our only satisfaction is that it can't get any worse.

The economic program which I have set before the Congress is essentially a program for recovery—and I do not equate recovery with growth. But it is an essential first step. Only by putting millions of people back to work can we expand purchasing power and markets. Only by higher income and profits can we provide the incentive and the means for increased investment. And only when we are using our plant at or near capacity can we expect any solid expansion.

Capacity operation is the key. No matter what other arguments or stimulants are used, the incentives for investing new capital to expand manufacturing plants and equipment are weak as long as manufacturers are operating at less than 80 percent of their capacity. From 1950 to 1958, we put only one-sixth of our total output into capital formation, while Japan, Germany, Italy, the Netherlands, Canada, and Sweden were all investing one-fifth or more of their total output in capital goods. So it is not surprising that each of these and other nations over the past several years have all surpassed us in average annual rate of economic growth.

I think we can do better. Working together, business and Government must do better—putting people back to work, using plants to capacity, and spurring savings and investments with at least a large part of our economic gains—beginning not when our economy is back at the top, but beginning now.

II

Second. New plant investment not only means expansion of capacity—it means modernization as well. Gleaming new factories and headlines about automation have diverted our attention from an aging industrial plant. Obsolescence is slowing down our growth, handicapping our productivity, and worsening our competitive position abroad.

Nothing can reverse our balance-of-payments deficit if American machinery and equipment cannot produce the newest products of the highest quality in the most efficient manner. The available evidence on the age of our industrial plant is unofficial and fragmentary; but the trend is unmistakable—we are falling behind.

The average age of equipment in American factories today is about 9 years. In a dynamic economy, that average should be falling, as new equipment is put into place. Instead the available evidence suggests that it has been slowly rising.

Private survey of machine tools used by manufacturers of general industrial equipment found less than half of these tools over 10 years old in 1949, but two-thirds over that age in 1958. Nineteen percent of our machine tools were found to be over 20 years old.

Meanwhile, other countries have been lowering the average age of their fixed capital. The German example is the most spectacular—their proportion of capital equipment and plant under 5 years of age grew from one-sixth of the total in 1948 to two-fifths in 1957.

All of these facts point in one direction: We must start now to provide additional stimulus to the modernization of American industrial plants. Within the next few weeks, I shall propose to the Congress a new tax incentive for businesses to expand their normal investment in plant and equipment.

But modernization and productivity depend upon more than investment in physical resources. Equally essential is investment in human resources. And I think that this is obvious to those of us who have considered the problems of unemployment and depressed areas. There is no doubt that the maximum impact of a reducing economy falls upon those who are at the bottom of the educational ladder. The first people unemployed are those with the least education, the last people to be hired back are those with the least education. So there is a direct connection between increased emphasis on education in this country and also upon increased productivity and technological change.

Without strengthened programs for health, education, and science and research, the new modern plant would only be a hollow shell. Many of these programs are within the province of State and local governments. Full recovery will increase the tax revenues that they so sorely need. But the Federal Government will have to pay its fair share of developing these human resources.

Finally, Government and business must turn their attention to the problem of price stability. Concern over the resumption of inflationary pressures hangs over all our efforts to restore the economy, to stimulate its growth and to maintain our competitive status abroad. In recent days, complaints have been voiced in some quarters that this administration was not meeting its responsibilities in this area. But the facts are that, whatever one may regard our responsibilities to be, we are almost totally without direct and enforceable powers over the central problem. A free government in a free society has only a limited influence—provided that they are above the minimum—over prices and wages freely set and bargained for by free individuals and free enterprises. And this is as it should be if our economy is to remain free.

Nevertheless, the public interest in major wage and price determinations is substantial. Ways must be found to bring that public interest before the parties concerned in a fair and orderly manner.

For this reason, I have announced my determination to establish a Presidential Advisory Committee on Labor-Management Policy, with members drawn from labor, management and the public. I want this Committee to play a major role in helping promote sound wage and price policies, productivity increases, and a betterment of America's competitive position in world markets. I will look to this Committee to make an important contribution to labor-management relations, and to a wider understanding of their impact on price stability and our economic health. And in this undertaking, I ask and urge the constructive cooperation of this organization and its members.

Economic growth, plant modernization, price stability—these are all intangible and elusive goals. But they are all essential to your success, and to the success of our coun-

try. Initiative, innovation, hard work and cooperation will be required, on your part, and on ours.

But I have confidence in our Nation, confidence in our economy, and confidence in your ability to meet your obligations fully. I hope that my associates and I can merit your confidence as well. For I can assure you that we love our country, not for what it was, though it has always been great—not for what it is, though of this we are deeply proud—but for what it some day can and, through the efforts of us all, someday will be.

Thank you.

The Sixth Maccabiah Games

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. ZELENKO. Mr. Speaker, with the unanimous consent of the House, I take pleasure in calling attention to the fact that the sixth Maccabiah games, which will take place in Tel Aviv, Israel, from August 29 to September 5, 1961. This is another example of the principle that competition in sports among nations is one of the soundest means of fostering international goodwill. An article concerning the forthcoming games, written by Mr. Norman Miller of the United Press International, and which appeared in the press, nationwide, on Sunday, February 19, follows:

NEW YORK, February 18.—A delegation of more than 100 American men and women athletes embark next summer on a goodwill mission to Israel, where they will compete in the 6th Maccabiah games.

The United States is 1 of approximately 25 nations whose athletes of Jewish faith will participate in the games near Tel Aviv, next August 29 to September 5.

Americans will compete in 14 of the 19 sports on the Olympic-style program and once again are expected to dominate the more popular events.

Besides the "Jewish Olympics," the weeklong sports festival in this tiny nation will include a golf tournament pitting four-man amateur teams from each country.

Max Lovell, chairman of the U.S. Maccabiah games committee, said that athletes are being lined up for the oversea mission with the help of the National AAU, the NCAA, and U.S. Olpmpic committee.

At least two Olympic athletes are expected to be included in the U.S. team. They are Isaac Berger, of New York, who won the 1956 Olympic gold medal in the featherweight weightlifting class, and Abe Grossfeld, former University of Illinois gymnastics star.

However, the strongest U.S. showing undoubtedly will be made in America's own-invented game of basketball. Among the leading collegians from which the U.S. team will be chosen are: Art Heyman, of Duke; Mike Cinsiger, of Brown; Jeff Cohen, of William & Mary; Dave Waxman, of UCLA; Sandy Pomerantz, of Washington University of St. Louis; Julie Cohen, of Miami (Fla.); and Rick Kaminsky, Yale freshman from Houston, Tex.

The swimming delegation likely will be headed by Pete Fogarasy of North Carolina State, the AAU breaststroke champion; Dave Karetsky of Yale, in the butterfly event; Dave Abramson of New York, the junior AAU 400-meter freestyle champion; and Dickie Morse of Nashville, Tenn., in the 3-meter dive.

Mike Herman of New York, who won the Maccabiah decathlon championship in 1957, will be back to defend. Other trackmen will be Lou Steiglitz, former Connecticut 2-miler, and MM Gary Bubner, standout NYU freshman shotputter.

Thus far, the two leading women's entries are Judy Shapiro of California, who finished third in the Olympic women's quarter-mile trials last year, and Kathy Flicker of Summit, N.J., in the 3-meter dive.

The Maccabiah clubs were started many years ago for the physical development of inhabitants of the ghettos throughout Europe.

The games began formally in Israel, then Palestine, in 1932 and following World War II were held three times, in 1950, 1953, and 1957.

Now far removed from their original purpose, the games are designed to promote international goodwill and the fellowship of sports in this tiny young nation.

U.S. Trade Associations Typify American Way

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. AYRES. Mr. Speaker, there is much speculation today regarding automobile sales. Most people seem to agree that increased automobile sales will strengthen our economy. I believe the article by Mr. E. John Lehman pinpoints the need for strong associations in this field.

[From the Akron Beacon Journal, Feb. 26, 1961]

U.S. TRADE ASSOCIATIONS TYPIFY AMERICAN WAY

(By E. John Lehman)

The Akron Automobile Dealers Association is in its 35th year of operation. To answer the questions—"What is it? What do these people do?—requires some explanation.

Simply put, it is a group of highly competitive businessmen engaged in a common business who are making a diligent and serious attempt at self-government on a voluntary basis.

The net result of a successful operation becomes a distinct service to the general public since confidence and reliability are direct byproducts of a combined effort to raise the standards of the individual members.

We are very little different from thousands of other trade or professional groups who are actively engaged in trade association activities. Each business or profession needs to exchange ideas and methods with fellow members within the same trade or profession.

Through the trade association office, a library of exchange is available to aid newcomers in the field. Older members can be kept abreast of the times and through cooperative action, the industry can give to society the best efforts of modern times.

The trade association is a democratic way of self-expression in methods that promote good principles in the modern business world. To know more of trade associations today, perhaps we should look into their history and review the philosophy that gives them birth and sustains them as living testimonials.

The American businessman, as well as the American society, generally, is distinguished from the businessman and societies of other countries by their inherent desire and energetic devotion to do things in a cooperative manner.

The voluntary movement of self-government has been a feature of American life since pioneer times. We are all familiar with "barn raisings" and "harvest festivals" and similar rural examples of togetherness. Early police and fire departments, insurance policies, minutemen voluntary armies, all were originated and maintained on a voluntary basis. Virtually every need which we had was met by a group of volunteers joining together to accomplish some public purpose. Trade associations and civic organizations are a natural reflection of this voluntary way of doing business.

Unfortunately, today, all over the world, this concept is being severely challenged. Under other systems of government, the people are not trusted to do what is best by voluntary groups but are organized into groups which are government sponsored and government controlled. The whole concept is one of government from the top, rather than government from the bottom up.

The threat is not all from abroad but increasing from within. Our own American customs are severely leaning. We are being told that modern civilization, the modern way of doing things, does not permit the old-fashioned, time-consuming, and voluntary idea and way of doing things, even though everything we have are fruits of cooperative action. They say life has become so complicated and so fast that decisions must be made promptly. We cannot wait for the old slow methods.

This just is not so. True, the business and social world cannot stand idly by to simply let nature take its course. This we have not done.

Every business trade or profession has organized its own trade and professional associations that are working diligently and to a high degree of efficiency through committees and clubs to express that same high degree of voluntary expression.

Every American citizen should know and must know that these trade associations are one of the strongest defense and enlightened voices in the American way of life today. In doubtful times, we must move forward and be prepared to accept even greater challenges and responsibilities to defend as well as promote the principles of self-government.

Trade associations are doing this job by separate trade groups but they must cooperate with other trade groups in supporting association membership, as well as supporting them with patronage in a commercial way.

Every trade or business has its parasites who try to enjoy all the trade and society benefits without contributing financially to the organization that has raised the standards and defended their right to express voluntary opinions.

They express a personal derogatory opinion in the hope they can overshadow the stigma of nonmembership. Unfortunately, they get some converts to this minority opinion, just as any nonconformist by nature, is prone to do.

But the trade group does not falter. They move progressively ahead in the sound knowledge that cooperative action is sound, both for the business itself, as well as for the country in general. Each association must share in the responsibility of informing the public of these facts.

In this country today, we have a physical well-being and a mode of living which exceeds that known to any civilization at any time in past history. We have available

creature comforts such as no civilization has ever produced for its citizens.

It is unfortunate that these same creature comforts should seem to bring with them suspicions of a weakening spirit. There is a serious question whether our moral standards have kept pace with or have improved in the same proportion as have our living standards or our improved business standards.

All of us should be aware of these problems and take comfort in the knowledge, trade associations and professional groups are active in the vineyards of democracy.

We can face them with confidence if we maintain the idea of voluntary associations, voluntary groups—meeting openly to discuss problems and to arrive at conclusions and then proceed to take voluntary action.

Trade associations have a great responsibility to you and to our country. We will do everything in our power and diligence to see that we continue to go forward. We will examine ourselves, improve our methods of operation, and resolve to try to do every year a better job than we did the year before.

But you too, can help and should help.

For every product or service you need as a consumer ask this one simple question? Is this company or person a member of his trade or professional association? By so doing, you will help to keep alive one of the basic elements of our American civilization.

Embargo on Cuba?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. FLOOD. Mr. Speaker, the steady deterioration in the relations between the United States and Soviet Cuba since early 1959 reached their logical culmination at 8:30 p.m. on January 4, 1961, with the United States breaking diplomatic relations with that island country.

At that time there was much discussion about bringing about a hemispheric quarantine of this Communist beachhead. The idea, however, seems not to have gotten beyond the talking stage, for business between the two countries, though not generally recognized, has continued.

This commercial activity, as described in a news story by Dom Bonafede in the February 5, 1961, issue of the Miami Herald, seems to be greater today than it was when the United States imposed a partial Cuban embargo in October 1960.

In order that documentation for this assertion may be available to the Congress and other cognizant agencies of our Government, the indicated news story is quoted:

[From the Miami Herald, Feb. 5, 1961]

U.S. FIRMS SHIP CATTLE TO CUBA

(By Dom Bonafede)

Airborne flights of U.S.-bred livestock from Miami to Havana are replenishing Fidel Castro's once-empty stockyards.

Since October, when the United States imposed a partial embargo against Cuba, more on-the-hoof stock has been flown out of Miami International Airport to Cuba than in all of 1960.

Being flown out daily by Cuba Aeropostal, a Cuban nationalized cargo line, are thousands of purebred cattle and hogs, and hundreds of thousands of hatching chicks and pullets.

The Miami manager of Cuba Aeropostal, Alfred J. Canal, acknowledged that six or seven flights to Cuba are scheduled daily.

A. E. Arthur, U.S. officer in charge of the airport animal quarantine section, reported: "There has been a tremendous increase in trade to Cuba within the last few months."

As a result of Castro's newfound trade sources, there is little likelihood that his regime will come tumbling down because of economic reasons.

Today, he is buying goods and equipment from U.S. allies and from behind the Iron Curtain which he formerly imported from the United States.

Huge seaborne shipments of farm products, lard, and other commodities are exchanged between Havana and West Palm Beach aboard the U.S.-owned West India Fruit & Steamship Co. And recently Cuba increased its trade with Canada by flying in cargoes of fruits and vegetables.

Miami airport figures show that last year 2,550 stock animals were shipped to Cuba.

In 4 months since October, the amount has jumped to 5,045.

Almost all animals involved in the trade are breeding animals. About 12 head of cattle can be assigned to a plane, and 35 or 40 large-size hogs.

The cattle mainly came from Wisconsin, Connecticut, Ohio, and Michigan. Although of pedigree stock, they are reportedly of poor grade and American dealers are glad to get rid of them.

No exact figures are available on the number of chickens, turkeys, and ducks being flown out from Miami but it runs into the millions.

Canal said that 45,000 pullets can be packed aboard one plane.

Records show that among the dealers are the Airport Livestock Corp. of Miami, F. A. Gailbraith, of West Palm Beach, and Swindell Farms, of Fort Lauderale.

Mrs. Gailbraith told the Herald that her firm has sold "several hundred dairy cows" to Cuba since last April for around $300 each.

"We deal with businessmen over there just as we do with Americans, but I imagine that they work with the Cuban Government," she commented.

She added that the purchases are paid in American dollars through letters of credit on U.S. banks.

In addition to filling Castro's breadbasket, the U.S. farm shipments are bolstering his propaganda campaign at home.

Once they arrive in Cuba, the products are labeled as Cuban-raised—tangible evidence of the "glorious progress" made under the revolutionary movement.

Veterans' Disability Ratings

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. DULSKI. Mr. Speaker, the bill which I am introducing today is in line with legislation heretofore enacted in the 83d Congress, which provides that where a veteran had total disability rating for 20 continuous years it should not thereafter be changed. This was true for compensation, pension, and insurance purposes. My proposal is a very simple one, namely, to reduce this 20-year period to 15, thereby assuring greater protection for the individual veteran.

I think we can all agree that any person who has been rated totally disabled for 15 years or more should not have his disability rating disturbed. The cost of this proposal would be negligible, and this certainly is an equitable step which should be taken at the earliest possible time.

Pastoral Letters

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the RECORD a pastoral letter issued separately by the Most Reverend Thomas J. McDonough, bishop of Savannah, Ga.; the Most Reverend Francis E. Hyland, bishop of Atlanta, Ga.; and the Most Reverend Paul J. Hallinan, bishop of Charleston, S.C., a document on morals and race relations well deserving of insertion into the RECORD.

The pastoral letter, issued separately to each of the three dioceses by its own bishop, speaks with clarity and intelligence:

MY DEAR PEOPLE: In time of crisis, our people look to the church to state moral principles and apply them to practical situations. With racial tension mounting, the church must speak out clearly. In justice to our people, we cannot abandon leadership to the extremists whose only creed is fear and hatred.

This fear is unworthy, and in large measure unjustified. All peoples have a pride of race, a pride which they naturally desire to maintain and preserve. This pride is not destroyed, however, when people recognize the rights of others. It is the failure of many to understand this that causes fear.

The hatred is neither Christian nor American. If there is one virtue that marks the true follower of Christ, one virtue dearer to the heart of Our Divine Lord than any other, surely it is the virtue of charity. For He said: "A new commandment I give you, that you love one another: that as I have loved you, you also love one another. By this will all men know that you are my disciples, if you have love for one another."

Our Lord died upon the cross to exemplify this love, not just for those who loved Him, but for those who hated Him—for all men. This is the Christian way, and we cannot brush aside, or rationalize, or close our minds to this truth of our redemption.

We cannot ignore the teaching of the sacred Scriptures, that in the beginning, God created man after His own image and likeness; that He breathed into him an immortal soul; that He gave him an eternal destiny. We cannot forget that all human beings, without regard to differences that are purely accidental, are created in the same way. We cannot ignore that Jesus Christ

our Lord, the Eternal Son of God, became man and died for all men, that they might be saved by His grace.

With these Christian truths in mind, the great Americans who wrote the Declaration of Independence set forth the fundamental principle of our Government: "That all men are created equal, and endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

The issue of racial justice is not new, nor is it only southern. Only the urgency is new, and this is true in every part of the United States where racial discrimination is practiced. Twice in recent years, in 1943 and 1958, the Catholic bishops of the United States have outlined the Christian position. In their annual letter of 1958, these two vital points were made:

1. "It is unreasonable and injurious to the rights of others that a factor such as race, by and of itself, should be made a cause of discrimination."

2. "Legal segregation, or any form of compulsory segregation, in itself and by its very nature imposes a stigma of inferiority upon the segregated people."

All Catholic people in the United States are coming to realize, as the bishops said, that "the time has come to cut through the maze of secondary or less essential issues, and to come to the heart of the problem. The heart of the race question is moral and religious. It concerns the rights of man and our attitude toward our fellow man."

The influence of the Catholic Church in the South has not been based on great numbers, but upon great faith. When changing times have called for fresh application of the eternal God-given principles, our loyal people have not wavered. Nor will they waver now.

To assure all men that the church is moving steadily toward the full Christian solution, we affirm this policy for the diocese of Charleston:

1. Catholic pupils, regardless of color, will be admitted to Catholic schools as soon as this can be done with safety to the children and the schools. Certainly this will be done not later than the public schools are opened to all pupils.

2. The Negro schools will be continued as long as there is need for them. Their purpose is to reach and teach the Negro, not to segregate him.

3. During 1961, this diocese will undertake a program of preparation for its people. Pastoral letters, sermons, study clubs, and school instruction will explain the full Catholic teaching on racial justice.

This affirmation for our diocese is not just a minimum approach to full Christian justice. In a region where our Catholic population is less than 2 percent, it is an honest effort to influence a way of life that has prevailed for many decades. Millions of people have accepted this way of life in good faith. Now, both whites and Negroes face a tremendous challenge—to live in a community with full Christian justice for both.

This is only one of many tasks facing our church. The racial problem does not exist in a vacuum. It must be solved in the wider context of our missionary work. The bishop, therefore, will prudently judge the appropriate time and conditions in such a way that the schools and the children, whether white or Negro, will not suffer by the change.

This same statement is being made today by the Most Reverend Thomas J. McDonough, bishop of Savannah, Ga.; and the Most Reverend Francis E. Hyland, bishop of Atlanta, Ga. It is being published at this time to prepare all our Catholic people for the future, and to assure all men that with justice and prudence, the Catholic Church in the Deep South will continue to meet her moral commitments. Of all men, of whatever region or race, we ask their prayers and their understanding.

As this holy season of Lent begins, I ask our Catholic people especially to offer their daily prayers and sacrifices to God for the peaceful solution of this issue. May He bless us with His love. May we respond with our love. "By this, will all men know that you are my disciples, if you have love one for another."

DISCRIMINATION AND THE CHRISTIAN CONSCIENCE—STATEMENT OF THE BISHOPS OF THE UNITED STATES, 1958

Fifteen years ago, when this Nation was devoting its energies to a world war designed to maintain human freedom, the Catholic bishops of the United States issued a prayerful warning to their fellow citizens. We called for the extension of full freedom within the confines of our beloved country. Specifically, we noted the problems faced by Negroes in obtaining the rights that are theirs as Americans. The statement of 1943 said in part:

"In the providence of God there are among us millions of fellow citizens of the Negro race. We owe to these fellow citizens, who have contributed so largely to the development of our country, and for whose welfare history imposes on us a special obligation of justice, to see that they have in fact the rights which are given them in our Constitution. This means not only political equality, but also fair economic and educational opportunities, a just share in public welfare projects, good housing without exploitation, and a full chance for the social advancement of their race."

PROGRESS MADE

In the intervening years, considerable progress was made in achieving these goals. The Negro race, brought to this country in slavery, continued its quiet but determined march toward the goal of equal rights and equal opportunity. During and after the Second World War, great and even spectacular advances were made in the obtaining of voting rights, good education, better paying jobs, and adequate housing. Through the efforts of men of good will, of every race and creed and from all parts of the Nation, the barriers of prejudice and discrimination were slowly but inevitably eroded.

Because this method of quiet conciliation produced such excellent results, we have preferred the path of action to that of exhortation. Unfortunately, however, it appears that in recent years the issues have become confused and the march toward justice and equality has been slowed if not halted in some areas. The transcendent moral issues involved have become obscured, and possibly forgotten.

Our Nation now stands divided by the problem of compulsory segregation of the races and the opposing demand for racial justice. No region of our land is immune from strife and division resulting from this problem. In one area, the key issue may concern the schools. In another it may be conflicts over housing. Job discrimination may be the focal point in still other sectors. But all these issues have one main point in common. They reflect the determination of our Negro people, and we hope the overwhelming majority of our white citizens, to see that our colored citizens obtain their full rights as given to them by God, the creator of all, and guaranteed by the democratic traditions of our Nation.

There are many facets to the problems raised by the quest for racial justice. There are issues of law, of history, of economics, and of sociology. There are questions of procedure and technique. There are conflicts in cultures. Volumes have been written on each of these phases. Their importance we do not deny. But the time has come, in our considered and prayerful judgment, to cut through the maze of secondary or less essential issues and to come to the heart of the problem.

QUESTION IS MORAL AND RELIGIOUS

The heart of the race question is moral and religious. It concerns the rights of man and our attitude toward our fellow man. If our attitude is governed by the great Christian law of love of neighbor and respect for his rights, then we can work out harmoniously the techniques for making legal, educational, economic, and social adjustments. But if our hearts are poisoned by hatred, or even by indifference toward the welfare and rights of our fellow men, then our Nation faces a grave internal crisis.

No one who bears the name of Christian can deny the universal love of God for all mankind. When Our Lord and Savior, Jesus Christ, "took on the form of man" (Philippians 2: 7) and walked among men, He taught as the first two laws of life the love of God and the love of fellow man. "By this shall all men know that you are my disciples, that you have love, one for the other." (John 13: 35) He offered His life in sacrifice for all mankind. His parting mandate to His followers was to "teach all nations." (Matthew 28: 19)

Our Christian faith is of its nature universal. It knows not the distinctions of race, color, or nationhood. The missionaries of the church have spread throughout the world, visiting with equal impartiality nations such as China and India, whose ancient cultures antedate the coming of the Savior and the primitive tribes of the Americas. The love of Christ, and the love of the Christian, knows no bounds. In the words of Pope Pius XII, addressed to American Negro publishers 12 years ago, "All men are brothered in Jesus Christ; for He, though God, became also man, became a member of the human family, a brother of all." (May 27, 1946)

Even those who do not accept our Christian tradition should at least acknowledge that God has implanted in the souls of all men some knowledge of the natural moral law and a respect for its teachings. Reason alone taught philosophers through the ages respect for the sacred dignity of each human being and the fundamental rights of man. Every man has an equal right to life, to justice before the law, to marry and rear a family under human conditions, and to an equitable opportunity to use the goods of this earth for his needs and those of his family.

From these solemn truths, there follow certain conclusions vital for a proper approach to the problems that trouble us today. First, we must repeat the principle—embodied in our Declaration of Independence—that all men are equal in the sight of God. By equal we mean that they are created by God and redeemed by His Divine Son, that they are bound by His law, and that God desires them as His friends in the eternity of Heaven. This fact confers upon all men human dignity and human rights.

PERSONAL DIFFERENCES AMONG MEN

Men are unequal in talent and achievement. They differ in culture and personal characteristics. Some are saintly, some seem to be evil, most are men of good will, though beset with human frailty. On the basis of personal differences we may distinguish among our fellow men, remembering always the admonition: "Let him who is without sin * * * cast the first stone * * *" (John 8: 7) But discrimination based on the accidental fact of race or color, and as such injurious to human rights regardless of personal qualities or achievements, cannot be reconciled with the truth

that God has created all men with equal rights and equal dignity.

Secondly, we are bound to love our fellow man. The Christian love we bespeak is not a matter of emotional likes or dislikes. It is a firm purpose to do good to all men, to the extent that ability and opportunity permit.

Among all races and national groups, class distinctions are inevitably made on the basis of like-mindedness or a community of interests. Such distinctions are normal and constitute a universal social phenomenon. They are accidental, however, and are subject to change as conditions change. It is unreasonable and injurious to the rights of others that a factor such as race, by and of itself, should be made a cause of discrimination and a basis for unequal treatment in our mutual relations.

ENFORCED SEGREGATION

The question then arises: Can enforced segregation be reconciled with the Christian view of our fellow man? In our judgment it cannot, and this for two fundamental reasons.

1. Legal segregation, or any form of compulsory segregation, in itself and by its very nature imposes a stigma of inferiority upon the segregated people. Even if the now obsolete court doctrine of "separate but equal" had been carried out to the fullest extent, so that all public and semipublic facilities were in fact equal, there is nonetheless the judgment that an entire race, by the sole fact of race and regardless of individual qualities, is not fit to associate on equal terms with members of another race. We cannot reconcile such a judgment with the Christian view of man's nature and rights. Here again it is appropriate to cite the language of Pope Pius XII: "God did not create a human family made up of segregated, dissociated, mutually independent members. No; He would have them all united by the bond of total love of Him and consequent self-dedication to assisting each other to maintain that bond intact" (Sept. 7, 1956).

2. It is a matter of historical fact that segregation in our country has led to oppressive conditions and the denial of basic human rights for the Negro. This is evident in the fundamental fields of education, job opportunity, and housing. Flowing from these areas of neglect and discrimination are problems of health and the sordid train of evils so often associated with the consequent slum conditions. Surely Pope Pius XII must have had these conditions in mind when he said just 2 months ago: "It is only too well known, alas, to what excesses pride of race and racial hate can lead. The church has always been energetically opposed to attempts of genocide or practices arising from what is called the 'color bar'" (Sept. 5, 1958).

ECONOMIC AND EDUCATIONAL OPPORTUNITY

One of the tragedies of racial oppression is that the evils we have cited are being used as excuses to continue the very conditions that so strongly fostered such evils. Today we are told that Negroes, Indians, and also some Spanish-speaking Americans differ too much in culture and achievements to be assimilated in our schools, factories, and neighborhoods. Some decades back the same charge was made against the immigrant—Irish, Jewish, Italian, Polish, Hungarian, German, Russian. In both instances differences were used by some as a basis for discrimination and even for bigoted ill-treatment. The immigrant, fortunately, has achieved his rightful status in the American community. Economic opportunity was wide open and educational equality was not denied to him.

Negro citizens seek these same opportunities. They wish an education that does not carry with it any stigma of inferiority. They wish economic advancement based on merit and skill. They wish their civil rights as American citizens. They wish acceptance based upon proved ability and achievement. No one who truly loves God's children will deny them this opportunity.

To work for this principle amid passions and misunderstandings will not be easy. It will take courage. But quiet and persevering courage has always been the mark of a true follower of Christ.

PLANS SHOULD BE BASED ON PRUDENCE

We urge that concrete plans in this field be based on prudence. Prudence may be called a virtue that inclines us to view problems in their proper perspective. It aids us to use the proper means to secure our aim.

The problems we inherit today are rooted in decades, even centuries, of custom and cultural patterns. Changes in deep-rooted attitudes are not made overnight. When we are confronted with complex and far-reaching evils, it is not a sign of weakness or timidity to distinguish among remedies and reforms. Some changes are more necessary than others. Some are relatively easy to achieve. Others seem impossible at this time. What may succeed in one area may fail in another.

It is a sign of wisdom, rather than weakness, to study carefully the problems we face, to prepare for advances, and to bypass the nonessential if it interferes with essential progress. We may well deplore a gradualism that is merely a cloak for inaction. But we equally deplore rash impetuosity that would sacrifice the achievements of decades in ill-timed and ill-considered ventures. In concrete matters we distinguish between prudence and inaction by asking the question: Are we sincerely and earnestly acting to solve these problems? We distinguish between prudence and rashness by seeking the prayerful and considered judgment of experienced counselors who have achieved success in meeting similar problems.

VITAL THAT WE ACT NOW

For this reason we hope and earnestly pray that responsible and sober-minded Americans of all religious faiths, in all areas of our land, will seize the mantle of leadership from the agitator and the racist. It is vital that we act now and act decisively. All must act quietly, courageously, and prayerfully before it is too late.

For the welfare of our Nation we call upon all to root out from their hearts bitterness and hatred. The tasks we face are indeed difficult. But hearts inspired by Christian love will surmount these difficulties.

Clearly, then, these problems are vital and urgent. May God give this Nation the grace to meet the challenge it faces. For the sake of generations of future Americans and indeed of all humanity, we cannot fail.

Signed by members of the administrative board, National Catholic Welfare Conference, in the name of the bishops of the United States:

Francis Cardinal Spellman, archbishop of New York; James Francis Cardinal McIntyre, archbishop of Los Angeles; Francis P. Keough, archbishop of Baltimore; Karl J. Alter, archbishop of Cincinnati; Joseph E. Ritter, archbishop of St. Louis; William O. Brady, archbishop of St. Paul; Albert G. Meyer, archbishop of Chicago; Patrick A. O'Boyle, archbishop of Washington; Leo Binz, archbishop of Dubuque; Emmet M. Walsh, bishop of Youngstown; Joseph M. Gilmore, bishop of Helena; Albert R. Zuroweste, bishop of Belleville.

Billy Hamilton in Baseball Hall of Fame

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. PHILBIN. Mr. Speaker, I was very happy indeed to learn recently that my late, lamented friend, and outstanding baseball player from my home town of Clinton, Mass., Billy Hamilton, had been elected to the Baseball Hall of Fame.

I had been interested in Billy Hamilton's election to the Hall of Fame for sometime past and over a period of time now have urged the committee in charge to give favorable consideration to his name. It is quite inspiring and gratifying to realize that at last Billy Hamilton's great feats on the diamond have been appropriately recognized by his admission to the Hall of Fame.

Hamilton's lifetime batting average during his 14 years in the majors is now officially listed at .344, although many claim it should be .351, a figure that was carried on the early record books.

Only Ty Cobb, Rogers Hornsby, Joe Jackson, Pete Browning, Ted Williams, Lefty O'Doul, Dan Brouthers, and Ed Dalahanty are credited with higher lifetime batting averages than Hamilton.

His accomplishments on the diamond have been considered to be almost legendary. The story in Clinton has it that when Hamilton played with the Phillies in Boston, it was his custom to doff his uniform as soon as the game was ended, dash to the Back Bay station and board the train for Clinton in order that he might spend a night at his home. It is reported that he consistently followed that routine after he was traded to Boston and he returned home after each game.

Hon. Orra L. Stone, late distinguished editor emeritus of the Clinton Daily Item, and an old and valued friend of mine and a friend of Hamilton's for many years, has written an authoritative story on Hamilton which I am inserting in the RECORD. Mr. Stone recalls how Hamilton used to come home at night folowing the baseball game and join the boys in the center of the town relating the highlights of the day's game in which he had played.

I had the pleasure of knowing Billy Hamilton when I was a high school student. At that time he was retired and used to attend many of the football, baseball, and basketball games of the local high school teams. He was a rabid fan, so to speak, and always found time to speak an encouraging word to the players. In his personal life, throughout his baseball career and at all times, he was a model athlete and was truly a lofty example for young people to follow.

Many will be pleased with the honor that has come to the great Billy Hamil-

ton, and I am proud indeed that my hometown of Clinton can boast of such an illustrious, baseball figure who at the same time represented such a fine high code of sportsmanship and conduct.

I heartily congratulate the hall of fame for its wisdom in including his name among baseball's greats.

Also, I congratulate my valued friend, Mr. John T. Morgan, of Wheelwright, Mass., peerless sports follower and statistician, upon his warm interest in and effective work for Billy Hamilton's admission to Baseball's Hall of Fame.

The material follows:

[From the Clinton (Mass.) Daily Item, Jan. 30, 1961]

LONGSTANDING WRONG IS RIGHTED: BILLY HAMILTON MAKES HALL OF FAME

(By the Observer)

William R. Hamilton, formerly of Clinton, Lancaster, and Worcester—the greatest gift to baseball Clinton ever produced—was unanimously elected to the Baseball Hall of Fame Sunday at Cooperstown, N.Y., by a special oldtimers' committee of the Baseball Writers' Association.

His name will be officially inducted into the shrine July 24 and he will probably be represented by his sister Mrs. Robert Jones, of Ozai, Calif.

Hamilton's election righted a longstanding wrong which has mystified baseball fans from coast to coast, especially among Clinton fans who were around during the gay nineties era.

It topped with success the efforts of many years by John T. Morgan, of Wheelwright, Mass., to give the Clinton star his rightful and well-deserved niche among the greats of the national pastime.

BORN IN NEWARK

Billy Hamilton was born in Newark, N.J., and in early life came to Lancaster, with his parents and later to Clinton and spent the last years of his life, after his retirement from the diamond, in Worcester.

During his sports career, with the Boston team, in the National League, Billy by thrift and frugal living, saved enough from his salary to erect the six-apartment building known as the Hamilton block, at 512 High Street, corner of Plain, where he and his wife resided, for many years, until they moved to Worcester.

Known as "Slidin' Billy" during his playing days with Philadelphia and Boston from 1890 to 1901, Hamilton stole 115 bases in 1891 with Philadelphia and in 1894 scored 196 runs—both marks which have stood the test of time.

What makes Hamilton's records all the more remarkable is that he set them playing shorter seasons than have been played since. He stole his 115 bases in 133 games, while second place Ty Cobb could do no better than 96 in 156 games. His 196 runs were scored in 131 games and runnerup Babe Ruth tallied his 177 in 152 games.

In all, Hamilton is variously credited with a career record of 796 and 937 stolen bases. In dispute are 140 bases he swiped with Kansas City of the old American Association, considered by some a major league.

ONE HUNDRED RUNS A SEASON

A centerfielder, his career included 100 runs a season for 11 years, 10 of them in a row and is also tied with George Gore, formerly of the Chicago Cubs, for the most stolen bases in a single game. Both stole seven in a game.

He began to play baseball, in Clinton, but got his real start in Worcester.

In 1887, he left Clinton to play in Waterbury, Conn., but came to the Worcester club, in 1888, which played on the old Grove Street grounds.

He was sold that year to the Kansas City club for $2,500, a big price for a minor leaguer at that period.

In 1889, he stole 117 bases with Kansas City and caught the eyes of big league scouts. He was bought by the Phillies in 1890 and played with that team through 1895. He was sold to Boston and played with the Hub team until 1901, helping them win National League pennants in 1897 and 1898.

His legs, which made him the league's speediest base runner, began to go and Boston released him, in 1901. Dr. Patrick J. Carney, later a baseball coach at Holy Cross, replaced him.

BECAME MANAGER

In 1903, he became the manager of the Haverhill New England League team and in 1 year brought it from last place to the top. In 1905 and 1906 he managed the Harrisburg club, in the Tri-State League, an outlaw outfit, but returned to organized baseball with Haverhill, in 1907.

He left, in 1909, to manage the Lynn club for 2 years and 1911 and 1912 he scouted for the Boston Nationals.

Next he went to Springfield, Greenfield, and Fall River and in 1916 returned to Worcester to manage the city's Eastern League team.

His National League batting average was .344 and he led the National League in hitting in 1901 with a mark of .338. He batted .300 or more for 12 consecutive seasons.

Following his retirement from the national game he entered the employ of the Graton & Knight Co., of Worcester, and during World War I he served as one of the welfare directors of the plant.

He retired in 1935, and died in 1940 at the age of 74 years.

LIFETIME AVERAGE

His lifetime average during his 14 years in the majors is now officially listed at .344 and many oldtimers claim it should be .351—a figure carried in the early record books.

Only Cobb, with 367, Rogers Hornsby, Joe Jackson, Pete Browning, Ted Williams, Lefty O'Doul, Dan Brouthers, and Ed Delahanty are credited with higher lifetime marks than Hamilton.

His baseball accomplishments are legend. He rarely missed being included with his old pal and intense rival, Jesse Burkett, of Worcester, among baseball's elect and with a small group who hit .400 in their respective careers.

When Hamilton played with the Phillies, in Boston, it was his usual custom to doff his uniform as soon as a game was over, dash to the Back Bay station and board a train for Clinton in order that he might spend a night at his home. He consistently followed that program after he was traded to Boston and came after each game.

LOCAL HERO WORSHIPERS

Arriving in Clinton between 6 and 7 o'clock, on a train via the northern division of the New Haven Railroad, he hurried to his High Street home, ate supper with his wife and then walked up High Street to the corner of Church where he leaned against the front of the Brimhall block and calmly related to a dozen or more local fans, all of whom were hero worshipers, including the Observer, the highlights of that day's game in which he had played.

NO BOASTING

Never boasting of his prowess on the diamond, he would answer questions covering the score, the number of hits he made and his stolen bases, if any, and the total of runs he scored, even admitting to his eager audience his errors, if any, which were few and far between.

It must be recalled by the reader that in the 1890's no radios or television sets had been heard of and the only other way local baseball fans could learn the details of a major league game was to await the appearance of the box scores in the newspapers of the following morning.

LOCAL TOP EVENTS

These nightly summaries so willingly given by Hamilton were the top events of every day that Billy appeared on the scene and the fans became crepehangers on rainy nights when they missed the résumé of a major league game in the Hub in which Billy played.

PRIDE OF MANAGERS

Hamilton was the acme of perfection under every manager he served and was never fined or verbally chastized by a manager for an infraction of the training rules. He did not smoke or drink, was not a night owl, never gambled or bet on games, horses, or prize fights, generally was abed by 9 o'clock and reported for each game in perfect physical condition, with clear vision and an earnest desire to play it to the hilt.

Caribbean Security and Cuba

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. FLOOD. Mr. Speaker, on September 17, 1960, the day officially designated as "Constitution Day," the people of the United States were shocked to read in the press that President Eisenhower, by Executive order, had struck the American flag in the Canal Zone. This startling action, taken in contemptuous defiance of mandates of the Congress, precipitated a chain reaction of critical discussions that has not yet ended.

In an address to the House on January 4, 1961, I emphasized the constitutional question issued by the President's reprehensible order, and quoted a series of press releases made by me subsequent to it.

The response of the American people to this challenge has been splendid. Anyone who has read the letters which have deluged the Congress can have no doubt as to how they stand with respect to the President's ill-advised action.

To their voices have now been added the protests of patriotic organizations, the latest being resolutions on Caribbean security, and on Cuba, adopted on February 2, 1961, by the American Coalition of Patriotic Societies at its annual meeting in Washington.

Consisting of more than 100 patriotic groups in many parts of the country, the total membership of the constituent bodies represented is estimated to exceed 4 million persons.

In order that the views of these influential groups may be given to the Nation at large, I include the texts of the indicated resolutions as part of these remarks:

RESOLUTION ON CARIBBEAN SECURITY

Whereas since the 1956 Suez crisis the Caribbean has become a fourth front against the United States with the Panama Canal as the key target in the struggle for control

of the Western Hemisphere by the world revolutionary movement known as the international Communist conspiracy; and

Whereas the Government of the United States, in meeting this challenge, has persistently adopted practices of reacting to crises rather than leading from policies of strength derived from a reasoned line of thought; and

Whereas the foreign policy of the United States for the past generation has been, in the very largest measure, the treatment of symptoms rather than causes, and replete with surrenders of basic rights and principles with consequent intensification of diplomatic problems; and

Whereas our Caribbean policies have tended to bring about a long series of diplomatic failures adversely affecting the security of the United States and other parts of the Western Hemisphere; and

Whereas these failures have contributed to the establishment of a Soviet beachhead in Cuba, threats to our naval bases at Guantanamo, Cuba, and Chagaramas, in Trinidad, overthrow of the constitutional governments of Venezuela and other countries fronting on the Caribbean, and the formal raising of the flag of the Republic of Panama over the Canal Zone territory; and

Whereas the most unfortunate and reprehensible order of the President in striking the flag of the United States in the Canal Zone, issued under pressure of Communist-inspired demands of radicals in Panama and on advice of the Department of State in clear violation of our traditional interpretation of the treaties of 1903, 1936, and 1955 with the Republic of Panama, and in contemptuous defiance of mandates of the Congress, has aided and abetted the subversive forces behind the program for Caribbean conquest; and

Whereas the repeated diplomatic failures of the Government of the United States to carry out its recognized responsibility for the security of the countries bordering the Caribbean, has served to encourage invasions of various countries by revolutionaries from Soviet Cuba and raises the question of whether or not there are in our Department of State communistic or other subversive influences that are still hidden:

Resolved by the American Coalition of Patriotic Societies, Inc., (1) That the Congress of the United States conduct thoroughgoing and comprehensive investigations relative to subversive influences in our Department of State; and

(2) That the Congress, by appropriate measures, take steps to accomplish the following:

(a) Make definite, and reaffirm, the principle of the Monroe Doctrine as applying to intervention by the subversive forces known as international communism; and

(b) Make definite, and reaffirm, U.S. policies for exclusive jurisdiction in perpetuity over the Panama Canal or any other isthmian canal that may be constructed in the future; and

(c) Repudiate President Eisenhower's order directing display of the Panama flag over the Canal Zone territory as violative of law, treaty, international usage, and the historic policy of the United States and invalid; and

(d) Legislate for the formation of a permanent Caribbean patrol force; and

(3) That copies of this resolution be sent to the following:

(a) The Congress of the United States;
(b) The President;
(c) The Secretary of State;
(d) The Secretary of Defense; and
(e) The press.

RESOLUTION ON CUBA

Whereas Cuba has become a 100-percent Soviet satellite, only 90 miles from our shores; and

Whereas, as always, bloodthirsty Communists have passed the ultimate in perfidy as they have scourged and defiled Cuba, destroyed all elementary decency and obliterated every right and freedom; and

Whereas unless broken and thrown back, communism will surge on to engulf and destroy other sister republics, some may sink any moment, the Caribbean overnight may become a red lake; and

Whereas it would be inhuman to abandon our Cuban friends to Communist slavery; and

Whereas we cannot risk having a Communist satellite state at our very threshold, controlling the Caribbean and the approaches to the Panama Canal and the Mississippi Valley; and

Whereas the United States of America must dictate and control its own policies, especially when the very lives and freedoms of its citizens are at stake:

Resolved, That the American Coalition of Patriotic Societies, Inc., makes the following recommendations:

1. Recognize a responsible Cuban Government in exile, just as we recognized the Free French and others during World War II.

2. Give that Government our full support, morally and materially, with arms and money.

3. Invoke a pacific blockade of Cuba to take care of trading by the Communist nations.

4. Continue U.S. cooperation and guidance after the Communists have been driven out of Cuba in order to rehabilitate that poor country and bring it back to freedom and constitutional representative government.

Is the Outlook Inflation?

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. QUIE. Mr. Speaker, those of us here in this House are fully aware of the recent economic policies enunciated by the new administration, and many of us here have expressed varying degrees of alarm lest such policies are tending toward economic instability. The February 27, 1961, edition of the Wall Street Journal carried an extensive analysis of our country's present economic position, and the proposed economic programs of the new administration. I believe my fellow Members will be interested in reading this article.

THE OUTLOOK—APPRAISAL OF CURRENT TRENDS IN BUSINESS AND FINANCE

(By George Shea)

The Kennedy administration is offering the world a classical lesson in how to lay the seeds of future inflation. It is doing so by proposing new Federal programs in new areas of the Nation's life.

To understand what is going on as clearly as possible it is necessary to review briefly what causes inflation. It is often said that the issuance of money so that its supply exceeds the availability of goods in the cause. However, this is something of an oversimplification. It is necessary also to go back of the issuance of the extra money to see what causes it, and to examine the circumstances surrounding the decision to issue the extra money.

The reason for this further examination is that economists have found a good many cases where the issuance of extra money was not followed by generally rising prices, and others where prices rose without the kind of money issuance generally regarded as the most inflationary. Reasoning from these varying situations, economic students nowadays in most cases agree that an essential factor is whether capacity to produce is fully employed or not.

If capacity is not fully employed, new spending through the issuance of new supplies of money is more likely to raise production than it is to raise prices. But if there is no unemployment and no unused capacity, new spending through the use of new doses of money will raise prices.

Actually, if capacity and workers are fully employed, any kind of new spending effort will tend to push prices up, whether it be Government spending or private spending. The more inflationary kinds of spending, furthermore, are the kinds that do not produce immediately consumable goods. If the spending is on new productive capital, such as a more efficient factory, it will at first have an inflationary effect, but later it will enhance the supply of goods, thus offsetting its first inflationary effect. But if the spending is on guns and shells to be used up in a war, there is no direct offset afterward, which is why inflations resulting from wars persist.

One of the clearest examples of inflation as a result of capital spending is in Russia today, although few people think of the Russian experience in these terms. The whole Russian postwar effort has been concentrated on building up capacity to make heavy industrial goods and armaments. People employed on these works, as well as most members of the Armed Forces, have naturally had to be paid but have produced nothing currently consumable. Thus their buying power has competed for the consumable goods produced by the rest of the population, and there has been a continuous shortage of such goods. As a result, the Russian ruble has been devalued three times since World War II, the latest devaluation having taken place at the start of this year.

One conclusion that can be reached from the foregoing considerations is that much Government activity and employment is inflationary in nature. True, some governmental activity is clearly necessary, if only to keep people from hurting each other. To the extent that it prevents wasteful violence or otherwise creates better conditions for production, it is in its own way productive since it permits greater production than would otherwise be possible. But beyond that it is very difficult to draw the line between governmental activities that are basically productive, and those that employ people in nonproductive work so that they have to live, in essence, entirely on the production of others.

What the Kennedy administration is proposing is a new expansion in Government activity in several directions. There's to be a medical care for the aged, although expenditures of the Federal old-age trust fund (mostly benefits) have risen from $3.5 billion in 1954 to more than $11 billion in the latest fiscal year.

There's to be aid to education State by State, although Federal aid of all kinds to States and localities has already grown from $2.7 billion in 1954 to $7.4 billion in 1960. Furthermore, this proposal would include a formula for rapid acceleration of aid expenditures: Any State whose effort fell short of the national average would be expected to bring it up to the average. Because any increase in a component figure below an average automatically raises the average, the sheer arithmetic of this kind of competition

would soon force the national average up to the level of the most lavish spender.

And there's to be Federal spending of new kinds on national resources, including desalting of sea water, which private enterprise is avid to develop even without Federal help. Of course, all these things are desirable. Better education is desirable, better medical care is desirable, and development of national resources is desirable. But medical care has been improving, as witness the growth in the average person's life span, and education has been getting better rapidly, too.

To some extent, these Federal efforts would merely duplicate efforts that would have been made anyhow, and to some extent they would go beyond them. But whichever is the case, the generous Federal hand on the job would mean the employment of more people than would otherwise be necessary—even if only for the Federal supervision of local efforts that would be added. Furthermore, with Federal help added, much of the normal and practical limits on spending which local management often can impose would be swept aside.

One has only to look at some of the historical trends of Federal spending to know what would happen. Federal trust fund spending of all kinds has grown from $7 billion in fiscal 1954 to more than $22 billion in 1960, all of it over and above the regular budget. Whether within or outside the budget, much of what is proposed would tend to add increasingly to the nonproductive expenditures of the Nation—the kind which must be supported by the productive portion of the populace and which, therefore, intensify the inflationary bias that always has existed and always will exist in government.

Ball-Bearing Gap: Should We Help Russians Close It?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following article by Roscoe Drummond appears in this morning's Washington Post.

The article is very revealing in that it points up once again that we have no firm policy in regard to Russia and the Communist takeover of the world.

In other words, we shilly-shally; one day one policy promulgated by some secretary, the next day another suggested by some new man.

As this article shows in the case of these high precision ball bearings that can only be made in this country and that the Soviets want to buy from us for the perfecting of their missiles, the only firm and knowledgeable voice that has been raised is the voice of Senator DODD of Connecticut. This Senator is not of my party, but I regard him as one of the most dedicated fighters agaist communism in the United States, and what is more important, if that is possible, one of the best informed and the most intelligent.

Mr. Speaker, if we are to defeat communism we must fight it here and now. If communism should win, its major victory will have been achieved through misguided American dupes and apathetic public opinion.

BALL-BEARING GAP—SHOULD WE HELP RUSSIANS CLOSE IT?

(By Roscoe Drummond)

Should the United States help the Soviet Union close one of its own "missile gaps?"

This is no classroom question. It is immediate and high policy. You might think that the answer should be simple. Perhaps it should be but so far the Eisenhower administration and the Kennedy administration has each answered it both ways.

At stake is whether the Soviets are to be permitted to buy from the United States $1,500,000 of newly developed, very complex machines capable of producing high-precision ball bearings as small as fifteen one-thousandths of an inch.

This is not just another commercial transaction. The reason is that these ball bearings are predominantly used in the guidance systems of military missiles and spacecraft and other highly complex military weapons.

So far American industry has in total operation only about 72 of these very special machines. The Soviets want to get 45 like them delivered real fast.

Naturally, the U.S. manufacturers would like to sell them—if the Government is prepared to issue the necessary export license.

The Department of Commerce, which makes these licensing decisions, has been on all sides of the question.

During the latter months of the Eisenhower administration the Department first decided that the sale could be made, then that it couldn't, and later that it might.

When the Kennedy administration took over, Secretary of Commerce Luther Hodges found himself inheriting a whole series of position papers, most of which favored letting the Russians buy.

Secretary Hodges had to decide yes or no. He decided yes, but lately, since Senator THOMAS J. DODD, Democrat, of Connecticut, vice chairman of the Senate Internal Security Subcommittee, has been raising pointed questions and apparently acquiring fresh information, Mr. Hodges has held up the license until Senator DODD can give the Department his report.

Mr. DODD is reporting:

That the sale of this machinery might well save the Soviets several years' delay in closing their present gap in the "miniaturization" of their missile and spacecraft-guidance systems. (It is this miniaturization which makes it unnecessary for the United States to have such powerful thrust for its own missiles.)

That, according to industry experts whose findings Senator DODD is submitting to Mr. Hodges, these machines the Soviets want to get from us cannot be duplicated elsewhere at the present time.

All the arguments are on one side.

The ban on the sale of precision tools to the Soviets was removed by the Eisenhower administration some time ago on the ground that what we would sell the Soviets, they could get elsewhere.

At one stage only the Defense Department member of the Advisory Committee on Exports objected to the issuance of the ball-bearing license.

Obviously the U.S. manufacturer does not lightly want to throw away business which means jobs as well as profits.

What is really disconcerting is that it should take so long to get the pertinent facts together in one place and that in the end the Department of Commerce, which has the authority to decide these matters, did not appear to have full knowledge until it was provided by a Senate investigating committee.

It is well to have skeptical Congressmen scrutinizing the executive branch of the Government but they can't do the job regularly. The yes-and-no and yes-and-maybe-not handling of the ball-bearing decision suggests that the whole procedure of granting export licenses needs to be reviewed.

None of this means that former Commerce Secretary Frederick Mueller or Secretary Hodges wants to help the Soviets. It does mean that the mechanism for getting the facts fully and promptly is dangerously pretty creaky.

The United States Clearly Leads in Space

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. FULTON. Mr. Speaker, the National Aeronautics and Space Administration has announced, as of February 24, 1961, an authoritative "International Satellite and Space Probe Summary." The following space vehicles are in orbit as of this date:

Name and country	Launch date	Transmitting
Explorer I (United States)	Jan. 31, 1958	No.
Vanguard I (United States)	Mar. 17, 1958	Yes.
Lunik I [1] (U.S.S.R.)	Jan. 2, 1959	No.
Vanguard II (United States)	Feb. 17, 1959	No.
Pioneer IV [1] (United States)	Mar. 3, 1959	No.
Explorer VI (United States)	Aug. 7, 1959	No.
Vanguard III (United States)	Sept. 18, 1959	No.
Explorer VII (United States)	Oct. 13, 1959	Yes.
Pioneer V [1] (United States)	Mar. 11, 1960	No.
Tiros I (United States)	Apr. 1, 1960	Yes.
Transit I-B (United States)	Apr. 13, 1960	No.
Spacecraft I (U.S.S.R.)	May 15, 1960	No.
Midas II (United States)	May 24, 1960	Yes.
Transit II-A (United States)	June 22, 1960	Yes.
NRL Satellite (United States)	do	Yes.
Echo I (United States)	Aug. 12, 1960	Yes.
Courier I-B (United States)	Oct. 4, 1960	Yes.
Explorer VIII (United States)	Nov. 3, 1960	No.
Tiros II (United States)	Nov. 23, 1960	Yes.
Samos II (United States)	Jan. 31, 1961	(2).
Sputnik VII (U.S.S.R.)	Feb. 4, 1961	No.
Sputnik VIII (U.S.S.R.)	Feb. 12, 1961	No.
Venus probe [1] (U.S.S.R.)	do	(2).
Explorer IX (United States)	Feb. 16, 1961	No.
Discoverer XX (United States)	Feb. 17, 1961	No.
Discoverer XXI (United States)	Feb. 18, 1961	Yes.
Transit III-B (United States)	Feb. 21, 1961	Yes.

[1] In solar orbit, others in earth orbit.
[2] Not available.
[3] On command.

Current summary (Feb. 24, 1961):

Earth orbit:	
United States	20
U.S.S.R.	3
Solar orbit:	
United States	2
U.S.S.R.	2
Transmitting:	
United States	11
U.S.S.R.	1

Complete summary (launched to date):

Earth orbit:	
United States	36
U.S.S.R.	[1] 9
Solar orbit:	
United States	2
U.S.S.R.	2
Lunar impact:	
U.S.S.R.	1

[1] Lunik III passed once around Moon, then into Earth orbit.

Still Needed: A Tax Incentive for Home Improvements

EXTENSION OF REMARKS
OF
HON. BOB CASEY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. CASEY. Mr. Speaker, within a few weeks, the Bureau of the Census will bring before us an ugly picture of national shame. It will be painted for all to see in the statistics of the 1960 housing inventory.

We will be told that in this land with the highest standard of living on earth there are 10,952,000 substandard units of housing.

We will be told that 639,000 units of housing stand dilapidated and vacant.

We will be told that 888,000 substandard homes are occupied by the owners.

Two weeks ago in his program for economic recovery and growth, President John F. Kennedy called for a tax incentive for business to spur on our lagging economy.

The White House informs me that specific proposals will be submitted to Congress by the President at a later date. This is, indeed, heartening news for our businessmen.

But in our drive to spur on a lagging economy with tax incentives, let us not overlook the perennial forgotten man, the American homeowner. Upon his weary shoulders rests the heaviest tax burden. He is school taxed, city taxed, district taxed, county taxed, State taxed, Federal taxed—taxed until it nears the state of being confiscatory.

In the last Congress, I introduced a bill to provide a tax incentive for home improvements. The need for passage is even greater now, and I am pleased to advise my colleagues I have this day reintroduced the measure.

This is a multipurpose bill. Basically, it will permit income tax deductions as an incentive for home and property improvements. But in addition, this bill if enacted will give a tremendous shot in the arm to our sagging economy.

Plumbers, electricians, carpenters, roofers, glaziers, paperers, contractors, hardware and lumber stores—all phases of the building and construction industry would benefit from a surge of business.

The President is asking that we expend millions in extending unemployment benefits. Here, in my opinion, we can take a positive approach to the problem by enacting this bill. The upsurge of activity in the business world would heavily overcome any loss of revenue generated by its passage, and thousands of our unemployed would be put to work.

But consider this point as well: our State and local governments would benefit tremendously as substandard housing is repaired and its valuation increased on the local tax rolls.

This, to me, is where our Government and this Congress can enact legislation and properly assert the claim of Federal aid. This is the type of aid I believe most Americans and local governments would prefer to see—aid our citizens and our local governments to help them selves.

My bill, briefly, would permit a taxpayer to deduct a maximum of $750 during a taxable year for expenditures made to repair or improve property used as his principal residence. In addition, the owner of rental property would be permitted to amortize over 60 months the expenditures made for repairs, replacements, or improvements intended to increase the livability, utility, safety, or value of property. Improvements or additions which would increase the total amount of floor space used for dwelling purposes would not be deductible.

It is tragic that under our existing Internal Revenue Code, a homeowner cannot deduct any expense for major improvements to his home. He can, if he itemizes deductions, subtract only the interest paid on a loan for such improvement or repair.

Nor has this Congress given landlords any incentive to repair substandard housing. While they can declare depreciation, they are not permitted to deduct expenses for capital improvement such as remodeling, replacing a roof, and so forth.

Again I ask the Members of this body: Is it any wonder that so much of our greatest national asset, our housing, is substandard?

And again I must say that the answer is obvious—and the fault is ours. Through our restrictive tax laws, we have built in an incentive for home and property owners to keep housing sustandard, for they can ill afford to make needed repairs.

I ask that you reflect but briefly on the billions spent in the past decade for public housing and urban renewal. Yet the shame of substandard dwelling for millions of our citizens is with us still.

Passage of this bill will bring a new meaning to urban renewal, for it will enlist the aid of the homeowner to rehabilitate existing substandard housing. But equally important, it will be a giant step toward prevention of blight and decay among homes not yet substandard.

How many homes in each of your districts are now in need of paint and repair, and how long will it be before such areas become part of a slum? While we have spent billions fighting the effect of blight and decay we have neglected entirely the cause.

I know full well there will be those who argue that passage of this bill will cost the Federal Government in revenue—that the answer lies in huge expenditures for urban renewal and public housing. Again I say it is a fallacious argument. The street of the Federal dole is a street of no return. Its destination is fiscal insolvency, dependency, and bureaucracy.

The bill I have introduced points a positive way to cure one of our Nations greatest ills—a way to assist our tax-burdened homeowner—a way we can extend the hand of cooperation to our State and local governments.

I sincerely urge my colleagues to consider the measure closely and join with me in seeking its early adoption.

Wall Street Journal Views "The Most of the Worst"

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in an editorial appearing in the February 28 issue of the Wall Street Journal, attention is directed to the recent comments of America's new President on the state of the Nation's economy. It comments upon "distortion of the whole by preoccupation with a part" and urges, as I urged in my statement to this House on February 17, that "when one wants to improve, he must see not only his weaknesses but also his strengths." I believe that this sound evaluation of our economy deserves the attention of the country and for this reason I request that it be inserted into the RECORD at this point:

REVIEW AND OUTLOOK—THE MOST OF THE WORST

In one of his recent messages to Congress, President Kennedy stated:

"A recent survey of a very large elementary school in one of our major cities found 91 percent of the children coming to class with poor diets, 87 percent in need of dental care, 21 percent in need of visual correction, and 19 percent with speech disorders."

That's an alarming picture, and the impression created is that it's a rather broad picture, that children all across the country are going to school in pathetically neglected condition.

But all the President's statement really tells us is that a survey was made. We don't know where or why or by whom. We are told it was made in "a very large" school, but not whether the school is representative of schools in the major city in which it is located or of schools in the Nation as a whole. Nor are we told what the surveymakers considered a poor diet or how they judged the need of dental care.

What we're told is that some children in this country unfortunately do not get the nourishing diet or careful medical attention of the great majority of American children. No one can take exception to that, or to the suggestion that the community has a responsibility toward truly needy children.

Nonetheless, by dwelling on the most unrepresentative part, the whole is submerged, and the needs of the few cast a pall of inadequacy over the well-being of the many. The image of our society and ourselves is distorted. And because the need is expanded by overstatement, the argument for expanding Government to meet it is given a more persuasive ring.

Distortion of the whole by preoccupation with a part is not uncommonly met nowadays. We hear grim reports of widespread unemployment. Business, we are told, is going to pieces. The economy is said to be stagnant, the pace of economic growth snail-like. We hear how the lack of missiles sometime in the sixties may seal the national doom. In distant corners of the world, angry mobs storm through the streets, and we are told it is the prestige of the United States being trampled underfoot.

Yet these indictments focus on narrow parts of broad pictures, and what truth they may contain is thus reduced by the truth they ignore. Certain areas of the country are hard hit by unemployment, but the Na-

tion as a whole is enjoying near-record employment. Business is down in some lines, up in others, and, on the whole, only slightly below the peaks of record prosperity. In comparing national rates of economic growth, we give ourselves the worst of the argument two ways: We ignore the impact of war recovery and reconstruction in Western Europe, and forget that our half-a-billion-dollar gross nation product can grow absolutely larger than other nations at a rate well below theirs.

Similarly, the uproar over the "missile gap" some months ago confused the potential rate of Soviet missile production with overall strategic capability—an error, surely, which Kremlin strategists do not make. Nor does their propaganda reflect the alleged "decline" in U.S. prestige. The United States remains the standard of every Soviet economic boast and the target of every propaganda effort.

This is not to say that all's well; all's obviously not. And perhaps it is useful for the Preesident to remind us more of our society's small failures than its large successes. Certainly, we see no merit in a Pollyanna sort of positive thinking.

But if there's little to be gained by patting ourselves on the back, there's even less to be won by beating ourselves down to the point where a crisis, a calamity, or an "unmet need" looms at every turn. Almost anything, after all, can be blackened by speaking of its faults only. When one wants to improve, he must see not only his weaknesses but also his strengths. For only by understanding our achievements are we able to grasp the true proportions of what remains to be done.

Throughout their history, the American people have been blessed with a divine dissatisfaction; they are self-critical by nature. They should listen closely to those who would make the best they have done even better, but it will profit them little to listen to those who make the most of the worst.

Outlook for 1980

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. QUIE. Mr. Speaker, in the February 27, 1961, edition of the Wall Street Journal, I read with interest an editorial commenting on the sweeping Federal programs being proposed by the present administration. Because I believe the observations made in this editorial merit the consideration of all my fellow Members, I request that it be presented in the RECORD.

The editorial follows:

REVIEW AND OUTLOOK: 1980

In his message to Congress last week on national resources, President Kennedy took the long view:

"We now use over 300 billion gallons of water a day. By 1980 we will need 600 billion gallons a day.

"Through 1980, according to present estimates of the Federal Power Commission, total installed capacity (of electric power) should triple if we are to meet our Nation's needs for essential economic growth."

And in this span, too, the President foresaw a doubling of our timber requirements, the need for providing 3 billion pounds more of seafood and tripling the Nation's recreation facilities, not to mention unspecified requirements for more city sewage disposal and for better breathing air over metropolitan areas. It was a comprehensive message, ranging from trout streams in the hills to the seashore beaches.

Although these precise measurements of need are little more than figures grabbed from an unlimited supply of air over Washington, a reasonable man might guess them to be conservative. If this country grows as freely and as rapidly as it has in the past, it will need much more of everything.

But the President's long view was not limited to foreseeing the Nation's future needs. Some other phrases suggest some rather far-reaching plans on what's to be done.

"We need an effective Federal air pollution control program now.

"I have requested * * * a progressive, orderly program of starting new (water) projects * * * Uninhibited commercial and residential development in such areas increase ultimate acquisition costs and may result in pressures against the project * * * I urge Congress to enact legislation permitting the reservation of known future reservoir sites * * *.

"Unfortunately, efforts to reduce flood losses by constructing remedial works are being partially offset by rapid industrial and residential development of flood plain lands.

"The role of the Federal Government in supplying an important segment of this (electric) power * * * must continue. * * * In marketing Federal power, this administration will be guided by the following basic principles. * * * Preference in power sales shall be given public agencies and cooperatives.

"A more difficult and unresolved forest situation lies in that half of our forest land held in small private ownership. * * *"

Now, if these phrases mean anything, they say that the villain in the picture—the reason why we are not meeting our water problem, or our timber problem, or whatever—is what is called the private sector of the economy. People, left alone, will uninhibitedly develop plain lands that the Government may later want to put at the bottom of a reservoir; or small private owners of timber land will impede the Government's forest program.

Left to its own devices the private electric industry, like the private lumber industry, would presumably fail to meet the Nation's needs; or at the least it wouldn't sell electricity so as to encourage widespread use and thus recognize the rights of the general public to have electricity.

So it follows, then, that the Federal Government must do something about it. And in this message the President proposes Federal programs for flood control, power development, timber management, urban sewage, city parks, seashore beaches, offshore oil digging, deep-sea fishing and air filtering.

We suppose this is all not too surprising when you reflect that the Government is already proposing to manage our education as youths, our care as old people, and our food and housing in the years between. Still, if this bias against the private sector is not exactly new, it's nonetheless interesting that the President should pick 1980 as the target date for all these Federal programs to take care of all our problems.

Readers of George Orwell's fantasy about the State that provided everything, from the people's necessities to their pleasures, will note this blueprint is 4 years ahead of 1984.

Predator Control

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the RECORD an article entitled "Predator Control," appearing in the March issue of National Wildlands News:

PREDATOR CONTROL—AN UNSAVORY MESS

(By Marguerite Angelo Smelser)

Every year in these United States, under pretext of economic necessity and game protection, men in the Predator and Rodent Control Branch, U.S. Fish and Wildlife Service, and in State and county departments of agriculture are seeing to it that they are paid millions of taxpayers' dollars to poison, shoot, trap, and club to death hundreds of thousands of largely beneficial wild animals—the so-called predators.

These animals are the carnivores and insectivores—foxes, bobcats, coyotes, badgers, skunks, cougars, golden eagles, and the like. The racket sustaining this killing hides under the pretty euphemism "predator control."

Men on the payroll of Government predator control agencies have taken advantage of the occasional legitimate need for control to develop programs of widespread senseless killing. For example, during 1959 in California, 29,228 wild predators were reported by these agencies as "taken"—the respectable word for killed—11,737 in Colorado; 42,909 in South Dakota (by bounties and government trappers); and 1,865 even in little New Jersey, which employs 6 trappers. Colorado supports 42 trappers; California, in 1957, supported 87.

IT'S YOUR MONEY

And you, in addition to being made to pay millions of dollars every year for this slaughter, are being forced to pay more millions for the pseudobiological propaganda to keep you sold on it, and still more millions for poisons to get rid of the rodents and insects which the predators, if left alive, would have helped to keep under control without cost.

You should understand that the evil inherent in indiscriminate predator control is no longer a matter of doubt, and every competent authority has long known this. Only those not financially dependent on the racket have been willing to admit it.

The scientific examination of thousands of wild animal stomachs, by the agencies that did the killing, has shown that the bulk of the predators' diet consists of gophers, squirrels, rats, rabbits, insects, and carrion.

On the basis of this evidence, and as a result of field observations, honest men in State departments of fish and wildlife are trying to eliminate their own predator control programs; but they are hampered by their political bosses' collusion with officials of the U.S. Fish and Wildlife Service's Predator and Rodent Control Branch and by legislators and certain influential sportsmen who, despite evidence, contend that predators decrease the sportsmen's supply of live targets.

The California fish and game department, attempting to divest itself of its own costly predator control program, lost the struggle

when certain State legislators, in 1959, passed Senate Concurrent Resolution 40. Aimed at the department, it presented the complaints of the wool growers' associations, and purported to represent the sportsmen and all citizens of this State.

Walter Shannon, director of the department, testified that 15 years' observation showed predator control to be a virtual waste of money in game production. Every coyote and bobcat killed cost an average of $35; each skunk $6 to $7; each mountain lion, $629.

But the legislature, representing a handful of selfish interests, ordered the department either to increase its control program, or to allocate funds to the U.S. Fish and Wildlife Service to broaden that agency's program in California. Results: The department paid out $25,400 to the Federal agency, and the department was directed to use its own personnel and $30,000 of its funds to kill the lesser predators.

LOSING A VALUABLE ASSET

Early in the century, the Biological Survey, predecessor of the U.S. Fish and Wildlife Service, made a study of predator-prey relationships, in which predators were evaluated as principally an asset to agriculture. In a Survey bulletin (No. 932), D. E. Lantz wrote: "Coyotes, foxes, wildcats, badgers, skunks, minks, and other flesh-eating animals are among the most potent agents in preventing an undue increase of mice, ground squirrels, pocket gophers, and the like; and much of the damage now done by rodents is due to the increasing warfare that has been waged against their enemies, the carnivores."

Nevertheless, at the demand of a few ignorant stockmen, sportsmen with no knowledge of ecology, and upon a nebulous, unspecified, anonymous, alleged general demand, Government agencies, in 1915, began getting public money for poisoning and trapping predators. The campaign is being expanded today, using Western stockmen as lobbies, but with never an objective review being made.

A DESTRUCTIVE FEDERAL AGENCY

In 1931, the American Society of Mammalogists characterized this arm of our Government as "the most destructive organized agency that has ever menaced so many species of our native fauna," and asked for an investigation.

In 1934, nearly 150 leading naturalists of our largest museums and research institutions petitioned for a thorough investigation to be prosecuted by disinterested and properly qualified parties. The Emergency Conservation Committee has fought the poisoning and trapping operations of the Government for more than 25 years. In spite of all, the Bureau has remained untouchable, and today is more firmly entrenched than ever, with its political affiliations, its cooperation with the U.S. Forest Service, Bureau of Land Management, agricultural departments, and the poisoning and trapping programs of these agencies.

"This whole business of predator control is an unsavory mess deriving its perpetuation from the bureaucratic edifice it has built up and the moneys that can be dispensed in its name," writes Richard W. Westwood, formerly editor, Nature magazine. "If the Government wishes to exercise some economy, here is an excellent place to begin."

CONGRESSIONAL LIPSERVICE

To save money by abating predator control to a necessary minimum is furthest from the intentions of those in charge. Each year representatives of the U.S. Fish and Wildlife Service appear before a congressional Appropriations Committee requesting funds for more slaughter; yet not once has the committee questioned the spending of millions of taxpayers' dollars to kill first the rodent and insect eaters, and then spending millions to poison the rodents and insects. With "we just must not waste a dime" lipservice, Congress gives all that is requested. State legislatures and county governments are doing similarly, yet to pay for proven damage would be far less costly.

"It is well known that popular reports in support of Government control programs are not distinguished for being critically impartial," writes Biologist Durward Allen, formerly of the U.S. Fish and Wildlife Service, in his book, "Our Wildlife Legacy."

Biased and padded reports take many forms. On file is a letter written in 1957 by a district manager of the U.S. Fish and Wildlife Service in reply to an inquiry regarding the Federal trapper and poisoner in Riverside County, Calif. "We are unable to take care of the numerous requests for work in Riverside County," he complained.

THE DEPLETED LAND

Yet at that very time, turkey raisers in that county told this writer that a Government trapper called at their ranch soliciting the privilege to trap out their premises. (Such solicitation is not unusual.) His services were refused. The poultry growers were having no problem with predators, despite their ranch being on the edge of wild country. In fact, in their 7 years of poultry raising they had had only two instances of predation, each of which they had handled themselves.

Tenant cattlemen and sheepmen graze public lands—your lands and mine—at fees so low that they would not pay taxes on comparable private lands, and even this pittance is returned to them for predator control and range improvement practices, some of which deplete the land to an extent incredible to those who have not seen it. (This writer has seen it.)

The Bureau of Land Management and the U.S. Forest Service cooperate with the U.S. Fish and Wildlife Service in poisoning and trapping across millions of acres of our public lands. They allow overgrazing along with the slaughter of wildlife until the acres are bare as the palm of your hand. Then they propagandize you—with your money—to mislead you into believing "scientific management techniques of the open range" have developed lush forage, as shown on the current range conservation 4-cent stamp, where cattle are pictured standing knee deep in grass. You should read the scandal of public land mismanagement, of which indiscriminate predator control is an integral part, in Politics and Grass, a factual exposé by Prof. Philip O. Foss, Department of Government, San Francisco State College.

THEY KEEP THE STOCKMEN IGNORANT

A high official in predator control activity makes the allegation (off the record) that stockmen are not sufficiently enlightened to adopt the system of eliminating only the occasional predator that may be doing damage. This commonsense approach has worked in Missouri for 15 years to the satisfaction of farmers with savings to taxpayers.

If it is true that stockmen are "ecologically ignorant," you may be sure the control agencies are refraining from educating them. Write to any Federal, State or county control department and you will receive stanch arguments for the necessity of killing to the extent it is being done in order to protect the farmers and the sportsmen.

J. Frank Dobie, author of the book, "The Voice of the Coyote", in a letter to this writer in 1959, stated: "I found out while writing my book on the coyote that the hierarchy of the 'control' care nothing at all except to keep killing and to keep increasing their jobs."

INTELLIGENT CATTLEMEN

Of course there are intelligent cattlemen who want predators left alive. (In her article "Uncontrollable 'Control'," this writer included testimony from enlightened ranchers, many of whom say Government agencies put pressure on them to allow poisoning and trapping on their own and leased lands.)

Some of these cattlemen appeared in 1960 before the National Advisory Committee, in Washington, D.C., to voice their protests against killing coyotes, hawks, and other predators. They were opposed to the use of Compound 1080—a vicious chain-acting poison now in general use. However, a spokesman for the Predator and Rodent Control Branch, U.S. Fish and Wildlife Service, brushed off these protests with dispatch.

BUT THE WOOLGROWERS

Almost to a man, the well-subsidized woolgrowers have no knowledge of ecological principles and couldn't care less. That the coyote played a part in making and keeping the range good, is beyond their comprehension. Their sheepherders follow the instructions of the "bossaman."

To save the trifling expense of guarding their flocks against the occasional destructive predator, the woolgrowers prefer instead to let the taxpayers pay for the wholesale destruction of wildlife on our public lands. Before thousands of sheep are turned onto the range, Government poisoners and trappers go in like a wave of death to kill every wild animal that might conceivably cause monetary loss to some woolgrower, together with every beneficial animal of the same species.

A COZY AFFILIATION

For this the trappers are rewarded with public money. They actually call themselves "The Government" on signs which they print at your expense and mine, and which they tack up in regions where they carry on their work. So cozy is their connection with politicians that they have had a law passed—Federal Penal Code, section 47—to prevent the public from trying to save any of its wildlife from them. If you release one suffering, broken-legged animal dying of thirst in one of their steel traps, you will get up to 5 years and a $5,000 fine.

In its propaganda, the Government has built in advantages beyond the means of private citizens or genuine conservation organizations. With our money, the control operators reach press, radio, and television; and Government public relations men talk before civic groups, chambers of commerce, 4–H clubs, and in schools.

Indicative of this is the 1959 report of a director of U.S. Fish and Wildlife Service operations in Arizona. He admits that his 16 fieldmen have reduced the coyote population—competent Arizonians say "to the verge of extinction"—but he does not suggest cutting down on trapping and poisoning. He relates how his men have educated the public about the necessity of control as he practices it, and as to the alleged benefits of compound 1080. He scoffs, "Many people, including some of Arizona's leading biologists, believe that predators control rabbits and rodents."

PUBLIC FUNDS FOR RIDICULE

It should be a matter of grave concern that public money is used to publish material containing a paucity of scientific truth but a plethora of biased reporting and even ridicule. A sample is the piece titled "Policies and Philosophies of Predator and Rodent Control." The author refers to the protests of that large and growing but as yet unorganized citizenry opposed to indiscriminate predator destruction—among them biologists, ecologists, naturalists—as the "maudlin sentimentalities of the Peewit Twitter Societies."

Cattlemen will tell you that in as many as 40 years of cattle raising they have never found proof that coyotes or other predators kill calves; and that they know from experience that predators are insurance against too many rodents. "Stock die of many natural causes, and a coyote found eating a carcass is blamed as the killer," says lifetime cattleman John W. Cummings, of Nogales, Ariz., who, with his son, is vehemently opposed to Government predator control programs.

"It is common knowledge that all predators do not prey on livestock and poultry," reports the South Dakota Department of Game, Fish, and Parks, in a 1959 pamphlet. "Where such losses occur it is usually one or a few individuals which are doing the damage. Removal of these few usually ends such losses. A 12-year investigation of the coyote bounty in Missouri showed no relationship between coyote numbers and complaints of coyote damage, indicating that the losses were caused by a few individual coyotes."

TRUTH FROM THE INFORMED

You may be sure the control departments are not putting out such information, nor are they publishing the opinions of such eminent biologists as Frank and John Craighead, Edson Fichter, Daniel McKinley, Marston Bates, Robert Rudd, Charles Elton, William Albrecht (professor of soils), or Durward Allen.

Dr. Clarence Cottam, formerly Assistant Director, U.S. Fish and Wildlife Service, has made thundering accusations against Government propaganda which attempts to gain public support for blanketing millions of U.S. acres with poison. At the 1960 congressional hearings on the Pesticide Coordination Act, Dr. Cottam stated that in his opinion there has been "misinformation, unfounded assertions, inaccurate reporting, and scare campaign propaganda, if not bold deception, fed the American public." Whereas he was speaking primarily of the fire ant fiasco of the U.S. Department of Agriculture in the South, he testified: "It isn't only in the field of entomology that problems may arise. The predator and rodent control programs of the Department of the Interior constantly need review and objective appraisal."

There is a handful of U.S. legislators who agree that a truthful appraisal is needed. They will help get such an appraisal if the public demands it; but we should make certain that it is not done by the profiteers of control. Like appointing bank robbers to investigate their robberies, that is what has been done in the past, with the results foisted on the public as being factual.

A NEEDLESS LOSS OF LIFE

Ill-advised poisoning campaigns have resulted in the death of thousands of ducks, geese, pheasants, and deer by actual count; while uncounted thousands of predators have died from eating the flesh of creatures already killed by poisons. In California, last year, 258,460 pounds of 1080 bait was used by the State department of agriculture alone.

According to the Humboldt Star, 33 Government hunters and trappers killed 4,480 predators in a 6-month period, in Nevada, but "officials of the U.S. Fish and Wildlife Service estimate that compound 1080 and other lethal materials were responsible for several times the accredited catch."

There has grown up in this century a kind of scientific investigator: the specialist. The channelized thinker, he has been aptly called. "Specialization in the world of modern knowledge is necessary," writes Marston Bates, professor of biology, University of Michigan in "The Forest and the Sea," "but generalization is also necessary if we are to fit our jig-saw pieces of information together into meaningful patterns."

WHAT DIFFERENCE DOES IT MAKE?

An example of specialist thinking was voiced at an agricultural experiment station by an official who asked this writer, "What difference does it make if whole species are wiped out? We'd get along very nicely without them. Whoever misses the bison and the passenger pigeon?"

The science of ecology began about 40 years ago. Every day it becomes clearer that even remote interdependencies between man and the flora and fauna of this earth are crucial to man himself. "It is not a sentimental but a grimly literal fact that unless we share this terrestrial globe with creatures other than ourselves, we shall not be able to live on it for long," writes Joseph Wood Krutch in "The Voice of the Desert."

All too often, specialists at our tax-supported universities are strongly biased in favor of whatever ups agricultural production, in spite of an $11 billion farm surplus. They do indeed know how to kill insects and mammals with increasing use of poisons put out by the chemical companies who furnish grants to the universities.

Biologists in the same institutions who dare to question the end results do so at their peril, while those who protest on the outside are termed religious fanatics, humane crackpots—ignorant or even subversive.

SCARE PROPAGANDA

Because the truth about predation and the value of biological controls are becoming more widely known, the control agencies are redoubling their propaganda. Scare items appear regularly in the newspapers: "Predators Are Increasing" is a charge that many professional trappers who know the finagling of reports say bluntly is "a damned lie." "Rabies Among Wild Animals on the Rise" is the kind of subject newspapers accept without question. The pronouncements of public officials have the political authority of power, which is a very different thing from the authority of knowledge—and too seldom the twain meet. How much of this rabies scare is based on fact, and how much on the intent to bolster predator control? Here is what Dr. William Brady, widely quoted physician, has to say:

"There is nothing scientific about the diagnosis of rabies in animals. It is all a purely empirical question, a question of individual opinion. Even finding of so-called Negri bodies, regarded by some pathologists as characteristic of rabies, is a matter of personal opinion merely."

While alleged agricultural benefits and game production become discredited as excuses for predator control, rabies scares can fill the gap.

SPREAD TRUTH

"Do we want to comprehend the natural laws of the biotic community into which we turn our sheep and cattle?" asks Zoologist Edson Fichter of Idaho State College. "Do we want the self-sustaining yield of a healthy land, or do we prefer the 'fast buck,' regardless of the cost it imposes upon the land? Will we choose the preventive medicine of natural control of potential pests, or will we continue calling upon the perennial pattern of poison baits and paternalism to treat the sick land's symptoms while the illness lingers on?"

Do we want to know the truth, or do we want to protect empires?

Where Is Our Economy Heading?

EXTENSION OF REMARKS
OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. QUIE. Mr. Speaker, I have for some time now been concerned about the general direction our economy is heading, and I note that I am not alone in my concern. The business and financial editor of the Christian Science Monitor, Mr. Nate White, in the February 25, 1961, edition of that newspaper, clearly reflects some general areas of concern and alarm over the present trend of our economy. Since I believe his observations are worthy of notice, I recommend the full reading of his article to my fellow members:

TREND OF THE ECONOMY: REVERSE COURSE

(By Nate White)

BOSTON.—It is fashionable these days for newsmen and commentators to write in surprised fashion about the moderate course of the new Kennedy administration in economic affairs.

Nothing could be more deceptive.

It is not a moderate course. It is a diametrically opposite course from that in which the United States has been traveling. It is deliberately so. It is not accidental.

The economy is changing daily before everyone's eyes. It is a change in the direction of informed, balanced, central planning, but it is the direct opposite of the kind of political and economic thought developed under the Eisenhower administration.

It is to President Kennedy's credit that this turn around has been accomplished in 36 days without shattering the structure of the economy. It is to the economy's credit that the Nation is so maneuverable.

A reverse course of a great ship can be an exciting, shocking, tremulant experience. Or it can be achieved full circle so quietly that no one except those in the deckhouse and the close observers of the skies might notice.

We are in the latter kind of turn around. We are pointed in the direction of the most tightly planned, directed, and controlled economy in our history.

The clearest indication of the new direction is in President Kennedy's special message to the Congress on the development of the Nation's natural resources.

The objectives are for the benefit of the general public. The President has even included all types of electric-power developers—public, private, and cooperative—in the plan. He has called for a massive expansion of power, all types, well knowing that in power capacity lies the genuine basis of economic growth. But it implies massive central planning.

This is a point which the Soviet Union understands well. The U.S. power development is massive. But as the saying is, when the full impact of the Kennedy program is understood, the public "will not have seen anything yet."

The development of water resources, to desalt seawater, purify the streams—these are fundamental measures in the economy which require the financial backing of the Federal

Government, its conception, blueprinting, and execution.

The cost of the projects which will stem from the Kennedy natural resources message cannot even be guessed at. They will be paid for and amortized, undoubtedly, in much the fashion of the Tennessee Valley Authority.

The point is: The Nation is on the way. And the direction is directly opposite from that in which it has been traveling.

Some other definite points are coming clear, if one reads between the lines.

The Nation's defense posture has stiffened.

At the same time the administration is exploring every avenue of arms control.

Defense Secretary Robert S. McNamara told the House Armed Services Committee that the Nation's weapons arsenal must be capable of a decisive counterblow after a massive nuclear attack has occurred.

This type of defense or survival posture requires massive development of highly mobile forces. It is significant that the preceding day, February 22, Adm. Arleigh A. Burke, the Chief of Naval Operations, said in Fort Lauderdale (and his address must, under the new rules, carry White House clearance) that the Navy needed many new aircraft carriers so that "we can project naval air power where we need it, when we need it."

The high-speed carrier, Admiral Burke said, "is the closest thing to an all-purpose weapon that has ever been devised." He explained: It can reinforce the drooping courage of friendly nations; it can obtain and maintain control of airlanes where and when needed; it can support amphibious or parachute landings; it can give the right amount of punch to halt an aggressor; it can send nuclear weapons as a retaliatory force.

The first act of Secretary McNamara was to strengthen the Nation's capacity to handle small-scale warfare. The Nation clearly is moving also in the direction of massive mobile retaliatory power.

At the same time, Ambassador Llewellyn E. Thompson, Jr., has returned to his post in Moscow readied with the Kennedy administration's desires to pool research in space exploration and in other peacetime directions, and also to discuss with the Soviets how to begin to negotiate for arms control.

Does this mean an international nuclear power compact in which the U.S.S.R. and the United States police the world?

Meanwhile, the economy is in the obvious first stages of an economic upturn. The administration's programs to stimulate it will add to the momentum. A vigorous recovery, plus a vigorous stimulant, can mean only one thing: large and rapid inflation, unless the new labor-management-consumer presidential commission can exert a firm stabilizing force.

Credit plans indicate a large increase in the money supply. Housing plans indicate more liberal Federal-guaranteed mortgages. Union, business, and consumer spending plans, on top of those of Nation, States, communities, can exert massive economic pressures this year.

In 36 days this has happened. And a few people still write of the "moderate" young man in the White House.

The Late Honorable Walter M. Mumma

SPEECH
OF
HON. J. IRVING WHALLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1961

Mr. WHALLEY. Mr. Speaker, I was indeed saddened to learn of the untimely passing of our good friend and colleague, WALTER MUMMA.

As a member of the Pennsylvania State Senate for some years, I had long been acquainted with his devoted service to his district and his State and his Nation, and upon my election to the Congress, I soon came to regard him as a personal friend and trusted adviser.

WALTER MUMMA was a man of ability, integrity, courage, and good will, and this country has suffered a great loss in his passing. He will be sorely missed by his colleagues, his family and his countless friends, but we may find consolation in the fact that his dedication to duty and his adherence to principle will be a living memorial to this great American.

I join with my colleagues in expressing my deepest sympathy to his fine family.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Resources for Development

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. BARTLETT. Mr. President, on February 27 Col. Christian Hanburger, the U.S. Army district engineer for Alaska, addressed the Greater Anchorage Chamber of Commerce on various phases of the work of his office.

The Alaska district was created in 1946, and since that time the interests and work of the district described so well by Colonel Hanburger have ranged over the vast area of Alaska.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech made by Colonel Hanburger.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY COL. CHRISTIAN HANBURGER

I would like to review with you today something of what has been accomplished in military defense construction in Alaska during the last 20 years, and then briefly to glance to the future.

The military construction program has been an important factor in Alaska's phenomenal growth. It very likely has affected every person—resident of Alaska—during the 20-year period, either directly or indirectly.

Dating back to 1946, this program has been administered by the U.S. Army Engineer District, Alaska, the organization that I represent. The district was created to continue the work started in Alaska by engineer troops in 1941. Both are elements of the U.S. Army Corps of Engineers.

Engineers in uniform began the construction in the months preceding an attack on Pearl Harbor on December 7, 1941. After war was declared, the work was expanded in scope and increased in tempo. Their mission was to build facilities needed for defense and offense.

In this they were singularly successful. They built the Alcan Highway, forerunner of the Alaska Highway, and numerous bases from Annette Island to Nome and from Nome to Attu. These rightfully have been called "stepping stones to victory."

Following the war, the construction mission inherited by the district was modified to fit the world situation. The Alaska district continued to build or adapt facilities for defense, but not for the offensive. These were needed by a Nation at peace, which at the same time was engaged in a cold war.

The first work undertaken by the Alaska district in 1946 was at Anchorage and Fairbanks where wartime bases were converted to modern, permanent installations. Afterwards, a network of defense warning stations and secondary bases were established radiating out from these centers to the most remote corners of this large State.

This work of the first 20 years has been successful. Most of the defense work I described has been done. We have work remaining to do, but the spadework is done.

More was achieved in this period than the mere building of a defense network, no matter how vast or intricate in a frontier country. It was during these years that Alaska experienced an unprecendented period of growth—a growth that I am sure will continue. The presence of a large civilian construction industry numbering over 2,300 at peak periods certainly has been a factor in Alaska's growth of the last 20 years.

This defense program will continue as the needs of the Nation dictate, and it will continue to contribute to Alaska's economy in the future; but not, barring the totally unforeseen, on a scale that it did in the past 20 years.

The hard, costly pioneer work has been done. The remote stations have been built. The large jobs, Clear being the latest, have been virtually completed.

Projects starting this year are perhaps as varied in design as they were in the past, but they are smaller and they are not as difficult of access.

They include the relocation of an alert hangar, runway work, chapel construction, an airmen's dormitory, radar tower work, construction of runway extensions, building of a dry cleaning facility, and family quarters.

In the Anchorage area we will start building a storage cubicle magazine, a missile assembly shop, taxiway lighting, and utilities at Elmendorf.

The estimated value of work that we expect to place this year is $27 million. For last year, this was $95 million or slightly more than three times as much as this year.

Last year was one of the big years in military construction in Alaska. It ranks with the annual programs undertaken in the period from 1950 to 1959. It was during the fifties that military construction reached its peak. In 1953, the value of placement peaked out at $150 million. The average annual placement was $96 million. The program is down noticeably from its peak.

In the 20 years of military construction, a total of slightly more than $2 billion was spent in Alaska. Such a sum would be helpful in any economy, no matter how rich it was otherwise.

The question will arise now as to what the effects will be on the economy resulting from the reduction in military construction. I can only say that Alaska being Alaska, it will find other roads to economic independence. Alaska is a land of promise due to its many virtually untouched resources and its vigorous people.

I think that Alaska's future depends on the development of its resources. If its resources are developed, then its future will be better than its past or present. If this is not done, then I do not know how it will continue to grow. My advice is to develop them as rapidly as possible. This job is much larger than any which has been performed in the past.

Much of the preliminary work leading to full resource development has been done. I feel I can speak with authority on this subject. Shortly after Alaska came under the American flag in 1867, Army Engineers came here singly or in small groups to conduct trail explorations, waterway explorations, and to chart Alaska's resources at a time when their fellow countrymen still considered Alaska as "Seward's folly."

They continued this work beyond the turn of the century. In this century, before the start of World War II, they have dredged channels for ocean shipping and built and expanded harbors. They were charter members and continued to serve on the original Alaska Road Commission for 33 years; they helped to survey and build the Alaska Railroad.

Our work directed along these lines was interrupted for several years due to the immensity of the war work, but in 1949 the responsibility for continuing the civil works was given to the Alaska district. The first assignment of our civil works people was in the tradition of their forerunners. The old-timers would recognize it as a typical large order. They were assigned to map the water resources of Alaska and to report their findings to Congress. The potential of hundreds of streams and lakes and coastal waters in all parts of Alaska had to be gauged to fill the order.

Our civil works men have completed this survey of water resources in Alaska and soon will make their final report to Congress. They examined the resources for navigation, flood control, recreation, and hydroelectric potential. What they found in hydropower potential exceeds Alaska's gold by many multiples in economic possibilities, if not in glamor.

Alaska has about 18 million kilowatts potential in hydroelectric power at sites ranging from the very small to the mammoth.

I would like to review briefly a few hydropower developments and what contributions to the economy can be expected from them.

On the Kenai Peninsula southeast of Homer, a site at Bradley Lake has been subjected to a detailed engineering study. This site is located near enough to Anchorage so that it could supply low-cost power that will be needed here in the near future. Bradley is a medium-sized project having a potential capacity of approximately 64,000 kilowatts. The estimated cost of construction is $45,750,000.

The project has been recommended for constructed by the Alaska district and favorably reviewed by the Board of Engineers for Rivers and Harbors in Washington, D.C. It is fully expected that the project will be presented for appropriation of construction funds. Conceivably, Bradley could be built and producing power in 1965 or 1966.

In the meantime, the Alaska district is continuing to investigate the feasibility of a hydroelectric project on the Yukon River at Rampart Canyon, northwest of Fairbanks. This project is of such magnitude that, if it is carried through to completion, it will stand with the hydroelectric giants of the world, having a capacity in the neighborhood of 5 million kilowatts.

Detailed engineering studies are being made of Rampart. This spring we will make drill tests through the ice for foundation data.

Another study will soon be launched under the direction of the U.S. Fish and Wildlife Service and the Alaska Department of

Fish and Game to determine the effects of the completed project on the wildlife of the area.

In the near future, we expect to announce that a world-renowned firm has been retained to conduct an economic study of the effects of the project on the economy of Alaska and the Nation as a whole.

Rampart is frequently thought of as being a remote project—something that may be built in the next generation. This is not necessarily so. The studies made by Army Engineers indicate that Rampart could be producing power for industry by 1971–72 if full authorization and funding are forthcoming.

Even Rampart's total capacity will be insufficient for the future demands of power-hungry industries—industries which process metal ores through electrical processes and industries that are auxiliary to these.

Among those industries that use electro-processing—that is, electricity as a raw material and ingredient rather than as a source of power—are the processors of aluminum, magnesium, titanium, zirconium, hafnium, electric steel, electric pig iron, electrolytic copper, zinc, nickel, ferroalloys, chlorine, and caustic soda, calcium carbide, elemental phosphorus, artificial abrasives, and many others.

The amount of energy required is enormous. For example, one ton of aluminum consumes 15,000 kilowatt-hours of electrical energy, and one ton of elemental phosphorus consumes 13,000 kilowatt-hours. Even the smallest processing plants of this nature use large amounts of power, and it must be low-cost for them to compete. The power cost is their main expense, and they will, as they must, locate where power is the cheapest.

The cost of Rampart power delivered at tidewater at Anchorage has been generously estimated at 3 mills. There is not another project in Alaska in the plannnig stages which could be built on the line in 10 years with this kind of low-cost power.

I realize that Rampart's vastness is the subject of concern, but I must say that it is too big only if there will not be a market for its power. As a matter of fact, there is a demand for this amount of power in the Nation and the world, and this demand is expected to grow in the future.

The cost of building Rampart is estimated at $1,300 million. It is a lot of money, but I have recommended that engineering studies be pushed ahead as rapidly as possible because the development is needed.

Recently a board of civilian advisors has been appointed to assist the Alaska district and the Corps of Engineers with the Rampart studies. They include Mrs. Irene Ryan and Mr. Stanley McCutcheon of Anchorage. Other Alaskans named to the board are Mr. W. T. Kegley, president of the First National Bank of Juneau, who will represent Governor Egan; Mr. Frank H. Mapleton, a mechanical engineer of Fairbanks; and Dr. William R. Wood, president of the University of Alaska. Other than Alaskans, the board consists of Dr. Edward Steve Shaw, an economist for Stanford University; Mr. Samuel B. Morris, a prominent consulting engineer of Los Angeles; and Mr. Gus Norwood, executive secretary of the Northwest Public Power Association of Vancouver, Wash. The assistance of these highly qualified people will be invaluable in planning and developing Rampart.

It has been a pleasure to meet and talk with you today. I am glad that I have the vantage of the corp' 20 years of military construction experience as a basis from which to make my remarks on Alaska's economy. These remarks would be difficult to boil down to one statement.

If I attempted, the result would go something like this: Alaska's future growth depends, now more than ever, on the wise and rapid development of its tremendous resources.

Civil War Centennial Observance

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey began its Civil War Centennial observances on February 21, with a unique program which also managed to state a few truths about this Nation and other free nations.

Dr. Roy P. Basler, Chief of the Reference Division of the Library of Congress, spoke before more than 650 New Jersey legislators and guests at a special joint session of the legislature commemorating Abraham Lincoln's historic appearance in Trenton on February 21, 1861. Dr. Basler, in describing the validity in today's world of Lincoln's beliefs, said:

It is always the hope of elders that the young may learn without making the mistakes their elders made, but let us judge fairly and calmly those who are striving today to establish or maintain in other lands around the world the governments of their choice.

Lincoln's own words to the State senate and general assembly 100 years ago were spoken by actor Anthony Quinn. Assemblyman Herbert H. Tate was in the chair, as speaker pro tempore—the first Negro to preside over a joint session of the two houses. Assemblyman Tate, who is assistant minority leader regularly, was named to the honorary post by assembly speaker LeRoy D'Aloia.

Mr. President, the occasion was a memorable one. It contributed to the national understanding of the great conflict which tested men and principles of this Nation. I ask unanimous consent to have printed in the Appendix of the RECORD Dr. Basler's address and the two addresses made by Abraham Lincoln, in Trenton.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ABRAHAM LINCOLN'S ADDRESS BEFORE THE NEW JERSEY SENATE, FEBRUARY 21, 1861 [1]

Mr. President and gentlemen of the Senate of the State of New Jersey, I am very grateful to you for the honorable reception of which I have been the object. I cannot but remember the place that New Jersey holds in our early history. In the early revolutionary struggle, few of the States among the old thirteen had more of the battlefields of the country than old New Jersey.

May I be pardoned if, upon this occasion, I mention that away back in my childhood, the earliest days of my being able to read, I got hold of a small book, such a one as few of the younger members have seen, Weems' "Life of Washington." I remember all the accounts there given of the battlefields and struggles for the liberties of the country, and none fixed themselves upon my imagination so deeply as the struggles here at Trenton, N.J. The crossing of the river; the contest with the Hessians; the great hardships endured at that time, all fixed themselves on my memory more than any single revolutionary event; and you all know, for you have all been boys, how these early impressions last longer than any others. I recollect thinking then, boy even though I was, that there must have been something more than common that those men struggled for.

I am exceedingly anxious that that thing which they struggled for; that something even more than national independence; that something held out a great promise to all the people of the world for all time to come; I am exceedingly anxious that this Union, the Constitution, and the liberties of the people shall be perpetuated in accordance with the original idea for which that struggle was made, and I shall be most happy indeed if I shall be an humble instrument in the hands of the Almighty, and of this, his almost chosen people, for perpetuating the object of this great struggle.

You give me this reception, as I understand, without distinction of party. I learn that this body is composed of a majority of gentlemen who, in the exercise of their best judgment in the choice of a chief magistrate, did not think I was the man. I understand, nevertheless, that they came forward here to greet me as the constitutional President of the United States—as citizens of the United States, to meet the man who, for the time being, is the representative man of the Nation, united by a purpose to perpetuate the Union and liberties of the people. As such, I accept this reception more gratefully than I could do did I believe it was tendered to me as an individual.

ABRAHAM LINCOLN'S ADDRESS TO THE NEW JERSEY GENERAL ASSEMBLY FEBRUARY 21, 1861 [2]

Mr. Speaker and gentlemen, I have just enjoyed the honor of a reception by the other branch of this legislature, and I return to you and them my thanks for the reception which the people of New Jersey have given, through their chosen representatives, to me as the representative, for the time being, of the majesty of the people of the United States. I appropriate to myself very little of the demonstrations of respect with which I have been greeted.

I think little should be given to any man, but that it should be a manifestation of adherence to the Union and the Constitution. I understand myself to be received here by the representatives of the people of New Jersey, a majority of whom differ in opinion from those with whom I have acted. This manifestation is therefore to be regarded by me as expressing their devotion to the Union, the Constitution, and the liberties of the people.

You, Mr. Speaker, have well said that this is a time when the bravest and wisest look with doubt and awe upon the aspect presented by our national affairs. Under these circumstances, you will readily see why I should not speak in detail of the course I shall deem it best to pursue. It is proper that I should avail myself of all the time at my command, in order that, when the time arrives in which I must speak officially, I shall be able to take the ground which I deem best and safest, and from which I may have no occasion to swerve.

I shall endeavor to take the ground I deem most just to the North, the East, the West, the South, and the whole country. I take it, I hope, in good temper—certainly no malice toward any section. I shall do all that may be in my power to promote a peaceful settlement of all our difficulties.

The man does not live who is more devoted to peace than I am. [Cheers.] None who would do more to preserve it. But it may be necessary to put the foot down

[1] "The Living Lincoln," edited by Paul M. Angle and Earl Schenck Miers, Rutgers University Press, 1955.

[2] New York Tribune, Feb. 22, 1861.

firmly. [Here the audience broke out into cheers so loud and long that for some moments it was impossible to hear Mr. Lincoln's voice.] [He continued:] And if I do my duty, and do right, you will sustain me, will you not? [Loud cheers, and cries of "Yes, yes; we will."]

Received, as I am, by members of a legislature the majority of whom do not agree with me in political sentiments, I trust that I may have their assistance in piloting the ship of state through this voyage, surrounded by perils as it is; if it should suffer attack now, there will be no pilot ever needed for another voyage.

Gentlemen, I have already spoken longer than I intended, and must beg leave to stop here.

Lincoln's Meaning to New Jersey and the World

(Address by Roy P. Basler before the special joint session of the New Jersey Legislature, commemorating Abraham Lincoln's visit to the statehouse on February 21, 1861)

It is most gratifying that we meet today, in commemoration of an event 100 years ago, under circumstances vastly different from those which confronted the men whom we honor. Without detracting from the seriousness and solemnity of this occasion, may I remind you of a humorous aspect of that time when Abraham Lincoln addressed your predecessors. I quote from the account of the ceremony printed in the Philadelphia North American and United States Gazette on the following day: "Arrangements were made by the State legislature to admit only such parties as might adorn, but not embarrass the ceremonies. Members of either house were debarred from entering the other." Whatever the reasons may have been for such vigorous attention to preserving the respective autonomy of each chamber, both the senate and the assembly gave Abraham Lincoln their unreserved pledge of the "continued devotion of this State to the Constitution and the Union founded by our fathers, and that our people will cooperate with you in all constitutional efforts for a speedy and peaceable settlement of the differences which now distract our country * * *." Today it is gratifying that both chambers are met in joint session to commemorate the separate occasions of 100 years ago.

Humbly reflecting on scenes invoked by Mr. Quinn's reading of the words spoken a century ago by the greatest American who ever appeared before the senate or general assembly of this heroic and historic State, and proudly grateful for the spirit of the man that was Lincoln, let us renew his pledge and theirs of "devotion to the Union, the Constitution, and the liberties of the people."

We should also be, as Lincoln said he was, anxious that the principle of freedom and equality, "that something more than national independence; that something that held out a great promise to all the people of the world to all time to come * * *" shall be perpetuated. We are human beings first, and Americans second. Whether consistently or intermittently, most of us are partisans only at third hand. As one whose traditions are divided in politics, I have at different times, I believe, voted for both good Democrats and good Republicans. Let this centenary remind us that the right to choose is, and always has been, the guarantee of continued freedom, and that responsibility is the guarantee of the right to choose. And let it remind us also that when the people have chosen, they have the right to change or corroborate their choice at succeeding elections, but that the choice of the majority must be honored until a succeeding election affords another opportunity to change. This is what your predecessors recognized a century ago by honoring the man who had been chosen by the people of most of the then States of the Union, even though a plurality of the people of New Jersey had at the same election voted for an opposing candidate, and had chosen a majority of State representatives and Senators from the opposing party.

This is, in simple, what the Civil War was about. As Lincoln phrased it in his message to Congress in special session on July 4, 1861, the Civil War was to "demonstrate to the world, that those who can fairly carry on election, can also suppress a rebellion—that ballots are the rightful, and peaceful, successors of bullets; and that when ballots have fairly, and constitutionally, decided, there can be no successful appeal, back to bullets; that there can be no successful appeal, except to ballots themselves, at succeeding elections. Such will be a great lesson of peace; teaching men that what they cannot take by an election, neither can they take it by a war—teaching all, the folly of being the beginners of a war."

As a nation, we did not learn this lesson easily, but a century of peace among ourselves testifies that we learned it fairly well. In fact, we seem to have learned it so well that we are sometimes impatient as a nation with other younger republics that have not learned it yet. We forget that nearly a century intervened between the establishing of our Government under Washington and the preserving of it under Lincoln. Shall we expect more rapid or more effective learning on the part of nations younger than ourselves? Let us remember that with the exception of the little Republic of San Marino, we are the oldest republic on the earth, and with the exception of England, the oldest country with a history of continuous constitutional government in any form. It is the hope of elders always that the young may learn without making the mistakes their elders made, but let us judge fairly and calmly those who are striving today to establish or maintain in other lands around the world the governments of their choice. As we did not learn quickly or easily, as we have not yet learned fully, that "all men are created equal;" and "that they are endowed by their Creator with certain inalienable rights," should we not try more earnestly than ever before, to set a better example at home after nearly 2 centuries of national existence? As we have required so much to teach us and so long a time to learn, should we not do all we can to aid those who are just beginning?

Abraham Lincoln was a problem to the party that nominated him for the Presidency, as well as to the party that opposed him, and he has remained a problem to both parties for a hundred years. Both can quote him for their respective purposes, and either suffers the penalty for not living up to what is quoted. He was a conservative bent on conserving the state existing, as a means to the state becoming; a conservative bent on preserving a degree of permanence while making desirable change; a conservative bent on conserving above all else the right of individuals and of classes of people to improve their condition, even when that improvement required major adjustments in the condition and privileges of other people. This kind of conservative is not easy for a political party or a nation to live with, but both parties and the nation learn in the long run that this kind of conservative is the only kind they can live with.

Nine days before Abraham Lincoln addressed the Senate and Assembly of New Jersey, he addressed a group of representatives of eight German workingmen's societies at Cincinnati, Ohio. These immigrant laborers had left the country of their birth in quest of the freedom and equality for all men, which, Lincoln said, held out hope to "all the people of the world to all time to come." As new American citizens, they came to greet the President-elect and to pledge him their whole support in whatever lay ahead, because they knew, perhaps better than their native-born compatriots, what would be lost if the new President could not preserve it.

In responding to their pledge, Abraham Lincoln said this:

"Mr. Chairman, I hold that while man exists, it is his duty to improve not only his own condition, but to assist in ameliorating mankind; and therefore, without entering upon the details of the question, I will simply say, that I am for those means which will give the greatest good to the greatest number."

Today, we should also remember this, in New Jersey and in every State of the Union, because the people of the world remember it, if we do not. The concept that the United States was created to preserve and extend freedom and equality to all men, which Lincoln believed and struggled for, was not a something for Americans only and if we today fail to remember this, we may expect to be judged accordingly. The United States is judged among the people of the world by the extent of our success or our failure to live up to the ideal of Jefferson and Lincoln, both at home and abroad. Men like Jefferson and Lincoln, and their ideal of freedom and equality, were and are our greatest asset in the eyes of the world, but when that asset is not put to work at home, and shared abroad, it becomes a liability. If Lincoln's commitment to "ameliorating mankind" is replaced by a commitment to "maintaining the status quo," we cannot expect people in search of amelioration to be so ignorant as not to know the difference. The image of Abraham Lincoln and the image of Uncle Sam are not by any means synonymous in the eyes of the world. I am reminded of a cartoon drawn by a French cartoonist in one of the Paris newspapers in 1873. In it, the figure of Abraham Lincoln holds in the palm of his hand a Tom Thumb figure of Uncle Sam. The cartoonist's message cannot be misundertsood, and we may well wonder whether the enormous expansion of our material power as a nation in the 20th century has altered this relative assessment of Abraham Lincoln and Uncle Sam in the eyes of the world.

We do not have to "sell" Abraham Lincoln to the masses of the people in the world any more than we have to "sell" the ideal embodied in the Declaration of Independence. But we do have to show them that the people of the United States still believe in the principle embodied in our Declaration of Independence, as a principle for all the people of the world, as Lincoln believed in it. This is seldom, if ever, easy, but it is particularly difficult when what we think is our interest comes in conflict with what people in other lands think is their interest. Apropos of our once peculiar interest in slavery, Lincoln said, "The plainest print cannot be read through a gold eagle." I trust that the disappearance of the gold coin, as well as the devaluation of the dollar, will not lessen the point Lincoln was making, if we substitute for "gold eagle" the twenty dollar bill, or the hundred ruble note for that matter, since the difficulty in reading through material wealth is by no means confined to citizens of the United States.

On our part at least, should we not continue most carefully to weigh this matter of our interest, in the conservative spirit of Lincoln, recognizing that "ameliorating mankind" is the only ultimate interest worthy of ourselves and our Nation? Let us seek the best means today by which "that something that held out a great promise to all the people of the world to all time to come * * * shall be perpetuated." This is what Abraham Lincoln

means to the world; this is what we should strive to make Uncle Sam mean to the world. Although it is fitting and proper that we should commemorate this day, we can do even better everyday, by continuing to extend the principle upon which our Nation was founded.

People Need Encouragement

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. JONAS. Mr. Speaker, people out in the country are becoming discouraged as a result of so much talk about depressed areas and recession. My mail has been full of letters from people down home who report that morale has been shaken and confidence undermined by the pessimistic pronouncements from the White House concerning business conditions.

The Charlotte News of February 28 reports that the members of the Charlotte Merchants Association have become disturbed over the continued pessimistic talk and that the president of the association recently dispatched a telegram to the President of the United States urging him to help rebuild the confidence of the people in the future of our country.

Since the text of the telegram from the president of this association has been made public, I feel at liberty to quote it as a part of my remarks. I call this telegram to the attention of my colleagues in case they may see fit to bring it to the attention of similar organizations in their districts. If the attitude of the people in Charlotte, as set forth in this telegram, is typical of sentiment in the country, similar groups in other sections might wish to follow the example of the Charlotte Merchants Association. I believe a concerted effort to persuade the President of the United States to follow the recommendations of the Charlotte Merchants Association might be effective.

Following is the text of the telegram mentioned above:

As merchants as well as members of a large trade association, we are in close and constant communication with the consumer.

In the past few weeks we have been made aware of the fact that the working people are becoming more and more depressed because of the great amount of adverse publicity being given about depressed areas, which is having a depressing effect on the people of all areas, thereby affecting the morale of the public and our national economy.

In view of your effort to bolster the economy in depressed areas, it is unfortunate that the national publicity tends to paint a dark picture for all America.

Could the story be told of the depressed areas and not make it appear to be nationwide?

We believe in America and we believe in the American people, but unfortunately national publicity is shaking the confidence of the people in America.

We solicit your influence in the direction of building the confidence of the people in America. Your comments will be greatly appreciated.

Our Nation's Future

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. THURMOND. Mr. President, the February 23, 1961, issue of the Calhoun Times, of St. Matthews, S.C., which is ably edited by Mr. Craddock Morris, contains two excellent editorials which make very important points concerning the future of our Nation. One is entitled "Rome Went Out of Business," and the other "Socialism and Cupidity." I ask unanimous consent that these two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

ROME WENT OUT OF BUSINESS

There is a common wish among people to peer into the future but the future cannot be visualized except through history—which often repeats itself. Due to the wide belief that the Federal Government should provide an endless list of benefits from welfare to education with centralized bureaucracy replacing local responsibility it is well to ponder possible results. The fate of the Roman Empire suggests what might happen to the United States.

The Encyclopaedia Britannica says this about the decline and fall of the Roman Empire: "* * * nothing could compensate for the lack of self-determination, and although during the first century and a half of imperial rule a flourishing local patriotism in some degree filled the place of the wiser sentiment, this gradually sank into decay and became a pretext under cover of which the lower classes in the several communities took tool of their wealthier fellow citizens in the shape of public works, largesses, amusements, etc., until the resources at the disposal of the rich ran dry, the communities themselves in many cases became insolvent, the organs of civic life became atrophied, political interest died out and the whole burden of administration, as well as that of defense, fell upon the shoulders of the bureaucracy, which proved unequal to the task. The gigantic bureaucracy of the fourth century proved, in spite of its undoubted services, an intolerable weight upon the energies of the Empire."

History, let us remember, has a habit of repeating itself.

SOCIALISM AND CUPIDITY

According to figures just released by Tax Foundation, Inc., the per capita burden of Federal, State, and local taxes was $109 in 1940, $369 in 1950, and $715 in 1960.

In virtually all State and local governments, no less than the Federal Government, proposals are advanced for more and more tax revenue. Unless the people restrain their demands on government, and put their foot down on unnecessary government expenditures that curry favor with pressure groups, Karl Marx's plan "to wrest all capital from the bourgeoisie," may become a reality in the United States.

If socialism engulfs our country, it will be due to the cupidity of people who think they can get something for nothing from government.

Beware of the Campaign To Restrain the Growth of Railroad Piggybacking

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. VAN ZANDT. Mr. Speaker, there is presently underway a campaign to deprive the public of one of the most promising transportation developments of our time. That development is piggybacking, which is the colorful term used to describe the movement of truck trailers, automobiles, and containers on railroad flatcars.

In recent weeks, some Members of the Congress including myself have received numerous letters demanding Government action to restrain the growth of piggybacking, especially for the movement of new automobiles, on grounds that it is enabling railroads to take business from trucks and hence putting truckdrivers out of work.

In a recent edition of the Teamsters monthly magazine, as well as in several specially prepared publications, teamsters and their wives and friends have been urged to write Members of Congress demanding special measures to curtail piggyback growth and thereby protect teamsters from railroad competition.

I can remember, as I am sure many of you can, when virtually all new automobiles moved by railroad. Then came vast Government expenditures for the construction of fine new highways and with these, the development of new type trucks and trailers capable of carrying several automobiles direct from factory loading ramps to the dealer's door.

This was a service that appealed greatly to the automobile manufacturers. And because the costly highways and other required facilities were provided largely by Government, it was also competitive in price. The result was inevitable. The automobile companies turned to trucks, and the railroads lost virtually all of the new automobile traffic.

Now the railroads have devised means of providing a still better service at lower cost. Piggybacking is proving itself not only in the movement of new automobiles, but also for a wide range of commodities. Its development particularly in the last few years has been little short of spectacular. Last year, with most other classes of railroad traffic on the decline, piggyback traffic showed an increase of about one-third. As compared with 1958, the increase was more than double.

Underlying this remarkable growth is a firm foundation of technological improvement, which includes not only such general improvements as dieselization,

fully automatic freight classification yards, and centralized traffic control, but also a wide variety of technological breakthroughs in particular problem areas. Among the latter are developments in methods and equipment for loading and unloading trailers and in new types of freight cars, some capable of hauling two fully loaded trailers and the trilevel automobile carrier handling up to 12 standard size automobiles or 15 of the compact variety.

Improvements of this kind are the real reason for the railroads' improved competitive capability. As always the real beneficiaries are the users of transportation and the public as a whole.

The Teamsters' publications have stated that the ICC favors railroads, is railroad oriented, and have charged that the ICC has been packed with prorailroad people.

Nothing could be further from the truth. Of the 10 Commissioners presently on the ICC—there is 1 vacancy—only 2 have had railroad experience of any kind. One of these spent 6 years in railroad work, leaving in 1925; and the other 3 years with a State railroad association, leaving in 1949.

Nine of the Commissioners have legal backgrounds, and all 10 had distinguished themselves in private or Government work before their appointment to the Commission. One is a former Lieutenant Governor of Kentucky, president of the Senate of the Commonwealth of Kentucky, and special circuit judge; another is a former assistant attorney general of Colorado; another is a former assistant attorney general of Texas; and another a former Member of Congress and general counsel of the U.S. Post Office Department.

The Nation is fortunate indeed to have attracted men of such high caliber to direct the affairs of this unit of Government.

One of the Teamsters' publications asserts that—

> It is a matter of undisputed fact that the trucking industry is paying more than its share of the cost of the Federal highway program.

If this be an undisputed fact, it is certainly news to the Congress, which in the Federal-Aid Highway Act of 1956 directed that a study be made for the purpose of making available to Congress information on the basis of which it may determine what taxes should be imposed by the United States, and in what amounts, in order to assure, insofar as practicable, an equitable distribution of the tax burden among the various classes of persons using the Federal-aid highways or otherwise deriving benefits from such highways.

The Bureau of Public Roads in its recent report to Congress declares that the heavy vehicles, particularly the vehicle combinations—as compared with light vehicles and automobiles—are not bearing their share of highway costs. Further information on this subject will be available after results of the recently completed Illinois road test have been analyzed and submitted to Congress about the middle of the year.

The Teamsters also express concern that loss of truck traffic to piggyback will mean reduced revenues from the fuel tax and from license and registration fees for Federal, State, and local goverments. Overlooked is the enormous reduction in highway wear and tear and the positive and very substantial benefits in increased safety and convenience for other users of highways.

Another point one of the Teamsters' publications asserts is that in time of war the railroads, despite their boasts, would be the least effective and least dependable form of transportation. As a member of a special armed services subcommittee which last year conducted an extensive investigation into the adequacy of transportation systems in support of the national defense effort in event of mobilization, I should like to call attention to our conclusion which appears in the report of October 10, 1959, as follows:

> No plans for transport dependence can fail to take into account the railroad industry.
>
> The versatility and adaptability of rail transport, as thoroughly demonstrated on a worldwide basis under all kinds of conditions, is but one of the reasons why military logistical planning is built around the railroads for the bulk of its freight and passenger movements. The other forms of transport, important as they are to the total need, are auxiliary and supplemental to the railroads.

Our subcommittee is not alone in this conclusion. It is shared generally by the Office of Civil and Defense Mobilization, the Department of Defense, and other authorities in the field.

The Teamsters sometimes contradict themselves. On the one hand they charge that railroad piggyback rates are so low as to cover only out-of-pocket costs or less; on the other they quote figures to show that earnings of the average piggyback car are over seven times higher than those of the average boxcar and conclude by saying:

> These figures illustrate what a lucrative operation piggyback really is.

Clearly the Teamsters cannot have it both ways. If piggyback is a lucrative operation for the railroads, and there is every indication that it is, then it cannot be held that piggyback rates are below cost, or meet only out-of-pocket costs.

With these reckless charges of unfair competition and ICC prejudice exposed, the Teamsters' real purpose becomes unmistakably clear. That purpose is to require railroads to maintain rates higher than necessary.

The concern of the Teamsters is the alleged loss of employment for truckdrivers, which they foresee if piggyback is allowed to expand. Naturally we all sympathize with anyone who loses his job and is forced to seek another, whether for reasons of advancing technology or any other. But let me remind the Congress what has happened to employment opportunities for railroadmen during the last generation, due in no small part to loss of business to trucks.

During the past 30 years, railroad employment has been cut in half: from 1,511,000 in 1930 to fewer than 750,000 today. Employees thus displaced have had to find productive employment in other fields, which is what anyone else would have to do, whose job has been abolished.

My answer is simply this: I am not now and never will become a party to an effort to block progress in any field, especially in transportation. Nor will I be party to any attempt to subordinate the public welfare to narrow interests, and I am confident that the answer of my colleagues in this body and in the Senate will be the same.

Renewal Program

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. MORSE. Mr. Speaker, under leave to extend my remarks, I wish to insert the following editorial from my hometown newspaper, the Lowell Sun. To me, it illustrates the finest in Federal-local cooperation in the area of urban renewal.

RENEWAL PROGRAM

The Lowell Planning Department urgently recommends that five new urban renewal projects should be launched in the city this year, taking full advantage of State and Federal aid now available.

We heartily agree with the proposal and suggest that the proper authorities here and in Boston give City Planner Charles Zettek's ideas their enthusiastic and undivided support.

The city of Lowell, primarily because of the anticipatory work of the planning department, has a jump on most New England cities in the vital field of urban renewal. The Church Street project will be under construction as soon as weather permits, and the Northern Canal project, fully planned and approved, will soon become a reality.

The five developments proposed by Mr. Zettek are in the Acre, the Hale and Chelmsford Streets zone, Back Central Street, lower Belvidere, and the central business district. The extension of the Lowell connector, from its present terminal on Gorham Street and by way of a circuitous course that would end on Pawtucket Street, is linked to all projects, with the possible exception of the Acre redevelopment.

Aside from the outstanding changes in the appearance of our city through the razing of so much substandard and antiquated properties, we are impressed by the figures which have been issued by Mr. Zettek. By using all available State and Federal support and adding an estimated investment of $5 million by the city, new private investment would have a $50 million potential—with proportionate and lasting benefits to the city treasury.

Thus, for 10 percent of the ultimate value, Lowell could not lose.

Older cities, such as Lowell, must make the most of these opportunities; they provide powerful guarantees for the future. We cannot risk any lag, resulting from dickering and bickering or from simple procrastination.

This work is realistically and immediately before us. It must be promoted at once.

A Letter to the President of the United States—Protest Against Increase in Residual Fuel Oil Import Quota

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. BYRD of West Virginia. Mr. President, it would take some real national eye shutting to ignore the ignominious effects which importations of foreign residual fuel oil have upon the economies of our coal-producing States. Fortunately, our new and excellent Secretary of the Department of the Interior, Mr. Stewart L. Udall, is wide awake to this situation, and conducted a lengthy and grueling hearing on the matter on February 20.

Nor is President John F. Kennedy uninformed as to the serious economic decline which foreign residual oil imports have caused in many areas of our coal-producing States. But to strengthen his hand in forging an equitable solution to this most inequitable matter, I sent him a letter dated February 27, 1961, which 17 of my senatorial colleagues cosigned.

This letter contains many of the pertinent facts regarding the situation, and I believe that other Members of the Congress who are interested in the security of our Nation, as well as in the economic well-being of our depressed areas, should have the opportunity to read this letter. For this reason, I ask for unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: As you have clearly proclaimed, the deterioration of markets, decline of job opportunities, and economic diseress throughout the coal-producing regions of America are intolerable and dangerous to our very security. The Members of the Congress of the United States representing these many areas, the welfare and prosperity of these regions, the Nation's coal producers, members of the United Mine Workers of America, operators and employees of the coal-hauling railroads, and others so vitally concerned are solidly determined that such conditions must be corrected. We, therefore, wish to present for your attention facts regarding the injurious effects upon the coal and rail industries resulting from increasing imports of residual fuel oil.

In February 1955, there was issued a report prepared by an Advisory Committee on Energy Supplies and Resources Policy, established by the President on July 30, 1954. In part, the report contained the following:

"An expanding domestic oil industry, plus a healthy oil industry in free countries which help to supply the U.S. market, constitute basically important elements in the kind of industrial strength which contributes most to a strong national defense. Other energy industries, especially coal, must also maintain a level of operation which will make possible rapid expansion in output should that become necessary."

We maintain that the coal industry does not today enjoy a level of operation which would make possible rapid expansion in the event of a national emergency. Residual oil imports, having risen from 53 million barrels in 1948 to 230 million in 1960, have made dangerous inroads into coal's east coast markets.

The 1960 imports of residual oil were the equivalent of approximately 55 million tons of bituminous coal. About 75 percent of the oil which is imported is competitive with coal. Therefore, this competitive element last year displaced 41,250,000 tons of coal. The average value per ton of bituminous coal, F.O.B. mines, being around $4.86 (1959 figure), the loss of a market for 41¼ million tons of coal meant a loss of $200,475,000 in gross revenues for coal producers. This meant a loss of $100 million in miners' wages, or a year's work for nearly 20,000 men. It meant a loss of $100 million in new equipment, taxes, development of new mines, and return on investment. Additionally, the railroads lost well over $100 million in lost freight revenues, to say nothing of the wages lost to railroad workers. One could further cite the loss in taxes to Federal, State, and local governments.

It is doubtful that any other major industry, vital to the economy of the Nation, has experienced anything approaching the depressed financial condition of the coal mining industry over the past 20 years. In 1953, producers who accounted for 80 percent of the coal mined realized a calculated net profit of less than three-fourths of 1 percent of the gross value of the coal produced. It is not difficult to see, therefore, that the coal industry is in a precarious financial situation, and it simply does not have the resources to engage in research, to purchase high priced equipment for use in the highly competitive fuel field, and to maintain the cost upkeep of machinery and operative mines ready to expand production in a moment of emergency.

Moreover, an industry plagued by declining employment for a generation cannot raise a new generation of skilled and experienced coal miners in a day of peril. As the number of personnel regularly employed in the mines has been sharply reduced, there has been a steady reduction in the relative number of younger men employed in the coal industry. In 1951 the percentage of miners under 30 years of age was 18.6. In 1957 it had fallen to 6.5 percent. This alarming trend emphasizes the importance of retaining young workers in the bituminous coal industry in order to assure an adequate supply of experienced and skilled workers in the event of war.

With reduced coal freight tonnage, 25 percent of the rolling stock of the B. & O. Railroad is presently in need of repairs, and the situation is equally bad with other railroads. Railroad workers have been laid off, railroads are not buying new cars as fast as old ones are headed for the scrap heap, and this great medium of transportation would find it difficult to respond to the requirements which must be met in an hour of national peril.

The domestic oil industry has suffiered as a result of increased foreign imports, because domestic exploration and production are discouraged. Meanwhile, the great industrial plants on the east coast have become increasingly dependent upon foreign residual oil. It may be noted that the foreign sources which supplied but 26 percent of the east coast residual oil requirements in 1940, now account for something in excess of 70 percent of the residual oil requirements of the same area. If war should come, the foreign sources which supply these requirements would become utterly undependable. To be reminded of this, one has only to read pages 87 and 88 of the Interior Department's "History of Petroleum Administration for War, 1941–45." That document, in referring to the sinking of 50 tankers along the east coast in 1942 and the resulting fuel supply situation, has this to say:

"Although the boats had to keep running to supply military requirements, no one could doubt the decline of tanker shipments for civilian needs in the face of those 50 sinkings. From then on, until the last year of the war, tanker deliveries were an insignificant factor in supplying the oil needs of the east coast."

It is obvious, in the light of the foregoing, that to permit increasing quantities of residual fuel oil to be imported into this country is to invite economic disaster in the coal, domestic oil, and railroad industries in time of uneasy peace and to invite military disaster to the country in time of war.

We appreciate that you are quite familiar with the fact that the ordinary home does not use residual oil for heating purposes. Most of it goes into industry, because special equipment is required for preheating purposes. While U.S. refineries are very advanced and efficient, the residual fuel oil yield in South American refineries may be as high as 60 percent. In order to dispose of residual oil, the oil companies are willing to sell it at almost any price, and it is dumped on utility and large steam plants that have multiple burning equipment. They provide the focal point for the residual-coal competition when there are excess supplies of residual oil caused by imports. Consequently, there is no stability of price, and the objective is to "undersell" coal at any price. This type of competition is unconscionable and simply cannot be met by the coal industry. The results are closed mines, unemployed men walking the streets looking for work, and families with no food other than Government surplus commodities.

We, the undersigned, do not ask for complete elimination of residual fuel oil imports. This would be unreasonable and unthinkable. But we do ask for a substantial reduction. We maintain that the quotas on residual oil imports should be so designed to permit the coal industry, the domestic oil industry, and the transportation industry to meet the needs of exploration and research, repair and replace damaged and obsolete equipment, recoup employment losses, and maintain a capability to meet the expanded needs of a national emergency. We believe that it is unwise to permit residual imports in any year to rise above 1957 levels, and we hope that a thorough reevaluation of the residual oil import quota program will reveal the necessity for a gradual reduction of quota levels to a point where coal might be permitted to regain a part of its markets, at least, and the domestic oil industry may be encouraged to find new sources of supply so as to eliminate the necessity for our having to depend, in the event of war, on foreign sources which will likely be unable to produce and on tankers which will surely be unable to reach our shores.

Sincerely yours,

ROBERT C. BYRD, JENNINGS RANDOLPH, FRANK J. LAUSCHE, FRANK CARLSON, J. J. HICKEY, HOMER E. CAPEHART, GALE W. MCGEE, THRUSTON B. MORTON, STEPHEN M. YOUNG, JOHN SHERMAN COOPER, ANDREW F. SCHOEPPEL, VANCE HARTKE, WALLACE F. BENNETT, ERNEST GRUENING, E. L. BARTLETT, MILTON R. YOUNG, FRANK E. MOSS, QUENTIN N. BURDICK, U.S. Senators.

High Pay Linked to Jobless Rate

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1961

Mr. SIKES. Mr. Speaker, I was quite impressed by an article which appeared recently under the pen of J. A. Livingston on the problem of wages for American workers. Since we shall soon be required to reach an important decision on the matter of wages and hours, I feel that this article should be reprinted in the CONGRESSIONAL RECORD for further study by the membership of Congress.

The article follows:

HIGH PAY LINKED TO JOBLESS RATE
(By J. A. Livingston)

Once upon a time, there was a rich, powerful, industrious nation, whose economic well-being was envied by peoples throughout the world. As in all countries, inequalities prevailed, not only between the captains of industry and the workers, but among the workers, bituminous coal miners, and steelsome workers received more than $3 others less than $2.

Three broad classes of workers were in an elite over-$3-an-hour group—construction workers, bituminous coal miners, and steel workers. One day an economist, ruminating over some labor statistics, noticed this striking fact: The unemployment rate among these three types of workers was also highest in the Nation—16 percent for construction, 13 percent for bituminous coal, and 14 percent for steel.

Vexatious questions passed through his mind. Could this be rough—really rough—economic justice? Could unemployment be the unhappy counterpart of high wages? Do people with high pay, pay for it with unemployment?

WAGES 80 TO 85 PERCENT OF COSTS

His eye idled further along the statistics. He noted that automobile workers, with 9 percent unemployment, were fifth highest in hourly wages. Could this be pure happenstance? After all, the national average for unemployment was about 6.8 percent of the labor force.

Pondering these imponderables, the ruminator recalled his early economic indoctrination. Wage and salary costs—all along the line from production of raw materials, the transport of them to workshops, processing them, and bringing a finished product to market—range from 80 to 85 percent of the retail price.

Were some workers pricing their skills out of the buying reach of other workers? Indeed, were workers pricing their skills too high for some employers? Was this a cause of chronic economic malaise in Detroit, in coal areas, in steel centers?

In the coal mines, for instance, a great labor leader pushed up the hourly pay so high, including fringe benefits, that for some mines economics became all too simple: mechanize or die.

Many mines "died." Other mineowners mechanized. Output per miner rose. Simultaneously, idleness per miner rose. Out of the blessing of increased efficiency came the curse of human desuetude.

STEEL SUFFERS, TOO

In construction, too: As wages of carpenters, bricklayers, plumbers increase, homebuilders try to find ways to cut costs. Building blocks supplant bricks and the greater labor of bricklaying. Concrete is poured into molds, replacing many masons and carpenters. Spray painting takes the place of brush—and so on.

In steelmaking, itself, massive mechanical improvements require highly skilled but fewer workers. And the competition of materials—plastic, aluminum, copper—becomes more intense as steel prices increase.

The economist was distressed by another correlation. His country had the highest unemployment rate among industrial nations of the world. At the same time, its employers paid the highest wages and its workers enjoyed the highest standard of living.

Was this rough economic justice, too? Is his country exporting employment and importing unemployment? Are corporations investing abroad to hold markets there, because they no longer can export at competitive prices? Do they even import parts because of advantageous prices?

LOWER PRICES FOR BETTER LIVING

The economist wondered if a new frontier in labor relations were coming—an era in which both management and labor seek improved productivity; an era in which labor leaders accept gains for workers through greater efficiency, lower prices, and a wage dollar of greater purchasing power rather than through increased wages.

He wondered if a newly established Government-labor-management committee would be able to persuade management to moderate the stress of unemployment—through retraining and relocation of workers displaced by the "invisible hand" of unseen economic forces.

Heretofore, businessmen, fearing high taxes, have consistently opposed social legislation. Heretofore, businessmen have protected profits or cut losses—by early layoffs.

In exchange for labor's consent to riddance of featherbedding, etc., would management bear some of the burdens of technological adjustments? Neither management nor union leaders can be happy with the ups and downs of production in, say, autos.

Labor leaders can afford to swap wage demands for greater assurance of work stability—for economic security. The economist recalled the longshoremen in the western part of the country agreed to full-scale mechanization in exchange for payment by employers into a "technological retirement" fund.

Only in this way, he reflected, can costs be held down and men work at their greatest efficiency. Only thus will the Nation hold its share of the world markets. Only by being able to buy more of what one another produce, will workers create jobs for themselves.

The economist sadly observed that in this great county, in contrast with other countries, unemployment rose simultaneously with employment. This wasn't using manpower well. If high wages didn't create full employment, he wondered if a Government-labor-management try at lower prices might.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. KOWALSKI. Mr. Speaker, with so many peoples of the world fighting against the yoke of oppression, it is most appropriate that we mark Bulgarian Liberation Day.

It was 83 years ago today that the act of San Stefano restored independence to the Bulgarian nation after centuries of foreign domination.

Against the wishes of her people, Bulgaria has been a satellite nation since 1944. Yet within her borders the hope of the restoration of full national sovereignty has been kept burning brightly.

On this liberation day, the Bulgarian people, and the sons and daughters of Bulgaria all over the world, will join in prayer that soon will come the glorious day when Bulgaria is again a free nation.

Golden Age Ahead for Northwest

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Golden Age Ahead for Northwest," which appeared in the Tri-City Herald of January 22, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

News stories reporting some $50 million in President Eisenhower's budget for construction of Columbia and Snake River dams in the Tri-City area made no mention of Inland Empire Waterways Association.

Such an omission is common, although it is widely recognized that IEWA for more than a quarter century has been the moving force in development of our northwest rivers. Virtually every project authorization, every appropriation, can be credited to the tireless, and inordinately patient, work of the IEWA, and its able, ubiquitous executive officer, Herbert G. West of Walla Walla.

He and a handful of other men seemed almost hopelessly visionary when they first began to dream aloud of linking this great, semidesert country to the Pacific Ocean with a series of water stairsteps.

This vast and almost empty land then was inhabited mostly by jackrabbits, coyotes, and rattlesnakes. There seemed little urgency for construction of the network of multipurpose projects which Herb West and his few, at first, supporters began to talk about to whomever would lend an ear.

The dams already built are impressive monuments to the zeal and persuasiveness of these men. But the budget requests of President Eisenhower, which he made just before yielding his office to Democrat John Kennedy, must give them as much satisfaction.

An example of what this development has meant can be seen in the Walla Walla, Kennewick, and Pasco port districts.

The Eisenhower policy of no new starts for western reclamation and hydroelectric projects has been a barrier for nearly 8 years to IEWA plans. It did not halt the program—northwest Senators and Congressmen managed some starts over the President's opposition—but it was slowed drastically, lagging behind general development of the Northwest to a degree where it appeared the area's growth might be stunted.

The last Eisenhower budget amounts to a right-about-face. It is recognition at last by the Republican leader as valid the basic IEWA premise, from which it never has

wavered, that development of the Northwest's water resources, particularly for navigation and hydroelectric purposes, is justified not only by the regional benefits but by those to the Nation as well.

President Kennedy is committed to active support of multipurpose hydro projects. The IEWA, and its now-legion supporters, can look confidently to the future. A golden age of development lies ahead. The dream will be shaped into concrete and steel.

Broadcasts to Cuba

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let's Step Up the Broadcasts," published in the St. Petersburg Times of January 19, 1961.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S STEP UP THE BROADCASTS

One of the most astonishing things about our position in the cold—and sometimes not so cold—war is that as the principal developers of mass communications and propaganda techniques we make so relatively little use of them.

As Cuba went unmistakably into the Communist orbit, while both Russia and Red China stepped up their drives for Latin American support, what have we been doing to try to offset their propaganda?

Have Voice of America broadcasts, for instance, been stepped up? Have we attempted through this means to reach not only the masses of Cuba but of all Latin America to restate our principles and broadcast the truth? We have not.

But, meanwhile, Fidel Castro has been building and soon will put on the air a 120-thousand-watt broadcasting station, capable of reaching all of Latin America.

This new "Voice of Fidel Castro" will be more powerful than all but a few U.S. stations, and will be 2½ times more powerful than the anti-Castro station now operated in the Swan Islands, off Honduras.

There has been a lot of brave talk about the battle for men's minds, but precious little action. We should have been flooding Cuba, at least, with broadcast truth. Even the campesinos could understand this—assuming, of course, that we were thoughtful enough to use their own language. Even if our broadcasts were jammed, we would score a point, because the very act of jamming would raise suspicions against Castro.

Congress, of course, with its strange penury when it comes to propaganda appropriations, is largely to blame in our communications shortcomings. But surely some emergency funds have been around somewhere.

Considering that the Communists are spending in Latin America, alone, more than we spend on propaganda throughout the world, and that the average salary for our U.S. Information Agency officers in the field is only $6,000—and, perhaps that is all they are worth—a new, hard look needs to be taken at our information activities. The rectificaton is long overdue, but it is never too late.

Red Storm Warnings in the Orient

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. CHAMBERLAIN. Mr. Speaker, most of us do not have an opportunity to make an extended visit to Asia to learn firsthand the true state of affairs. Therefore, I feel it is helpful and necessary that we read carefully the experiences of other Americans as they travel in the Orient to try to determine what is happening there.

Mr. Robert N. Branson, of Federated Publications, a former foreign correspondent, has just returned from a 50-day trip to Japan, Korea, Okinawa, Formosa, Quemoy, Hong Kong, the Philippines, Thailand, and Laos. He found Red storm warnings up and widespread feeling among Western experts that Asia may prove to be the Kennedy administration's most perilous testing ground.

Under leave to extend my remarks in the RECORD, I include one of the articles Mr. Branson has written about the situation as he saw it. This news story appeared in the Lansing (Mich.) State Journal on February 19:

Washington: A Chinese Nationalist general invited a group of American visitors to his Formosa headquarters not long ago and put on a demonstration they will never forget.

He unveiled a sandtable mockup of Nationalist plans for recapturing the China mainland. The table was a realistic panorama of land and sea, complete with molded mountains and painted cities. Colored electric bulbs lit up the invasion pattern.

In white gloves, the general flicked switches and pushed toy armadas into place. Then came the kicker. To dramatize the invasion's impact, he set off firecracker-size charges wired inside the imitation China.

Enemy cities and harbors were supposed to go snap-crackle-pop. But the electrician had miscalculated the size of the charges. Instead of pop-pop, the table blew up with a deafening bang, showering the general and his audience with paint, glass, sand and splinters.

The general apologized profusely and promised stern punishment for the erring electrician. One of the guests, a U.S. Army officer, recalled:

"We all stood there brushing stuff out of our hair, a little dazed and angry. Then it dawned on us that we had received a classic lesson. Someone told the general graciously: 'Sir, I have never seen the Asian military picture summed up so concisely.'"

In 20 years of struggle for supremacy in Asia, the great world powers have poured forth enough munitions—and gold—to boobytrap everything from Manila to Mandalay.

In southeast Asia, particularly in the science fiction realms of Laos, Cambodia and Vietnam, the best of diplomatic minds cannot be sure today where the firecrackers are planted—let alone who may flick the detonator tomorrow.

The nervous breakdown rate among U.S. officials in Asia is said to be the highest anywhere, including Africa. Oriental politics is a brand of witchcraft that defies the graphs, charts, projections and logic upon which Western minds rely.

Take Laos—an upside down kingdom where the falsehood is viewed as truth, where corruption is honesty, where superstition is wisdom, where democracy is fantasy and ignorance is bliss.

The present Premier of Laos, Prince Boun Oum, depends for guidance upon a grisly magic amulet. It is a smoked human foetus which, worn about the neck in a bamboo shell, is said to protect the wearer by making his body itch if any secret enemy or traitor approaches.

This is the man the State Department has to champion today as a leader of enlightened democracy.

Boun Oum is only the latest of the pro-Western premiers we have backed since U.S. aid began in 1954. The plan looked fine on paper, and in 6 years the outlay has been $310 million—more riches than Laos had amassed in all past ages.

Results: More communism in Laos than when we started, more losses than gains by the Lao Army we equipped, everspreading control by rebels whose manpower is less than half of our side's.

Our Lao allies report nonexistent battles and invasions, bar Americans from the field, insult and hamstring the Western press, lie brazenly to U.S. Ambassador Winthrop Brown and his staff, "lose" American aid in vast quantities and demand more.

These are not a reporter's guesses. They are flat assertions, stated privately, by official sources at the top level in Vientiane.

Political black magic and military incalculables are not confied to Laos. The whole of southeast Asia strikes the traveler as a clouded crystal ball in which two facts alone stand out as keys to the future:

One is Red China's desperate hunger.

The other is the rich abundance of the rice countries south of the Chinese border.

Plotted graph style across the 1960's, these two Asian realities appear to converge as inevitably as red curves on a collision course.

Communist China's food problems go beyond the crop failures and blights of 1960. Even if bumper harvests follow for 10 years, there will not be enough to feed a population that already is the biggest on earth and multiplies faster day by day.

The lands to the south overflow with what the Communists need. South Vietnam, Cambodia, Thailand, and Burma are rice-surplus nations. Beyond them lie Malaya and Indonesia, rich not only in food but in rubber, oil, tin, and other natural treasure.

"The hungrier China grows, the greater the peril," said one of the West's senior diplomats. "Pressure on the pro-Western rice countries is going get worse instead of better over the years. Holding the line is going to get harder and harder. A starving monster doesn't negotiate. It grabs."

Swallowing Laos would enable the Communists to sink prongs into Burma, Thailand, Cambodia, and south Vietnam. For six-sided Laos, a key jigsaw piece, adjoins all four of those nations as well as Communist north Vietnam and China.

What if Laos falls? Some western analysts think Communist control is only a matter of time there, as well as in South Vietnam where western hopes are pinned on a regime both corrupt and shaky.

Such questions bring conflicting replies. Some U.S. strategists say Communist conquest of Laos (or South Vietnam) would plunge the world into war. Others say such losses might be weathered provided the rest of southeast Asia holds firm—especially Thailand.

Thailand is the West's new bulwark. Politically it is considered the soundest nation in the bloc. Strategically it guards Malaya, Burma, and Indonesia. Militarily it is heavily fortified with U.S. weapons—far more so than Laos.

No one in Asia can tell you where the next crisis may erupt. Like the Chinese general's mockup, the region is loaded with powder. International friction supplies more than enough electricity to touch it off anytime.

The British, French, and Dutch have withdrawn or been driven from southeast Asia since World War II, leaving the United States with the bag. Red China is a notoriously reckless foe and a hard-pressed one. It seems obvious that the Kennedy administration is going to need at the very least, courage, skill, judgment, and luck.

Capsule impressions elsewhere in the Far East:

Japan: Basically friendly to the United States despite anti-Yankee outbursts. Having tasted nuclear war, the Japanese are superallergic to any defense plan that might make them a sitting duck again.

South Korea: With two U.S. divisions and 535,000 ROK troops holding the fort, no new Communist invasion is foreseen.

Okinawa: Armed to the teeth with the heaviest concentration of battle gear west of Hawaii. If the United States has to go to war in Asia, Okinawa will supply the big punch.

Formosa: An efficiently run military dictatorship with Chiang Kai-shek still firmly in the saddle, though growing old.

Quemoy: A bone in the throat of Red China and a real danger spot. The Formosa Government insists it will hold Quemoy at any cost, and the Kennedy administration has yet to propose a workable alternative.

Honk Kong: Where East meets West. A badly overcrowded but richly scenic crossroads, easily this reporter's own choice as the most intriguing city in the world.

Manila: Sadly run down at the heels, bled white by politicians who have been skirmishing for power ever since the popular President Ramon Magsaysay was killed. This year's Philippine national battle shapes up as the bloodiest in years.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. DEROUNIAN. Mr. Speaker, it will be my privilege, tomorrow, to speak to the people of Bulgaria through the Voice of America. March 3 commemorates for the Bulgarian people a birth of freedom. On that day 83 years ago, a proud country finally regained the independence it had lost several centuries before.

I will tell these people that in the modern history of the peoples of the Balkan Peninsula, there has been a continual record of subjugation. This ugly record finally was broken late in the 19th century. Siding with the victorious Russians in the Russo-Turkish War, Bulgaria was able to obtain its independence. By the Treaty of San Stefano, Bulgaria's freedom was guaranteed. Thus, the Bulgarians after over five centuries of foreign domination were finally liberated by the Russians.

It is one of the sad ironies of history that today Russia, under Communist rule, dominates Bulgaria. After suffering the miseries of two World Wars Bulgaria still is not free. As a result of the Second World War she lost her freedom in the peace that followed to the very country which claimed to have liberated her.

It is within the context of the modern plight of Bulgaria that March 3 looms so large upon the horizon as a symbol of freedom. Today in Bulgaria there is no more liberty than under Turkish rule, and it is tragic that even in a country so desirous of freedom it cannot exist. Let us all pray that the brave Bulgarian people will soon be able to realize their heritage of freedom that we today are commemorating.

Recession?—Make Sure of the Patient

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. JONAS. Mr. Speaker, evidence accumulates that the constant barrage of pessimistic statements emanating from the White House is creating a condition of despair out in the country. While no one would advocate that the President of the United States should mislead the people of our country concerning domestic problems, reports from my district indicate that the pessimistic talk is having an adverse influence upon the morale of our people, and a depressing effect upon business.

It is my hope that President Kennedy, in his wisdom, and after considering the adverese effect his repeated pessimistic utterances are having, in at least one section of the country, will see fit to say something encouraging to the people who are becoming scared and discouraged about the future. The importance of doing so is made manifest by the following editorial which appeared in the February 28 issue of the Charlotte News, which editorial I include as a part of my remarks on this subject:

RECESSION?—MAKE SURE OF THE PATIENT

News Reporter Dick Gorrell's survey of the Charlotte economy prompts the question whether it is wise for the administration to talk with growing dourness about that great abstraction, "the economy." In fact, there are many "economies," looking at the country from one angle, and Charlotte's—and North Carolina's generally—is fairly healthy. Mr. Gorrell's thorough probe for "recession" here found only one soft place in an otherwise muscular local economy. And that one soft spot, heavy construction, is partly offset by plans now on the architects' tables, and compensated by healthy growth in employment, retailing, private housing, and other vital indexes.

This not only explains the "who, me?" attitude with which so many greet talk of economic slide. It suggests that economists may oversimplify matters by talking altogether about one economy, when they should more carefully pick and choose from State to State and from city to city. A wholesale treatment of the economy, which is understandable when revenues and expenditures must be calculated on national balance sheets in Washington, may have an unfortunate effect on the still-dominant economies which don't feel the present isolated pinches.

The truth about today's recession, nationally, is that all, or none, or some of the symptoms of depression and long-term sluggishness may show up at scattered points. Thus a dour tone about the economy as a whole may be accurate, but may be beside the point. There are plenty of plateaus to emphasize, just as there are plenty of troughs, as the economists like to call them.

This is not to suggest that the pockets where serious economic problems exist can be ignored, for while most of the country is economically robust there are certain trends that touch even the most prosperous parts of the country and they are to be watched.

For instance, total employment and total unemployment can grow flank by flank—as they have been growing in Charlotte and in national figures. Either figure can be misleading unless something is known of the total work force and how fast it grows. Then, there are not only pockets of economic slowdown across the country, there are—as Charlotte's heavy construction business shows—pockets within cities or States; and meat for one pocket may be poison for another.

Among other nationwide indexes which the administration much watch are a reluctance to be venturesome with capital, which even prosperous businesses in prosperous areas may show; the increasingly rounder bite from the consumer's dollar being taken by services, from education to plumbing, which forces producers of goods to be wary. The Federal Reserve's just completed survey of buying plans for this year, covering mainly household goods, is down and may reflect not only a temporary shakiness about purchasing but a longer trend to make durables last. Finally, credit buying has paused from a long expansion and—most importantly—technological changes, including everything from the lightning-fast change of taste in automobiles to increasing automation, are coming more rapidly. They are breaking into places where rapid technological change is unaccustomed.

The administration, then, has a tough problem monitoring these subtle shifts underneath the surface which may mean health or illness for the national economy. But broad diagnoses and prescriptions applicable to a depressed area may dismay a prosperous area and give it an unnecessary case of hypochondria. When possible, the patient should be pinpointed by name and locality.

Alice Widener Speaks Out Against Emergency Civil Liberties Committee

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. SCHERER. Mr. Speaker, Mrs. Alice Widener, columnist, publisher, and editor of that splendid magazine U.S.A., has written an excellent article, entitled "ECLC and Our Industrial Security."

Mrs. Widener, out of the wealth of her wide experience, clearly, concisely, and effectively helps the American people to understand the objectives of perhaps the most notorious Communist-dominated

and controlled organization in the country, the Emergency Civil Liberties Committee. Her article follows:

ECLC AND OUR INDUSTRIAL SECURITY

The platform adopted by the National Council of the Emergency Civil Liberties Committee (1959) states in part, "We will seek the introduction and passage by Congress of bills to repeal the Smith Act, the Internal Security Act, the Communist Control Act, the McCarran-Walter Immigration Act, and various industrial screening provisions."

The Emergency Civil Liberties Committee (ECLC) is described as "an instrument of the Communist Party" by the House Committee on Un-American Activities.

Loyal Americans are well informed about many dangerous aspects of the ECLC's abolition campaign against the congressional investigating committees. They would be wise to become equally well informed about the dangerous ECLC activities against our industrial security provisions and personnel screening processes.

Obviously, the ECLC wants Americans to drop their industrial security guard. If this were done, then Communist espionage agents and saboteurs could imperil our entire military defense.

In his state of the Union message to Congress, President Kennedy said that our Nation is in an hour of national peril, and is drawing nearer, day by day, to the hour of maximum danger.

ATTITUDES AND SECURITY

In our times, we cannot afford to have a confused attitude toward the problems of political, military, economic, and industrial security. Actually, security is an attitude, a fact that was brilliantly discussed, last June, at the Second North East Regional Conference of the American Society for Industrial Security by Joseph E. Loughran, Chief of the Security Division, New York Air Procurement District. The following passages from Mr. Loughran's speech should be studied and heeded by all loyal Americans, not only those employed in industry but also those wishing to assume personal responsibility for the safety and welfare of our Nation:

"Many of you are familiar with one of the most effective security posters published during World War II. It pictured a torpedoed troopship and bore the simple slogan 'Loose Talk.'

"A recently published poster points up the effect of security violations. It pictures a steel chain with a broken connector, and the slogan 'The Missing Link.' The lack of a positive attitude toward security is a missing link. Without it, the chain secures nothing and accomplishes no worthwhile function.

"Security is the order of the day in these tense times of rapid change. 'Where will it end?' is a comment often heard. More important to us should be the question, 'Where does it start?'

"I think the whole security program stands or falls on the individual attitude displayed by each one of us. A security attitude is a state of mind, a mood, or a position which we assume.

"Our security attitude should not be confined to mere compliance with routine safeguarding procedures laid down for us in the Industrial Security Manual. There seems to me to be a whole area of security that is inadequately stressed—the cold war propaganda put out by Communists at home and abroad. Unless we develop the will and the capability to counter their insidious propaganda, we shall find ourselves isolated, then divided, and ultimately conquered.

It becomes imperative, therefore, that our attitude toward security be broadened, that it include not only the diligent practice of routine security procedures but also encompass a continuous intelligent study and dissemination of information concerning the ideals and freedoms we are defending, the alien concepts we are opposing and why we oppose them.

"How can this be done?" you may ask.

It can be done through the medium of security education programs.

We have established within the ranks of the military a code of conduct which sets forth the obligations binding on our uniformed military members to reject the Communist propaganda efforts to subvert them. Similarly, a code of conduct should be established for those individuals who work behind the man behind the weapon in order to insure both our own survival and that of the military. Such a code of conduct must reflect a positive and aggressive security attitude.

I believe that the vast majority of our people possess the native intelligence to recognize Communist propaganda when it is stripped of its trappings. It only remains for Government and industry, who have the know-how, to present it in its proper perspective.

It is in, and through, and by our daily attitude toward security that our essential freedoms will be maintained.

PROPAGANDA PETITION

A main pro-Communist antagonist of our national security program is the Emergency Civil Liberties Committee. Ceaselessly, it seeks to abolish it by means of propaganda.

On February 9, 1961, the New York Times carried a 2-page paid advertisement entitled "Petition to the House of Representatives of the 87th Congress of the United States." The petition called for elimination of the House Committee on Un-American Activities. Close scrutiny of the several hundred signers of the petition shows that among them were the following members of the National Council of the Emergency Civil Liberties Committee:

Royal W. France, lawyer, New York.
Prof. Stringfellow Barr, New Jersey.
Prof. John Ciardi, writer, New Jersey.
Earl B. Dickerson, lawyer, Illinois.
Prof. Thomas I. Emerson, Yale University, Connecticut.
Joshua W. Gitt, Pennsylvania.
Prof. Fowler V. Harper, Connecticut.
Prof. Erich Kahler, New Jersey.
Prof. Curtis D. MacDougall, Illinois.
Carey McWilliams, editor of the Nation, New York.
Prof. William A. Williams, Wisconsin.
Prof. H. H. Wilson, Princeton University, New Jersey.

Other signers of the February 9 ad in the New York Times who are active in the Emergency Civil Liberties Committee are Dorothy Marshall of California, Samuel L. M. Barlow of New York City, and Prof. Alexander Meiklejohn.

POISON FROM THE NEW YORK POST

Four days before the abolition ad against the House Committee on Un-American Activities appeared in the Times, there also appeared in the New York Post a column by William V. Shannon from Washington, D.C., with an attack on President Kennedy and Attorney General Robert Kennedy for having "thus far touched nothing labeled 'security'" and having maintained the entire security program. Shannon then launched into the following vicious attack on the Director of the Federal Bureau of Investigation:

"Our civil liberties cannot be restored to their full vigor as long as J. Edgar Hoover remains as head of the FBI.

"The whole weight of his reputation, his congressional connections, his newspaper allies, and his secret dossiers is thrown against any security reform, great or small. The House Un-American Activities Committee, and the Senate Internal Security Subcommittee could not function if it were not for the information and support supplied by Hoover and the FBI. Hoover is the symbol and the source of much of the confusion in the public mind on security issues."

The foregoing attack on Mr. Hoover is evidence of the wisdom in Joseph E. Loughran's speech "Security is an Attitude." It is indeed. Mr. Shannon's attitude is obvious. The Emergency Civil Liberties Committee deems it to be of such help that reproductions of Mr. Shannon's column were mailed out to the members of that organization and to the public with the statement: "Compliments of Emergency Civil Liberties Committee, 421 Seventh Avenue, New York, N.Y." Along with the Shannon column, the ECLC mailed an announcement of "a meeting to discuss what William Shannon in the enclosed article calls the 'Blind Spot' of the new frontier." The ECLC meeting is scheduled for February 24, and the announcement bears the boxed statement: "Representatives [WILLIAM FITTS] RYAN of New York and [JAMES] ROOSEVELT of California will soon appear before the House Administrations [sic] Committee to oppose the third of a million dollars the HUAC gets annually for attacks on the American people."

MRS. F.D.R. IN FOREFRONT?

It is interesting to note that Mrs. Eleanor Roosevelt was a signer of the abolition ad which appeared in The Times, February 9, and was also a key member of the reform group in New York City politics which backed WILLIAM FITTS RYAN for election in 1960 and helped to send him to Congress. Thus both Members of the House of Representatives whom the ECLC alleges will oppose appropriation of funds for the House Committee on Un-American Activities are related to Mrs. Roosevelt—one is her son, the other her political ward.

A perfect illustration of the truth in Mr. Joseph E. Loughran's statement "Security is an Attitude" was published in the January 2, 1959, issue of U.S.A. magazine in an article "Communism in the United States" by John J. Alessio, who reported on a meeting of the ECLC held at the Hotel New Yorker in Manhattan, December 15, 1959.

Mr. Alessio reported that Dorothy Marshall (who signed the February 9, 1961 ad in the Times along with so many ECLC members) said at the meeting she had been to see several Congressmen about the ECLC abolition campaign against the House Committee on Un-American Activities and that JIMMY ROOSEVELT had told her he needed to be sure of grassroots support for it. "So during the campaign this year," she continued, "whenever he spoke at a meeting or a rally, you can be sure we saw to it that the question was raised."

QUESTIONS AND ANSWERS

All questions possible are being raised by Communists, pro-Communists, fellow travelers and dupes about the need for an effective internal security system in our country. The Emergency Civil Liberties Committee is the instrument being used by a hard core of braintrusters wishing to abolish every form of security screening in our country and all industrial security provisions.

Many patriotic Americans are either uninformed or ill informed about the reasons for and methods of our industrial security program.

"Our military weapons system," explains Joseph E. Loughran, Security Chief, New York Air Procurement District, "continues to grow in size and complexity, and this condition results in increasing emphasis on the security classification of documents and the components of these technical systems. This makes it imperative for our enemy to try to obtain information regarding our latest de-

vices as early in the developing and manufacturing stage as possible in order to nullify their effect through countermeasures. It is essential, therefore, to insure the same uniform standards of enforcement in all industry both large and small."

President Kennedy gave Congress and the Nation a clear warning of our national peril and maximum danger. The Soviet Union and Red China maintain the tightest secrecy systems possible. These Communist nations also maintain cruel and ruthless secret police systems to control the entire population.

In our country, every single activity of the FBI is controlled by laws enacted in a Congress of which the representatives are freely elected by American voters casting a secret ballot. The Director of the FBI is appointed by the President of the United States who is himself elected by the people. And every single aspect of our national security program is controlled by congressional legislation and appropriation. Thus our security program expresses the will of the people.

What will be our attitude toward the ECLC?

Shall we permit this "instrument of the Communit Party" to thwart our will? Can we afford to let it conduct a program designed to undermine our vitally necessary industrial security program?

U.S. Loses Export Markets as Imports Rise

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report on 3 years of textile foreign trade as compiled by the Textile Information Service of the American Cotton Manufacturers Institute, Inc., 1501 Johnston Building, Charlotte 2, N.C.:

U.S. LOSES EXPORT MARKETS AS IMPORTS RISE

The textile import record for 1960 has now been written. It is now a fact that the prophecies of 1958 and 1959 have come true. There has been no let up in the sharply rising levels of textile imports from lands whose workers' wages are at rates illegal in the United States. Cotton cloth and cotton yarn imports are representative of what is happening throughout the textile industry.

In 1958 U.S. imports of cotton cloth were approximately 142 million square yards. These imports increased to 242 million square yards in 1959—nearly doubling from the already high 1958 level. Cotton cloth imports jumped to a new record high of 455 million square yards in 1960.

This trend is unmistakable. Not only is the import level at a record high, but the rate of increase is such that, if it continues unchecked, the entire market for domestic cloth will be supplied by foreign production.

An even sharper rate of increase is seen in cotton yarn imports. After a steep rise from 1958 to 1959, cotton yarn imports shot up from about 1.4 million pounds in 1959 to 15.1 million pounds in 1960.

No fiber and no fabric of the U.S. textile industry is insulated from this onrush of foreign competition. For example, imports of manmade fiber fabrics, which averaged about 5 million pounds in 1958, doubled to more than 11 million pounds in 1959 and continued at over 10 million pounds in 1960.

Woven wool cloth imports moved up from about 34 million square yards in 1958 to 47 million yards in 1959 and attained a new level of 62 million square yards in 1960.

Broad silk fabrics, recorded at about 55 million square yards in 1958, rose to 81 million yards in 1959 and continued at 72 million yards in 1960.

The same alarming trends appear beyond the cloth manufacturing end of the textile industry—in apparel import statistics. From a level of $138 million worth of apparel products in 1958 to $202 million in 1959 there was an additional increase of 13 percent to $220 million worth of apparel products imported in 1960.

While other examples can be drawn from the multiplicity of textile products that flow into the United States from low-wage countries, it is significant to understand that U.S. textile trade has been reversed in recent years. The United States has lost its historical position as a net exporter of textile manufactures.

The United States moved $1.4 billion worth of textile manufactures into world markets in 1947 and absorbed $366 million worth of foreign-made textile manufactures. By 1957 these textile exports had dropped to $667 million, but imports had increased to $635 million. In 1958, exports of textile manufactures of $600 million failed to equal the $636 million imports. The import balance was $36 million. By 1960 imports had risen to $932 million, while textile exports were $694 million—a net import balance of $138 million worth of textile products.

The impact of these trends on the U.S. textile industry with its billions of dollars invested in machinery and equipment is clear to see. Uncertainty about spending for new plants and equipment in the United States and increased search overseas for possible investment in textile plants in countries where foreign government favor the development of industry is the logical outcome.

At the same time, the U.S. Government continues to pursue a two-price cotton program under which domestic mills must buy U.S. raw cotton and pay 25 percent more than the special export prices provided to foreign mills. And wage rates paid by these same foreign manufacturers range from one-half to as low as one-tenth the average wages paid by U.S. industry.

Such raw material cost and wage advantages held by foreign textile manufacturers, over which the U.S. textile industry has no control whatever places the U.S. industry in an intolerable competitive position due to factors beyond its control.

3-year summary of textile foreign trade

U.S. merchandise	1960	1959	1958	Percent change from—	
				1959 to 1960	1958 to 1960
Trade (millions of dollars):					
Exports	20,299	17,383	17,725	+17	+14
Imports	14,654	15,207	12,982	−4	+13
Textile manufactures (millions of dollars):					
Exports	694	634	600	+9	+16
Imports	932	837	637	+11	+46
Cotton cloth (thousands of square yards):					
Exports	436,749	472,299	500,501	−8	−13
Imports	454,898	240,371	141,540	+89	+221
Cotton yarn (thousands of pounds):					
Exports	10,690	13,772	12,921	−22	−17
Imports	15,141	1,380	835	+997	+1,713
Manmade fiber fabrics:					
Exports (thousands of square yards)	154,449	168,004	156,767	−8	−1
Imports (thousands of pounds)	10,215	11,012	4,865	−7	+110
Woven wool cloth (thousands of square yards):					
Exports	1,348	713	853	+89	+58
Imports	62,020	46,610	34,328	+33	+81
Broad silk fabrics (thousands of square yards):					
Exports	1,439	1,641	1,589	−12	−9
Imports	71,942	81,374	54,827	−12	+31
Apparel (millions of dollars):					
Exports	81.1	71.4	72.5	+14	+12
Imports	229.6	202.4	138.4	+13	+66

Retire on $3,000 a Year?

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. AIKEN. Mr. President, in these days when we get letters from people stating they do not think the Government is doing quite enough for them, it is refreshing to read that in my State of Vermont there are two sisters, young ladies, both over 80, who have found a way to get along very nicely and are not asking for any additional assistance. The names of these ladies are Mrs. Selma E. Divers and Miss Anna Ockerblad.

The story of how they get along and how their income and expenses are broken down is discussed in an article which appeared in August 1960 in Changing Times, the Kiplinger magazine.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETIRE ON $3,000 A YEAR?—SEE HOW FOLKS MANAGE ON $150 TO $300 A MONTH

Can a retired person or a couple live comfortably and without too much financial strain on $2,000 or $3,000 a year? If you are in your young or middle years, your answer probably will be "No." Two or three thousand dollars just doesn't sound like a living wage. Yet the truth is, millions of retired people, perforce, are living on such incomes and many of them do rather well. They are able to do it, first, because they have to; second, because they find that upon retirement, taxes and certain expenses fall and there is less need to save. By that time, too, there usually is no mortgage on the home. In fact, many retired people have no debts at all.

There is one fly in the ointment, however, and often it's a vicious one. That is the ever-present threat of heavy medical expenses. Older people are vulnerable. And the threat comes at a time when they are least able to handle big and unexpected bills or the drain of chronic illness. Medical insurance is not always available. In most States, financial assistance is reserved for the needy.

By and large, however, despite worries over health and despite the limitations that a rigidly restricted income impose on recreation, travel and most luxuries, the sample of retired people that Changing Times interviewed seemed to be making out remarkably well. They are neither bitter nor steeped in self-pity. Rather, they are too busy with projects and hobbies and the business of making their income go as far as possible. And they are able to make it go a lot further than most working families would imagine possible.

TWO SISTERS IN VERMONT

Burlington is the largest city in Vermont, but its population is only 35,000. On its western edge lies a grassy park that looks out over the blue waters and fir-covered islands of Lake Champlain. Drive eastward up its sloping, tree-shaded streets and you will pass the town square and then the campus of the University of Vermont and finally you will come to the edge of town and gently rolling farmland. Here, on a quiet street in a rambling yellow house with a gnarled elm tree in front, live Mrs. Selma E. Divers, a widow, and her sister, Miss Anna Ockerblad.

These two ladies are so quick and busy that you would never guess that they are 80. Nor would you guess that they are living on less than $3,000 a year. But such is the case, and on this amount they live not in any mean, pinchpenny way, but comfortably, pleasantly, and usefully. The trick to it, says Mrs. Divers, is to be a Vermonter of Scandinavian descent.

Their father, a florist and gardener, was born in Sweden; their mother, in Norway. This couple moved from Staten Island to Burlington in 1882 and about 50 years ago bought the house their daughters now live in. As a young woman, Mrs. Divers taught business methods and accounting in colleges in New York City. After her husband died, she moved back to Burlington and in 1936 took a job in the business office of the University of Vermont, where she worked until her retirement in 1954.

Miss Ockerblad stayed home all those years, earning her living as a dressmaker. She worked at it full time until she was 75. Now, because of eye cataracts (she has had one operation and anticipates another) she no longer does dressmaking regularly, though she still does some altering at home.

Years ago the two sisters discovered a way to make a separate apartment out of the upstairs of their house. This involved transforming a big upstairs closet into a kitchenette and a downstairs pantry into a bathroom. The stairs were routed through a hall closet to the front porch, making a separate entrance. Because they live within walking distance of the university, the sisters have no trouble keeping this apartment rented for $75 a month. In fact, it has not been vacant for years.

Being thrifty Vermonters, Mrs. Divers and Miss Ockerblad put in a 60-by-100-foot garden each spring. Plowing costs $3.50. Thereafter Mrs. Divers does the cultivating with a little electric rotary tiller. It has 125 feet of cord and is handled much like a vacuum cleaner. For fertilizer, Mrs. Divers uses poultry manure from the university's farm and homemade compost. Last year the ladies froze or canned a bushel of peas; half a bushel of limas; two bushels of green and wax beans; half a dozen boxes of beets; 98 pounds of asparagus; 62 quarts of strawberries; 77 quarts of raspberries, 2 bushels of grapes (made into juice and jelly); an undetermined amount of sweet corn, tomatoes and tomato juice. They bought windfall apples at $1 a bushel for canning and applesauce. They ate fresh vegetables all summer and sold enough raspberries and asparagus to pay for plowing and part of the yard work.

Miss Ockerblad is a great breadmaker and has won 16 blue ribbons for both white and whole wheat at the Barre farm show. She makes four loaves of each at one time for freezing. These ladies keep alive another old-fashioned art: They make their own soap.

What do they do in their "spare time"? Mrs. Divers works occasionally in the accounting office of the university. She also does publicity for the church, reads five magazines, knits and sometimes watches TV, although most shows the considers a sinful waste of time. Miss Ockerblad sews and grows flowers. Occasionally they drive to Hanover, N.H., to visit another sister. Their 1954 Chevrolet, bought secondhand, logs 4,000 to 5,000 miles a year and is stored in a garage during the rugged Vermont winter.

Here are the income and expense figures for this household.

	Annual income
Social security	$1,560
Apartment rental	900
Dividends	986
Part-time work	100
	3,546
	Annual expenses
Electricity	58
Gas	98
Telephone	75
Water	16
Oil for heating	211
Real estate tax	314
Sewage tax	11
Food	500
Clothing	500
Services (yard care, trash, storm windows)	80
Repairs and replacements	340
Magazines	23
Doctors and medicine	30
Blue Cross	127
Car	300
Fire insurance and extended coverage	38
Church and benevolences	150
Total expenses	2,871
Available for saving	675

As you can see, these spry and thrifty Yankee ladies not only live on $300 a month but manage to save $50 of it. They keep $1,200 to $1,500 in the bank and over the years have put additional savings into blue chip stocks that now pay handsome dividends. They owe not a cent. Truly, being a Vermonter of Scandinavian descent seems a valuable trait.

Bulgarian Liberation Day, March 3, 1878

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. MULTER. Mr. Speaker, the Bulgarians are the most resourceful and defiant fighters against all their enemies, but they are perhaps best known as gallant warriors against their oppressors.

Their little country in the Balkans was a powerful kingdom during the middle ages, and they constituted a real power there for centuries. Then early in the 15th century as the Ottoman Turks overran the Balkan Peninsula and parts of southern Europe, Bulgaria became an Ottoman province in the Ottoman Empire, and the Bulgarians a resolute minority struggling against Ottoman despotism. For more than 400 years they carried on their struggle against formidable odds, and all these attempts ended in failure because without effective outside help they could not cope with the then powerful Ottoman forces.

In the Russo-Turkish War of 1877–78 they had their chance. The Bulgarians were fighting on the side of the Russians, for the war was waged in the name of the Balkan peoples. Early in 1878 the Turks were thoroughly vanquished, and when Russia was dictating her peace terms, she insisted upon Bulgarian freedom. Thus their freedom was guaranteed in the treaty signed on March 3, 1878, and since then Bulgarians everywhere, in and out of their homeland, think of that day as their holiday and celebrate it as such. Since those days the Bulgarian people have endured much misery, have gone through two devastating world wars, and both of these have had tragic consequences for them. Today, after all the sufferings and sacrifices, they are not free in their homeland. Even so, these stanch fighters for freedom, these dauntless and hardy peasants, under the most oppressive of tyrannies continue to work and hope for their eventual freedom. There under Communist totalitarianism, and totally sealed off from the free world, they work for their ruthless taskmasters, yet cling to their most cherished ideal, their freedom and independence. It is sad but true that while they attained their freedom with the aid of czarist Russian forces 83 years ago, today they are robbed of their freedom in their homeland by Communist Russian agents. All friends of freedom-hungry Bulgarian people hope that they will again regain their freedom and live in peace in their homeland.

Decade of Progress for Schools in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. WILEY. Mr. President, today the Nation faces the job of further improving and expanding its educational system.

The increasing school population and greater demands upon our people for knowledge and training require that a larger effort be directed toward providing more high quality schools, teachers, and training facilities.

The challenge, of course, will require local-State-Federal cooperation.

Across the country, States, like Wisconsin, are making realistic efforts to provide adequate educational opportunities for our youth.

During the past 10 years, for example, Wisconsin has spent about a half-billion dollars for new schools, and additions or remodeling for existing ones. Also, teacher preparation has advanced and schools are providing ever-higher quality programs.

Recently, the Milwaukee Journal published an article by Robert L. Dishon, entitled "Decade of Progress for Schools in State." Reflecting the forward-looking way in which Wisconsin is attempting to meet its local-State obligations in the field of education, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DECADE OF PROGRESS FOR SCHOOLS IN STATE—WATSON REPORTS MANY IMPROVEMENTS BASED ON MAJOR CHANGES IN 1949

(By Robert L. Dishon)

MADISON, WIS.—Public schools in Wisconsin built remarkable improvements from 1949 to 1959 on a foundation established by the legislature, the State superintendent of schools has reported.

In his biennial report, George E. Watson reviewed what has happened to public education since major law changes were authorized in 1949. He called the report "Decade of Progress."

In the 10 years, Watson said, teacher preparation advanced, the number of inefficient school districts was reduced, more schools developed higher quality programs, auxiliary services like transportation and lunch programs expanded.

FRAMEWORK SET UP

"Actually," Watson said, "these legislative enactments do not guarantee a better educational program. They rather set up a framework in which local districts can more effectively help themselves as they strive to offer an increasingly broader and richer educational program for their children."

In the last decade, Watson said, the people of the State spent nearly a half billion dollars to erect new schools and additions and remodel existing schools.

Operating costs rose from $100 million in 1949–50, with State aids totaling $17.5 million, or 17.4 percent of the expense, to $245 million in 1959–60. State aids that year totaled $59.2 million, or 24.2 percent of the cost.

AGENCIES COOPERATED

Watson said that in 1949, when the first of the war babies began to hit the elementary schools, 2,535 out of 12,900 elementary teachers had less than 2 years preparation for teaching. Ten years later, those with less than 2 years numbered 268 out of 18,333.

The change resulted from cooperation of his department, school administrators, teachers, school boards and teacher education institutions, according to Watson. His office has the responsibility for certifying teachers.

At least 60 percent of the elementary teachers now have at least a bachelor's degree and more than 70 percent of the 28,846 elementary and secondary teachers have such a degree, Watson reported. Requests from superintendents for special permits for teachers to fill up staffs have fallen below 1,000.

AIDS HELP PROGRAMS

School district reorganization and State aids are connected with the aid formula set up in 1949. Part of the aid formula is the guaranteed property valuation behind each school child. The State pays flat aids and basic and integrated aids per pupil. Integrated aids are for the better quality programs.

In 1949–50, a total of 151,680 or 32 percent of the pupils were in integrated level programs. Last school year, the basic programs had 88,741 or 13.9 percent of the enrollment and integrated programs had 548,294 or 86.1 percent of the pupils, reflecting major changes toward improvement.

DISTRICTS DECLINE

Integrated schools must have a certain number of teachers and must offer a minimum curriculum. To meet the State standards, many districts have had to merge in order to get an adequate tax base to borrow money.

The State had 6,273 school districts in 1949. Ten years later, the number had been reduced to 53.7 percent to 2,904. An average of about 300 districts disappeared in Wisconsin each year in the 10-year period, Watson's report said.

One of the major legislative changes in 1949 was establishment of county school committees to develop master plans for school development. Part of their work is reflected in the reduction of one teacher schools from 4,133 to 1,691 and nonoperating districts from 1,053 to 30.

PUPILS TRANSPORTED

Tied to district reorganization, and annexation for school purposes is transportation of pupils. Part of the 1949 legislation called for school boards to provide bus service for pupils living more than 2 miles from schools.

In that year, 78,000 pupils were transported. Last school year, 209,601 pupils living more than 2 miles away and 42,207 living less than 2 miles were transported to schools.

Part of the reason for the growth of the school lunch program is the transportation of pupils. More youngsters remain at school all day. The number of schools in the lunch program increased from 1,380 to 1,667 and the number of pupils from 68,388 to 169,918 in the 10 years. The cost has jumped from $2 million to more than $7.5 million a year.

The State and local districts will have to continue their school efforts, Watson said, because enrollments will continue to climb.

Enrollments have increased over the last 10 years from 475,000 to nearly 650,000 last year. Watson said school construction would have to continue this decade and perhaps have to be stepped up in the 1970's.

Former Congressman J. Harold Flannery New President Judge of Court of Common Pleas of Luzerne County, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of February 21, 1961, which comments on the designation of the Honorable J. Harold Flannery to be the new president judge of the court of common pleas of Luzerne County. Judge Flannery, who recently announced his candidacy for a third 10-year term, will be remembered by many Members of the House as the Representative of the district which I now have the honor of representing, Pennsylvania's 11th Congressional.

The editorial follows:

J. HAROLD FLANNERY IS NEW PRESIDENT JUDGE

A notable career of public service was climaxed yesterday afternoon when J. Harold Flannery was sworn in as 17th president judge of the court of common pleas of Luzerne County, succeeding John J. Aponick who collapsed in court on Wednesday and died on Thursday.

The designation of the West Pittston jurist as president judge by Gov. David Lawrence came less than a week after he had announced his candidacy for a third term. The new eminence he has attained by virtue of seniority on the bench will enhance his prestige.

In his new capacity, President Judge Flannery follows in the footsteps of 16 prominent citizens who distinguished themselves, not only in the law, but in the service of the community, the Commonwealth and the country. In the order of service, the list includes: Seth Chapman, John B. Gibson, Thomas Burnside, David Scott, William Jessup, John N. Conyngham, Garrick M. Harding, Charles E. Rice, Stanley Woodward, John Lynch, George S. Ferris, Henry A. Fuller, William S. McLean, Jr., Benjamin R. Jones, William A. Valentine, and John J. Aponick.

The 11th Judicial District, now limited to Luzerne County, once included Wayne, Susquehanna, Bradford, and Tioga Counties. Subsequently, Pike, Monroe, Columbia, Montour, and Wyoming Counties were added. Lackawanna then was a part of Luzerne County and also was included.

The new distinction that has come to President Judge Flannery inevitably is accompanied by greater responsibility. As a member of the legal profession for 40 years, 20 of which were spent on the bench, he is well equipped to discharge the duties of the post. His impressive record of public service includes a tour of duty in Washington as a Member of Congress and in the district attorney's office.

While the community mourns the passing of President Judge Aponick, it will be comforted by the knowledge that an experienced jurist and good neighbor is available to carry on. The hope will be the vacancy on the bench, created by President Judge Aponick's death, will be filled by the appointment of a lawyer of comparable stature.

Cuba's Communist Imports

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. SMATHERS. Mr. President, Cuba is a Communist satellite. Cuba's leaders are as communistic as the Red bosses of Poland, Czechoslovakia, Hungary, or Red China, and still we are sending Fidel Castro dollars at the rate of $65 million a year by purchasing Commu-

nist-produced Cuban goods. The United States is unwittingly helping Fidel Castro to finance his program of chaos, strife, revolution, and bitter anti-Americanism. Incredible as that statement may seem, the facts bear it out.

Twice I have written to the Secretary of State asking that this policy of folly be halted and that an ironclad embargo be ordered to prohibit all imports from that Communist island. On February 19 the Palm Beach Post-Times printed an editorial entitled, "Cuban Imports Help Communism," which presents a strong argument in favor of a full embargo on Cuban goods. I ask unanimous consent that this editorial be inserted in the Appendix of the RECORD.

There being no objection, the editorial ordered to be printed in the RECORD, as follows:

CUBAN IMPORTS HELP COMMUNISM

Whatever may be thought of their methods, Americans can only applaud the stated aims of longshoremen picketing the port of Palm Beach in protest against importation of Cuban fruits and vegetables.

Two decades ago we found that it was impossible to do business with Hitler. We did business with the Japanese—to our sorrow—almost up to the eve of Pearl Harbor, when some of our scrap iron exports came back to us in the form of shrapnel in demolition bombs.

Since that time, we have learned the folly of trying to do business with the Communists; but for some strange reason we continue to do business with Castro, the Kremlin's stooge in the Caribbean.

Although a partial embargo has been placed on U.S. exports to Cuba—excepting only food and medicines—Cuban imports of fruits and vegetables still continue to pour into this area, with a corresponding export of U.S. dollars that strengthen the Castro-Guevara Communist regime.

Cessation of this business would, of course, hurt some local interests. But there is no logic in "business as usual" during wartime. And although we are not technically at war with Communist Cuba, we are—or should be—vitally concerned in helping the island republic to throw off its Red shackles. Every dollar that goes into the Castro coffers has the opposite effect.

Aside from this, there are valid reasons for halting this traffic with Cuba. Citrus and tomatoes, particularly, are glutting the market and depressing prices to the detriment of south Florida growers. Even though, as a nation, we appear to be fond of aiding "underprivileged" peoples at the expense of our own economy, this appears to be carrying the principle a little too far.

It could be stopped by executive action. And it's high time.

Peace Corps

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. JONAS. Mr. Speaker, since President Kennedy yesterday announced the signing of an Executive Order establishing a Peace Corps on a temporary basis, it is interesting to recall that a number of years ago Mr. Heinz W. Rollman, an industrialist of Waynesville, N.C., and the Republican candidate for Congress in 1960 from the 12th Congressional District, suggested a similar idea in his book "My Plan for World Construction." Mr. Rollman summarized some of his ideas in an article which he had published in the Mountaineer, of Waynesville, N.C. Our former colleague, the Honorable George A. Shuford, of North Carolina's 12th District, inserted Mr. Rollman's article in the CONGRESSIONAL RECORD for January 20, 1954.

Since the entire article was placed in the RECORD by former Representative Shuford, I will not include all of it again but will include, as a part of my remarks, excerpts from it. Those interested in Mr. Rollman's full statement are referred to the CONGRESSIONAL RECORD for January 20, 1954. The excerpts from the article, bearing upon the question of a "Peace Army", which I believe will be of interest today in the light of the President's Executive Order and message to Congress of yesterday, follow:

In order to accomplish such a vast program of teaching our know-how to populations all over the world, the services of approximately 3 million persons will be required. These 3 million would constitute a peace army who would go abroad, not with hate and guns, but with love and respect of our fellow human beings and bring their civilian skills with them. Each teaching member of the peace army will not be required to teach more than an average of 200 persons during his or her 3-year period of service with the peace army. Teaching would be conducted with small groups or even individuals. Subjects to be taught would not be limited to industrial techniques or agricultural techniques. The program, in order to create a sound basis for spiritual and political growth and maturity of the recipient countries, would have to encompass every phase of life and activity that should be a part of a democratic way of life. In this manner we could teach 600 million persons to live and produce the way we do here within a very short period. The members of the peace army will teach subjects which they are qualified to teach on the basis of their regular civilian skills and occupations.

To quote from the book "My Plan for World Construction": "Not only must we send overseas experts in banking to teach people how to bank, grocery clerks who know how to run supermarkets, engineers who know how to build steel mills, but it is equally important to send people overseas who know how to milk cows, how to put on diapers, and how to run a democratic government."

A Blow Against Communists

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. SCHERER. Mr. Speaker, in view of the stepped up assault on the House Committee on Un-American Activities, it is my feeling that every Member of the Congress and reader of the CONGRESSIONAL RECORD should have the opportunity of seeing David Lawrence's column on March 1, 1961, concerning the decisions of the Supreme Court in the Wilkinson and Braden cases, resulting from contempt citations from the Committee on Un-American Activities:

A BLOW AGAINST COMMUNISTS—FIVE JUSTICES' DECISIONS LAUDED IN FREEDOM OF SPEECH CASE

(By David Lawrence)

It seems incredible that, with a cold war going on and with billions of dollars being spent by the Soviet Government to infiltrate every democratic country in the world, there should be issued by four members of the Supreme Court of the United States—Chief Justice Warren, Justices Black, Douglas, and Brennan—an opinion which appears to brush aside the Communist menace.

Fortunately, five other members of the Court—Justices Stewart, Clark, Frankfurter, Harlan, and Whittaker—see the Communist menace in its realistic form. By their latest decision, they make it clear that the empty claim to protection of free speech will not save suspected Communists in the United States from investigation by an authorized congressional committee.

The four dissenting justices insist that witnesses, when asked by a congressional committee whether they are Communists, need not even take the 5th amendment but can refuse to answer on the ground that their rights of free speech under the 1st amendment are being transgressed.

The argument solemnly proclaimed by the four dissenting justices is that no agency of the Federal Government, be it legislative, executive or judicial, may "harass or punish people for their beliefs, or for their speech about, or public criticism of, laws and public officials."

This doctrine would make it possible for any citizen to decline to tell an investigating committee about rackets, monopolies, payola, or any irregularities in human behavior on which it might be desirable to pass remedial laws. The witness could merely claim that the congressional committee was harassing him for his criticisms of the committee and was trying to punish him for his beliefs. Congressional efforts to get information on which to base regulatory laws could thus be frustrated.

In the latest opinion—the case of Frank Wilkinson, who refused to give even his place of residence to the House Committee on Un-American Activities—the majority of the justices repeated a statement from a previous decision, which said:

"To suggest that because the Communist Party may also sponsor peaceable political reforms the constitutional issues before us should now be judged as if that party were just an ordinary political party from the standpoint of national security, is to ask this Court to blind itself to world affairs which have determined the whole course of our national policy since the close of World War II."

What the majority of the court says is supposed to be "the law of the land," but it is being scorned—in the companion case of Carl Braden—by Justice Black, with Chief Justice Warren and Justice Douglas agreeing. In this dissenting opinion these words of defiance are issued.

"The founders of this Nation were not then willing to trust the definition of first amendment freedoms to Congress or this Court, nor am I now."

But to accept the idea that Congress cannot investigate or that the Supreme Court cannot rule on the case of a man who may be serving or helping a hostile government—an enemy—is to deprive the Nation of any power of self-preservation. The pur-

pose of these congressional investigations is to expose the espionage and subversive activities of the whole Communist apparatus in the United States. Loyal American citizens are expected to cooperate with their own Government in all its branches. The Communists have stolen atomic secrets. They have at times infiltrated the departments in Washington. The Supreme Court in the past has taken the view that it isn't a "right of free speech" falsely to cry "Fire," in a crowded theater. Nor does the "free speech" clause of the Constitution give anyone immunity from an investigation to determine whether he belongs to a party that is financed by, instigated by, and often directed by a foreign government which is seeking to damage the United States and possibly to bring on a war.

Justice Black argues that editors and newsmen who have criticized a congressional committee now could be brought before that same committee and punished for refusing to answer questions. But whenever there is a basis for suspecting that a newspaperman is paid by or working for an enemy government, he shouldn't be able to claim immunity under the first amendment, either.

The House Committee on Un-American Activities is under attack these days by so-called "liberals" who will be encouraged now by the dissenting opinions of the Supreme Court to carry on their campaign to curtail, if not abolish, the work of the House committee and also of the Senate Internal Security Subcommitte. But the defenders of America's safety against the Communist enemy will find an irrefutable argument in the two opinions rendered this week by Justices Stewart, Clark, Frankfurter, Harlan, and Whittaker.

Preservation of Natural Resources

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. ANDERSON. Mr. President, the Senate Interior Committee has completed hearings on S. 174, the wilderness bill. We have had some constructive proposals for clarifying amendments and the hearings have been of real value. Of course, over the past 4 years we have built up considerable records of hearings and studies dealing with wilderness legislation. Much has recently been written in the press concerning the preservation of wilderness areas and there is a heightened interest generally in the problem of national resources.

I ask unanimous consent that two articles bearing on this subject be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CRISIS IN NATURAL RESOURCES

Ranking in importance with the message on education that he had sent to Congress only 3 days earlier is President Kennedy's exciting and comprehensive statement on the development and conservation of the Nation's natural resources.

The President covered virtually the entire field: Water, power, forests, public lands, ocean resources, and recreation. He laid out a program that the Nation will ignore literally at its peril. In some ways even more significant than the program itself is the fact that the President clearly showed an understanding of the most basic fault of our natural-resource policy: the failure to look at it as an integral whole; the failure to put a stop to the rivalries, duplications and exceedingly harmful conflicts in the field and in Washington between various arms of Government; the failure, in short, to coordinate the management of the Nation's dwindling resources, or to provide adequately for their wise use and preservation.

In an effort to correlate the work he proposes some immediate administrative steps. We regret—as we have already stated on this page—that he did not go the whole way and present a full-fledged plan for creation of a Department of Natural Resources.

As to the substance of his message, the President devoted most attention to the problem of water resources, stressing the vital need for comprehensive river-basin planning. We have our reservations about the necessity for many additional large dams and flood-control projects; there has been too much pork barrel in the past for us not to be skeptical for the future. But if the planning is properly and objectively done the projects may be fewer and their necessity less doubtful.

The President is far from being merely a big-dam advocate. He recognizes the value of land zoning to reduce flood damage; of acceleration of the very useful small-watersheds program; of promoting soil conservation; of taking effective steps to control the increasing menace of water and air pollution; of intensifying research into the conversion of saline water. The power policy he enunciated is progressive but hardly radical.

The urgent need to improve the management of much of the Nation's commercial forest land, especially that 50 percent in small-woodlot ownership, cannot be too greatly emphasized. Mr. Kennedy's program to improve the dreadfully deteriorating condition of the public domain is most encouraging. Here he will have a fight with some heavily vested interests on the range. Even the resources of the coastal ocean do not escape his attention, and he suggests a national program for oceanography.

We are particularly pleased by the President's wise words in respect to the great scenic and recreational resources of the country, which are now meeting pressures such as they have never known before—pressures that will only increase in the foreseeable future. Conservationists will be delighted by his advocacy of the pending wilderness bill (S. 174), a modest effort to preserve for future generations some of the natural quality of primeval America. It is essential that Congress delay no longer on his recommendation of three new national seashore parks; but this is only the beginning of what must be done about new parks, and done quickly—before it is too late to do anything.

RENEWED VIGOR IN CONGRESS DRIVE TO ENACT LEGISLATION FOR PARKS

(By Ann Cottrell Free)

President Kennedy's message to Congress on natural resources and the scheduling of a number of major conservation meetings here gives new urgency to the "call of the wild."

The President made it clear that the call had gone too long unheeded and the time has come to reexamine the Government's often conflicting natural resources policies.

"If we fail," he said in Thursday's message, "to chart a proper course of conservation and development—if we fail to use these blessings prudently—we will be in trouble within a short time."

Efforts soon to be undertaken at the White House level to make some sense out of the patchwork and jigsaw pattern of conservation efforts might well lead to an administration proposal to establish a department of natural resources.

CONGRESSIONAL HEARINGS SET

Fittingly, detailed study of the conservation crisis—and man's role in causing it—will be undertaken thoroughly in coming days. Congressional hearings and national conservation meetings are bringing naturalist and wildlife experts by the hundreds here.

They will seek to keep our wildlands wild, to restore the balance of nature, and, in effect, to keep the bulldozer from the wolf's door. And above all, they will try to preserve the best values of the old frontier. And just as in those days there will be unity against common enemies—such as fire, flood, and city-slicker exploiters.

Today the enemy also includes the polluter of streams, indiscriminate user of traps, poisons, and pesticides and destroyer of wildlife habitat.

Unity among conservationists against man at his predatory worst will be seen, for instance, on March 9 at the Smithsonian Institution. Six wildlife, humane, and naturalist groups have joined with the Defenders of Wildlife to present the crusading Scot, Dr. Harry R. Lillie. The naturalist-physician's subject: "Man—Menace to the Planet."

But conservationists are beginning to realize that it is almost easier to rout the common enemy than to parcel out the land among themselves. For now, unlike frontier days, the land shrinks with the birth of every baby.

NEED FOR ZONING SYSTEM

And the naturalist, hunter, reclamationist, public power adherent, recreation seeker—as well as the commercial interests—want to be served.

Therefore, a need for a system of zoning is becoming acute.

This need will be illustrated, for example, tomorrow, when men who love the land solely for the sake of the land, journey once again to Capitol Hill. They will ask for a third time that some of our land be left forever as wilderness. It would remain, then, as a living museum for future generations and always as a source of spiritual renewal.

The controversial "wilderness bill" asks only that about 5 percent of our Federal estate—national forests, parks, wildlife refuges—be protected from exploitation. Their administrators would be relieved of all pressures to change the present character of these areas of thorn and rock, velvet green and dancing stream. The authority to change, limit or increase would be given the Congress.

THE OPPOSITION

It will be opposed again—as for the last 5 years—by mining, timber and livestock interests at the hearing before the Senate Interior Committee tomorrow.

Due to the administration's backing, vigorous sponsorship of Committee Chairman CLINTON P. ANDERSON of New Mexico, and the educational efforts of the Wilderness Society, the bill's chances in the Senate seem good. The outcome in the House is a greater question.

Growing interest in nonurban zoning, known as multiple use, will be exhibited here this week at the 3-day annual meeting of the National Wildlife Federation. "Multiple Use" is the meeting's theme and also of National Wildlife Week, March 19–25.

Realization that many ancient civilizations perished because of poor land management contributes to this demand for more equitable use of the land. Under the ideal national policy, no one interest would be developed to the detriment of the other. Such a policy is now in effect for this Forest Service.

WHO WOULD ADMINISTER IT?

But this concept leads to the question: Who would administer this policy?

Experts are divided. Kennedy, during the campaign, favored a council of resource and conservation advisers in the Office of the President. It would work with a joint congressional committee. A bipartisan bill, with 90 cosponsors, has been introduced in Congress.

There are others who believe that the national interest would best be served by a natural resources department. But this would mean taking power away from other arms of Government reluctant to part with it.

Nevertheless the passing of the coordination problem by Mr. Kennedy to his already madeup Council of Economic Advisers and a special advisory committee—including concerned Federal department and agency heads—may be the first step toward the proposal of such a department. The President, at any rate, believes this approach would have more teeth than the one he made during the campaign.

But whoever or whatever the coordinator, people still pose the problem. And the North American Wildlife and Natural Resources Conference, meeting here March 5–8, recognizes this. Its theme: "Planning for Population Pressures."

The problem that increases every day has been reduced to an equation by the Forest Service: More people plus more money, leisure, mobility equals more demand.

The first task, clearly, is to find more land for public recreational use, particularly beach areas. Along the 3,700-mile coast of 18 Atlantic and gulf coast States only 270 miles are set aside for public use.

Suburbia with its split levels and ramblers—is eating into the potential park areas, too. But the idea to make suburbia vertical (ramblers into skyscrapers) instead of horizontal may not get far.

Interior Secretary Udall may have started machinery for greater acquisition of land for State and Federal recreation use by his recent moratorium on public land sales. Speculators have been grabbing up too much that might better be used for the public good.

Establishment of a youth conservation corps could also help to reclaim and develop land for many good uses.

Mr. Udall is also reexamining the thorny problem confronting Mission 66 in developing our 29 national parks so they can take care of 80 million persons by 1966. Today about one-third that number visit the parks. The charge has been made that the parks are being overdeveloped to take care of people at the price of impairing nature. Lodgings, ski lifts and other fun and comfort aids belong nearer the gates, not deep inside some critics say.

The Secretary is faced, too, with working out a policy in regard to wildlife that will meet the objections of those who fear that the Predator Control Division of Fish and Wildlife is destroying too many of our foxes, golden eagles, coyotes. As a result—due to stockmen's insistence—the balance of nature is off kilter. Also the policy of public hunting within some wildlife refuges and sanctuaries is questioned.

Dakota Centennial

EXTENSION OF REMARKS
OF
HON. HJALMAR C. NYGAARD
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. NYGAARD. Mr. Speaker, I would like to call attention to the joint effort of nine North Dakota daily newspapers in presenting a "Dakota Territory Centennial" section to their readers, marking the 100th anniversary of Dakota Territory.

This special section is not only beautifully printed and exceptionally well written, but I believe it constitutes a signficant contribution to the historical documents of our State.

Cooperating in the writing and production were the Bismarck Tribune, Devils Lake Daily Journal, the Dickinson Press, the Fargo Forum, the Grand Forks Herald, Jamestown Sun, Mandan Daily Pioneer, Minot Daily News, and Valley City Times-Record.

I feel sure the introductory editorial will prove most interesting to my colleagues.

The editorial follows:

PEACE GARDEN STATE BUILDING ON A NOBLE HERITAGE

A significant 100th anniversary is being celebrated in North Dakota this year.

What we are marking is 100 years of law and order, of organized government on one of America's frontiers, an epoch which commenced in 1861 with the creation of Dakota Territory, of which North Dakota was a part.

Dakota Territory itself lasted only 28 years. It was succeeded in 1889 by statehood. Yet the territory was a notable political entity in the history of our Nation, and the occasion of this centenary is momentous.

It is a time to pause and take note of the beginnings of civilization in a wilderness country, to take stock of what has come out of these 100 years.

Throughout this centennial edition are articles and pictures reviewing those beginnings, from the remote past to the present, reflecting what has happened, what has been accomplished for weal and for woe. Much of it is glorious and we can look back with pride.

We need to remind ourselves that we must know our first beginnings and our heritage. We need to know well the land and the conditions under which we have lived and what has happened here.

We cannot otherwise plan the future of our State. The hope of realizing the stirring prospects we may envision and which surely lie before us in the days to come rests to a large degree in the lessons learned from the past.

As a people we are the result of the heritage of State as well as family.

Not all of it may be acceptable to us. In part we would reject it and go in another direction. In greater part we can accept it and build upon it.

Have we but a celar picture of how and whence we came, we can the better understand where we now are and where we are going.

The past is not always pleasant, but we cannot discard it. If we deny it, it haunts us in our subconscious. It appears in our prejudices and reveals itself in our tacit assumptions and patterns of behavior.

What are our mistakes and what our accomplishments? What are our liabilities and what our assets? What is possible and what is not possible? What can be hoped for and what must be abandoned?

These facts we must know well and face realistically. Having appraised ourself and our potentials we must join hands to build the future.

The slogans on the billboards calling North Dakota the land of unlimited horizons is true. The best is yet to come. We have but to grasp a vision of what can be done and begin.

One condition attaches itself automatically. Political and sectional disputes, petty differences and self-interest must be cast aside for the greater good, the welfare of the State itself. For the State is but a name for all of the people.

What we need is a flaming spirit of patriotic ambition, to stimulate the desire of unselfish men to add something to the enrichment of our State which shall endure for all time.

Significant beginnings have lately been made in appraising North Dakota's past, in seeing ourselves as we are, and suggesting realistic plans for the days to come.

Historians have frankly disclosed our obviously brash course of too muchness in certain aspects of our physical development. Much has been revealed about blundering overexpansion in certain fields.

Conference and study in recent years is resulting in the creation of wiser legislation. We are beginning to pay heed to the counsel of trained investigators. We are less prone to file studies away in pigeonholes.

We are beginning to take stock of our heroes, and are beginning to reach agreement on our standards of values.

We need to know and revere the great men of our State, to call the attention of our children to their lives and accomplishments, that their example may not be forgotten.

The reputation of a State and its heroes maintains a constant appeal to its citizens to maintain its integrity and greatness.

It appeals to our pride and our patriotism. It is a potent living incentive to every citizen to so sacredly guard it that the historian of the future may find no blot upon its honor.

North Dakota has many problems, some peculiar to itself, some common to all States. Some, perhaps many, are capable of solution. Some may not be fully solved. In some instances it may be best to rely on remedies effective years ago rather than weak modern solutions.

We need to know more about the probable final effect of the mechanization of agriculture in our economy.

What the future of oil, lignite, power, and water resources may eventually mean.

What to do about the exodus of our native sons from our colleges and universities to other States.

How to attract more people and more industry.

How to overcome the problems which seem related to our brisk winter climate.

Fellow North Dakotans, you can participate personally in seeking the best course for your Peace Garden State in the 100 years ahead.

You can involve yourself by becoming articulate, by joining in group study of the State's problems, by speaking up, by willingness to make a sacrifice of time and energy for the good of your State.

Let us pick our goals and make our dreams come true. The next 100 years can be the greatest of all.

Economic Problems of Expanding and Declining Communities

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Solomon Barkin, research director, Textile Workers Union of America, New York City, which appeared in the February 1961 issue of the magazine, Social Action, published by

the Council for Christian Social Action of the United Church of Christ.

Mr. Barkin's article follows:

ECONOMIC PROBLEMS OF EXPANDING AND DECLINING COMMUNITIES

Economic change is being propelled by various forces in our society. The simplest is the mere multiplication of our population. To maintain the same level of per capita wealth, national product and income, it is essential that we use more resources and more capital, build more houses, create more communities and extend existing ones. Therefore, even in a period of so-called economic stagnancy there is much change.

In addition, even in the relatively stable era when our per capita growth is not being improved economic shifts of various kinds are being made. People are moving from one place to another; transfers are occurring in economic activity; worn out or obsolete facilities have to be replaced; new products are coming on the market to displace older ones.

Even in periods of declining economic wealth, movement is common. People are withdrawing from existing activity. They are abandoning previous living levels. They are shifting back to communities in which they will find familial support. Business contracts and eliminates economic operations. Surpluses become available; vacancies increase; and idleness grows.

But the process of change is accelerated in periods of rising per capita income, national product, and wealth. Such progress is being effected through various methods. Increased efficiency in operations is one basic technique. Machinery substitutes for labor; the organization of work is improved; management becomes more effective; expensive and rare materials are displaced by cheaper and more plentiful ones; more efficient building structures replace obsolete ones; long-distance communication eliminates the need for way stations; automatic controls displace human ones. As such technical changes are effected, new products arise, new raw materials are needed, new services required. Manufacturing and service industries relocate to more economic areas. People flock to the new job opportunities and the industrial and population maps get altered radically.

Advances in the rate of growth are accelerated by new forces, most important of which are organized research and scientific investigation. These are providing a cumulating fount of new technical knowledge from which will flow more radically different technologies and societies. The practical applications of these findings have hardly begun. When this flow is tapped, they will truly gush forth with many innovations.

A second force accelerating our rate of progress is savings made in our investments both human and physical. Physical, mental, and vocational rehabilitation of individuals is becoming commonplace. Similarly, we are learning through urban renewal and redevelopment of distressed urban and rural areas to preserve our large-scale capital, thereby conserving more wealth and further accelerating our total progress.

With the new accent on conservation of human, natural, and physical wealth, we are closing the circle of attitudes. Progress and growth do not mean merely the introduction of the new but also the alteration of the old to make them better serve us in this rapidly changing society. The challenge ahead for us is to facilitate our adjustments and capitalize on our human and physical resources for the greatest national and individual good.

In no field is there greater need of maintaining the quality and benefits of past investment than in the area of the community. Its resources include human, natural, and physical capital. The well-being of its citizenry and of the community agencies and their economic soundness depend upon their easy adjustment to change. They must be adapted to the newer needs, which means that the older ones are to be scrapped only if they cannot economically be rehibilitated, redeveloped, and renewed to serve the newer needs. We must not create a scrap heap of human beings for our investment in them is great and they are really the raison d'être of all social and economic activity.

CONTRAST IN PROBLEMS OF EXPANDING AND DECLINING COMMUNITIES

Governmental and semipublic agencies have the responsibility, in expanding and declining communities, to help individuals adjust and to create the institutions necessary for the fullest realization of individual and comfunity potentialities. The difference between these communities lies in the nature of the economic foundation available for solving their problems and for financing these programs. They are more readily available in the expanding than in the declining community.

But even the observation may not be wholly appropriate since the economic base in expanding areas may be inadequate, as in places where the existing industrial pattern precludes realization of prevailing American income standards. Second, there are expanding communities with such a backlog of deficits, unemployment or underemployment, and insufficiencies of community resources and facilities that they have a long way to go before they can be considered adequate.

In many cases of expanding communities, therefore, and in all instances of the contracting community, the foremost challenge is to designate a pattern of economic development which would assure the maximum utilization of the human, natural, and capital resources to advance the living standards and opportunities of the individual citizens. This preliminary responsibility must be shouldered by most communities with the possible exception of those whose economic future appears adequately safeguarded and where the levels of income and employment are among the most favorable.

PLANNING FOR GROWTH

The major challenge confronting each community is to organize itself for effective economic growth. There is no single theory, formula, or method of projecting the future which will provide a sure course. Neither diversification nor specialization is a safe solution. The only answer is continued alertness to economic trends. It requires an intimate knowledge of the economic structure of the community which is possessed by few in this country. The cloak of privacy of economic information which has in the past kept the community ill-informed must be removed, for knowledge is not only the key to the future but also a source of warnings of adversities to be prevented by appropriate early action. The community has the continuing responsibility of creating an environment which fosters economic growth and rising incomes.

Relevance of national trends

Besides focusing upon local economic trends and conditions, each community has as great a responsibility for national trends. In fact, it may well be argued that the primary interest of most areas must be the maintenance of a national full employment economy. During periods of great national activity, local communities are likely to share in the benefits and are better able to deal with local economic issues. It is during such periods that private industry expands and is constantly on the lookout for new areas in which to locate. The task of attracting new economic units is much easier in periods of plenty.

Even in times of high national unemployment, in one of which we are now living, the community cannot resign itself to the reverses. Its responsibility must always be to assure the maximum development of its own structure and employment on the best terms for its people. While supporting programs for high national growth and employment, it must be hard at work at rebuilding and reactivating its own local economy.

The agency for planning for such economic growth must be built around the groups keenly interested in the community's development and the rise in the income level of its population.

Resistance to change

Unfortunately, there always are vested interests of one type or another which resist such goals. Some are afraid that new industry will increase the demand for employees and force higher wages. Others fear that growth will expand the local buying power and induce larger national corporations to seek sites for business. Still others resist any change in pattern simply because they are accustomed to the existing one. Finally, some leading citizens resist advances because they fear that their own positions might be endangered in the distant future.

Nevertheless, each community has an obligation to proceed on such planning ventures. The real challenge is to find the spearhead for the undertaking. While the business community is most immediately prepared to understand the issue, it may not be interested. You then turn to civic, political, trade union, and professional leaders, as well as to the universities.

Economic studies as planning aids

Of the types of economic studies which have been employed for such planning, the "economic core study" is most useful, since its emphasis is upon the locational advantages of the community. Beginning with an understanding of the forces which have favored the location of existing industries, "the economic core," the planning group, is in position to determine whether these considerations are becoming less or more critical in economic growth and to determine whether they are sufficient to attract new industries. If not, the alternative issue is that of determining which other assets the community can develop or build up to favor more expansion. The goal must necessarily be to define and favor the creation of a new nucleus of economic growth upon which an industrial complex may be constructed.

For this purpose, the planning group must assemble a varied set of facts. These would include an inventory of resources such as power, water, minerals, forests, and others. Other data would consist of an income flow analysis to define the relative contribution of each current sector to the local income, "value added" and employment. The third item would be input-output studies which can define the sources of new industries by highlighting the specific services needed and products not now provided in the community. The study of the income levels would reflect on the consumption patterns and potentialities which they offer. The description of the qualities and capacity of the population is important in defining the gaps that have to be closed, the amount of upgrading required, and the human resources now available. Studies of migration allow the group to understand the losses being incurred and the attitudes of the people themselves. In the population study, it is particularly important to isolate the entrepreneurial and professional talents and competences. This will enable the planners to determine whether the community will have to depend solely upon outside resources or whether it can expect some local initiative.

The sixth study would provide information on current and potential uses of avail-

able lands. It can help define the types of economic activity which can be favored and the public works necessary for building them up.

The seventh and final study would appraise the major local institutions. The character, reputation, and quality of local government must be described and information furnished as to the taxes and other charges it levies and their effect on business. In addition, the study should contain an evaluation of the quality and character of semipublic and public institutions such as hospitals, libraries, churches, social service agencies, cultural institutions, and trade unions. A similar analysis of the organization and enterprise of the business community would be helpful.

Unfortunately, we do not have legislation designed to aid local communities financially to undertake such overall investigations and appraisals. The nearest approximation was a provision in the area redevelopment bills passed by Congress in two successive sessions but vetoed by former President Eisenhower. These would have provided such funds for general economic area redevelopment. There are, however, available funds for advanced public works planning. Other planning funds are provided for specific types of projects such as urban renewal, flood control, soil conservation, and road construction. There is urgent need for Federal and State legislation to aid local areas by offering them financial grants for such studies.

Community facilities

With these analyses and plans, the community is prepared to focus on the action program. First it must upgrade the community's own facilities, where they have deteriorated, and close those gaps in services which have not been provided. Modern industry requires many more local amenities than previously. Moreover, the employees in modern industry usually possess a higher level of education and make greater local demands for housing and cultural and civic facilities. Without meeting these tests, many local communities are unable to compete for new industries. Many are the cases of industries which have rejected specific sites because of these deficiencies.

The great deficit in facilities has attracted national attention so that Federal aid, both long-term and emergency, has been promoted to overcome economic recessions. The Federal aid programs emphasize sewer and water facilities, hospitals, pollution controls, schools and other educational facilities, public buildings, roads and streets, highways and airports, flood control, rivers and harbors, nursing and convalescent homes, farm product markets, parks and recreational facilities, forests, power, and other utilities. Together, these aids, though spotty and qualified, provide a real base for modernization and completion programs.

Industrial development and redevelopment

Three remarks must be made before the analysis of industrial development proceeds. First, a number of economists emphasize as a difficulty of redevelopment the necessity of helping people to move from distressed areas. Actually, most urban distressed communities can be redeveloped. They now contain such large amounts of social and personal capital and such intimate personal values that they provide a ready base upon which to build new economic structures.

Second, the decline of many communities has been due to the shrinkage or loss of the core industry or some of its satellites. The first step in reclaiming such communities is to aid the redevelopment of this industry. Many an industry which has almost disappeared has been revived by deliberate research and study of new products and processes. Unfortunately, many of these industries are unable to undertake such research and redevelopment programs because they are unable to coalesce their constituent units into cooperative programs. One objective which the interested communities might well promote is the establishment of national facilities for encouraging such research through the finances of these constituent industries.

Third, the development authorities should place their emphasis upon finding new industries which can serve as the nucleus for spontaneous economic growth and which are capable of spawning satellite and affiliated industries within the same area. Many an agency has had the unfortunate experience of financing the location of a fly-by-night enterprise, only to find that it closed down long before it had even paid the cost of the special facilities built for it. The development program should be designed to provide long-term growth rather than merely short-term jobs. Similarly, the goal must be to raise the income level in the community rather than depress it by filling the structures with low-wage-paying industries.

Development authorities having an understanding of the potentials for their locality and a plan for the improvement of the community and its natural resources are ready for the search for businesses to be established on these sites. The alternatives are to find some enterprises within the community and to import others. Unfortunately, too little has been done in the first direction. With the vast degree of centralization of banking, managerial talent, and resources in the larger communities, small ventures need more encouragement at the local level.

Some development agencies have provided "shell" or other new enterprises, thereby enabling them to attract new industries, but they represent a considerable risk and have had only modest results. Industrial parks have been built as readymade centers for industrial development.

One final caution is that voluntary efforts are often insufficient for such projects. Professional assistance can often advance the program at a considerably faster pace. Smaller communities have cooperated with one another to hire specialists in order to benefit by such expertise.

PEOPLE

The key factors in industrial development are the people and their work qualifications. It becomes extremely important in modern society that we assure the highest degree of competency among them. Education and vocational qualifications must meet the needs of industry. Physical and mental health is essential for good production. It is this realization that has prompted more and more groups to support the expansion of governmental facilities in these fields. Without a qualified, competent, and healthy work force, a community is truly handicapped in growth and redevelopment.

To maintain the morale of our work population in face of the current rising rate of change, a number of different programs have to be improved and extended. Unemployment insurance benefits must be liberalized to 39 weeks at a level which more nearly approximates two-thirds of the employee's regular earnings. Medical care must be provided to sustain the physical well-being during periods of unemployment. Vocational rehabilitation and training are vital for people who have been displaced.

CONCLUSION

Community leaders have a great responsibility to keep abreast of the economic developments within an area. The level of income and the promise of growth, or the threat of decline, will not only determine the resources, and the degree of satisfaction which the community will be able to provide, but also affect the people's moods. Basic to the attainment of life's goals, is the achievement of an income with which to finance the loftier objectives.

American society has hitherto depended completely on private individual initiative to stimulate and account for economic activity. We are becoming increasingly aware that the Nation, and the community, have an intimate concern for the effectiveness of the private economy. Where it fails or lags, it injures the entire community and Nation. The society cannot remain indifferent to its shortcomings, whether they be due to a lack of initiative and enterprise, or to poor administration. When its failings produce an economic recession, or a declining community, the burdens are thrown back on the community, and the Nation. Private enterprises are the stewards of the society. The Nation and community must constantly take an accounting of the manner in which this stewardship is being discharged. When necessary, they must intervene to reinvigorate private enterprise, compensate for its deficiencies, or guide its performance. The goal is that of providing continuing economic growth and higher living standards, and individual opportunities. The Nation and the community must assure their realization.

Alaska Roundup

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. GRUENING. Mr. President, news letters giving the lowdown or inside dope, variously known as scuttlebutt or poop on what is taking place in a given area or in a certain field, are always intriguing. One that is particularly newsy and interesting has just made its appearance. It is edited and published by John J. Ryan, who has been recently appointed editor of the Daily Alaska Empire, the newspaper published in Alaska's capital, Juneau. Mr. Ryan is an experienced newspaperman, having previously been editor of the Fairbanks Daily News-Miner, and is also an author of note, having published an excellent book on fishing in Alaskan waters called "The Maggie Murphy."

As the first item is entitled "The Battle of the Budget," I should make clear that this refers wholly to the budget of the State of Alaska and not to the Federal budget, over which there is also almost invariably a battle. The ferry battle, to which Ryan's "Alaska Roundup" refers, has to do with an important project to establish a ferry service to connect the lower 48 States by way of Prince Rupert, British Columbia, with the interior of Alaska, supplying thereby what is properly called a "marine highway" through a region—southeastern Alaska—which cannot, because of its numerous islands and mountainous terrain, be connected by a single land highway. A bond issue of $23 million to finance this ferry and another one connecting the Kenai Peninsula with Kodiak Island was approved by the voters at the last general election in Alaska. However, the project requires implementation by the legislature.

I ask unanimous consent that Jack Ryan's "Alaska Roundup" be printed in the Appendix of the RECORD.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

The battle of the budget, and the ferry battle, which promise to be two of the major conflicts of the 1961 legislative session, will be opened shortly. It is impossible to predict just how these battles will turn out. Let's look at them separately.

The $59 million budget is generally defended by the Democrats, attacked by the Republicans. Governor Egan's budget will be fought out largely along party lines. Democrats claim Alaska can afford this budget, needs the expenditures to maintain proper services, growth under statehood. Republicans say Alaska cannot afford this budget, though it would be nice to have the things it provides. Principal objection of the Republicans is the fact that statehood transitional grants and other nonreoccurring sources of revenue are fully spent on operational expenses. They fear Alaska is building up to a letdown, will have to "face the tiger," in 1962 or 1964.

Presuming that the budget battle is fought mainly on party lines, the Democrats hold the edge. Their control is not overwhelming, but when chips go down on an administrative-backed measure, they can't expect to do worse than a 10–10 split in the Senate. It appears doubtful that many Democrats will bolt party leadership in this budget battle. It is still anybody's fight, but the edge goes to the budget largely as it stands.

The ferry system proposal as it stands in House bill 44 is in trouble. Compromise appears to be in the air. Legislation to create an authority to operate the ferries undoubtedly will be submitted to pacify opponents of the measure. This would take the operation from the control of the Governor. When debate opens, expenditures for the ferries may be sliced down. Some opponents say the Kodiak ferry will be cut, southeastern Alaska reduced from three ferries to two or one ferry. Those who back the Marine Highway claim this would be like opening a restaurant with all kitchen facilities, cook and waitress, but putting in only one stool. There will be debate, and compromise. It is not known how the "ice block" legislators from the northwest district will line up. The outcome of this battle cannot be predicted right now.

Here are some statistics concerning the impact the ferries will have on truck transport in Alaska. They'll open up southeastern to overland freight service. They'll save 1,500 miles per roundtrip between Seattle and Fairbanks or Anchorage. Big truck and trailer rigs operate at a cost of about 65 cents per running mile. This means a saving of about $500 per roundtrip when ferry fare is deducted. The saving amounts to almost 20 percent of total present costs for a roundtrip. The ferries will give trucks a better position in the Alaska transportation picture, if and when the ferries go into operation.

This brings up the matter of competition with other carriers. A top official of a steamship line serving Alaska told us that if the ferry system subsidized truck transportation to Alaska, his concern would fight the ferries. Offering an economical new service and charging fares that are profitable isn't a subsidy. But problems will no doubt arise in this field. If the ferries lose money, they are subsidized.

One other factor: Up to 2,500 cars a month travel the Alaska highway, both northbound and southbound. Canadian as well as American traffic will now be diverted to the Marine Highway if it is established. This cuts out 750 miles of road in Canada, each way, where travelers are spending money. Alaska highway money will be diverted to Alaska ports where it has not been spent before.

Aside from the budget and ferry bonds, there are other major issues to be resolved by this legislature. Boroughs are up for consideration, but probably nothing will be done about them. They were written into the constitution to provide local government outside cities, similar to a metro district. Trouble is Alaskans haven't caught on to the idea. Borough hearings are usually attended by only a handful of people who generally oppose boroughs. People fear more government and more taxation. They don't "dig" the name borough which is not familiar to them. There is no clamor in Alaska for boroughs, even in areas where they are needed. It appears that the constitutional convention wrote into the document a unit of government that is not acceptable to Alaskans. This will have to be altered at the next constitutional assembly.

Other major items to be considered include ESC bill amendments, moves to give some of the Governor's power to boards, election code changes. Tax increases hinge on outcome of the budget battle. The increases proposed are in State income tax and fuel tax fields. A State property tax has been talked, but it appears unlikely that action will be taken.

Aside from the legislature, news was made in Alaska this week by fisheries experts who gathered here from all over the west coast, British Columbia and Alaska at two conferences. They were here to study salmon and other fishery problems, to coordinate their research. Most of them saw fisheries a sad picture right now due to depletion of stock and foreign encroachment.

One prominent fisheries scientist stated flatly that the only sure way to restore salmon fishing in southeastern Alaska was to close the area to fishing for 5 years. He readily admitted this would probably touch off great protests from fishing areas.

The scientists expect to see a great expansion in the Russian fleets fishing off Alaska. This expansion will be in the form of bottom fishing fleets which will operate not only in the Bering Sea, but off the southeastern and gulf coasts. They'll be fishing just outside the 3-mile limit from Sitka to the Arctic coast.

Rich trawling grounds not being utilized by Alaskans will attract the Russians. One fisheries authority told us that American research vessels have found excellent bottom fishing off the southeastern and gulf coasts. In an area seaward from Yakutat, a U.S. research ship found a huge undersea bank that abounded with 20-inch sole and other valuable bottom fish. A Russian ship was studying this area when the U.S. vessel arrived. The Soviets have prospected the entire Alaska coast. They have scheduled a 400-percent increase in fishing operations, using modern equipment. They'll be operating all along the Alaska coast in the near future, possibly next summer. There is no way to prevent this bottom fishing by Soviet ships that stay beyond the 3-mile limit. Sad part of it is that fisheries experts believe that this rich Alaska resource could be profitably developed by Americans under certain conditions. For instance, New England bottom fishing fleets experienced economic problems, but were assisted by subsidies. The Government now pays up to one-third of the construction cost of vessels to be used in the ground-fishing industry. Such assistance is not available in Alaska.

Next summer's construction program in Alaska is not exactly a bright picture. Military construction will amount to about $29 million, down from $90 million last year. In years past, $200 million was a good season. Private construction is expected to boost the total for 1961 to about $50 million at the most. In addition, the State has $38 million to be spent on roads, but it all cannot be spent in one season. The Statae road program is getting into gear, after being hampered by a shortage of top engineers, and other factors.

There is a big bright spot in Alaska's economic future. This encouragement was contained in a statement by a top Army official who was widely quoted in the press. This military authority termed the Polar Sea the Mediterranean of the next war. He pointed out that a major missile base in Alaska would be within range of virtually all of our potential enemies. He made it clear that the Army regarded Alaska as being highly strategic in the missile era. It has been reported that the Army is pushing for at least one large missile base in Alaska, but the Defense Department has held up the move because of high costs. A new administration has taken over, and more money is being spent on defense. Alaska's military picture could change very suddenly. Just one missile base would be a $150 million construction project, bring a permanent garrison of well paid technicians to some area of Alaska.

We've reported on slow business conditions in many Alaskan cities. Here's a report on a community where things are booming. Nenana was once a quiet Alaska Railroad stop and river port with one short main street and a declining economy. Nenana's principal store sold bacon, traps, canned goods to natives and white trappers in the area. Recently, the United States commenced to build a giant international ballistics missile detection site at Clear, 17 miles away. Up to 1,000 men have been working on construction, 1,200 are scheduled to be stationed there permanently when work is done. Two trailer camps housing 50 families have sprung up in Nenana. The store now stocks TV dinners, cut meats, and baby food. An effort is being made to obtain financing for 65 modern homes in a wilderness area north of the Tanana River. By next fall, Nenana will be linked with Clear and Fairbanks by paved road. The future of this river community is enhanced by rumors that RCA will not build company housing close to the site because the powerful radar radiation there is harmful to human health. No matter how things turn out, Nenana is destined to become a prosperous, growing city. Some other area of Alaska may enjoy similar good fortune, for persistent reports say that another detection site is slated for Arctic Alaska.

A report recently released by the State shows that Alaskans drank 549,000 gallons of whisky, 174,000 gallons of wine, 2,933,000 gallons of beer in 1960. This report interests us because if you divide the total number of adult Alaskans into the above grand total of gallons, you come up with enough fluid to fill each resident's swimming pool. We'll admit that Alaskans consume their share of these beverages. But we submit that figures prove that it is the visitors who must be doing the heavy work in this field.

A Timely and Legitimate Protest

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. MASON. Mr. Speaker, the following letter, protesting the distorted and unfair treatment of the medical pro-

fession on the CBS television documentary "CBS Reports," Thursday night, February 2, was sent to Frank Stanton, president of the Columbia Broadcasting System, by AMA's nine-member board of trustees meeting in Chicago. It was signed by Julian Price, M.D., Florence, S.C., chairman:

FEBRUARY 3, 1961.

Mr. FRANK STANTON,
President, Columbia Broadcasting System, New York, N.Y.

DEAR MR. STANTON: The medical profession, which has dedicated itself unceasingly for generations to advancing the medical arts and skills toward the continuing goal of better health for all people, was profoundly shocked Thursday night, February 2, 1961, at the caricature of medicine and its aims on "CBS Reports."

The board of trustees of the American Medical Association strongly protests the misrepresentations, bias, and distortions which composed the show from beginning to end.

A commentator represented that the AMA had cooperated in the production of this monumental travesty of the medical profession. Although the AMA assisted CBS in the belief the network intended to give the American people a thoughtful, balanced and objective examination of the myriad problems of medical care for our citizens, the result made a dismal mockery of AMA's cooperation.

The AMA office in Chicago has been flooded with hundreds of telephone calls, many of them from laymen, protesting the misrepresentations in this program.

It is deeply disturbing and disheartening to those of us who are informed about the manner in which this program was assembled that the real truth about AMA's position on medical care lies on some CBA cutting room floor.

It is the considered judgment of physicians in all corners of America that this CBS report was designed to project the worst possible image of those who see in socialized medicine not just a threat to the quality of medicine but the loss of individual freedoms as well.

The test of fairness, it seems to us, could rest alone on the amount of time given AMA to present its views—a total of about 4½ minutes out of the hour program. The filmed interview with Dr. Leonard W. Larson alone, requested by CBS, lasted 5 hours.

However, the lack of fairness was not confined to a question of time. The producer of the program selected the most unrepresentative quotes from AMA, twisted them out of context and positioned them in a manner most favorable to the cause of friends of government medicine.

We are amazed that a major national television network, with its grave responsibility to safeguard the truth in examining the great issues of the day, would permit such a distorted program to be presented in the guise of objective reporting.

We believe that CBS has performed an historic disservice to the people of this country.

Sincerely,

JULIAN P. PRICE, M.D.

Depressing Depressed Areas

EXTENSION OF REMARKS
OF
HON. ELMER J. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. HOFFMAN of Illinois. Mr. Speaker, the Congress may be asked in the near future to consider legislation to give aid to depressed areas of the Nation. In this consideration we should look closely at the legislation to determine whether these proposals actually give aid, or whether they will increase the present depressed areas. Some of the hard facts for your consideration of this matter are set out in an editorial which appeared in the March 2 issue of the Chicago Daily Tribune. The editorial follows:

HOW TO DEPRESS LARGER AREAS

Secretary of Commerce Hodges, appearing before the House Banking and Currency Committee to argue for President Kennedy's $390 million scheme to aid depressed areas, conceded that it could cost $60,000 to provide one job for one man. That would be the necessary investment in land, buildings and machinery to put the man to work.

On this basis, the whole Kennedy appropriation would provide jobs for only 6,500 men—a total of such pitiful inadequacy in the light of the number of jobless Mr. Kennedy would help that the depressed areas program would be as futile as trying to ladle up the Atlantic ocean with a teaspoon.

Mr. Hodges, apparently sensing this embarrassment, was quick to explain that the $60,000 investment would be required only to create a job in heavy industry. He said a job might be made in light industry at a cost of perhaps no more than $2,200, and that the average cost calculated to provide a job was $10,000.

The Secretary did not attempt to justify these computations, but, accepting his average of $10,000 per job, the Kennedy program would make work for no more than 39,000 unemployed.

The conclusion to be drawn from the Secretary's own analysis is one of two things: Either the depressed areas bill is a fraud and a fake which will make no real dent in areas of chronic unemployment, or the starting figure of 390 million is merely a come-on for a spending program that could cost tens of billions of dollars.

General Motors has announced that this year it will put $1 billion into expansion—a sum more than 2½ times that envisioned by the Washington central planners—yet it is obvious that the Kennedy administration thinks this won't turn the tide against unemployment. Otherwise, it wouldn't be barging into the field itself.

So if a billion dollars of private investment is a mere drop in the bucket, what would be the possible dimensions of public spending to get the country around the corner? On that, you could write your own ticket, but, remember, you'll pay for it if the administration has its way. The prospective cost could turn the whole country into a depressed area.

The Peterson Breeding Farm—An American Success Story

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. FULBRIGHT. Mr. President, one of the leading poultry breeding firms is located in the little town of Decatur, Ark., which is near my hometown of Fayetteville.

The growth of the Peterson Breeding Farm is truly an American success story. This firm now operates on an international scale and has captured 30 percent of the national market for male birds in a period of only a few years. I am proud that an Arkansas firm has been so successful in the highly competitive poultry breeding business.

I ask unanimous consent that there be printed in the Appendix of the RECORD an article from the Arkansas Gazette of February 26 concerning the Peterson Breeding Farm.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILLIONS

(By Ernie Deane)

A little northwest Arkansas town is bringing international notice to our State, all because of the roosters it produces.

The town is Decatur, and it's only about 10 miles from Oklahoma and 15 from Missouri. Its population is around 400.

The roosters are known in world poultry circles as Peterson males, much in demand for breeding stock now—but famous for only a few years.

Lloyd E. Peterson is the 48-year-old founder and president of the Peterson Breeding Farm, where eggs and chickens, too, are counted by the million. Thirty years ago he was the manager of a cooperative grocery store in Decatur, who later tried his luck with 500 Rhode Island Red chicks and cleared $107.

Today, they say, Peterson is several times a millionaire—doing business throuhgout the United States and in foreign countries, and still expanding.

His vice president for international relations suggested I visit the highly integrated operation in and around Decatur. He is F. R. L. Tuthill, a retired admiral of the U.S. Navy who took a friend's suggestion to settle in the Arkansas Ozarks and take things easy. Peterson recognized the value of Tuthill's long experience in foreign lands, in helping the firm to expand overseas, and so put him in a key position on the staff.

Tuthill was on a mission in Puerto Rico when I met him recently for the first time. Peterson is getting into broiler raising on that Caribbean island where so much American money and know-how are already at work. Tuthill has been to Europe and elsewhere outside the United States, studying markets, contacting interested persons, and so forth.

Not all the Peterson breeding farm's international dealings are carried on in this manner, however. To Decatur come people from as many as 20 nations a year, to see at first hand the physical plant and production operations, and to talk with Peterson and staff. Just recently Danes, Italians, and Frenchmen were there. Peterson has already learned the advantage of producing his advertising and promotion literature in several languages.

It's the Peterson male on which his company's reputation is being built at home and abroad. Although the firm has been in the chicken business since the 1930's, only in the past 5 or 6 years has the emphasis been on the breeding and sale of pedigreed cockerels. Peterson says he has captured 30 percent of the national market for male birds in that time.

As mentioned earlier, he started experimentally with Rhode Island Reds and made a small profit 30 years ago. As his operation grew, and he got into the breeding end of the industry in a serious way, he decided to produce a white chicken—something the industry did not have at the time, he says.

His poultry today is all white, a combination of over half a dozen strains of birds—Cornish in appearance, although males used for breeding actually have less than a third Cornish blood.

Research is a vital part of the Peterson operation. I met a young scientist of the staff, W. Dane Kimmell, a specialist in poultry heredity.

Kimmel showed me how records of blood types are kept on individual fowls and their progeny, generation after generation; how the laboratory has developed antibiotics; where tests are run, and the like.

He and Tuthill took me on a guided tour of the egg production operation, and showed me how each egg is marked according to both rooster and hen, and records maintained on each chick that's hatched.

So big is the Peterson operation that electronic business machines are used in the recordkeeping and research work.

The constant goal, Kimmel explained, is to improve hatchability, fertility, growth, and livability, and also the quality of the finished product.

Peterson ships out both eggs and day-old chicks from his Decatur center of operations, many of his deliveries being made in his own airplanes which are based on his own airstrip. In addition to his hatchery at Decatur, each of his branches also has a hatchery—at Gainesville, Ga., Guilford, Conn., and Thorntown, Ind. Canadian, Mexican, and Latin American points are served through these establishments, in addition to the nationwide market.

He has also established branches in Europe, at Le Foeil, France, at Milan and Fonzaso, Italy, and at Barcelona, Spain. These also service customers in Austria, Belgium, Holland, and Portugal.

The Peterson breeding farm is situated in a 700-acre tract at Decatur, not counting the headquarters building and part of the hatching and feed production operation downtown.

The company has worked out its own designs for the various types of buildings. It has its own construction and maintenance crews. Automation in the daily feeding and watering of some 2 million fowls has been developed to a high degree.

Peterson has said previously, in explaining the development of his company, that there was a time when most decisions were made by himself, "based on the best advice I could get, plus intuition." Now the operation is so big and complex, he relies heavily on group conferences of his key men, and finds himself delegating more and more responsibility.

Whatever the system—past or present—it obviously has worked extremely well, and that's why the names Lloyd Peterson and Decatur, Ark., are known internationally in the poultry business.

Our Country Needs More Reservists for Modern War

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1961

Mr. SIKES. Mr. Speaker, in the February issue of the very fine monthly magazine The Officer, published by the Reserve Officers Association, appears an article by ROA's first president under the heading "Our Country Needs More Reservists for Modern War."

This article was written by Brig. Gen. Henry J. Reilly. General Reilly, who is now 80 years old, is in a veterans' hospital in New York, but he writes from long years of experience and his views have considerable significance.

The Officer, in an editorial, has this to say about General Reilly:

REILLY RIDES AGAIN

Henry J. Reilly is 80 years old, largely confined to bed and wheelchair, and under the continuing eye of doctors. But his intellect is sharp, his memory long, his experience broad, and his wisdom deep.

Reilly, a Reserve brigadier general retired since the end of World War II, has seen and/or participated in 25 wars about the globe since he finished West Point in 1904. He has seen nations' fortunes rise with their national will to preparedness and ebb with the seizure of their national will by pacifism. In World War II, General Marshall called General Reilly in and used him as a lecturer on use of modern weapons at our infantry and artillery schools.

General Reilly is ROA's first national president. But his voice should be heard because he always has been first a patriot. He helped bring ROA into existence because he was a patriot.

General Reilly is bringing to us, out of his concern for America, a new message which is being printed in The Officer. It is not easy for him to write, but in this one he has done a magnificent chore. All ROA should read and ponder his words. They then should pass them on to others who should read and ponder them.

General Reilly's article reads as follows:

OUR COUNTRY NEEDS MORE RESERVISTS FOR MODERN WAR

(By Brig. Gen. Henry J. Reilly, AUS, retired; first national president of ROA)

When Elihu Root was Secretary of War, he had published the uncompleted manuscript of Gen. Emery Upton entitled "The Military Policy of the United States." It had been lying in the War Department, unfinished, since the general's death. Up to and including 1863, it gives the facts and figures showing how this country has suffered in war, and afterward, due to its failure to prepare in peace, as George Washington had strongly urged this country to do.

It is a disgraceful record of defeat risked, of lives and limbs unnecessarily lost, and dollars wasted.

The main reason for this has always been the afilure to train a large Reserve force to rapidly expand our small Regular Army and Navy into the necessary war force. Our greatest failure has been the absence of trained Reserve officers, with all the evil results that an improperly raised and trained military force suffers from. Now we have a third service, the Air Force, which has a greater proportion of officers to enlisted men than do the other services.

When the Spanish-American War broke out in 1898, this author saw a practical example of what happens when a country fails to prepare for war in time of peace. The Regular Army at that time was 28,000; the Navy also was small. There was no Air Force; there were no reservist officers or men. The National Guard of the various States was organized into units, none higher than a regiment, without any regard to the units organized into divisions.

The President called for volunteers, simply assigning a certain number to each State, leaving it to the Governor to provide the units.

His father, a Regular officer, being bound for Cuba, the author enlisted in a volunteer infantry regiment, giving his age as 21, when he was 16. About a week later, this was discovered, and he was eliminated. However, he had gotten a close view of the inefficient method used for providing troops for war. The officers were political appointees of the State Governors. There were insufficient stocks of uniforms, equipment and arms.

Of the total number of troops raised, only a few regiments fought at Santiago de Cuba, in Puerto Rico, and in the Philippines.

As all these volunteers were enlisted for the war with Spain, when the Philippine Insurrection broke out in 1899, only those few regiments of volunteers, who voted to continue in the service until they could be replaced, saw any fighting against the Filipinos. To replace them and supplement the Regulars, the U.S. Government raised 30 regiments of infantry and one of cavalry to fight in the Philippine Insurrection.

Of course, the taxpayer paid the additional costs of these troops.

Thanks to the National Guard having been federalized and Villa's raid on Columbus, N. Mex., indicating that the planned Mexican invasion of the United States, so as to keep us out of the war with Germany an Army was concentrated on the border. Eight thousand five hundred eighty-nine officers and 123,605 men of the National Guard were not mobilized. The mobilized National Guard, the Regular Army, including the Philippine scouts in the Philippines, totaled 5,025 officers and 102,616 enlisted men. The Navy, including the Marine Corps, was 4,370 officers and 66,607 enlisted men. There were, as the author remembers, less than a dozen aviators in the Signal Corps.

When we entered the war with Germany, besides these forces, the Army had 4,649 enlisted reservists and a small number of officers, who had been to training camps, but who were not ready for active service and were sent back to training camps. The Navy had 638 reserve officers and 9,170 enlisted reserves.

At the time of the Armistice in 1918, these small forces had been swollen to an Army, which included the air service, to 188,434 officers and 3,485,454 enlisted men and the Navy to 25,134 officers and 476,291 enlisted men.

Therefore, during the war, 174,820 new officers had been added to the Army, and 20,106 to the Navy.

The enlisted men of the Army had risen from 230,869 to 3,485,454 of 15 times its strength, while the enlisted strength of the Navy had risen from 20,106 to 73,777, or 3½ times its strength.

The trained reserves of officers and enlisted men should have been in existence at the time the war broke out, as well as the arms, equipment and clothing.

This would have insured the arrival of a considerable number of divisions in France by the end of 1917, when both the British and French were in serious difficulties, due to the large number of infantry and guns being transferred from the Russian front to the Western front, because Russia had left the war. Instead, only four divisions arrived in 1917; the bulk of them arriving in the summer of 1918, just in time to stop the German offensives and allow the Allies to take the final offensive, which won the war.

In 1939 the total for the Army, including the Air Corps, the National Guard, and the Navy, including the Marine Corps, was 41,876 officers and 1,492,135 enlisted men. The Army Reserve was 116,719 Reserve officers and only 22,356 enlisted men. The Navy Reserve was 12,986 officers and 41,935 reserve enlisted men.

Yet, in 1945 we had 1,265,109 officers and 10,863,346 enlisted men.

These figures show what a tremendous number of absolutely new officers and en-

listed men had to be taken into the armed services during the war.

Three months training is not nearly long enough to make a good enlisted man in any of these services.

Far less is it sufficient time to teach an officer what he should know.

Bravery in battle is not sufficient.

One of the most important things is that an officer should be so indocrinated, that he does it without thinking, is taking care of the men under his command first and then of himself. Such privileges as an officer has are only given to him so that he may carry out this fundamental duty.

He must thoroughly understand and be quite sure in his own mind of the proper tactics for his command, so as to get victory with the minimum of losses.

He must be certain that his men are always properly clothed, fed and given the maximum amount possible under the circumstances of recovery from fatigue.

Nothing is more important than that an officer should know how to maintain discipline without a long list of trials by court-martial. To do this, he must know as much as possible about each man under his command, and what difficulties that man may be having, not only in the service, but at home.

In the Regular service, an officer has always been considered a poor one if he has to court-martial many men.

In between battles, this author has always found that a large part of his time was taken up, tearing up charges preferred against enlisted men by officers who thought they were maintaining discipline by promptly writing out charges against any man who failed in any way.

Naturally, all these attributes take time to acquire and, therefore, the need to have sufficient reserve officers in time of peace to train them properly for war.

On his graduation leave from West Point in 1904, the author went to Europe. He had letters of introduction to German Guard Corps cavalry officers, with whom he spent 10 days at Potsdam, and later 10 days at the cavalry school. One of the numerous impressive things was the way in which the German Reserve officers, undergoing training, became an integral part of the regular regiments.

Later, he saw the same thing in France. Both countries had universal service, with the result that they had enough trained Reserve officers and enlisted men, not only to promptly mobilize and concentrate a large army at the front and their navy at sea but also to fill the depots for replacement purposes.

On various trips to England, he learned that while the navy, due to its reserve system, could be promptly mobilized for war, the army, like ours, had been neglected. While having a reserve of enlisted men who had finished their service in the regular army, it had back of that nothing but a relatively small force, the Territorials, roughly corresponding to our National Guard before it was federalized. Therefore Britain was unprepared to fight a first-class war.

When the war broke out in 1914, the results were immediately apparent. The author arrived in France during the first battle of the Marne. There were approximately 1,500,000 French trained troops in that battle, not more than 50,000 British, with probably as many Germans as French.

Later, on the British front in north France, he saw British replacements of regulars, who had completed a long period of service in the regular army, joining their regiments in the trenches. These were all middle-aged men, undoubtedly mostly married and fathers. This while millions of young civilians at home were being called upon for volunteers for Kitchener's new army. The Territorials had, in some cases, been sent to India to replace the regulars. The rest had not yet been sent to the front. It was not until 1916, that Britain adopted conscription and finally got an army of approximately 2 million into France.

In World War II the author flew back to Paris from London the day before war broke out. The French immediately mobilized 101 divisions, due to their reserve system. The British had immediately available only four divisions to send to France. Later, six more were sent, the last one arriving just in time to be captured.

The British statesmen had guaranteed Poland, but they had failed to provide the armed forces which their army knew to be necessary to carry it out. As in the United States, foreign policies and military ones were not complementary.

Throughout our history, our statesmen have decided upon policies without providing the military forces necessary to carry them out.

In 1905, the author took a leave from the Philippines to see some of the Russo-Japanese War. The two principal clans in Japan were the Chosu and Satsuma, both of which were badly beaten. These two fights convinced the Japanese that their military casts of Samurai were not sufficiently numerous or properly armed to fight a war with a Western Power. They, therefore, adopted conscription. They first had their army trained by the French and then after the Germans had beaten the French, by the Germans. Their navy was copied after the British.

When the Russo-Japanese War came, the Army units were not only filled to war strength by reservists, but well beyond it. Thus, when their units went into battle, they were of much greater strength than the Russians had expected. They let the first battles whittle the units down to war strength.

In peacetime, their Navy crews were larger than the war strength crews. When war came, the captain of each ship, picked out the inefficient officers and sailors, and sent them ashore, thus bringing his ship to war strength.

Every first-class nation, except Great Britain and the United States, has a military system which trains enough officers and men to bring their units to war strength and to furnish replacements thereafter. This applies to armament as well.

In World War I, the 42d Rainbow Division, in which the author served, on several occasions received replacements at night, just before a dawn attack. We were armed with excellent Springfield rifles. The replacements had been trained with the British Enfield rifle, which was not nearly as good, as well as the replacements not being familiar with it. This, for the reason, that when we entered the war, our industry had been manufacturing large numbers of the British Enfield rifle, while there was no reserve of Springfield rifles.

The same way our industry had been manufacturing rifle barrels and other parts for the French field gun to send to France, but we had no large reserves of our own field gun.

In World War II, before we entered, President Roosevelt, not only took arms from our arsenals, but also from the ROTC, and, in some cases, parts of the armaments of regular regiments to send to England. We held maneuvers with cardboard silhouettes representing machine guns and tanks, because we didn't even have enough for our relatively small army.

While the professors, scientists, and other civilians, who lack experience in war, write books on nuclear war, the indications are that, like the war in Korea, we will have to fight unlimited wars in difficult terrains, with few and poor roads and plenty of forestation. In other words, we will have to fight under circumstances which do not favor the methods used in Europe. The forestation will badly limit effective use of aviation; good targets for missiles will be few and far between.

In Korea, the greatest number employed was in 1952, consisting of 148,427 officers, 1,447,992 enlisted men. The Navy had 98,660 officers, 957,572 enlisted men, the Air Force had 128,742 officers, 854,579 enlisted men.

Of course, the total number of officers and men of our Armed Forces used in that war, is much greater because of casualties and, above all, the rotation system.

There is nothing new in the talk of a short war. The author remembers a luncheon in Paris with a number of French generals, shortly before World War II broke out. One of them agreed with the French civilians, who were quite convinced that a war with Germany would be a short one.

No one who read the Italian General Douhet's book, shortly after it came out, will forget his prophecy that World War II would be over in a few days, instead of which it lasted nearly 6 years.

That nuclear bombs and weapons will do great damage cannot be denied. Neither can it be denied that the United States, Russia, and China are full of immense stretches of territory which contain no cities nor industrial targets.

It is well known, by those who keep up-to-date, that the Russians, with their large army, well supported by its own aviation, and armed with plenty of missiles, intends to take advantage of these spaces.

The Russians have universal service. So after several years active service depending upon arm and branch, they pass to the Reserve where they spend the rest of their active life. When in the Reserve they have periods of active service depending upon their age bracket.

International Travel Regulations

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. JAVITS. Mr. President, in this jet age, it is heartening to note the growing number of countries which are removing obstacles to travel by waiving the visa requirement for American tourists. It would be highly commendable if our own country also made it possible for overseas tourists to come to our shores for limited visits without cumbersome visa procedure. International travel is a great promoter of understanding and cultural exchange. It helps to break down artificial barriers that keep people apart, reduces prejudice and misconceptions and establishes truth in place of propaganda.

I ask unanimous consent that there be printed in the Appendix of the RECORD the table entitled "Tourist Documents and Regulations," published in the New York Times of February 26.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TOURIST DOCUMENTS AND REGULATIONS

The U.S. citizen has a new, plastic-covered passport in a light blue to lead the list of documents and official papers required to smooth his path across the frontiers of the world. It is supposed to be more convenient than the old passport, which is more than can be said for all the other documents the pleasure traveler needs and all the many and varied regulations he must observe as he moves from one country to another. This list of documents is larger than last year's, but that is principally because the independent nations of the world have multiplied in the past year. There are 22 more nations listed here this year, 3 new ones in Europe and 19 in Africa. And each has its own special brand of documents, health requirements, and customs and currency regulations with which the traveler must conform. Incidentally, the local Passport Office wishes natives of New York City would get an early start on their private documentation before applying for passports. It is reliably reported that it takes 10 days to get a birth certificate in this city, and that venerable document is essential for obtaining a passport. This is not to be construed as an attack upon the bureaucracy of New York City, because it is always advisable to set out in behalf of documents and the information required by different governments long before one plans to leave home. Many an itinerary has been dislocated for lack of a paper unobtainable away from home. This is true not only of the Iron Curtain countries and some African and Asiatic nations, but also of the United States of America.

EUROPE

Country	Papers	Currency restrictions	Tobacco admitted duty free
Austria	Passport, no visa for 3 months	No limit on schillings in, 10,000 out	400 cigarettes.
Belgium	Passport, no visa for 2 months	None	Do.
Bulgaria	Passport, visa, $1.20 fee, 3 pictures	No leva in our out	400 cigarettes, 50 cigars, or ½ pound of tobacco.
Cyprus	Passport, no visa up to 3 months	10 British pounds in or out	½ pound of tobacco.
Czechoslovakia	Passport, visa, $6 fee, 3 pictures	No crowns in or out	400 cigarettes, 50 cigars, or ½ pound of tobacco.
Denmark	Passport, no visa for 3 months	No limit on kroner in, 2,000 out	400 cigarettes.
Finland	do	20,000 marks in or out	400 cigarettes or 100 cigars.
France	do	No limit on francs in, 250 new francs out.	1,000 cigarettes, 250 cigars, or 4½ pounds of tobacco.
West Germany	do	None	400 cigarettes.
Great Britain	Passport, no visa	Only 50 pounds out	400 cigarettes, 50 cigars, or 1 pound of tobacco.
Greece	Passport, no visa for 3 months	1,000 drachmas in or out	200 cigarettes.
Hungary	Passport, visa, $9 fee, 2 pictures	50 forints in coin in or out	400 cigarettes, 50 cigars, or ½ pound of tobacco.
Iceland	Passport, visa with 1 picture	No Icelandic currency in	100 cigarettes.
Ireland	Passport, no visa	50 British or Irish pounds out	1,000 cigarettes, 200 cigars, or 2½ pounds of tobacco.
Italy	Passport, no visa for 3 months	No limit in, only 50,000 lire out	400 cigarettes.
Luxembourg	Passport, no visa for 2 months	None	Do.
Netherlands	Passport, no visa	1,000 guilders out	Do.
Norway	Passport, no visa for 3 months	1,000 kroner in, 350 out	Do.
Poland	Passport, visa, $9.90 fee, 3 pictures	No zlotys in or out	400 cigarettes, 50 cigars, or ½ pound of tobacco.
Portugal	Passport, no visa for 60 days (visa needed for all overseas possessions, except Madeira, $3.67 fee).	None	400 cigarettes.
Rumania	Passport, visa, no fee, 3 pictures	No lei in or out	400 cigarettes, 50 cigars, or ½ pound of tobacco.
Soviet Union	Passport, visa, no fee, valid up to 30 days, 1 picture	No rubles in or out	200 cigarettes, 25 cigars, or ½ pound of tobacco.
Spain	Passport, no visa for 6 months	50,000 pesetas in, 3,000 out	400 cigarettes.
Sweden	Passport, no visa for 3 months	6,000 kroner in or out	500 cigarettes.
Switzerland	do	None	400 cigarettes, 100 cigars, or about 1 pound of tobacco.
Turkey	do	200 liras in or out	50 cigarettes.
Yugoslavia	Passport, visa, $1 fee, valid 1 month, or visa at border, $2 fee	1,500 dinars in or out	200 cigarettes.

WESTERN HEMISPHERE

Argentina	Passport, no visa up to 90 days	None	500 cigarettes.
Bolivia	do	do	200 cigarettes.
Brazil	Passport, tourist card from transportation company, valid 30 to 60 days, 2 pictures (no charge), return ticket.	do	Reasonable amount for personal use.
Chile	Passport, no visa for 3 months	do	500 cigarettes.
Colombia	Proof of nationality or passport, tourist card, no fee, 2 pictures, valid 90 days for multiple entry within 4 years, return ticket.	do	200 cigarettes.
Costa Rica	Proof of nationality, tourist card for 30 days, $2 fee for 30 days, entry to be within 90 days of issue, return ticket.	do	Do.
Cuba	Passport with special validation by U.S. Government, visa (from Czechoslovakian Embassy in Washington).	Only 50 pesos in or out	Do.
Dominican Republic	Passport or proof of nationality, tourist card from transportation company, $2.24 fee, valid 15 to 60 days.	None	Up to $5 worth of tobacco.
Ecuador [1]	Passport, tourist card, $1 fee, valid 90 days, 2 pictures, proof of trip from transportation company or return ticket.	do	300 cigarettes.
El Salvador	Proof of nationality, tourist card valid 90 days from day of issue, 1 picture, no fee, entry within 90 days of issue.	do	2.2 pounds of tobacco.
Guatemala	Passport or other proof of citizenship, tourist card for 6 months, to be used within 60 days of issuance, $2 fee.	do	400 cigarettes.
Haiti	Passport or proof of citizenship for tourist card issued on arrival, $2 fee, valid 30 days for multiple entries within 2 years, return ticket.	do	2.2 pounds of tobacco.
Honduras	Passport, visa, valid 90 days, no fee	do	200 cigarettes.
Mexico	Proof of citizenship, no passport for tourist card, $3 fee, valid 6 months	do	600 cigarettes if arriving by land or sea, 800 if by air.
Nicaragua [1]	Passport, visa valid 30 days, no fee, 2 pictures, letter from transportation company, police certificate, or, for U.S.-born citizens, tourist card from Pan American World Airways in Miami, valid 1 month, return ticket.	do	200 cigarettes.
Panama [1]	Proof of citizenship for tourist card, 2 pictures, $2 fee, valid 30 days, extendable to 90 days, proof of financial responsibility, return ticket.	do	Reasonable amount for personal use.
Paraguay [1]	Passport, visa, 50-cent fee, valid for 6 months, police certificate or letter of reference from business concern.	do	Do.
Peru	Passport, tourist card from transportation company, $2 fee, valid for 90 days	do	400 cigarettes.
Uruguay	Passport, no visa	do	200 cigarettes.
Venezuela	Passport or birth certificate for tourist card valid 30 days, 4 pictures, letter from employer stating it is a pleasure trip, return ticket.	do	Do.

AFRICA, ASIA, AUSTRALIA

Afghanistan [1]	Passport, visa, 8 pictures, no fee, letter of reference, visa valid 4 months from date of issue.	50 afghanis in or out	Reasonable amount.
Australia	Passport, visa, no fee, valid 3 years (2 pictures on landing)	25 Australian pounds out, only 5 pounds sterling and English banknotes in.	400 cigarettes.
Burma [1]	Passport, tourist entry visa, $3.15 fee, 4 pictures, valid 1 month, or tourist transit visa, $1.05 fee, 1 picture, valid 10 days.	No limit on dollars, only 100 kyats	200 cigarettes.

Footnote at end of table.

AFRICA, ASIA, AUSTRALIA—Continued

Country	Papers	Currency restrictions	Tobacco admitted duty free
Cambodia [1]	Passport, visa, valid 7 days, $4.30 fee, 2 pictures, letter from travel agency	400 riels in or out	1,000 cigarettes.
Cameroon [1]	Passport, visa, 3 pictures, visa for next country, round trip ticket or onward ticket.	Not available	Do.
Central African Republic.[1]	do	do	Do.
Ceylon [1]	Passport, visa for 3 months, $2 fee	140 rupees in or out	100 cigarettes.
Chad [1]	Passport, visa, 3 pictures, visa for next country, round trip ticket or onward ticket.	Not available	1,000 cigarettes.
China (Taiwan)[1]	Passport, visa, 2 pictures, valid 4 years for multiple entry for stay up to 14 days, no visa for stay up to 3 days.	Only 500 Taiwan dollars in	200 cigarettes.
Congo (Leopoldville)[1]	Passport, visa on arrival for 48 hours, extendable, 3 pictures on arrival, return ticket, police certificate.	None	Do.
Congo (Brazzaville)[1]	Passport, visa, 3 pictures, visa for next country, round trip ticket or onward ticket.	Not available	1,000 cigarettes.
Dahomey [1]	do	do	Do.
Ethiopia [1]	Passport, visa, 4 pictures, fee $4, financial statement, police certificate	Only $60 (U.S. worth) of Ethiopian currency out.	100 cigarettes.
Gabon [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Gambia [1]	Passport, visa, $2 fee, valid for entry within 6 months	do	Not available.
Ghana [1]	Passport, visa, 3 pictures, $2 fee, valid 3 months from date of issue, letter from transportation company.	5 pounds in or out	400 cigarettes.
Hong Kong [1]	Passport, visa, fee $2, valid for multiple entry for 12 months for stay up to 3 months.	None	200 cigarettes.
India [1]	Passport, visa, $2 fee, 4 pictures, valid 6 months for stay of 3 months	75 rupees in or out (Ashok Pillar design).	Do.
Indonesia [1]	Passport, visa, 4 pictures, valid 30 days, $2.20 fee per person and $1.10 per passport, proof of transportation in and out of country, letter from travel agency that traveler is bona fide tourist, visa valid 6 months from issuance.	No rupiahs in or out	Do.
Iran	Passport, visa, 2 pictures, no fee, letter from travel agent regarding financial status.	No limit in, no rials out	100 cigarettes.
Iraq	Passport and visa, either transit visa good for 15-day stay, no fee, or entry visa for stay up to 3 months, 2 pictures, $6.18 fee, letter from transportation company listing all countries visited on trip.	None	200 cigarettes.
Israel	Passport, no visa for 3 months	No Israeli currency in or out	200 cigarettes or 9 ounces of tobacco.
Ivory Coast [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Japan [1]	Passport, visa, no fee, valid 4 years for multiple entry for stay of 60 days, round-trip ticket.	No limit in if personally carried, only 20,000 yen out.	200 cigarettes, 50 cigars, or ½ pound of tobacco.
Jordan [1]	Passport, visa, 2 pictures, no fee, valid 4 years, letter that traveler is a Christian	5 dinars in or out	200 cigarettes or 25 cigars.
Kenya and Uganda [1]	Passport, visa, $2 fee, valid for multiple entry within 1 year for up to 2-month stay in Uganda, 6 months in Kenya.	Not available	Not available.
Laos [1]	Passport, visa, valid up to 3 months, $2.50 fee, 3 pictures	Only 2,000 kips in	100 cigarettes.
Lebanon	Passport, visa, 1 picture, $5 fee, or transit visa, valid 3 days, $2.50 fee, visa for next country.	None	200 cigarettes.
Liberia [1]	Passport, visa, $2 fee, 2 pictures, police certificate	do	1 pound of tobacco.
Libya	Passport, transit visa, 2 pictures, valid 5 days, 56-cent fee, or tourist visa, $2.80 fee, valid 1 month, 2 pictures, letter stating purpose of trip.	10 British and 10 Libyan pounds	200 cigarettes.
Malagasy Republic [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Malaya [1]	Passport, no visa for 3 months	No more out than in	200 cigarettes.
Morocco	do	do	Do.
New Zealand	Passport, visa, no fee, letter from travel agent confirming booking to and from New Zealand.	Only 7 New Zealand pounds out	200 cigarettes, 50 cigars, or ½ pound of tobacco.
Niger [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Nigeria [1]	Passport, visa, valid for entry within 3 months for stay up to 28 days	10 pounds in	50 cigarettes.
Pakistan [1]	Passport, visa, no fee for 2-week transit visa, or tourist visa for longer stays, good for multiple entry within 4 years, visa for next country and proof of onward transportation, financial guarantee needed for stays over 14 days.	5,000 rupees in, 20 out	200 cigarettes.
Philippines [1]	Passport, visa, 1 picture, no fee, valid 6 months for stay up to 59 days, transportation and visa for next country, letter from travel agent.	20 pesos in or out	300 cigarettes.
Rhodesia (Federation and Nyasaland).[1]	Passport, no visa	None	100 cigarettes, 25 cigars, or ½ pound of tobacco.
Senegal [1]	Passport, visa, 3 pictures, visa for next country, roundtrip ticket or onward ticket.	Not available	1,000 cigarettes.
Sierra Leone [1]	Passport, visa, fee $2, valid for entry within 6 months	do	Not available.
Singapore	Passport, no visa for 3 months	200 Straits dollars, 300 Thailand ticals, 3,000 rupiahs, 270 Indian rupees.	200 cigarettes.
Somalia [1]	Passport, visa	None	Do.
South Africa	Passport, visa, no fee	No more out than in	Do.
South Vietnam [1]	Passport, no visa for stay less than 1 week, or visa, valid 6 to 30 days, 2 pictures, $5.60 fee, letter from employer.	400 piastres in	400 cigarettes.
South Korea [1]	Passport, visa, no fee for stay up to 15 days, visa, 2 pictures, $10 fee for longer stay, letter from travel agent.	None	200 cigarettes.
Sudan [1]	Passport, transit visa (valid 5 days), 3 pictures, $1.45 fee, or entry visa (valid 1 month), 3 pictures, $4.30 fee, bank reference.	10 pounds in or out	100 cigarettes, 25 cigars, or 4 ounces of tobacco.
Tahiti	Passport, visa, 2 pictures, visa for next country, round-trip ticket	200 new French francs out	400 cigarettes.
Tanganyika [1]	Passport, no visa for 6 months	Not available	Small amount for personal use.
Thailand [1]	Passport, no visa up to 90 days, 3 pictures on landing	Only 3,500 ticals in foreign currency in or out.	200 cigarettes.
Togo [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Tunisia [1]	Passport, no visa for 4 months	Only 30 dinars out	400 cigarettes.
United Arab Republic (Egypt, Syria).	Passport, visa, 2 pictures, $1.75 fee, letter from travel agent	No more out than in	200 cigarettes or 20 cigars.
Upper Volta [1]	Passport, visa, 3 pictures, visa for next country, round-trip ticket or onward ticket.	Not available	1,000 cigarettes.
Zanzibar [1]	Passport, no visa for 14 days	do	Not available.

[1] In addition to vaccination certificate, other types of inoculation or a certificate of good health are required or recommended. Check local consulates or transportation companies for detailed regulations.

Health documents: Entry into the United States requires a valid certificate of vaccination against smallpox no more than 3 years old. Many other countries also require this certificate. The geography of travel sometimes makes other health papers necessary. Persons who pass through yellow fever areas may be required to produce certificates of yellow-fever immunization before entering some foreign countries. In case of doubt, inquire in advance of U.S. health officials and at consulates of countries on the itinerary.

Where proof of nationality is asked for, it may sometimes be established satisfactorily, especially in Western Hemisphere countries, by showing an expired passport, a birth or naturalization certificate, or a voter's registration card. Naturally, the best evidence a tourist can present is a valid U.S. passport.

Birth of an Ancestor Links Biddle to Spain

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Washington Star on February 25, 1961. The subject of this article is the Honorable Anthony J. Drexel Biddle, Jr., major general, U.S. Army, who for the past 6 years has been adjutant general of Pennsylvania, and who has been selected by the President to be the next Ambassador to Spain.

The article follows:

BIRTH OF AN ANCESTOR LINKS BIDDLE TO SPAIN

HARRISBURG, PA., February 25.—A. J. Drexel Biddle, tapped by President Kennedy to be Ambassador to Spain, said today that country has a very special place in my heart.

His grandfather's grandfather was born in Andalusia Province in Spain.

"So naturally as a boy I heard the family talk about this, and it stimulated my interest in the country and its customs," the 64-year-old socialite-soldier-diplomat added.

Mr. Biddle, member of a wealthy Philadelphia family, said he has visited Spain frequently in the past and was looking forward to his first meeting with Generalissimo Franco.

"One thing particularly impresses anyone who visits the country, I believe, and that is the fact that Spanish people are just naturally friendly," he said.

GLAD TO RETURN

Mr. Biddle, tall and straight as an arrow in build, said he was glad to be returning to diplomatic work—a field in which he spent 9 years during the period just before Adolf Hitler began his march on Europe.

As to his mastery of the Spanish language, he noted:

"Right now I speak Spanish enough to get around. But I know I will have to brush it up and I intend to do so. In each country that I have been assigned in a diplomatic or military post, I have made it a matter of prime importance to master the language."

He speaks French and German fluently and has a working knowledge—as he called it—of Norwegian and Polish gained from previous oversea assignments.

STARTED CAREER IN 1935

Mr. Biddle, a Democrat, started his diplomatic career as U.S. Minister to Norway in 1935. He became Ambassador to Poland in 1937, and when that country was invaded by the Germans and Russians, he accompanied its beleaguered Government to France.

He also served as Ambassador Extraordinary and Plenipotentiary to the overrun countries of Poland, Belgium, the Netherlands, Norway, Greece, Yugoslavia, Czechoslovakia and Luxembourg with headquarters in London during the Second World War.

He retired from diplomatic service in 1944, to resume an Army career that had been interrupted temporarily after World War I. He held various top staff and liaison posts with Supreme Headquarters Allied Powers in Europe and was active in planning which led to formation of the North Atlantic Treaty Organization.

KEEPS IN SHAPE

Mr. Biddle looks like an athlete, even at 64. He keeps in shape by taking turns at swimming, golfing, skiing, and tennis.

The handsome, silver-haired Mr. Biddle possesses a quick wit and a warm, friendly manner than seems to light up a room when he makes an entrance. His charm has infected hard-core politicians and the most cynical of newsmen alike in this State capital.

Since 1955, he has been Pennsylvania's adjutant general and, as such, commander in chief of the State's National Guard. He holds the rank of major general in the Army Reserve. When he retired from active military duty in 1955, he was a brigadier general and special assistant to Gen. Matthew B. Ridgway, then Army Chief of Staff.

He has been known to spin many a tale about his experiences before and during the war in Europe, but the one newsmen talk about most is how Mr. Biddle made his exit from Poland before the German-Russian invasion.

It seems as though the word of what was happening reached Mr. Biddle in the early morning hours while he was in the middle of a shave. He hastily gathered his belongings together and darted into the street.

"It was really quite a picture—there I was darting around with all that lather still on my face," Mr. Biddle recalls.

Full name: Anthony Joseph Drexel Biddle, Jr.

Claim to fame: New Ambassador to Spain.

Home: Annville, Pa.

Birthday: December 17, 1897.

Education: St. Paul's School, Temple University.

Jobs: Shipping and mining business. Diplomatic posts, including Ambassadorship to Poland, Belgium, Netherlands, Norway, Greece, Yugoslavia, and Czechoslovakia during World War II. SHAPE and NATO postwar assignments.

Family: Married and has two sons and a daughter.

Hobbies: Swimming, golfing, skiing, tennis.

Know Your America Week

EXTENSION OF REMARKS
OF
HON. JOSEPH P. ADDABBO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. ADDABBO. Mr. Speaker, on November 22, 1960, it was my honor and pleasure to participate in the program of the Queens County chapter, Catholic War Veterans, U.S.A., in observance of Know Your America Week.

The Queens County Chapter of the Catholic War Veterans is an active and effective working group, working always for the good of the veteran and this Nation.

Under leave to extend my remarks, I include a résumé of the aforementioned program which I am sure will be of interest to my colleagues and Americans everywhere:

RÉSUMÉ OF PROGRAM OBSERVING KNOW YOUR AMERICA WEEK, TUESDAY EVENING, NOVEMBER 22, 1960, HELD AT DOMINICAN COMMERCIAL HIGH SCHOOL, JAMAICA, N.Y., FREDERICK F. STAFFORD, AMERICANISM CHAIRMAN

The program, attended by 300 members of the Catholic War Veterans, the American Legion, the Veterans of Foreign Wars, the Jewish War Veterans, the Disabled War Veterans, and other patriotically minded citizens of the county of Queens, New York City, was opened with prayer, led by Francis X. McBarron, first vice commander of the New York Department, CWV.

First to address the audience was the Honorable Thomas J. Cuite, councilman of the city of New York, and national chairman of the All-American Conference To Combat Communism. Mr. Cuite cited the CWV for bringing the Know Your America Week program to the people of Queens for the third successive year, and congratulated the public for participating in the program.

Commander Melvin Wolinsky, head of the Queens County American Legion, congratulated the CWV on its forthright stand in observing Know Your America Week again, and urged all the people of Queens to follow the leadership in the fight for the American way of life, which such programs offer.

Judge-elect Albert H. Bosch, Queens County Court, and retiring Congressman from Queens County, praised the CWV for its patriotic program and expressed his pleasure, as a Congressman, in expending his efforts in behalf of our constitutional Republic. Defining communism, he drew on its effect upon the national scene and advocated, as a better ideology for Americans, truth and good to combat the Communist conspiracy.

Kenneth Brown, senior vice commander of the Queens County Jewish War Veterans, praised the CWV for extending leadership in patriotic activities and issued a challenge against those un-American influences which discriminate against religious groups.

Vincent Hartnett, Consultant to TV and radio producers, issued an alert to all in Queens regarding the Communist infiltration in the entertainment mediums, and called for a boycott of movies such as "Spartacus," "Exodus," and "Inherit the Wind"—each of which was written or produced or acted by Communists or Communist-sympathizers. He urged all educators to produce an "army of competent writers" who, in adult life, would join the fight against the Communist influence in the communication arts.

The senior vice commander of the Queens County Disabled War Veterans, John J. Roach, added his praise of the CWV's "program of patriotism" and assured the population of Queens County that they can look forward to greater programs in successive years.

Highlight of the evening's program was the address of Rear Admiral Ellis M. Zacharias, U.S. Navy Retired, who delivered the following message:

"I have no political affiliations and the statements presented herewith are facts as I see them, with no political connotations. This is emphasized because domestic politics have interfered not only with our international relations, but also with our survival.

"We are in the most important time of our history, though not too critical, for we hold the cards and if they are played properly, the proper outcome is certain.

"International problems outweigh domestic issues, except for deficit spending and bankruptcy. The United States has a direct interest in every country in the world and isolation is gone forever. Let's examine the issues discussed in the recent political campaign, but which were never debated properly:

"Prestige: At the end of World War II, we were at the highest peak because we saved the world; the U.S.S.R. was at its lowest peak. The two could move at the same time—one downward and the other upward. We should not care that some people do not like us; we should desire respect—a

product of strength and basic national character.

"Defense: Admiral Burke said 'We are powerful; why all this fear?' I subscribe to this sentiment and have long said 'The Russians will never become involved with us in a military way unless they are certain they can win. They have never been in that position, are not in it today, and will not be in it in the forseeable future.'

"Cuba: The responsibility lies in the lap of the New York Times since its H. L. Mathews gave incorrect views to the State Department. Our CIA should have known the facts and prevailed accordingly. We must not allow a Communist base to be set up in Cuba or any Latin American state.

"Quemoy and Matsu: This issue is resolved; we cannot recognize Red China or allow it to join the U.N. We should resolve the dangerous situation by having the United States set up a U.S. Trusteeship of Formosa for the Formosans, since we have never disposed of Formosa as stipulated in the Japanese peace treaty.

"Congo: Situation is still nebulous. It is unfortunate that the Belgians were forced out of the Congo before the country was ready for self-government.

"Algeria: This is a most important trouble spot. We long ago should have supported DeGaulle on any course to stop that war, and we ought to stop pestering him about contributions to NATO.

"Middle East: Things here could not be worse. We must use all the pressures available to us—and they are sufficient—to resolve this situation quickly.

"Latin America: These states prospered during the war, but they squandered their earnings instead of developing their own resources. We can better this situation immediately by visits of our ships (which impresses their populations highly), by sound advice, technical help and realism.

"Foreign Aid: This is another war time effort that was allowed to drift. We ought to make those whom we have helped pay now, so as to limit help to others who need it."

The Admiral also stated that the new administration has the greatest opportunity for many years but that it will take courage, vision and radical action in our own country's interest.

He indicated that of all the prospective candidates for Secretary of State, all but one have eliminated themselves from proper consideration. This one is David Bruce, who served both parties, who was an effective diplomat with a fine record to show, and who was a former OSS officer with the courage and realism necessary for the job. He knows the scope and importance of our most effective weapon today—political and psychological warfare, of which we need a much greater amount to preserve this land of freedom.

He urged all the people to express their desires and wishes to our representatives in the Congress and to the President so that we would no longer be at the mercy of venal politicians, complacent industrialists, ambitious union leaders, who often are dominated by gangsters and Communist supporters.

The program was concluded with a brief question-and-answer session, followed by the playing of our national anthem and a salute to the flag.

Among the notables in the audience were Representative-elect Joseph Addabbo; Norman Dodd, consultant to the Reece Committee on Foundations; Matthew Shevlin, Americanism chairman of the Queens County American Legion; John Lautner, ex-Communist, representing the Oriel Society; and William R. Plumme, chairman of the New York State Constitutional Party, and Frank Thornton, president of the Queens County Ancient Order of Hibernians.

The Maturing of the Junior College

EXTENSION OF REMARKS
OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1961

Mr. ULLMAN. Mr. Speaker, the following article from the National Education Association Journal of February on junior colleges reflects the increasing interest in these important institutions of higher learning and sets forth some of the reasons for that interest. As you know, I have proposed legislation (H.R. 16) which would provide Federal assistance for the further development of this part of our educational structure, a development of which the recent report of the President's Commission on National Goals listed as one of the six important things that should be done in the educational field:

THE MATURING OF THE JUNIOR COLLEGE

(By Erwin Knoll)

"A relatively new public institution whose roles are so diverse as to be bewildering." The Carnegie Corp., of New York, used those words last year in a report on that amazing development in American education—the junior college.

Among the most bewildered by this diversity, the report might have added, are high school students looking for a higher education, and their parents. Even some teachers and guidance counselors have been unable to keep up with the phenomenal growth of the junior college movement and with the broad diversity of its purposes and programs.

Take, for example, the counselor in a suburban high school who recently told an outstanding student: "But you don't need to go to a junior college. You can get into almost any school." The boy, who felt he was not ready to leave home, had expressed an interest in enrolling in a nearby community college, a reputable institution with an impressive record of placing its 2-year graduates in the junior year of distinguished four-year colleges.

Or take the mother who was urged to enroll her daughter in a junior college where the girl could begin to acquire the study habits to match her obvious intelligence.

"But we can afford to send Judy away to school," the mother said.

"It's time the junior college came into its own," says Edmund J. Gleazer, Jr., executive director of the American Association of Junior Colleges. "Some still consider it a temporary expedient or a last resort. It is an institution in its own right."

The junior college is also, increasingly, a doorway to higher education for the Nation's youth. In recent years it has become obvious that the 50-year-old prophecy of President David Starr Jordan of Stanford University will be realized: "We look upon the junior college movement which is now spreading throughout the United States as the most significant occurrence in American education in the present century."

When the President's Commission on National Goals issued its final report a few months ago, it listed development of junior colleges "within commuting distance of most high school graduates" as one of the six "important things that should be done" in education.

In an essay on education which accompanied the Goals Commission report, President John W. Gardner of the Carnegie Corp. declared that "there should be roughly within commuting distance of every high school graduate (except in sparsely settled regions) an institution that performs the following functions:

"a. Offers 2-year terminal programs for students not going on to a 4-year college career.

"b. Offers transfer programs for students who do wish to complete a 4-year program

"c. Serves as a technical institute for the community, serving local needs for vocational and subprofessional education.

"d. offers continuing education to adults."

Dr. Gardner added, "States should expect these institutions to take care of a substantial percentage of the future college population—perhaps 50 percent of all who enter college for the first time."

Already, one student in every four beginning higher education in the United States is enrolled in a junior college. From a total of 8 such institutions at the turn of the century the number has grown to 677, serving more than 900,000 students last year in all types of programs.

It has been estimated that by 1970 most communities with populations of 50,000 or more will have at least one junior college. In his recent book, "The Community Junior College," James W. Thornton, Jr., of San Jose State College predicts that we can expect these institutions to accommodate at least 2 million students in 10 years.

Senator CLIFFORD P. CASE of New Jersey has proposed legislation to use Federal funds to expand junior college facilities in the United States.

Recent junior college activity in just a few States illustrates the ferment across the country. In California, which has pioneered in developing a strong junior college system, enrollments increased by 13 percent last fall. More than 400,000 are taking courses at 71 institutions, and 100,000 are enrolled on a full-time basis. That number will grow to 270,000 in 10 years under a "master plan" for education adopted last spring by the California Legislature.

In New York, which established its first community-sponsored junior college only 11 years ago, a State commission has called for facilities to accommodate 50,000 students by 1965, 100,000 by 1970, and 125,000 by 1975.

Florida, which now has about 16,000 full-time junior college students, expects to have 60,000 by 1970. Four new institutions were opened last year, and the goal is 35 before the decade is over. Ultimately, Florida hopes to have higher education opportunities available within commuting distance of 99 percent of the State's population.

Within recent months, a Colorado legislative committee proposed establishment of eight new junior colleges. The university system of Georgia plans to add two or three to the seven now in operation. Kansas is considering providing State aid for its 14 junior colleges.

The Citizens' Advisory Council of the Detroit area has recommended that five new community colleges be started immediately for the 6 counties around Detroit and that at least 15 be planned for the future.

In Maryland, which has seen the number of its junior colleges grow from 2 to 17 since World War II, there is talk of 5 junior colleges for Montgomery County alone. An advisory group to the Minnesota State Board of Education has proposed that the State pay at least half the cost of building and maintaining junior colleges.

And in New England, which has lagged behind other regions in the junior college movement, the first public junior college under the Massachusetts Regional Community College Board was opened at Pitts-

field last year and three more are expected to be in operation in the fall of 1961.

What are these junior colleges, and what do they do? The nomenclature alone is enough to confuse many: Some are called technical institutes, others seminaries, others city colleges or community colleges or just plain colleges. Most are 2-year institutions, but some also offer 1-year or 3-year sequences.

About 275 are private or church-related institutions, many with residence facilities and some with fees as high as $2,500 a year. But the largest number, enrolling about 85 percent of all junior college students, are publicly supported and offer higher education free or at nominal cost to students within commuting distance.

Often their programs are designed to meet local needs. The schools are usually under the direction of local boards of education. Some started as evening sessions in high school buildings, but most are now developing their own well-equipped campuses.

For the student planning to transfer to a 4-year institution as a junior after 2 years of junior college work, the community college offers the basic liberal arts program common to freshmen and sophomore work—courses in English, foreign languages, sciences, mathematics, social studies, and philosophy.

For the terminal student seeking the 2-year associate in arts degree, the community college offers a broad range of technical or semiprofessional training. Some 60 institutions now have degree programs in nursing, usually in affiliation with local hospitals. Students may earn the associate in arts degree while qualifying for State registered nurse exams.

Other vocational programs, often geared to the demands of local industry, include secretarial and business training, data processing, police science, nursing, dental laboratory techniques, agriculture, auto mechanics, drafting, machine shop, electronics, printing, sheet-metal working, woodworking, welding, and food technology. In some community colleges, classroom instruction is combined with on-the-job experience, giving students the opportunity to earn pay while learning their trade.

Financial considerations must, of course, play a considerable part in planning for higher education. The economy of living at home and paying only modest fees will be an overriding factor to many students. But there are other factors, and they are important.

"If a student is clearly motivated toward a bachelor's degree program and graduate work, if his objective is clear, if he has the necessary financial resources, intellectual potential, and self-discipline, he might well move immediately into a 4-year program," says Dr. Gleazer. Who, then, should be counseled to go to a junior college?

1. The able student who, because of finances, family responsibilities, or a lack of maturity, desires to attend college close to home.

2. The able student who desires training for specialized semiprofessional and skilled technician positions needed in his community.

3. The able student who is uncertain of his ultimate educational objective but who wants to start on his higher education.

4. The student who has underachieved in high school but who has the intellectual potential for higher education.

5. The student who wants only a 2-year general education background.

The junior college may offer a unique opportunity to the student who needs to find himself. Its faculty is usually not concerned with research or graduate work and therefore may devote more time to the individual student's needs.

"I can cite thousands of cases of youngsters who did failing work in high school, but who blossomed into excellent students in junior college," says Julio Bortolazzo, president, College of San Mateo.

The striking motivational effect which the presence of higher education opportunities can stimulate is illustrated by Chipola Junior College in rural Jackson County, Fla. When the college was established in 1947, only 7 percent of the county's high school graduates went on to higher education. This year, 52 percent began college careers—45 percent at Chipola.

In the fall of 1958, about 2,500 junior college graduates entered the University of California as juniors. More than half of them would not have been academically eligible to enter the university 2 years earlier as freshmen. Yet these students earned a grade average at the university almost as high as that of their eligible classmates, and 73 percent went on to graduate.

This is a partial answer to the parents who ask: "How good are junior colleges?" But no general answer is possible, of course. Many are accredited by regional evaluation groups. Some of the schools are excellent; some are mediocre; some are very poor. From the prospective student's point of view, all deserve the same close scrutiny as senior colleges.

In general, junior colleges can point with pride to their record in placing students in 4-year institutions, though some senior colleges still resist the notion of transfers. The student with a specific college in mind would do well to check in advance.

William H. Neal, registrar of Montgomery Junior College in suburban Washington, D.C., reported recently that in the 12-month period ending June 30, 1960, some 650 students requested transcripts of their academic work sent to 174 colleges and universities. The college expects more than 50 precent of the 1,600 students currently enrolled to continue their higher education.

Thorough studies in California have indicated that students who transfer from 2-year to 4-year colleges experience a first-semester drop in academic performance—a common occurrence in all transfers—but quickly recoup their losses and thereafter hold their own with other students.

Undoubtedly, some junior colleges are still having growing pains. So, for that matter, are some senior colleges. But, by and large, junior has gotten to be a very big boy indeed, and even the name may have to go some day.

To hard-pressed educators trying to meet the coming college enrollment surge, to State officials confronted with the need for doubled higher education facilities, to students confronted by ever-tightening admission requirements, and to parents faced with the problem of costs, the junior college looms large as an answer.

Arthur S. Adams, who retires this spring as president of the American Council of Education, wrote recently:

"We are approaching the time when 2 years of college, either to develop a vocational skill or to prepare for further college education, will be as necessary and commonplace as is graduation from high school."

At tremendous effort, the opportunities are being provided. To a large extent, high school teachers and counselors will determine whether these are used.

The 4–H Club Members Serve America

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. NATCHER. Mr. Speaker, National 4–H Club Week will be celebrated this year from March 4 to the 11. The nearly 2⅓ million members of this national youth organization are indeed worthy of our recognition and encouragement for by their participation in 4–H Club activities now they are preparing themselves to be responsible, well-trained citizens of tomorrow.

From an inauspicious beginning around the turn of the century, the extensive system of 4–H Clubs now encircles the globe and more than 40 countries have adopted all or part of the plan. This phenomenal growth is due not only to the appeal of the 4–H Club program but also to the fine guidance of three major groups who lead as a team to carry on national 4–H Club activities: The Cooperative Extension Service of the U.S. Department of Agriculture and State land-grant colleges and universities, the National 4–H Club Foundation, and the National 4–H Service Committee. These groups join together in their common endeavor to assist 4–H members to make the most of their abilities, to utilize scientific advances in farming and homemaking, and to render more efficient service to their community, State, and Nation.

At the local level, direction and instruction are provided by county agents, home demonstration agents, parents, businessmen, teachers, and older 4–H'ers who give generously of their time and talents to insure the success of 4–H Club work. In the Second District of Kentucky and in Kentucky generally we are fortunate in having many such outstanding men and women whose efforts are apparent in the impressive success of the 4–H program in Kentucky. They deserve our wholehearted gratitude for working for a better America through the youth of our Nation. Only through an informed citizenry, directed by high moral values and a sense of responsibility, can we rightfully assume the leadership of the free world.

The continuing theme of National 4–H Club Week is "Learn, Live, Serve Through 4–H," and I believe it clearly expresses the high purposes to which these young people are dedicated. Through their 4–H Club work, boys and girls learn better ways to farm, prepare food, make clothing and numerous other skills which will be of assistance to them in later life.

The 4–H Club members strive to live each day in a manner which will reflect credit upon themselves, their families, and their organization. Individual perfection in their intellectual and moral life as expressed in the 4–H Club motto "make the best better" is also stressed.

Perhaps the most important word of the theme is "Serve," because it is through service that these young people put into practice the training they have received in their 4–H Club projects. Not only do their families, communities, and States benefit from their knowledge, but they are made aware of the satisfaction and joy resulting from service to one's fellow man. This willingness to serve will carry over into the future and they will become the leaders of tomorrow.

Mr. Speaker, it gives me a great deal of pleasure to commend all present members of the 4–H Clubs in Kentucky

on their outstanding achievements, and to thank the many men and women in my section of the State who are contributing so much in time, energy, and enthusiasm to this fine youth organization.

The Courage To Doubt

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was sent to me by a former constituent of mine, Miss Susan Suritz, whose family formerly lived in Rock Hill, S.C. This article was written by Mr. Tom Marchant, and was put into the University of South Carolina's Gamecock, the excellent student paper which is managed, supervised and edited by the students at the university. I consider this an excellent article, and I congratulate the author and Miss Susan Suritz for calling it to my attention, and I am glad to place it in the RECORD at her request:

THE COURAGE TO DOUBT

(By Tom Marchant)

I recently read an article in a Unitarian magazine entitled "The Courage To Doubt." As I pilfered through it, it occurred to me that perhaps the number of people in my generation who have the courage to doubt is rapidly diminishing.

This is not an inference of religious connotation. Rather, it is a statement of doubt of the social courage of my fellow students.

The bond between a man and his God is a very personal one and certainly shouldn't be subjected to public scrutiny. It would seem however that man's interrelationships with his fellow man is a fit subject of debate and discussion.

THE FUNCTION OF YOUTH

Youth's historical function down through the centuries has been the questioning of the values of the age. The point has been made by Herbert Vetter, and I think correctly so, that the men of noblest faith have been men of strongest doubt.

Out of Gautama's doubts about the Hinduism of his age emerged one of our world religions, Buddhism. From the doubts and soul searching of Luther sprung that dynamic religious wave known as Protestantism. From a young man's doubts about his rather mysterious origins came the concept of Evolution. And out of the doubts of a number of young men about King George's sovereignty emerged the foundation of this democracy we now enjoy.

It is not easy to admit that one's country was founded upon treason, until one develops a historical perspective and realizes that democracy in 1776 was generally viewed with about as much suspicion as communism is viewed today.

DOUBT IS NOT BLASPHEMY

The purpose? Simply to elucidate the nature of doubt. Doubt is not blasphemy. Denial perhaps, but not doubt.

One must realize that if man had never experienced doubt, he would have never conceived the idea of progress. I do not wish for you to go away weeping. I do not wish to impart to the subject of discussion any connotation of fatalism.

As a matter of fact, we are producing people who not only talk, but think. And what is even more vital, act.

CHANGED TEMPO

Indeed, the tempo of history has doubled and tripled in the past few decades, and social changes that once took several decades are now taking place overnight.

The youth of this Nation is coming of age. Some of us are just now seeing the world which our elders have made for us. We do not like what we see. We fear that our leaders in their infinite wisdom have created a set of circumstances which may terminate the progress of the human specie.

Better educated and less tradition-bound than past generations, we often feel as though we are separated from our parents by centuries. And I suppose, in a sense we are. Our principals boast enthusiastically of a crackling new intellectual atmosphere in our high schools. Where children once complained of too heavy a workload, we now find that they are clamoring for better qualified teachers and less frilly curriculums.

TEENAGERS CHOOSE

Look magazine presented a number of U.S. teenagers with a list of possessions ranging from a new car to a Ph. D. degree and asked them to designate which possessions would make them most look up to a person. For better or worse, 62 percent answered "a Ph. D." Musical ability rated 16 percent, a large book collection 12 percent, a beautiful home 4 percent, and surprisingly enough, a new car rated less than 1 percent.

Young people in general do not seem to be turning away from materialism so much as turning toward the new intellectualism. This is also indicative of our state of mind. It is no longer "I just can't do it," but rather "I just gotta do it."

This is not just youthful exuberance. This is a new intellectual positivism, kindled probably by the critic's charges during the past few years, that American teenagers are "fat, dumb, and happy."

ANGUISHED PARENTS

This new, almost unthinkable intellectualism is causing some parents considerable mental anguish. They've sent their little cubs off for a degree, not an education. On their value scale, it would be better to hold a 6-week training certificate in salesmanship than a Ph. D. in Greek literature. A good steady job, money in the bank, new car every year—that's what counts, brother.

Scorn for our parents? No. Ironically enough, if it weren't for our parents we wouldn't exist—not just in the physical sense, but even more in a spiritual and psychological sense.

Our parents, growing up during the depression, emerged hungry for the material advantages of life, something that they had never had. We, the so-called beat generation, have never known what it means to be really hungry. We have never felt the humiliation of standing in a breadline or the empty feeling in the pit of our stomach when the man said he was firing us.

TAKE FOR GRANTED

It is only natural that we, who have always had the material advantages of life, take them for granted. We want something more than a Cadillac and a sexy wife, or at least we should.

Yet we really cannot seem to pinpoint our nebulous ambitions. They are not so concrete as a beautiful home, a big car, or any of the other status symbols which we see our parents scrambling for.

American youth—fat, dumb, and happy? I don't think so. Scientific studies show that American youth are more conscious of the world about them, more sensitive to the terrific problems which confront them, and more education minded than any other generation in our history. They may seem to flounder around and simply splash a lot of water, but one thing is certain—and that is that no one will ever be able to call our beat generation the beaten generation.

What America Means to Me

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. HARTKE. Mr. President, the Columbia Evening Republican has been printing a series of three guest editorials by Columbia High School students on "What America Means to Me."

I ask unanimous consent that the three editorials "What Can I Do?" by Jane Schaefer; "New Glory for Old Glory," by Lynda Bell, and "What Is Capitalism?" by Bonnie Reynolds, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

WHAT CAN I DO?

(EDITOR'S NOTE.—February 22, the birthday anniversary of George Washington, will be Youth Freedom Appreciation Day at Columbus High School. In observance of this day. The Evening Republican will print guest editorials by Columbus High School students, today, Tuesday and Wednesday and on Wednesday will have a page of statements on "What America Means to Me," written by students at the school. This is the first guest student editorial, written by Jane Schaefer, on "What Can I Do for America?")

At his inauguration, President Kennedy implored us, his fellow Americans, to ask not what our country could do for us; rather, what we could do for our country.

We are accustomed to the fact that, in the United States, there is no limit to what we may achieve for ourselves through effort. It is easy to forget that we have freedoms because we are Americans. "I want" and "give me" are two phrases that have become habit forming. If we wish to preserve our freedoms, we must use these phrases less and become more concerned about what we can do for our country.

In our world communism poses an ever-present threat to democracy. We must appreciate the freedoms of our free enterprise system and unite to defend them. We must realize that communism is our enemy; that Communists stop at nothing to further their ideology. To a Communist any act that promotes his doctrine is good and just.

We must become familiar with the Communist doctrine. Communists want peace, but theirs is a peace existing when communism conquers the world. None of us want this peace. We must not only be aware of these dangers, but also be prepared to fight them.

Therefore, because we know that our system of government is the best system and because we are proud of our heritage, we must always be squarely facing present problems and be preparing for future problems. Our system of government is not flawless; we do not claim that it is. Because it is right, we must work to preserve it. We have the

privilege of choosing our officials. We must exercise this right and our other rights. Our Government can be only as good as the people who govern it.

Not only does America need the help of each of us to protect her from such threats as communism, but also to guard inward corruption. Throughout her history the United States has been strong and victorious. This strength gives no cause for lethargy.

History also illustrates taht nations cannot long survive if corruption exists within them. We must continue to uphold and improve our educational system, our individual freedom, our political system, our economic system, our standard of living, and our morals. God has truly shed his grace on America. A Vice President of the United States once said that we should not worry about whether God is on our side, but whether we remain on God's side.

What can we do for America? There are many things, small things, whose sums are great things. One person alone could not accomplish everything that is necessary, but together we can accomplish great things. President Eisenhower said, "The future will belong not to the fainthearted, but to those who believe in it and prepare for it."

We must believe in the future because by choice we believe in America. We must prepare for the future to preserve America.

NEW GLORY FOR OLD GLORY

(EDITOR'S NOTE—Wednesday, George Washington's birthday, is Youth Freedom Appreciation Day at Columbus High School. This is the second in a series of guest student editorials on America, this one by Lynda Bell on "New Glory for Old Glory." A third student editorial will appear in Wednesday's paper, in addition to a page of statements by students on "What America Means to Me.")

The United States is yours and mine; and, thus, it's outcome is in our hands. It is not your Representative's, or Senator's, or President's responsibility to maintain the status of our country; it is your responsibility. It is past time for the American people to reevaluate what place freedom holds in their lives. But since it has not been done already, it must be done now. We cannot afford to be indifferent to our country's fate and heritage any longer.

We must not only wish that our country remains a land of progress, justice, and democracy; we must each and all work for this goal. Our political and economic systems are based on the individual, not the masses. That individual is you. Our representative democracy will exist only so long as people are interested in its existence. It takes spirit and enthusiasm to keep the fires of democracy blazing to illuminate the world. On our shoulders rests more than the responsibility to keep democracy alive in our country; ours is also the responsibility for the free world's cause.

But before we can help in the free world's cause, we must be positive that our country's foundation is firm. And is it? Certainly not as firm as it could be. At this stage, though, the reasons for this are somewhat secondary; the factor of prime importance is what we are going to do to strengthen our democracy.

The first action that you can take is to vote. This is so much more than merely a word or action; it is an imperative component in our democracy. You have heard and read so much about voting that you are probably tired of it. Why then don't you do something about it? The small percentage of qualified voters that exert the effort to vote once a year is appalling and pathetic.

Teenagers cannot understand why those who are qualified don't vote. We teenagers look forward with great anticipation to the time when we can have a part in our country's destiny, when we can help mold its future.

From this day hence, when you salute your flag let it be not only with your hand but also with your heart and soul, determined to build a more steadfast country. Let's keep Old Glory with its new glory forever waving "O'er the land of the free and the home of the brave."

WHAT IS CAPITALISM?

(EDITOR'S NOTE.—Today is Youth Freedom Appreciation Day at Columbus High School and this the final in a series of guest student editorials appearing in the Evening Republican. "What is Capitalism" was written by Columbus High School Senior Bonnie Reynolds.)

According to the dictionary, capitalism is an "economic system based on the private ownership of the means of production and distribution and their operation for profit, under more or less competitive conditions."

And, it is our belief that nearly every Columbus high school senior cannot only quote this or a similar definition, but also tell you what living under this system means to him.

As young Americans we know that if Dad works in a factory, he has the right not only to express his grievances to the boss but to strike or even quit if this is deemed necessary. If Dad is the boss, he runs his business at his own discrimination, taking the risk of either going broke or making money.

The Government acts only as a mediator in regulating the economy. Compared to the socialistic and communistic systems, these capitalistic elements are unique.

In these systems, the government or state has control of industry. Their idea is to have equal distribution of wealth, thus depressing incentive. We understand, too, how this supposed economic security appeals to underdeveloped nations.

As young Americans we realize that the capitalistic economy has brought us a standard of living second to none. We realize that nowhere in the world do teenagers enjoy the luxuries we do. But, it is also our belief that nearly every senior is coming to know the responsibilities, and, yes, even the pitfalls, that accompany this abundance.

When all is said and done, however, is how young Americans define capitalism the critical issue right now? It seems to us that how young Africans, Panamanians, Cubans, et al., define and evaluate capitalism that will count in the years ahead.

We are cognizant of the fact that America's future lies in the hands of our generation. It will be our job to uphold and spread what we believe to be the best government and economic system.

Good Citizenship Reflects Faith in Our Heritage

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. BREEDING. Mr. Speaker, Miss Janice Miller, a student at the Partridge, Kans., Rural High School, won the citizenship essay contest sponsored by the Seventh District General Federation of Womens' Clubs, with her essay entitled "Good Citizenship Reflects Faith in Our Heritage." Janice has written a fine statement on citizenship, one of interest to all citizens. Under unanimous consent, I insert the statement in the Appendix of the RECORD:

GOOD CITIZENSHIP REFLECTS FAITH IN OUR HERITAGE

Heritage is defined in the dictionary as that which comes, or belongs, to one by reason of birth. Our heritage is much more than that. Our heritage consists of the ideals our forefathers fought for in the Revolutionary War: equality, freedom of speech and worship, the right to a trial by jury, and the right to run our Government as we ourselves see fit. When our forefathers fought for these things, they were thinking of us, the future generations. They wanted to leave their descendants something to be proud of, so they left for us the best they could leave—freedom.

Once America's freedom was established, the great men of that time began improving the education, health, welfare, and defense of the new Nation. This improvement has been carried on for 171 years. Today our country has the highest living standard in the world.

Are we going to keep improving so our descendants will have even more of which to be proud, or have we reached the point of perfection? We are by no means perfect. No country is, or ever will be, perfect. Our large cities still have slums. Many people in the poverty-stricken areas can barely read. The ignorance of many of our people make them very susceptible to dishonest propaganda. Our prisons are overcrowded and many of the prisoners need unavailable psychiatric help. All over the United States mental institutions have large waiting lists and are understaffed.

Do we want to leave this to our descendants? With the large increase in population we can be assured the situation will get worse, unless we act now. We, as citizens of America, have the power to change these situations. To do this, we must practice good citizenship and sincerely believe that our American heritage must be handed down to our descendants. We must fight Communist infiltration, obey the laws of our land, and the international laws. We should learn the history and customs of foreign people so we can understand them better. We must work to better our education, and wipe out racial differences. We should learn how our Government is set up, and vote when we become of age. We must stamp out juvenile delinquency and the crime waves in the larger cities. We must spread Christianity to the primitive and uneducated people of the world.

These are but a few of the things we can do to be good citizens. Good citizenship shows that we believe our forefathers fought and died for what was right. Good citizenship reflects faith in our American heritage.

The Value of the Social Studies and Humanities

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. HUMPHREY. Mr. President, we see increasingly widespread public recognition of the need for high quality educational opportunities for a large number of young people in the general field of science and technology.

This is as it should be. We need scientists and engineers to help maintain our national strength, to help build the better world we seek for all mankind.

Nevertheless, it will be a dangerous tragedy if we ignore the lessons to be learned from the social studies and the humanities. The poet, the philosopher, the theologian, the economist, the political scientist, and the historian have vital contributions to make to our national welfare, and we endanger our democracy if we stifle their development or ignore them.

Dr. Paul H. Giddens, president of Hamline University in St. Paul, recently discussed the value of the social studies studies and the humanities in the 1961 winter issue of the Hamline University Bulletin. He points out that the major problems which face us throughout the world today have their roots in the social studies and the humanities, and he comes to the conclusion, with which I heartily agree, that:

There must be as much emphasis and financial support given to the study of human affairs as to science.

Mr. President, I ask unanimous consent that this excellent article by Dr. Giddens be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARE THE SOCIAL STUDIES AND HUMANITIES OF NO VALUE?

Within the last 60 years the United States has been transformed from a relatively simple agricultural state into a highly industrialized nation. As this industrial revolution progressed, it required a greater and greater number of highly trained and educated men and women for all kinds of positions in business and industry. To meet the demand, more and more emphasis was placed upon the teaching of science in high schools and colleges and universities. Corporations, business firms, and foundations made grants for scientific research and established scholarships and fellowships at leading universities to further graduate study in the sciences.

SCIENCE EMPHASIZED AT ALL LEVELS OF EDUCATION

In more recent years the development of the atomic bomb gave further impetus to the study and teaching of science. The launching of Sputnik I and other space satellites by the Soviet Union resulted in putting huge sums of money into the study of science in high schools, undergraduate colleges, and in graduate and professional schools. Public school programs in science have been developed and extended down into the elementary grades. In addition to workshops, conferences, and symposiums, summer institutes in science for gifted high school juniors and seniors and for high school and college teachers were established. Gifts to colleges for new science buildings have been conspicuous. Grants for science equipment and research projects on the undergraduate college level have been many and large. More and more fellowships with generous stipends and allowances have been established to encourage more qualified young people to go into science. As recently as November 1960 the President's Science Advisory Committee recommended a "massive" increase in the Federal Government's role in financing and otherwise facilitating basic research and the training in the physical sciences. It urged that American science must "double and redouble in size and strength" in the next generation.

THE GREAT IMBALANCE

The need for excellence in science training and basic research, for more and better educated scientists, and for more money to assure excellence is natural, understandable, necessary, and widely recognized. It is distressing, however, to note the great and rapidly growing imbalance between the sciences and the social studies and humanities and the lack of appreciation for the latter. Compared with science, there seems to be relatively little interest in or financial support for the study of economics, government, history, English, foreign languages, philosophy, sociology, psychology, and other liberal arts subjects. Relatively little money is being spent to encourage gifted high school and college students and high school and college teachers in the social studies and humanities and provide them with opportunities similar to those in the sciences. For students and teachers in these areas, this neglect is most discouraging and a cause for low morale. Worse yet is the fact that no one seems to be greatly concerned or alarmed over the disparity that continues to increase. It is particularly surprising that businessmen, of all people, do not show more interest than they do in providing financial support to strengthen the study of economics and government.

SOCIAL STUDIES AND HUMANITIES PERTINENT TO SURVIVAL

The need for emphasizing the social studies and humanities is just as great and pertinent to our survival as science. How can we possibly operate our democratic form of government successfully unless we have citizens and leaders who have a knowledge and understanding of the complicated economic, social, and political problems that confront us? How many citizens have sufficient knowledge to vote intelligently and make a rational decision on such current issues as taxation, inflation, civil rights, the farm problem, medical care for the aged, the flight of gold, foreign aid, and the regulation of business by government?

We are even less prepared to make intelligent decisions on foreign policies and international issues. If we are to deal successfully with the thorny international problems that plague us and avoid war, there must be greater emphasis placed upon the study of the nature of communism and the history, language, economic system, politics and government, religion, and philosophy, and the culture of Russia, Europe, Africa, the Middle East, the Far East, and Latin America. If we are unable to cope successfully with these domestic and international issues, all of which have their roots in the social studies and humanities, spending more money on science will not enable us to survive. There must be as much emphasis and financial support given to the study of human affairs as to science.

Fight Against Recession

EXTENSION OF REMARKS
OF
HON. JOSEPH P. ADDABBO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. ADDABBO. Mr. Speaker, daily we hear of and see evidence of a slowdown in American business and the resultant unemployment. We know that American business and know-how can pull us through. As long as we have people who are willing to expand present industries and start new businesses, we know that we shall not again experience a repetition of the thirties.

I am proud to inform this great body that in the State of New York the first new manufacturing company in 1961 is located in Jamaica, N.Y., in the Fifth Congressional District. Industrial Plywood Co., Inc., known as Plywood City, opened last week. This new plant and its developers must be commended for taking the initiative in the fight against the recession. It is indeed gratifying to me that this has happened in my own congressional district. I extend to these forward-looking citizens my sincere good wishes for every success.

The Communist Tyranny Over Lithuania

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the American Lithuanian Lawyers of Illinois and the Lithuanian Jurists in Chicago, urging our Government to continue to condemn the domination of Lithuania by the Soviet Union and to take action in the United Nations to secure the withdrawal of Communist tyranny from that land.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas Lithuania, an ancient nation from prehistoric times and a modern republic, was illegally and forcibly seized by and incorporated into the state of the Soviet Union in 1940; and

Whereas, after seizing Lithuania, the Soviet Union agents arrested Lithuania's legal government, replacing it with a puppet regime, and introduced a reign of terror in Lithuania; and

Whereas the Soviet Union's regime in Lithuania deprived the Lithuanian people of their human rights and fundamental freedoms, confiscated their properties and business enterprises, converted them into slaves of the Soviet Union, deported approximately 300,000 of them to Siberia, and other parts of Russia; and

Whereas the Soviet Union's acts of aggression against Lithuania and her people are crimes not only against Lithuania and the Lithuanians, but also against the world peace and humanity, as provided in the Charter of the International Military Tribunal, of which France, Great Britain, the Soviet Union, and the United States of America are signatories: Therfore be it

Resolved, That we, the convened American Lithuanian Lawyers of Illinois and the Lithuanian Jurists in Chicago, find it necessary on behalf of the Lithuanian people to condemn the rulers of the Soviet Union as aggressors against Lithuania and enemies of peace and humanity; be it further

Resolved, To request the Government of the United States of America and the governments of other countries, through their delegations to the United Nations, to declare the Soviet Union an aggressor and demand the withdrawal of its military forces and various agents from Lithuania, and to liberate the Lithuanian people from the Soviet Union's subjugation; and be it further

Resolved, To mail copies of this resolution to the Secretary of State of the United States of America, to the delegations of all countries to the United Nations, and to the press and other media of public information.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another in a series of articles on Ireland written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, Pa., which appeared in that newspaper on February 26, 1961. Mr. Heffernan wrote the series following an extended tour of Ireland last fall.

The article follows:

A JOURNEY TO IRELAND—ANCIENT SPORT OF "HUNTING" MEANS CHASING FOXES ON HORSES WITH HOUNDS

(By Tom Heffernan)

One of the pleasures we had in Ireland was at long last a chance to try the hunting—and on the British Isles or on the continent "going hunting" does not mean what it does here, when it indicates a chap has picked up his gun and gone for game in the Poconos, the North Mountain country or where-have-you.

Instead, in those lands, "hunting" means only foxhunting—riding horses to hounds.

No firearms are used—none whatever.

When, over there, a person does go out with his rifle or shotgun he is going—not hunting—but "shooting."

And there was shooting to be done in Ireland, too, with a couple chaps staying at the hotel bringing in 30 or so snipe and a couple pheasants each day they tried.

But back to hunting which is, to the horseman, the last word and the ultimate in riding.

It does not demand the great skill and finesse of the show ring and the championship jumping courses.

These skills can be used but you can get away with hunting without them and still enjoy yourself.

FOX CHOOSES THE COURSE

But as it calls for riding wherever the fox may choose to run, over hills, through fields, over stone walls, fences, and the famous Irish banks, one gets a chance to put to practical use all that he has learned of riding.

For us, though we have been riding all our life and in quite a few places, we found it the hardest riding we ever have done.

With the sparse population of the Limerick-Tipperary area there was plenty of country to ride all day in, and it was steep, rugged, and—always—with those fearsome Irish banks and ditches that are both steep and wide.

"Don't look down," we were counseled, "look across."

The idea is that if you looked down into those ditches you might change your mind about trying to jump them.

HOW A HUNT IS CONDUCTED

A fox hunt starts with the meet—which is merely the gathering of the followers of the hunt at the site selected and well in advance.

About 11 in the morning the hunt starts off, led by the master (master of foxhounds), the whips who handle the hounds and who often are employees, and the huntsman, also usually an employee unless the master acts as his own huntsman.

With that pack of fine foxhounds, the hunt leaders and then the followers—who make up the field—moving down a country road, with a few scarlet jackets here and there, the colors of other hunts, the hunt leaders and the ladies usually wearing hunting caps and the men either bowlers (reinforced derbies) or high silk hat (often well battered from falls) it is a colorful scene.

HOUNDS PUT TO WORK

The hunt moves off to a previously selected place, where the huntsman and the whips take the hounds into the area where is known there are foxes.

This may be a section of many acres covered with a thick growth of smaller trees or heavy bushes.

The way the big pack of hounds handles would delight any Luzerne Countian who likes any kind of hunting dogs and it is wonderful to watch as they move back and forth, under perfect control, in search of their quary.

There are 20 to 25 couples of them, meaning 40 to 50 hounds.

If they find one and it breaks from the cover—and you are certain it is the fox the hounds are after—you call, the hounds are brought up, put on the scent, take off in chase giving tongue in their chorus, someone shouts, "Gone awaaaaay" and off goes the field in the thundering mob, everyone trying to be first.

The idea is to keep up with the hounds, if possible, no matter where he goes or what kind of obstacles are met, and sometimes it is a mad spectacle.

And when there may be just one place where a horse can be jumped out of one field to get into the next in which the fox and hounds have gone, the scramble can get sticky.

ABOUT THOSE IRISH BANKS

As we mentioned, there are some stone walls to be jumped now and then, but seldom a wooden fence.

Usually, however, it is the ditches and banks and you might ask what they are.

As it happens, due to Ireland having to be a wet country to be so green, practically all fields in the wet areas are surrounded by ditches for drainage.

Over the centuries these ditches can become big and also wide.

Furthermore, the dirt thrown out as they are dug creates a bank beyond the ditch.

The ditches can be from 3 feet wide to 8 and the banks can be from 2 feet high to twice that much or more.

Then, in most places and causing the scramble to find a way through, most of the banks are overgrown with ancient bushes and such, some of which have developed heavy branches.

The requirement is to jump the ditch—usually from a muddy field—to land on the bank where a landing is possible.

THE "DOUBLE BANKS"

Then—with usually a pause as he places his feet on the bank after landing—the horse jumps down into the field beyond, which usually seems much lower than the field out of which you came.

Finally, Limerick is famous for its "double banks."

It is a "double bank" when there is a ditch on both sides of the bank and when these ditches happen to be of the wide variety while also around 5 feet deep, there is that much more of a demand on the horse and rider.

On other occasions, especially in the case of those banks which have not become overgrown, a bit of a barbed wire fence is built on that side of the bank opposite the ditch.

(Usually a part of the wire is dropped to let the field through but not always, even though wire is one of the real hazards of hunting.)

LUCKY IN CHOOSING LIMERICK HOUNDS

Our luck held good when, entirely by chance, our first experience with fox hunting in Ireland or any place else, was with the County Limerick Hounds, whose master is Lord Daresbury—a splendid English gentleman who, among other things, is also a newspaper publisher.

Lord Daresbury, who has the reputation of "working like a dog" to provide good sport for the followers of his pack, a task which also must be quite expensive for him, is a quiet, most unassuming and splendid gentleman. He is also as might be expected, an excellent horseman. He and the members of his field made us welcome and were cordial and helpful in the most unostentatious manner possible.

A leading spirit in the hunt is Lady Hilton, also from England and who personally is as beautiful as is her riding. Actually, Lady Hilton is a daring rider and usually, when there was a particularly difficult or rough passage to be opened to get over a dangerous ditch and overgrown bank, Lady Hilton would show the way.

Another good feature for a beginner was the fact that there were but some 15 riders in the field that first day. Later groups of 40 or more were met and, we have heard, the field in fox hunts in England frequently numbers more than 100.

DAY OF HUNTING CALLS FOR RIDING

A day of fox hunting means getting on your horse a little before 11 a.m. and, if you are lucky enough to have no spills, you are in the saddle for quite a few hours.

Usually, hunting continues until 4 or 4:30 in the afternoon and for the five to five and a half hours you do some easy riding, some standing in wait, some riding in a bit more of a hurry and then, when the hounds take out after a fox, you are off as fast as you can and over or through whatever gets in the way.

Frequently, when the day of hunting ends, you have a ride of up to 5 miles back to where the horse trailers are and where you turn over your mount.

In the actual chasing of the fox, the longer the chase the higher it is esteemed and, before we got there, the Limericks one day had one run of nearly an hour.

Best we ever had was of some 35 minutes.

The Yuletide Message of Andy Razaf

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. OSMERS. Mr. Speaker, Andy Razaf, now a resident of Los Angeles, is one of the Nation's leading songwriters and lyricists. He was formerly a resident of Englewood, N.J. Even though

he has lived in California for several years he is still held in highest regard in New Jersey. His yuletide message, though brief, has given me inspiration which I would like to share with the other Members of the House and those who read the CONGRESSIONAL RECORD.

MY YULETIDE MESSAGE

(By Andy Razaf)

"Merry Christmas," "Happy New Year"
Are the empty words we hear;
In a world of Nuclear weapons,
Hatred, Hunger, stress and fear.

"Peace and good will"; Still are strangers,
Due to leaders who are blind;
To the good of brotherhood
And the Needs of all mankind.

Oh, if this Yuletide could bring us
Universal unity,
Freedom, truth, and equal justice;
What a heaven earth would be.

The 1960 Valley Forge Patriots Awards

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. ROBERTSON. Mr. President, I recently had the great privilege of meeting and talking with five of the winners of the 1960 awards made by the Freedoms Foundation at Valley Forge in the category of "Letters From Armed Forces Personnel."

The thoughts expressed so well by these winners should serve as an inspiration to us all and as a tribute to the ideals on which the Freedoms Foundation is based.

I warmly commend these writings to my colleagues and to patriots everywhere. I ask unanimous consent to insert these prize-winning letters in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE 1960 VALLEY FORGE PATRIOTS AWARDS

(By Sp4c. Philip J. Webster)

MY VOTE: FREEDOM'S PRIVILEGE

I am 21 years old and a citizen-soldier in the Army of the United States. This year, for the first time, I am eligible to vote.

I am thus called upon to examine one of my most basic, and perhaps most-taken-for-granted freedoms. I am asked to pose this question of myself. What is there about my vote which makes it alone so very important?

Outwardly, my vote is only an X on a ballot, one of thousands of X's on countless numbers of ballots. At first glance, my vote is an impersonal thing, totaled up with millions of others by giant tabulating machines. In comparison with the votes of all my fellow Americans, my vote is as minute as an ant in a colony of anthills, or an atom on the head of a pin.

But inwardly my vote is very personal and vastly important.

My vote, freedom's privilege, is a precious right and a sacred trust—one which has been won for me in a variety of places by hundreds of thousands of men.

My vote was conceived in the minds of men named Washington and Jefferson and Hancock. It was born at Yorktown and Valley Forge, Lake Erie and Fort McHenry, Chancellorsville and Gettysburg. It was nurtured by Admiral Perry and Abraham Lincoln and Robert E. Lee. My vote grew up at San Juan hill and the Argonne and a little beach called Omaha by those who knew it well. It came of age at Iwo Jima and Pearl and Old Baldy and Heartbreak Ridge. And it was kept free by a variety of Americans named Sergeant York and General Patton and just plain Joe.

My vote this year is different from that of my father or grandfather. It is no longer simply a domestic expression of choice. My vote now has international implications. It's the difference between an Eisenhower and a Khrushchev, a Macmillan and a Castro, a De Gaulle and a Tse-tung. It bridges the gap between Dag Hammarskjold and men who answer to the strange sounding names of Mazurov, Tito, Gomulka, Kadar, Zhivkov, Shehu, and Ulbricht.

My vote this year is a shining light which penetrates the darkness behind the Iron and Bamboo Curtains. It's a guiding beacon to all who hate tyranny and abhor oppression You can hear my vote in the laughter of happy children and the intermittent beepings of a strange aluminum ball named Echo I. It's seen in the long strides of a young Negro athlete named Rafer Johnson and the bright lights of West Berlin's Kurfünstendamm. It's felt by a hungry little orphan gulping a bowl of soup on Quemoy, and by an African chieftain being inoculated against yaws.

Essentially my vote this year is the voice of a freeman, flaunted in the faces of those who wish to bind the world in chains.

I want to keep it that way. That's why I vote.

THE 1960 VALLEY FORGE PATRIOTS AWARDS

(By Capt. Jimmie A. Chezem)

MY VOTE: FREEDOM'S PRIVILEGE

My vote is the privilege, the symbol, and the basic power of freedom. It is a birthright inherited from our forefathers at no personal effort. It must be preserved at all costs and passed on to future generations as a guarantee of their freedom.

My vote is powerful, especially when I use the right of assembly to meet with fellow citizens to openly discuss, dispute, and compromise as a means of arriving at a democratic conclusion based on the principle of the greatest good for the greatest number. By this means, my vote makes the laws under which I live. By its group power I can elect, reject, or impeach the leaders of my country from the highest to the lowest. It enables me to exercise those freedoms guaranteed by the Bill of Rights of our Constitution.

My vote elevates me above the state and its manmade institutions and makes me the supreme reason for the state's existence. It protects me from being subservient and endows me with human dignity through the knowledge and use of my rights as a creation of God. By use of my vote I am an active member of a humanitarian government in which the well-being of the individual is the primary goal. My vote is the basis of the superstructure of the most revolutionary system of government ever developed by man for man.

The authors of our Constitution envisaged my vote as the main weapon in the fight against those minority groups who attempt to dictate government policies for their own benefits. Those authors fought and won against such tyranny and oppression and bequeathed me the rich spiritual and material benefits of their victory. Yet these benefits of freedom have a price tag attached: eternal vigilance and a heavy fist. Tyranny is again threatening the privilege of my vote. Communism seeks to destroy our humanitarian government and replace it with a system which destroys freedom, human rights, human dignity, and the worth of the individual. It seeks to make me a robot of a pseudoutopian system wherein my right to property, religion, family, freedom of speech, thought, and even life are forfeit. Communism is a throwback to the Dark Ages and feudalism, not in terms of science, but in terms of human rights and liberties. It took our forefathers at least 15 centuries to achieve freedom from such conditions, and during the two short centuries since, we have realized undreamed of benefits therefrom.

I choose to throw my lot with those who gave us the Magna Carta, the Declaration of Independence, the Bill of Rights, and our Constitution. And, like them, I choose to live with liberty and freedom or perish protecting that precious heritage, my vote, freedom's privilege.

THE 1960 VALLEY FORGE PATRIOTS AWARDS

(By Pfc. Timothy J. Chwala)

MY VOTE: FREEDOM'S PRIVILEGE

If all other rights were suddenly denied, and only the freedom to vote remained, what fool would cast the first ballot? Man never chooses tyranny. He carelessly abandons freedom and prepares the way for more powerful dictators who might allow him this one privilege if only as the most distinctive relic to mock the hope of yesterday's democracy. The least understood and most neglected of our privileges could easily become the worst form of despair under tyranny.

Not all citizens who should vote, necessarily do, and not all those who vote, necessarily take an active part in other important government affairs. Yet if freedom fails, the fault is not in our ideals, but in ourselves. The importance of my vote is clearly understood, not merely as a part of the entire democratic process, but as a vital part of the nature of man.

The true nature of man can only be understood in relation to his Creator. Since God has entrusted man with the highest office in the physical world by giving him reason and free will, man can honor that trust by accepting and defending the highest office of the human commonwealth, a citizen of a free society. Both offices require certain responsibilities no greater than man's innate capacity to assume.

If either office were unattainable, then man's search for his rightful place in the universe and society would mean more than an endless flight to a never never land. But man not only has the capacity to love and know the truth, he has the stubborn genius to act upon it. He not only has the capacity to love freedom, but the invincible courage to act upon it, fight for it, and die for it if necessary. His ideals are a part of his innermost being, electing his thoughts, governing his actions and leading him to victory in the hour of crisis.

Without truth, my free will and reason are meaningless, and without freedom, my vote is insignificant. Yet if I fail to use my free will and reason to search the truth, if I abandon the most important responsibility of freedom, personal decision, then I not only fail in both offices, as man and citizen, but for tomorrow's heritage.

Communism reduces man to less than an ape, and the citizen to a puppet of state, yet lie cannot efface the truth. The state is a poor substitute for man, for while it robs him of his rightful place before God, it cannot devour the rights that belong to man alone, and still pretend to be beneficial to all men.

The ultimate victory of freedom is found in its universal truth. It never betrays the true nature and dignity of man. If we are faithful to this truth, freedom is faithful to us, and in the final test, a reality for all men.

With a new sense of pride and gratitude for all the centuries of struggle and sacrifice in the long campaign that made this, my first election, a reality, I fully accept my office as citizen of a free nation knowing that each time I cast my vote, freedom votes for me.

THE 1960 VALLEY FORGE PATRIOTS AWARDS

(By Maj. Benjamin W. Eakins)

MY VOTE: FREEDOM'S PRIVILEGE

My vote: freedom's privilege? No. My vote: freedom's privilege!

Freedom places sometimes forgotten and occasionally ignored obligations on those privileged to live apart from slavery and other forms of restraint. We are obligated to support ourselves, to protect ourselves, and to govern ourselves if we are to preserve our freedom. As a group, we collectively maintain our freedom and fulfill our inherent obligations through our individual choices of those who will represent our group as a local, State, or National entity.

My vote reflects my choice of those persons and principles most likely to preserve the freedom I cherish as an individual. My vote is a sacred right, guaranteed to me in our ageless American constitution, but guaranteed only so long as it is exercised continuously and with wisdom. As an American, my vote is especially sacred because it can be exercised without the constraint or guidance imposed in many nations.

In a free society, everyone "votes," whether one fills out a ballot or stays away from the polling place. Either we actively vote to preserve our way of life or passively and by default, we jeopardize all that we hold dear by ignoring our voting right. Voting or not, we are expressing a preference. Shall it be freedom or constraint? Shall it be life under God or life under communism?

But if I exercise my voting right, what can my single vote mean when millions are voting? President Eisenhower has answered that question for all eligible American voters. In the elections of 1884, 1916, and as recently as 1948, just one vote per precinct in one or several of the key States decided the national election in those years. My vote is important. And the weight of my vote becomes greater and its importance more crucial because nearly 40 percent of my fellow Americans who are eligible to vote will not exercise freedom's cherished voting privilege in a positive way by casting their ballots.

Perhaps we need to return to the now obsolete definition of the word "vote." Long ago it meant: "a vow," "a prayer," "an ardent wish or desire." In 1960 we must recapture the zeal and fervor suggested in these old definitions. May each of us actively vote, prayerfully and zealously, for those Americans and those principles we admire and support.

Does this rephrased Mother Goose nursery rhyme really exaggerate the importance of my vote? And your vote?

"For want of my vote

"For want of my vote, my choice lost;
For want of my choice, the nation lost;
For want of my nation, freedom lost;
For want of freedom, God lost;
For want of God, the world was lost,
And all for the want of my vote!"

THE 1960 VALLEY FORGE PATRIOTS AWARDS

(By Lt. Col. Winfield S. Williams)

MY VOTE: FREEDOM'S PRIVILEGE

(A letter to my son on his 11th birthday)

FEBRUARY 3, 1964.

DEAR JOHN: One Sunday afternoon about 3½ years ago, we stood together looking out over the battlefield at Yorktown. You asked me, "Daddy, why did George Washington fight the Redcoats here?" I told you the story of our Revolutionary War and you seemed satisfied.

Later on, while we were watching the two presidential candidates on television, you asked, "Which one is the good guy?" Mother told you they were both "good guys," so your curious little mind wanted to know "Why do we have two men running for President if they're both good guys?"

Son, now that you are about to become a Boy Scout, and learn the meanings of the Scout oath and the Scout law, and your duties to your country, let me answer those questions you asked so long ago.

First, why did George Washington fight the Redcoats? As you know now, the Redcoats were the soldiers representing the King of England and the Governors of the American Colonies. We did not have a United States then, but 13 Colonies of righteous, thinking, God-fearing people who wanted to have representation in their Government. In the beginning, they did not seek a government of their own, but only the right to vote on the matters that affected them. Their watchword became "Taxation without representation in tyranny."

So, what was George Washington really fighting for? Yes, the right to be heard in the matters of government. He and his fellow patriots gained for us a new freedom and established a new way of life in the world because they wanted the right to vote.

Under our form of government, we choose our leaders. Each of us when we become 21 years old, is given the right to vote. Although our Constitution grants us this right, we must earn it by being loyal and trustworthy citizens.

In the election that you became aware of 3 years ago and wanted to know "which was the good guy," we had two principal candidates to choose between. Each man believed in America, in our democratic way of life, and in the safety of our country. It was only the way in which each proposed to accomplish his ideas that was the difference. So, after listening to their arguments, weighing their records, we chose one to become our President for the next 4 years. Both mother and I voted for the candidate of our choice.

Now, if we do not like the way he guided our Government, at the end of his term, it is our privilege to choose someone else. If the man that I voted for did not win, I may have been all the more critical of the man in office. But because I did vote, I have the right to speak out for those things that I believe in. And John, if the man I voted for became President, who knows—maybe it was my one vote that made the difference.

Yes, son, in our great country, just one vote can make the difference as to which candidate is elected. That is why it is so important that everyone who has the right to vote, does vote. Now that you are growing up, more and more you will have to make decisions. Sometimes in your school classes, in your scouting, or in your play groups, you will have to choose between two ways of doing things when it concerns many people. Under our American way, you will vote on these things. Now is the time for you to learn to choose your sides well.

You have inherited from your forefathers a country of free people, governed by free people. It is for you to grow strong in mind and body so that when you become a man you will be ready to accept the privileges of voting and the responsibilities of freedom.

Love,

DAD.

Federal Funds for New York City

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 6, 1961

Mr. HALPERN. Mr. Speaker, on January 26 of this year, I introduced legislation in this House calling for $4,404,000 of Federal funds to assist New York City in defraying the extraordinary expenses incurred during the fifth General Assembly of the United Nations last fall.

My objective in the introduction of this bill was to reimburse the city of New York so that they could compensate their police force at time and a half rates for the overtime duty of these men at the U.N. last fall.

I believe that everyone agrees, the heroes of the New York City summit were the policemen. They truly proved themselves as "New York's finest," during the most sensitive and tense days in the city's history. Any dereliction of police duty could have resulted in a holocaust for the entire Nation. Surely these men are entitled to be paid for the overtime they put in.

Mr. Speaker, surely the people of America want to share in this significant expression of gratitude.

The other day I received a letter from Mr. John J. Cassese, the able president of the Patrolmen's Benevolent Association of New York. I should like his comments included in the RECORD as substantiation of the need for these funds:

PATROLMEN'S BENEVOLENT
ASSOCIATION OF THE
CITY OF NEW YORK, INC.,
New York, N.Y., January 27, 1961.

Hon. SEYMOUR HALPERN
House Office Building,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HALPERN: I wish to take this opportunity to convey the sincere thanks of our members for your comments on their discharge of duty during the Fifteenth General Assembly of the United Nations.

As has been recognized by the majority of United Nations' dignitaries and all the Nation's major news media, the slightest divergence from the most diligent discharge of duty by New York City's policemen during this period could well have been responsible for an international incident.

As is well known to you, Congressman HALPERN, members of the force worked as many as 30 consecutive days without any time off. In addition, there were numerous instances in which the members performed 16 hours of duty within a 24-hour period. Notwithstanding this sacrifice, the morale of the men left nothing to be desired during the entire period of the emergency, a factor which positively proves that New York's Finest are always prepared to give their all when the exigencies so require.

In view of the hardships borne and the unquestionable devotion to duty by those men, the request that they be compensated at the rate of time and a half appears to be a most reasonable one, particularly in view

of the relative amount of additional remuneration, i.e., $1,468,000, required to justly compensate for this extraordinary display of devotion to duty.

Be assured that your efforts in behalf of New York's policemen are deeply appreciated and I might add that they feel confident that you will exert every effort to have them compensated at the rate of time and a half.

Respectfully yours,

JOHN J. CASSESE,
President.

Canadian Trade With Cuba

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. SMATHERS. Mr. President, for some time there have been disturbing reports that Canada was stepping up its trade with Cuba following the action by the U.S. Government in halting the export of critical and strategic materials from our country to the Castro government. Such reports were not only disturbing but also puzzling to me for I am convinced—as I am sure every Canadian is convinced—that the problem of a Communist government penetrating the vitals of our hemisphere is just as massive a threat to our sister nation of the north as it is to the United States, or indeed to any nation in our hemisphere. To every country and to every citizen in both continents communism is the common enemy—the implacable enemy.

I wish to report, therefore, I was greatly relieved to read a recent article in the Miami Herald of February 6 reporting that a private research group has openly stated that Canada is not encouraging trade with Cuba. In stating Canada's position, the report says:

It should be emphasized that the Canadian Government has taken no initiative to encourage such trade. The Cuban Government's flamboyant claims that Canada can be closely linked with Iron Curtain countries as "friends" of Cuba leaves most Canadians disturbed.

The Castro government has launched a broad propaganda effort to make Americans believe that Canada wants to increase and encourage its trade with Cuba. I think that it is important that we do everything possible to nail that lie. I ask unanimous consent that the article in the Miami Herald be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANADA NOT ENCOURAGING CUBAN TRADE, LEADERS SAY

WASHINGTON.—Fears that Canada has stepped in to fill the trade void between Cuba and the United States are unfounded, a private research group reported Sunday.

The Canadian-American Committee said Cuban propaganda efforts and press reports have given the impression that Canada is encouraging trade with the regime of Cuban Premier Fidel Castro.

"It should be emphasized that the Canadian Government has taken no initiative to encourage such trade," the group said. "The Cuban Government's flamboyant claims that Canada can be closely linked with Iron Curtain countries as friends of Cuba leaves most Canadians disturbed."

The committee said the Canadian Government "has provided no special encouragement to Canadian business to explore export opportunities in Cuba and it has taken no action to encourage imports from Cuba."

The committee, composed of business, agricultural, labor and professional leaders from both sides of the border, was established 3 years ago to study problems affecting Canada and the United States.

It is headed by Robert M. Fowler, president of the Canadian Pulp & Paper Association, and R. Douglas Stuart, board chairman of the Quaker Oats Co.

"Economic relations between Canada and Cuba did not deteriorate after the Castro revolution," the committee said, and thus "Canada obviously did not have a basis similar to that of the United States for economic sanctions against Cuba in its own national interests."

The Cuban Government has sought to encourage the view that Canada can fill the economic gap created by the U.S. embargo against Cuba, the group said in a report.

"It is important for people in the United States to recognize that this is propaganda and, moreover, that such propaganda is not received with any enthusiasm in Canada," the committee said.

The report said that no "serious conflict of views between Canadian and United States Government officials" exist on the question of Canadian trade with Cuba.

Indiana's Gateway to the Seaway

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. HARTKE. Mr. President, the Fort Wayne Journal-Gazette recently had an editorial concerning efforts to construct a public port on Lake Michigan in Indiana. This will be Indiana's gateway to the St. Lawrence Seaway.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INDIANA'S GATEWAY TO THE SEAWAY

Future history will show that the bill to create an Indiana Port Commission to construct a public port on Lake Michigan will be the most important bill to come before the 1961 session of the Hoosier general assembly.

This port will be Indiana's gateway to the St. Lawrence Seaway.

It will be a portal to growth and prosperity for the entire State.

The senate already has passed the bill by a nearly unanimous vote.

The house is expected to do likewise. And there is every reason why it should.

This bill is not a partisan matter. It has the support of the leaders of both parties.

It is not a political matter. It affords a rare economic opportunity.

The State must not let slip such a golden gift for the want of enabling legislation.

The port of Indiana will place our State upon the seven seas.

It will permit us to have access to raw materials which have never before been available.

We can ship our manufactured products and our agricultural surplus direct by water to the markets of the world.

Indiana will have new factories, increased employment, astounding growth, higher property values and a new burst of general prosperity.

The money which the port will cost can be considered a sound investment.

The revenue bond issue which is proposed to finance the port facilities will be self-liquidating by new wealth created.

W. M. Kiplinger, nationally known writer on business and financial matters, says in his book entitled "Your Guide to a Higher Income," that the Middle West will be the big industrial center of the Nation during the next 20 years.

He predicts that the area will add some 20 million people during the next two decades. He declares that no single group of States will add as many people as the five States of Indiana, Ohio, Michigan, Illinois, and Wisconsin.

The great opportunity is holding out its hands to us. All we have to do is grasp them.

Let's pass the port of Indiana bill, build the port, and go forward to meet our destiny.

Right To Vote Denied

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial from the Evening News, of Newburg, N.Y., sums up very neatly the situation brought about by the recent change in the Rules Committee.

The writer of the editorial has seen through all the talk of letting the House work its will. The House will work its will when and as it always has. The power of the Rules Committee has merely been shifted back to where it was in the days of Speaker Cannon, but the power remains greater than ever.

The editorial follows:

RIGHT TO VOTE DENIED

Those who were critical of our Hudson Valley Congressmen who voted against Speaker RAYBURN'S packing of the Rules Committee said they did not approve of the Rules Committee's ability to prevent the House of Representatives from voting on a bill.

The critics (and they included some rather loud voices from our section) held it wasn't proper for a committee like Rules to be able to bottle up legislation and keep it from coming to the floor.

Those who opposed packing of the committee, including our own KATHERINE ST. GEORGE, J. ERNEST WHARTON, and ROBERT BARRY, held that enlarging the committee to permit Speaker RAYBURN to add the necessary votes to give him control of the committee would only shift to him the power to prevent a floor vote.

They were proved right last week, but we doubt if the advocates of congressional right to vote ever can admit it.

The Rules Committee had before it a measure to let the House permit broadcasting of its activities—a measure long opposed by Speaker RAYBURN. Another would have prohibited Federal spending not covered by appropriations.

Did the Rules Committee let these measures come up for vote on the floor of the House?

It did not. By a vote of 8–6 (thanks to the two additional votes controlled by the Speaker), the Rules Committee voted not to let either matter come to the floor of the House.

There has been a strange silence from those who said the Rules Committee should not be permitted to bottle up legislation.

Can it be these critics were not opposed to the committee's power to bottle up legislation? Can it be they only cried when the committee had the power to bottle so-called liberal legislation?

Area Redevelopment: A Must in 1961

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1961

Mr. RABAUT. Mr. Speaker, it is interesting to note that on February 27, 1959, I submitted testimony to the Subcommittee on Production and Stabilization of the Senate Committee on Banking and Currency in support of area redevelopment legislation. Two years later—in fact, to the day—on February 27, I was scheduled to appear before Subcommittee No. 2 of the House Banking and Currency Committee—again in support of this legislation. Unfortunately, I was unable to personally testify on this long overdue program because of a recent illness. However, I was given the privilege of submitting a statement to the subcommittee. I hope, Mr. Speaker, this Congress will see fit to preserve for all of the Nation's citizens opportunity and human dignity by enacting area redevelopment legislation. My statement to the subcommittee follows:

Mr. Chairman, it is with much regret that a recent illness prevented my personally appearing before your subcommittee last Monday, February 27, in support of the area redevelopment bill. However, I appreciate having the opportunity of submitting a statement in support of this much needed program.

Since the 84th Congress I have been exerting every effort toward the support of legislation to provide extended Federal assistance to depressed areas. I refuse to become discouraged because of past presidential vetoes of bills which, in my opinion, were desperately needed to protect this Nation's great human resources. Again this year, as in the past, I am prepared to fight with all my God-given strength to see the Area Redevelopment Act born to reality.

It is with honor and privilege that I represent the people of the 14th District of Michigan. I am entering my 25th year of service—and through this quarter of a century I have been a part of their efforts to build a finer community and to respond to the call of our Nation through wars and national emergencies. This time, it is my district which needs the response and support of its mother Nation—for this day thousands, yes, 165,000 citizens of this great city of Detroit, cannot find gainful employment, cannot support their families, and they are begging for an honest day's work. But these people have been pushed off that magical path of opportunity through no fault of their own.

This is not a peculiar situation happening only to Detroit or to just one industrial center, but one that is like a growing cancer which has spread to communities large and small—industrial and agricultural—throughout our Nation; and, if not treated now, it can eat its way into our economic backbone and produce irreparable damage to our national strength.

These communities and their States have tried desperately to fight this curse of unemployment. They have cried time and time again for help through their legislative representatives. The Congress responded twice—only to have been answered by Executive vetoes.

Mr. Chairman, we must renew our fight. We must muster all the strength of this legislative body which speaks for the people. We must provide the laws necessary to recapture the vitality of our national economy and give to the people of our Nation a program providing the methods to enable our distressed areas to achieve lasting improvement and to enhance their domestic prosperity by establishing stable and diversified local economies. This legislation will give us strength not only at home but will, indeed, prove to the world we are still one nation under God striving to preserve for all its citizens opportunity and human dignity.

On behalf of the 165,000 unemployed in Detroit and hundreds of thousands in other depressed areas, I urge the committee to favorably consider the area redevelopment bill and to report it at the earliest possible moment.

Thank you.

New Gag on House

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial published February 27, 1961, in the Saratogian, Saratoga Springs, N.Y.

NEW GAG ON HOUSE

For sheer political hypocrisy, nothing outranks the pious professions of devotion to majority rule voiced by House "liberals" in the Rules Committee fight.

They said that all they wanted was to make sure the full House had a chance to vote on all liberal legislation blocked by Rules Committee Chairman HOWARD W. SMITH and his conservative coalition. And so they got the House to okay, by a narrow margin, the backing of the committee with two more Democrats favorable to their legislative cause.

Since then, Chairman SMITH (not without some political vindictiveness) has advocated passing along all bills on the committee's calendar for full House vote. This week, these happened to include laws proposing televised proceedings of House committees and an end to wasteful "back door" spending without appropriations.

Did the new Rules Committee majority let these bills reach the House floor? Not on your life. Speaker SAM RAYBURN, who engineered the committee-packing operation, opposes these measures. So his faithful followers put them back on the shelf, eliminating any chance of a House vote.

One power group has replaced another. It's as simple as that, and democracy has nothing to do with it.

Paper Reports Crack Combat Troops Used as Waiters and Dishwashers

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. KOWALSKI. Mr. Speaker, under leave to extend my remarks, I bring to the attention of the House an editorial from the Overseas Weekly a publication widely circulated among military personnel and their families in Europe.

No comment is necessary. The editorial speaks for itself.

Here is the text of the editorial from the Overseas Weekly:

WHILE BACK AT HEADQUARTERS

Exercise Winter Shield II has been one of the most realistic, effective training maneuvers for NATO defense troops in the history of that postwar hemispheric alliance.

But even as some 50,000 troops were fighting the mud, snow and bitter cold—in addition to their simulated enemy—interesting sidelights were taking place back at "Cyclone," the command headquarters in Vilseck.

Here are some items:

1. Almost 70 crack combat troops from the 9th Cavalry's border reconnaissance units traded in their panzer helmets and tank-mechanics' tools for "waiters' whites" and special training in dishwashing for visiting VIPS.

Seventh Army, which handled the mammoth maneuver, tagged B Troop of the 24th Infantry Division to play waiters and KP's to the nearly 500 observers who dropped into Vilseck. These same GI's who have become world famous for their sturdy watches on the East German and Czechoslovakian borders, became known as "GOB (Guest Observer Bureau) slaves," to the troops living under field conditions.

The men were sent to a special 2-day class in how to serve and how to make sure that every plate and glass was sparkling clean. They served each other at mock meals and the best 48 were selected as waiters. Those who didn't come up to snuff were sent into the kitchen.

Orders were cut for 24 cooks, 3 salad men and 4 bakers to report to duty at Vilseck. Ten of these men were hand selected out of the 111 messes under the supervision of W3 George T. Hanlon, 7th Army Support Command food adviser.

These combat troops served 2,300 meals daily in two special mess halls, one for generals and colonels and another for lower ranks and civilian guests.

"We were feeding more meals than any damn hotel in the world," Hanlon said, "and we were established like a hotel with special men for salads, desserts, meat, soups and gravies."

While some of the tankers turned out command performances as waiters, others rushed

around in the clubs wiping ash trays and delivering drinks.

"Most of our recipes came right out of Gourmet magazine and after each meal we had a critique for the waiters to see what they were doing right and wrong," Hanlon said.

Although the meals were alleged to be standard QM issue, the menus (two selections each meal) included such treats as lobster, steaks soaked overnight in wine and garlic.

2. Billeting and feeding 500 guests made necessary one of the biggest administrative complexities in Army history too.

The roster of notables included 9 full generals, 16 major generals, 64 lieutenant generals, 55 brigadier generals, 119 colonels and over 100 visiting newsmen, all of whom were given red carpet treatment and, reportedly, a healthy allotment of the maneuver budget.

Under wartime conditions, neither the generals nor the press would be afforded hotel accommodations or valuable Army officers to escort them wherever they went, checking on their needs and comforts.

3. As the maneuver came to a close, a top official disclosed that gas for observer vehicles was at a premium. The reason was that jeeps, staff cars, and helicopters had been requisitioned from most commands to ferry VIP's around Germany to follow the battle and bring them back to the Vilseck club at night.

Defense budgets being what they are, officials could do well to reevaluate next year's Winter Shield and give visiting VIP's more of the taste of mud and simulated combat and less luxury at public expense.

Cincinnati Says, "No, Thanks"

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. SCHERER. Mr. Speaker, shortly the Members of Congress are going to vote on a Federal aid to education bill. I am proud of the position taken by both the Cincinnati Board of Education and Archbishop Karl Alter on the subject. Their attitude and that of Cincinnati generally is set forth in an excellent editorial in the Cincinnati Enquirer of Monday, February 20, entitled "Cincinnati Says, 'No, Thanks' ":

CINCINNATI SAYS, "NO, THANKS"

It would be a salutary thing if every school district in America spoke up with the same kind of frankness, honesty, and courage that characterized last week's statement from the members of the Cincinnati Board of Education. The subject was Federal aid to education, and the seven board members, acting as individuals rather than as a board, took a strong stand against Federal financial support for Cincinnati's public schools and for the Nation's.

Several weeks ago, Archbishop Karl Alter made a similar declaration in opposition to Federal aid to education.

The impressive thing about the statement of the Cincinnati Board of Education members is that it comes from the individuals most intimately acquainted with Cincinnati's educational needs. The same, of course, is true of Archbishop Alter's statement in behalf of the Cincinnati area's Catholic school system. Both statements similarly came from individuals keenly interested in education. Neither can be dismissed as the utterance of those who put economy ahead of an adequate and educational program.

The members of the board of education based their opposition on two convictions:

They believe, first of all, that Cincinnati, at least, needs no program of massive Federal activity in the field of education. They, of course, are the individuals best equipped to know.

They believe, secondly, that Federal financial contributions to State and local educational systems will inevitably and eventually mean Federal control. And just as Cincinnatians are better equipped than anyone in Washington to know Cincinnati's financial needs, so are Cincinnatians better equipped than the Department of Health, Education, and Welfare to measure Cincinnati's educational needs.

The national record shows that only 1 school district in 200 has indebted itself to the legal limit to build classrooms. Only 1 district in 200, in other words, has done all it can do to solve its own educational problems.

That fact alone would seem to discredit those who contend that the Nation's educational system is crying out for relief from Washington.

The statements of Cincinnati's educational authorities discredit these cries even further. If school officials in the other cities of America should speak up with equal candor, the cause of Federal aid to education would be doomed.

Testimony of Gov. David L. Lawrence, Before the House Committee on Banking and Currency

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. TOLL. Mr. Speaker, yesterday the distinguished Governor of my State, the Commonwealth of Pennsylvania, Hon. David L. Lawrence, appeared before Subcommittee No. 2 of the House Committee on Banking and Currency in support of H.R. 4569, the proposed Area Redevelopment Act. He was accompanied by the Honorable William L. Batt, Jr., secretary of labor and industry of the Commonwealth of Pennsylvania, as well as the Honorable J. Eric Jones, deputy secretary of the Pennsylvania Department of Commerce.

A copy of Governor Lawrence's excellent statement before the committee is set forth below:

TESTIMONY OF GOV. DAVID L. LAWRENCE, OF PENNSYLVANIA, BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY ON H.R. 4569, PROPOSED AREA REDEVELOPMENT ACT, WEDNESDAY, MARCH 1, 1961

The citizens of Pennsylvania strongly favor the passage of an adequate and effective Area Redevelopment Act. We ask for the passage of this legislation not as an act which will benefit only Pennsylvania and a few other States, but as a measure to promote the general welfare of the entire Nation.

We in Pennsylvania are keenly aware of the need for area redevelopment legislation. This is only natural. After all, we have more than our share of the problem. With only 6½ percent of the Nation's labor force, we have 17 percent of the chronic unemployment areas and 21 percent of the total number of workers jobless in chronic unemployment areas.

Nevertheless, we ask our sister States to keep in mind that the benefits of this legislation will accrue to every section of the Nation, regardless of its rate of unemployment.

This should not be surprising. We see evidences every day of the complex interrelationships of our society. When an automobile plant in Detroit closes down, steelworkers in Pittsburgh lose their jobs. And, when steelworkers in Pittsburgh lose their jobs, farmers in Kansas, hatmakers in Connecticut, clothing workers in New York, and appliance manufacturers in New Jersey find that their own economic positions have worsened. And so on down the line.

We are all part of the same organic whole, and if I may paraphrase Benjamin Franklin, gentlemen, we must surely pull together on this problem or most assuredly we will all be pulled down separately.

It is our hope that there is no question by this time of the fact that long-term chronic area unemployment exists; that it is costly not only in terms of money but also in terms of wasted human resources; that it is caused by declining industries in once-prosperous places; and that it is causing a great hardship to many people.

These are the points which we and others have made time and time again in testimony before this and other congressional groups. But, for the record, let me review them briefly:

First, we know that there is such a thing as long-term chronic area unemployment. The Department of Labor reports that 94 out of a total 270 classified labor market areas are suffering from chronic long-term unemployment. These areas produce a large percentage of the long-term unemployed. These are people who hardly ever work, in good times or in bad.

Pennsylvania is a case in point. While employment was growing nationally by 11 percent, during the so-called fabulous fifties, Pennsylvania's total employment dropped by 3½ percent; in our chronic unemployment areas, the drop ranged from 6 to 31 percent.

This unsolved problem is costly almost beyond belief. If we had had high employment in our surplus labor areas in Pennsylvania during the past 5 years, we would have saved some $375 million in unemployment compensation and public assistance alone—almost the entire cost of the bill which is now before you. And, this does not take into account lost taxes. Also consider how much higher business sales would have been in these areas if we had had high employment. And consider how much more farm products would we have consumed.

This condition is not a result of any particular sin or blunder on our part. From 1950 to 1960, we lost some 230,000 jobs in only 4 industries—anthracite mining, bituminous mining, textiles, and railroad. For the most part, these losses stemmed from the general economic advancement of the country. For instance, when the railroads started using oil, we lost jobs in both railroading and mining. We favor economic progress; but we'd like some help in getting a little bit of the same medicine for ourselves.

Look at a map of Pennsylvania and you will see how areas of substantial and persistent labor surplus blanket the State. Look at a chart and you will see how our rate of unemployment has consistently been higher than the national average.

However, you would have to come to Pennsylvania to bring yourself face to face with

the human misery that results. You have to see the number of persons on public assistance rolls who are neither children, nor older persons, nor disabled. You have to see the shacks and the shanties. You have to talk to the men whose wives work in the garment factories while they stay home.

Some people do not believe that the Federal Government should help solve this problem. However, this is a national problem and not a local one, as I have already stated. It transcends State boundaries and hurts everyone.

There are a few who hold that a Federal bill involves too much Federal control, and that this would be distasteful. Yet, we have had State legislation of this type for 5 years, and we have not yet had one complaint from a locality that we were unduly interfering in its affairs.

I am also familiar with the argument that the bill will not work, that industrial loans are not effective in creating employment in depressed areas. Fortunately, we in Pennsylvania have some tangible proof that the bill will work. The Pennsylvania Industrial Development Authority has loaned a total of $17,492,323 for new plants or expansions of existing plants. Total costs of these projects over the 5 years the plants have been in existence, are $55,934,724. As you can appreciate, this in itself can have an important impact on the economy. These loans have been distributed in 41 counties and in 69 separate communities.

But the State does not go it alone in these efforts. Nonprofit community agencies have participated in these projects with loans totaling approximately $11 million. And banks and other private lending agencies have added more than $26 million.

Most importantly, in the 5 years since its creation, PIDA has accounted for 26,002 new factory jobs with estimated annual payrolls of $93,099,658.

If there is one thing certain, it is that the Pennsylvania State Legislature will continue, and will increase, this effort to create new job opportunities in Pennsylvania.

The roster of companies lists many blue chips. Contrary to the oft-repeated fallacy that only fly-by-night concerns are attracted, leading industrial firms such as RCA, Eberhard-Faber, SKF, Fruehauf, and Mergenthaler have moved into, or expanded within, our surplus labor areas as a result of our industrial loan program.

Another familiar argument which you gentlemen have undoubtedly been getting from opponents of the bill is that it would subsidize uneconomic areas; that natural laws ought to come into play; that if the people in distressed areas had any gumption, they'd move out.

These arguments are all wrong. Our surplus labor areas are prime industrial locations. We have abundant water, magnificent transportation (which will be even better in the next few years as our vast new road-building program gets going), a reasonable and competitive tax climate, a most advantageous location to markets, unsurpassed recreation and scenery, and a hard-working, skilled labor force. Most of the companies which have expanded within, or moved into, Pennsylvania have done very well, indeed. Some of our best industrial development salesmen are the executives of the companies which benefited under our industrial development program.

Moreover, those members of our population who can leave have done so. As you gentlemen know, we may lose three seats in the House of Representatives because our population growth has not kept pace with the rest of the Nation.

Many of our unemployed have moved from our labor surplus areas into other States; and even within the State there has been a dramatic shift of population from the labor surplus areas into the labor markets with better employment prospects. Many people from depressed areas commute long distances to work. Many young people have left. The president of one community college reported that more than 90 percent of his graduates had to leave the area to find employment.

Some people find it easy to leave their home communities. Others cannot. Their roots go deep. They have strong emotional and cultural attachments to families, to friends, to churches, and these are not easily tossed aside. Many have reached the age where it is difficult, if not impossible, to find employment in a strange city. Many have all their savings in their homes—homes for which there is no longer any market.

You will hear one more argument, I am sure, before this bill is finally decided upon. Someone will state that the recession will be over before the bill's provisions have time to take effect. I certainly hope that it will be.

But this bill is not an antirecession measure. The current unemployment figures bear little relationship to the need for this bill.

The Area Redevelopment Act is designed to reduce long-term chronic unemployment among people who live in labor surplus areas. It is not a substitute for legislation to help those who have exhausted their unemployment compensation benefits.

We in Pennsylvania fervently hope that other antirecession measures taken by the President and the Congress will soon have their effect. When and if they do, and if this bill is still under consideration, we earnestly ask that you disregard an improving economic situation and look behind the immediate short-run employment gains to concentrate on the insidious, steadily growing, long-term chronic area unemployment.

That is what we are trying to get at in this bill, and we must not allow false issues to obscure the real objective.

Three factors in connection with the bill itself need mention:

First, I hope that you will not reduce the authorized amounts for the various programs covered by the bill. Indeed, measured by the great cost of area unemployment and by the great need for a bold and substantial program, these are modest amounts. Even by standards of this Nation's aid to foreign countries, they are small.

We have shown in Pennsylvania that substantial sums of money can be put to productive use in a program of this type. We are confident that once our sister States begin moving at our rate of industrial expansion, there will be little enough to spare—especially in the industrial loan program.

Second, we are particularly interested in those provisions of the bill which will make it possible for us to clear more blighted areas for new industrial projects. We have 45 urban redevelopment authorities at work in Pennsylvania, and, with the exception of Philadelphia and Pittsburgh, the Commonwealth is matching their expenditures dollar for dollar.

Incidentally, this—like the PIDA program—is just another example of what we are doing to help ourselves. We are not sitting back and waiting for Federal programs in area redevelopment. We are pulling just as hard as we can, and we would welcome a strong partner in the harness.

Third, we would like the record to show that we prefer an independent agency to administer this bill, as outlined in the version now being considered in the Senate. This is a new concept at the Federal level, and it will require bold and imaginative thinking. Existing agencies tend to hesitate too long in the implementation of a new program.

However, we are mainly concerned with the passage of this legislation, and we would regret its delay or abandonment as a result of a disagreement on where responsibility should be placed for its administration.

There will be many difficulties in the way of success for an area redevelopment administration. We should make sure that instead of placing roadblocks in the way, we provide a vehicle which has the ability to go all the way.

This is not the first time that Pennsylvania has testified on behalf of an area redevelopment bill of this type. But I sincerely hope that it will be the last time. It is not that any of us from Pennsylvania find the journey down here onerous or the Congress unfriendly. On the contrary, it has always been a pleasure.

Nevertheless, it is time now for Congress once again to pass a bill, and this time we can be sure that a good bill will not be vetoed by the President. We are all confident that the Congress will indeed pass a good bill. And when the President finally affixes his signature on that bill, we will have come to a turning in a long road.

The new road will also be long. It may even be twisting and rocky. Yet, I am confident that we can traverse that road successfully and reach our goal. When that day comes, we can, all of us—those who have worked for the bill in and out of Congress—take credit for a notable achievement in conquering human misery and contributing to a healthy and prosperous Nation.

Here's Junket Which May Make Us Dollars

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. MACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a clipping about a trip which two members of my committee took in order to get information on the travel bill which was introduced last year and which has been reintroduced this year. One of the members is a member of a subcommittee of which I am chairman, and was present during the consideration of the legislation last year before the subcommittee. These men have put in quite an extensive report, and I include the enclosed story from the Fort Worth Press showing their purpose, and our purpose in the travel legislation which can make dollars for the United States. I am convinced that we can do that:

HERE'S JUNKET WHICH MAY MAKE US DOLLARS

(By Jack Steele)

WASHINGTON.—A round-the-world "junket" by two Members of Congress may pay off this year by speeding the creation of the Government's first official travel bureau. Its aim would be to encourage foreign tourists to "see America first"—and thus help ease the current U.S. dollar shortage.

The two world travelers—Representatives LEO W. O'BRIEN, Democrat, of New York, and ROBERT W. HEMPHILL, Democrat, of South Carolina—joined today in an enthusiastic endorsement of plans to set up such a travel bureau in the Commerce Department to seek a bigger slice of the world's tourist dollars for the United States.

O'BRIEN and HEMPHILL predicted such a Government travel agency could bring this

country at least $250 million a year—and perhaps as much as $500 million—in increased revenues from tourism.

This, they noted, would put a big dent in the Nation's so-called "balance of payments" deficit and possibly head off more drastic moves, such as restrictions on the travel of Americans abroad, to curtail the escape of gold and dollars.

Americans now spend at least $1 billion a year more in overseas travel than foreign tourists spend in the United States. This is one of the major sources of the steady drain in recent years on the Nation's gold reserves.

The gold shortage helped spur the Senate last June to pass a bill, sponsored by Senators WARREN MAGNUSON, Democrat, of Washington, and JACOB K. JAVITS, Republican, of New York, to create such a travel bureau. But it was sidetracked in the House Commerce Committee, where Representative HEMPHILL was one of those who dragged his feet.

Last month HEMPHILL joined O'BRIEN, ranking Democrat on the House Interior Committee, on a world tour to look into the need for such a bureau. They visited, among other places, Australia, New Zealand, Japan, Hong Kong, London, Edinburgh, Copenhagen, and Oslo.

They were amazed to find, they reported today, that other governments—even those of tiny and supposedly impoverished countries—are spending millions to lure tourists while the United States is doing nothing.

"In London we found that British tourists who were interested in visiting this country cuoldn't even obtain U.S. maps," HEMPHILL noted.

HEMPHILL said he was drafting a new bill to create the proposed travel bureau in the Commerce Department and predicted that it would win quick committee approval. O'Brien said he would do all he could to help speed it through the House.

The Senate bill would have provided up to $5 million a year to finance such a bureau. It did not spell out how it would be spent, but presumably most would have gone for advertising the United States abroad as a tourist attraction. The British government now spends about $2 million a year on tourist advertising in this country alone.

HEMPHILL and O'BRIEN have another idea about how the travel bureau should spend its money.

They suggested travel offices be set up in all major countries which now send tourists to the United States to promote and encourage such travel.

Odd Aid

EXTENSION OF REMARKS

OF

HON. CARLETON J. KING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. KING of New York. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial published February 27, 1961, in the Saratogian, Saratoga Springs, N.Y.:

ODD AID

President Kennedy's program for Federal aid to schools is a grab bag with a few apparent rules about the grabbing. It makes no concessions to the valid arguments that many States don't bother to spend enough for education and provides no incentive for them to spend more.

Most Americans would sympathize with a bill to provide Federal aid for poverty-stricken communities where youngsters cannot be given proper educational facilities. With proper safeguards to compel matching effort by recipient States, a bill to press school construction where it is urgently needed might also draw nearly universal support.

But the Kennedy program is the same old, tired proposal to take money from the rich (such as New York State taxpayers) and give it to the poor, such as those in Mississippi. The poor, many of whom are not making nearly the proportionate effort to educate their children they could and should, would not be compelled to increase their effort.

The Presidential message says they would be "expected" to do more. The expectation is naive. Gifts from Washington do not have that utopian effect.

If this bill is defeated, as it should be, perhaps a more limited, realistic program can be pressed. When States such as Kentucky bind themselves constitutionally not to borrow more than $50,000 a year for any purpose, why should taxpayers from Saratoga County be called on to pay the education bill for them? This area has a magnificent record for taxing itself for schools and teachers' salaries. Before Federal aid is given anywhere, there is a moral right to insist that the same effort, in proportion to income, should be made by all.

A Neighborly Idea Pays Off

EXTENSION OF REMARKS

OF

HON. JOE M. KILGORE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. KILGORE. Mr. Speaker, my congressional district, the 15th of Texas, borders on the Republic of Mexico; therefore I am keenly interested in inter-American relations. Because of this, I was especially impressed by a recent article in the Austin, Tex., American. It tells a compelling story of an individual good neighbor plan put into effect some years ago through the efforts and support of the able Senator from Texas, WM. A. BLAKLEY.

Senator BLAKLEY'S one-man good-neighbor program has made it possible for a number of Latin American lawyers to do graduate work at Southern Methodist University in Dallas in the law, institutions, and governments of American nations.

One of the conditions Senator BLAKLEY imposed on this program, however, was that his contribution be kept anonymous. For several years this was possible, but because of the uniqueness of the program, his effort was publicized first by word of mouth of those participating and later by newspaper stories.

The program is a continuing one. Already it has accomplished much that, in the words of the president of the Southwestern Legal Foundation is "stimulating and rewarding." It is an excellent example of private enterprise helping build up better relations in Latin America.

Because of widespread interest in a program of this nature, I ask unanimous consent that the newspaper story of this inspiring project be carried in the CONGRESSIONAL RECORD:

A NEIGHBORLY IDEA PAYS OFF

(By Lorraine Barnes)

A good neighbor idea that found a good friend in U.S. Senator WILLIAM A. BLAKLEY is reaping benefits for the United States around the free world.

A summary of the results has just been made by Robert G. Storey, president of Southwestern Legal Foundation, Dallas, and dean of Southern Methodist University Law School. He called the 9-year-old project stimulating and rewarding in what it has accomplished for U.S. relations in Latin America and Asia.

Under the program, which BLAKLEY has financed through the legal foundation, lawyers from Western Hemisphere Republics and elsewhere come to the SMU campus for a full year's graduate study of the law, institutions and governments of the American nations. A number of them now occupy topranking positions in their own governments.

"In 1951 I made a proposition to BILL BLAKLEY to start the Law Institute of the Americas," Storey said. "He listened and then agreed to do it provided his own contribution would be anonymous."

Grinning, Storey supplied the exact quote. "He said, 'I'll do it if you won't tell a soul.'"

BLAKLEY'S support of the program was not known until a few years ago, and even now the amount of his contributions has not been made public.

A successful businessman, lawyer and rancher, BLAKLEY believes strongly in inter-American cooperation based on mutual liking and respect. He has repeatedly described "a family of friendly nations" as the strongest bastion against communism, and warned against letting United States-Latin American relations deteriorate.

The Law Institute of the Americas quickly drew attention outside the Western Hemisphere. Storey began to get inquiries about the program from Far East countries—Korea, Japan, Thailand—striving to adapt age-old judicial concepts to modern needs. Could some of their bright young men come to Dallas, too?

Storey presented plans for a similar project to other prominent men—among them the late Fred Florence and Karl Hoblitzelle—and in 1955 the Academy of American Law was founded. It provides a program of study in the theory and practice of American legal institutions and the American legal system for lawyers outside the Western Hemisphere who have not had training in the common law.

"So the original idea expanded into a worldwide program. This would not have been possible but for the success of the Law Institute of the Americas, which BILL BLAKLEY quickly and wholeheartedly recognized the value of," Storey said. "It all goes back to him."

Fellowships are awarded to lawyers who have had at least 2 years of experience—in practice or as professors or judges. Tuition, fees, books, room, and meals are provided along with a monthly allowance for incidental expenses.

Well over a hundred of the institute's alumni are scattered through the Western Hemisphere. Storey and BLAKLEY have met many of them on trips through Latin America, and they are impressed with the quality of leadership the program has fostered.

Dr. Julio Cueto-Rua of Buenos Aires, one of the institute's first graduates, served as minister of industry and commerce in Argentina's post-Peron provisional government. "He did a marvelous job," Storey said, not-

ably in management of his country's mineral resources and negotiating the first contract with a private firm for development of Argentine oil.

Youthful (37), brilliant and capable, Cueto-Rua is the leader of Argentina's conservatives and a much-discussed presidential possibility. (Anti-American elements taunt Cueto-Rua with the charge that his daughter has a "Yankee" name. It is true. She is named Maria Dallas, for the city in which she was born.)

Among others, graduates include two ministers of the Republic of Columbia, two or three ambassadors to the United Nations, many distinguished judges, attorneys and professors. A 45-year-old Thailand judge (oldest student to be admitted to the program) made the highest grades; he is now a member of Thailand's supreme court. A Korean woman lawyer—first of her sex to be admitted to the Korean bar—also studied American legal procedures at the Texas-based academy; she is now married to Korea's foreign minister. A Cuban student who became general counsel of the Atlantic Oil Co. of Cuba is presently living in Spain, an exile from the Castro regime.

Representative John Brademas, of Indiana, Named Young Man of the Year

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 2, 1961

Mr. HARTKE. Mr. President, last Thursday night the South Bend Junior Chamber of Commerce named Representative JOHN BRADEMAS Young Man of the Year.

Representative BRADEMAS has done an excellent job in representing the citizens of Indian's Third Congressional District. He has been extremely sensitive to the problems which have confronted the district due to unemployment and he has worked hard here in Washington to provide relief for both individuals and businesses which have been injured. John Brademas and I have worked together on many of these matters and I have enjoyed this association.

He came to Congress as no stranger to the workings of the legislative branch. He had served on the staffs of several Members of Congress and he was an executive assistant to Adlai Stevenson when he was the Democratic presidential candidate.

JOHN BRADEMAS is a member of the important House Committee on Education and Labor before which much of the legislation designed to assist areas of high unemployment has been considered.

I congratulate Representative BRADEMUS on receiving this award as South Bend's Man of the Year.

I ask unanimous consent to have printed in the Appendix of the RECORD the article from the South Bend Tribune of February 28, 1961, entitled "BRADEMUS Named Man of the Year."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRADEMAS NAMED MAN OF YEAR

(By James Donahue)

U.S. Representative JOHN BRADEMAS, was named the 1960 Young Man of the Year, Thursday night at the 13th annual Distinguished Service Award dinner sponsored by the South Bend Junior Chamber of Commerce at the Indiana Club.

"I am deeply grateful for the high honor you have done me this evening," BRADEMAS told an audience of about 300 persons upon acceptance of the award.

He praised the Jaycees for their work and commented on the increasing importance of young men in world affairs today.

"I have noticed in Washington that the majority of Ambassadors from Africa and other underdeveloped countries are in their early 30's, or even late 20's," he said. "We must be able to talk to these persons but to do this we must first listen and understand them."

UNIQUELY QUALIFIED

It is the young men who are uniquely qualified to do that, BRADEMAS added.

Concerning the particular economic problems in and around South Bend and Mishawaka he appealed to the Jaycees to continue their efforts and leadership in this area.

"I am sure that if we have leadership that is confident we can meet the present difficulties, conquer them and move on to greater heights than we have ever known before," he asserted.

BRADEMAS was born in Mishawaka in 1927. He received his elementary and secondary education in South Bend schools and served in the Navy in 1945 and 1946.

WINS RHODES SCHOLARSHIP

He graduated from Harvard where he received high honors, and in 1950 he won a Rhodes scholarship to Oxford University in England and received his doctorate degree there, specializing in political science.

He served as executive assistant to Adlai Stevenson, and also served on the staff of several Members of Congress before being elected to Congress in 1958. He was re-elected in 1960.

In Congress, Representative BRADEMAS is a member of the House Education and Labor Committee and has been referred to by President Kennedy as, "one of the new breed of statesmen ready to seek solutions to the new problems that face Americans and the world."

The award was presented by Franklin D. Schurz, editor and publisher of the Tribune, who served as head judge for the panel of 13 South Bend business, political, and religious leaders who selected the winner.

The principal address at the dinner was delivered by Sherwood H. Egbert, newly elected president and chief executive of the Studebaker-Packard Corp., who outlined what has been done and what must still be done to get this firm back on its feet.

"I am not an overnight specialist," Egbert stated, "but I am mindful of my obligations because of what the Studebaker Corp. means to South Bend."

Recently returned from an 11-day tour of 23 cities throughout the country, in which he and his associates met with more than 750 Studebaker dealers, Egbert presented his findings with an optimistic attitude.

"Our product is a quality piece of merchandise," he said. "Every dealer I talked to has told me this. There also were no complaints concerning the price of the product," he added.

Egbert described the loyalty of the dealers as "tremendous."

On the debit side of the ledger he listed the firm's advertising as a specific weak point.

"Our advertising has been too sterile," Egbert said, "but this has recently been changed. A new and completely different program has been started which you will soon be witnessing in newspapers, radio, and television."

BID ON TRUCK CONTRACT

He also stated that the Studebaker Corp. was presently bidding on the contract for the manufacture of a 6½-ton truck which will provide employment for 456 people.

"However, the acquiring of this type of contract does not mean that we are de-emphasizing automobile production," he affirmed. "We are principally an automobile business."

Egbert stated that defense contracts are also being sought by Studebaker. He said that 30 percent of the work of all top companies is defense work.

"We are not looking for a 'handout' from the Government," he insisted, "but given a share of defense contracts we could continue to operate smoothly during times of economic setback."

SPEAKS ON JAYCEE STORY

William J. Reinke, president of the South Bend Jaycees, spoke briefly on the Jaycee story, emphasizing the importance of young men working together for the advancement of the community and the country.

Mayor Frank J. Bruggner also addressed the Jaycees, stating that each member is "deserving of the award for having given of themselves to our children and our community."

James W. Oberfell, former Jaycee president and winner of the Distinguished Service Award for 1959, was master of ceremonies.

How To Slay the Dragon Waste

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Jack Anderson as it appeared in the Miami Herald of February 26, 1961:

A MEMO TO THE PRESIDENT: HOW TO SLAY THE DRAGON WASTE

(By Jack Anderson)

WASHINGTON.—Memo to J.F.K.:

Among the dragons you must face and fight in the White House, not the least is the Dragon Waste. It is a ravenous monster that gorges upon greenbacks.

The ordinary citizen, thumbing through his wallet, knows when he has wasted a dollar. But on a national scale we have become so accustomed to the dizzy swirl of billions that fiscal figures have no more meaning than the mileage to the stars. We must get back to earth, Mr. President.

Our national debt has soared beyond the $289 billion mark. The run on our gold reserves has reached an alarming $3 billion a year. Yet we cannot risk reducing the great expenditures needed to muscle up national defense and to meet the economic challenge of the surging Soviet Union. More, not less, spending is needed to keep our country, safe and secure.

Where is the money to come from? There is a way to finance our thrust into the space age without raising taxes or tightening belts. If you can slay the Dragon Waste, Mr. Presi-

dent, you can recover billions for the Nation's urgent needs.

This is no haphazard claim but the estimate of experts. I have consulted the most responsible and respected of fiscal authorities. Our staff has searched the bogs and quicksands into which the taxpayers' dollars have been disappearing for years. Though this was by no means a complete survey, we found several ways to save money without impairing our national strength.

The greatest devourer of dollars, of course, is the Defense Department. Your predecessor, President Eisenhower, tried to slow down the drain. He set spending ceilings, laid down dollar dictums, pasted the Pentagon with economy slogans.

But he resolved every dispute over dollars by compromise. He permitted the separate services to waste money on expensive duplications, such as the Jupiter and Thor intermediate range missiles. Each service struggled to equip itself as if it would fight the next war by itself.

You might begin by getting rid of the costly, outdated military installations. At least two dozen posts, built for an earlier era, can be cut out, cut down, or consolidated.

Another example: The Army, an unlikely outfit to be in the shipping business, operates the Panama Line which takes freight away from the commercial companies. The taxpayers, in turn, help make up the private loss in the form of shipping subsidies.

The general accounting office after an exhaustive audit concluded that the principal purpose of the Panama Line is "the carrying of Canal Zone employees and their families to the United States for periodic vacations and back to the isthmus."

* * * * *

To justify its steamship business, the Army insists that all Government freight going to the canal must be carried in its ships. Goods from the West, which could be shipped more cheaply down the Pacific coast, must be hauled all the way across country to sail from New York.

The Armed Forces also offer cradle-to-grave benefits to our men in uniform. These inducements, justified as most of them may be, sometimes seem excessive. Example: The taxpayers provide free veterinary care for servicemen's pets and, in some cases, free burial for those pets that don't survive the free treatment.

The most massive saving of all can be achieved in military procurement. Senator PAUL DOUGLAS, Illinois Democrat, estimates the taxpayers could save a minimum of $2 billion a year by more competitive bidding, cutting out duplicate buying, and using up the $10 billion worth of goods sold off each year by the Armed Forces as surplus.

One service often won't transfer surplus to another except at inflated prices. For each service is jealous of its budget credits and doesn't want to give anything away to a sister service. This has forced the Army, say, to go into the public market for articles that are lying idle in the Air Force's warehouse.

It's a big dragon, Mr. President, waiting to be slain.

Claude McMillan: Genius

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. DORN. Mr. Speaker, the Honorable Claude McMillan, South Carolina's chief highway commissioner, was one of the greatest men our State has ever produced. No on in the history of South Carolina contributed more to the progress and improvement of our State than the late Claude McMillan.

Mr. Speaker, Claude McMillan was not only a great South Carolinian, but a great American. Highway officials in every State were aware of his genius in developing the best system in the United States. Other States and countries beyond the seas benefited from his engineering and methods. Foreign nations sent representatives to South Carolina to study Claude McMillan's highways. These roads are considered the best and most economically constructed in the world.

Claude McMillan was a brother of our own esteemed and beloved colleague, JOHN L. MCMILLAN.

The following editorial from the Greenville (S.C.) News, is a fitting tribute to this great American and genius of our modern highways:

CLAUDE MCMILLAN, BUILDER OF ROADS

South Carolina, or any other State for that matter, seldom has seen the likes of Claude R. McMillan as a public servant and is not likely to do so again soon. For he was a powerful and unique personality who combined the talents of an engineer with great executive skill that seldom is found in one man.

Claude McMillan devoted his life to the development of South Carolina's splendid highway program, starting as a young engineer in 1923 and becoming chief highway commissioner in 1947.

Building highways and improving South Carolina's administration of its highway system was his chosen life's work. The capabilities he brought to that task and which he applied until his terrible illness robbed him of his last ounce of strength, together with his personal charm, winning manner, suave attractiveness, his ability to make decisions no matter how hard and to stick by them would have carried him to the top of any organization.

Mr. McMillan was one of South Carolina's highest paid officials, elective or appointive, but he would have been worth several times as much to any corporation fortunate enough to secure his services.

As chief engineer for many years and as chief commissioner for nearly a decade and a half, Mr. McMillan was one of the principal architects of what has been described as one of the best highway programs in the United States.

To put it purely negatively, the Federal highway program in South Carolina, particularly the new $50 billion Interstate System, has been free of the controversy and scandal which has marred it in certain other States. But this is merely what we had come to take for granted in South Carolina. We have long been accustomed to efficient planning, skillful construction, and honest administration.

We have been more fortunate than we knew.

On the positive side, we have gotten much more than this. We have had the benefit of executive and engineering imagination and long-range planning. These things just don't happen. Somebody has to make them happen.

Many years ago, as the Federal-State highway program developed gradually, Mr. McMillan and his associates had a vision of the highways of the future and they began to prepare for them long before the present Federal Interstate System was proposed.

They built some of the first dual-line highways to be constructed in any of the States, other than some of the vast toll-road turnpikes in the larger metropolitan areas. They persuaded the general assembly to enact legislation to permit the construction of limited-access highways which could be entered or left only at certain points and with parallel roads to carry local traffic.

They gradually won public acceptance of bypass highways which would carry through traffic around major population centers. This took a lot of selling, because local businessmen often felt they faced ruin if the major stream of traffic was diverted, but they quickly saw the wisdom of the policy and the bypass not only is accepted but frequently is demanded.

Meanwhile, Mr. McMillan was quietly leading a movement, not only to upgrade the quality of our roads for the sake of safety and rapid movement of traffic, but to raise vehicular and driver requirements to protect the motoring public.

He and those about him advocated adoption, a bit at a time, of the nationally approved traffic code. They inspired the beginnings of what we hope will be someday a really effective driver responsibility law. They gained legislative acceptance of the point system which results in the temporary or permanent revocation of the license of a driver who repeatedly violates traffic laws.

They built up the State highway patrol in numbers and in degree of qualification. They instituted a thorough training program and a system of discipline which at one and the same time encouraged the conscientious officer and summarily punished the careless and inefficient one.

In all of this, the hand of Claude McMillan was always apparent. He did not hesitate to allow himself, rather than his department or its program, to become the center of controversy. He subjected himself to criticism and even abuse in the general assembly and in public meetings in communities where highway projects were at stake.

His method of doing his job required the talents of a master engineer, a consummate politician, a bureaucratic statesman. That was Claude McMillan, a man of vision, courage, and diplomacy.

As chief commissioner, he won nationwide recognition. The Federal Bureau of Public Roads respected his wisdom and ability and paid tribute to the administration of the South Carolina program.

As a member and former president of the Association of State Highway Officials, his opinions carried great weight among the men who build and manage the country's highways.

One of Mr. McMillan's last public appearances in the Greenville area was at the groundbreaking for the new YMCA. He was then a sick man, but people sought him out to pay their respects and to talk to a soft-spoken man who was basically kindly but who could be as stern as necessary to carry out what he felt was his duty.

We, along with all South Carolinians mourn his passing. And we extend to his family our deepest sympathy and to his associates best wishes in carrying on in the tradition they helped "the chief" to establish.

What Ike Wanted, J.K.F. May Get

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. ELLSWORTH. Mr. Speaker, the Kansas City Star, in an editorial on Feb-

ruary 27, pointed out that this year will see a number of moments of truth develop. I invite the attention of my colleagues to this editorial and ask that they keep it in mind in the months ahead. Under leave to extend my remarks, I include the editorial:

WHAT IKE WANTED, J.F.K. MAY GET

It would be revealing to check the voting record of this Congress, a few months hence, against the voting record of the last three Congresses. Certainly some of the lawmakers on the Democratic side will be facing some hard decisions. They may hope that the past will be forgotten, in the interests of maintaining a facade of legislative consistency. For what are they to do when a President of their own party asks for some of the things that Mr. Eisenhower consistently asked and was refused?

For example, there is the matter of those Federal judges. Repeatedly President Eisenhower recommended the creation of additional judgeships. Repeatedly, there were delays in the Democratic-controlled Congress. Cases piled up in the courts. But a Republican President would have made the new appointments. That was politically unthinkable. Now Mr. Kennedy has proposed 59 new judgeships. We assume that many legislators who in the past did not act on the Eisenhower plea may now respond. A Democratic President will make the appointments.

Then there is the problem of the gasoline tax. It is reported from Washington that President Kennedy will, as did his predecessor in his own budget, recommend a 4½-cent tax. Mr. Kennedy wants to step up the Federal road program and he wants to do so on a pay-as-you-pave basis. That is what Mr. Eisenhower wanted to do last year. But Congress would go only part way with an increase to 4 cents, and on a temporary basis. Many Democratic Congressmen opposed even that much. What to do this year?

Postal rates may be mentioned, too. In his budget message, Dwight Eisenhower again recommended a rate increase. A similar proposal went over with a dull thud in the congressional gatherings of 1959 and 1960. There are indications that President Kennedy may have his own suggestions on new rates. What will a Democratic Congress do then?

Charitably, we may conclude that Congressmen have their problems when the executive branch changes from one party to another. Charitably, too, we may recognize that consistency is not an expected virtue on Capitol Hill. Circumstances alter cases.

For the 87th Congress, little isolated moments of truth will arrive. This year however, all things may be different. For they will be moments of Democratic truth.

Social Security

EXTENSION OF REMARKS
OF
HON. JACOB H. GILBERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. GILBERT. Mr. Speaker, I have reintroduced my bill to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits under the Social Security Act. My bill also provides that full benefits under the act, when based upon the attainment of retirement age, will be payable to men at age 60 and to women at age 55.

Fifteen million elderly American citizens are suffering humiliations, frustrations, and real hardships under our present mixed-up discriminatory social security law. Under existing law, social security annuitants are permitted to earn only up to $1,200 per year; if they earn more than this sum, they are penalized; deductions are made from their social security payments, and in certain cases they can lose the social security benefits completely for long periods of time. This ceiling of $1,200 stems from 1937, when $1,200 had four times the purchasing power of today.

The law as it stands now hurts the very people for whose benefit it was originally enacted—those who work for their living. If the morale and well-being of our older citizens is to be restored, the limitation must be removed.

No one can possibly support a home on his social security check. When social security payments represent a pensioner's entire income, if he wishes to enjoy a dignified, comfortable existence and not become an object of charity, he must find employment to splice out his income. Skyrocketing living costs, high rentals, increased cost of medical care, medicines, high taxes, are a terrible burden, and our senior citizens are suffering anxieties and discomfort and lack of proper medical attention in their later years.

Circumstances have combined to prevent them from reaping the harvest of pleasant days and leisure time toward which they labored for so long. The vast majority have dependents or other family obligations, and so they must find employment. Under our present unfair law, the pensioner has great difficulty in finding employment, because employers do not want him walking off the job when his earnings have reached $1,200. If he assures the employer that he will remain—then he takes a financial loss, after the $1,200 mark has been reached.

We deny him the right to hold a steady job when we limit his earnings; we are now inflicting hardship upon millions of pensioners who prefer to work rather than be forced into substandard living conditions.

A paradoxical situation exists in that if a pensioner makes a fortune from investments or annuities or prizes, or even gambling, he can still receive his full social security payments—we only prevent his receiving "wages" or "earnings."

Another important amendment provided in my bill would enable men to collect full social security benefits at the age of 60; women could collect at the age of 55.

Many workers who wish to retire at an earlier age and are financially able to do so, when they can include social security payments, should be given that opportunity. They are entitled to enjoy their later years in leisure after many years of toil. Also, by retiring, they provide vacancies for the younger men and women who need employment.

There are many workers in poor health and barely able to do so, who must struggle to work in their last years because they cannot afford to quit, looking forward to the advanced age of 65 and their social security benefits and a lessening of their hardships. A realistic approach to the problem of assisting our senior citizens is to reduce the age limits as provided in my bill.

I urge the Congress to take speedy action on this legislation; I trust that it will be passed in this session of Congress.

Sylvester C. Smith, Jr., Nominated President-Elect of the American Bar Association

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. ADDONIZIO. Mr. Speaker, the State of New Jersey, and the 11th District in particular, is proud and happy at the latest honor to come to one of its most distinguished sons, Sylvester C. Smith, Jr., of West Orange.

Mr. Smith, who is general counsel of the Prudential Insurance Co., has been nominated president-elect of the American Bar Association. He will be elected to the post at the annual meeting of the association in August and will assume office in 1962.

His selection reflects the esteem and admiration Mr. Smith's brilliant attainments have earned for him from members of his profession—sentiments which are shared by all who have the privilege of knowing him. To his exceptional legal ability, evident in the demanding post occupied by him with Prudential Insurance Co., Mr. Smith adds a broad understanding of world problems and a keen interest in securing world peace through law.

He has been an able and eloquent champion of the development of world law to achieve peace, freedom and progress for all peoples. Lawyers have historically been the leaders of men, and the Nation is fortunate that a man of Mr. Smith's caliber will head the legal association in a critical era. The leadership, courage, wisdom and foresight that have characterized his career will make him a most effective president. In honoring him, the Bar Association honors itself. I should like to insert at this point an editorial from the Newark News of February 22 together with interesting sketches of Mr. Smith's record that appeared in the Newark Star Ledger of February 22 and the Newark News of February 26.

[From the Newark News, Feb. 22, 1961]

HONOR FOR MR. SMITH

The presidency of the American Bar Association is an honor that only two New Jersey men have enjoyed, Cortlandt Parker and Arthur T. Vanderbilt. Now a third, Sylvester C. Smith of West Orange, general counsel of the Prudential Insurance Co., has been chosen for this distinguished post.

The bar association forehandedly selects its president a year in advance. Mr. Smith will take over the presidency in 1962.

The ABA presidency has been adorned by such names as Root, Taft, Choate, Davis, Hughes and Kellogg. Mr. Smith's associates in the bar have known him a long time and they have no doubt of his qualifications. Neither have his friends and neighbors in New Jersey.

[From the Newark Star Ledger, Feb. 22, 1961]

NAME PRU'S SMITH TO HEAD BAR GROUP

CHICAGO.—Sylvester C. Smith, general counsel to the Prudential Insurance Co. of America and one of New Jersey's most distinguished attorneys was nominated yesterday president-elect of the American Bar Association.

The nomination puts him second in line to succeed to the presidency of the 99,000-member lawyers association, within which he has held top policymaking positions for the past decade.

Smith will be formally elected president-elect at the August convention of the ABA in St. Louis. He will succeed to the presidency a year later.

NATIVE JERSEYITE

A native Jerseyite, and a resident of West Orange, Smith, 66, is a former Warren County prosecutor, a post he held from 1921 to 1938.

He is treasurer of the New Jersey Highway Authority, vice president of the Newark Bureau of Municipal Research, and a past president of the New Jersey Bar Association and the Association of Life Insurance Counsel.

Born in Phillipsburg, Smith, the son of an attorney, graduated from Lafayette College in 1915 and was awarded his law degree at New York Law School in 1918.

He holds an honorary doctor of law degree from Lafayette, awarded in 1951.

He joined the Prudential in 1938 as an associate general solicitor and in 10 years rose through the positions of general attorney and general solicitor to the top legal post in the company.

HELD MANY ABA POSTS

He was at one time mentioned as a candidate for attorney general of New Jersey at the beginning of Governor Meyner's first term in 1953.

Within the American Bar Association, Smith has served as chairman of the rules and calendar committee and chairman of the House of Delegates, the top policymaking body of the organization.

He is a fellow of the American Bar Foundation and he holds membership in the American Judicature Society, the New York City Association of the Bar, and the Essex County Bar Association.

A widower, he lives at 1 Merrywood Drive, West Orange, and is a member of the Essex Club, the Down Town Club, Harkers Hollow Golf Club, Northampton County Country Club, Bay Head Yacht Club, and the New York Yacht Club.

[From the Newark Sunday News, Feb. 26, 1961]

ATTORNEY OF MANY TALENTS: SYLVESTER SMITH'S CAREER VARIED

(By Thomas J. Hooper)

With equal facility and a note of authority, Sylvester G. Smith, Jr., of West Orange, lawyer, can talk about the Cat Swamp murder case, complex legal problems in the insurance sphere, and the rule of law as a substitute for the rule of force in international relations.

Each of those subjects represents major achievements in the 44-year law career of the new president-elect of the American Bar Association and each is close to his heart and mind. They represent, too, the diversity of a career which has carried a young country lawyer to the top of his profession.

Smith, who is general counsel of the Prudential Insurance Co., one of the most desirable private legal positions in the Nation, won the nomination for president-elect of the 100,000-member ABA last Tuesday at the group's midyear meeting in Chicago. He will be elected to the post, for which he is unopposed, at the annual meeting in St. Louis in August and will become president the next year.

It was as Warren County prosecutor in the early 1920's that Smith became involved in the case with the unlikely name—the "Cat Swamp" murder. The crime took place in Sussex and he was assigned to it as a special deputy attorney general.

GRIM SUBJECT

Although the subject was a grim one—an innocent bystander was gunned down in the aftermath of a silk truck robbery—Smith recalls his role in the case fondly, the grimness eased by the passage of years. The case had all the elements of a moden TV thriller—gang leader surrounded in a hideout, an exchange of shots, his ultimate capture and two dramatic courtroom trials that sent two men to the electric chair and imprisoned a third for life.

It was back in the 1920's, too, that Smith cultivated an interest in the American Bar Association, an interest that grew with the years and found him deeply involved in the association's myriad affairs.

He became a close collatorator of Arthur T. Vanderbilt, later chief justice of New Jersey, in affairs of the bar, and nominated Vanderbilt for the ABA presidency in 1937. Smith will be only the third New Jerseyite to hold that high office in its long history. The other was Cortlandt Parker.

Smith, who politically is a Democrat, identifies himself with the forward-looking wing of the ABA, which has a strong conservative faction. He prefers "forward looking" to "liberal."

This approach was demonstrated at a meeting of the State bar association last November in Atlantic City during a debate on the so-called Connally reservation which restricts this Nation's role in the International Court of Justice.

LIBERAL APPROACH PLEA

Although the older members of the bar appeared to be generally against repeal, Smith stood up and in the deliberate manner of the slow-speaking country lawyer, a trait he has not lost, he gave a reasoned plea for a liberal approach. In the vote that followed, his side won.

In that vein, also, he believes that the association should be ahead of its time in promoting the administration of justice. He promises that under his presidency, the ABA's program of "world peace through law" will be continued.

"We in the ABA," he pointed out, "are trying to get the legal profession to lead the movement among all lawyers of the world for the development of principles whereby nations will decide their differences by rules of law rather than by armed force."

He has been in the forefront in other areas when a forward-looking approach was called for. He was chairman of the committee which in 1936 created the ABA's house of delegates as a representative body and the next year he was a leader in opposing President Roosevelt's attempt to "pack" the Supreme Court.

One of his interests is legal education, a continuing education, that is, that goes on so long as a lawyer remains at the bar.

One of the defects of the bar which he believes reflects a weakness of the law schools is the scarcity of good trial lawyers.

"We must impress upon the law schools that we need more young men trained in advocacy and trial work," he asserted, adding that he is an admirer of the English system that separates lawyers into office and trial men.

Smith is a native of Phillipsburg, the son of a noted lawyer and Warren County prosecutor. After Lafayette College, he won his law degree from New York Law School, and went into practice with his father. At 21 he was Phillipsburg town attorney and when he was named prosecutor in 1921 at the age of 26 he was one of the youngest ever to hold that post anywhere in the State.

He served as prosecutor until 1938 when he was named associate general solicitor of Prudential. He became general solicitor 3 years later and general counsel in 1948. He now directs a staff of more than 160 lawyers.

He has many interests outside his profession, including the Garden State Parkway, which he serves as a member of the operating unit, the New Jersey Highway Authority.

Smith's wife, the former Thalia E. Graff, died in 1958. He has two daughters, Mrs. William S. Bigelow of Maplewood and Miss Thalia Barbara Smith, who lives with him at 1 Merrywood Drive, West Orange.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 2, 1961

Mr. THURMOND. Mr. President, I invite the attention of Senators to two editorials against Federal aid to education which have been published in the two daily newspapers of Rockford, Ill., on February 21, 1961. The editorial from the Rockford Register-Republic is entitled "Federal Aid With Strings," and the editorial from the Rockford Morning Star is entitled "Nothing Worse for Schools."

I ask unanimous consent that both of these editorials be printed in the Appendix to the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Rockford (Ill.) Morning Star, Feb. 21, 1961]

NOTHING WORSE FOR SCHOOLS

President Kennedy has sent to Congress a $5.6 billion program of massive Federal aid to education that would put the heavy hand of Federal bureaucracy in every public school district in the Nation and extend it in our colleges. The program calls for Federal grants of $2.3 billion for public school construction and teachers' salaries over the next 3 years. This outlay would provide an average of $19.75 for each child in average daily attendance the first year, increasing to an average of $24.22 the third year.

In addition to the grants to public elementary and secondary schools, the Kennedy education program would establish a 5-year program of State-administered scholarships for "talented and needy" college students at a total cost to the Federal Government of $577,500,000. The scholarships, averaging $700 each, would go to 25,000 students the first year, 37,500 the second, and 50,000 thereafter. Colleges and universities would get $350 a year additional for each scholar-

ship winner enrolled. The college-housing loan program would be extended 5 years at a total cost of $1.3 billion. A similar program for erection of college classrooms would cost $1.5 billion. The aggregate of these costs is $3.3 billion.

The Kennedy program faces tough sledding in the Democratic-controlled 87th Congress. The Democrats controlled both the House and Senate in the 86th Congress, but Kennedy, as a member of the Senate, and his fellow advocates of heavy Federal spending for local school districts couldn't get such measures through Congress. The politically motivated Federal-aiders pushed through the Senate's bill which would have poured out $1.8 billion over a 2-year period for school construction and teachers' salaries, but the measure died in the House.

House Speaker SAM RAYBURN recently served notice that he will continue to oppose Federal contributions to teachers' salaries. The House has shown that it is aware of the danger of permitting the Federal Government to usurp the responsibility of local school districts in providing for teachers' salaries. Former President Eisenhower last year stated well the case against use of Federal funds for teachers' salaries when he said the Federal Government should not be in the business of paying a local official.

President Kennedy's proposals are somewhat more modest than the recommendations of his special task force on education, headed by President Frederick Hovde of Purdue University, which would have provided $30 for each student in average daily attendance. The issue involved, however, is the intervention of the Federal Government in local school districts. Illinois and other States are handling very well their responsibility of providing for classrooms and teachers' salaries. The taxpayers of the communities and States are continuing to meet the real needs of their elementary and secondary schools. The Kennedy program would shunt aside local responsibility, which has made the American educational system strong.

[From the Rockford (Ill.) Register-Republic, Feb. 21, 1961]

FEDERAL AID WITH STRINGS

President Kennedy, operating on the theory that States and local communities cannot meet their educational needs despite ample evidence to the contrary, has proposed a program of Federal assistance to schools and colleges that goes far beyond the most liberal measures submitted to Congress in recent years.

The President's omnibus program, carrying a price tag of $5.6 billion, would include a 3-year program of outright grants to States for use in building classrooms or raising teachers' salaries, with the States deciding how the money would be spent. It would set up a 5-year college scholarship program, for up to 212,500 talented and presumably needy students at public and private colleges and universities; grants would average $700 per student, with the college getting an additional $350 for each Federal scholarship holder.

Long-term, low-interest loans to colleges and universities for dormitory construction would be continued 5 years, and a similar loan program would be established for construction of college classrooms, laboratories, libraries, and related academic facilities.

Mr. Kennedy made a strong bid for southern support by proposing a formula under which poorer States would get relatively larger grants for public elementary and secondary schools. Federal funds could go to racially segregated schools if the States so decided, but no money could be used for private schools established to circumvent Court-ordered desegregation.

Use of Federal grants to pay teachers' salaries will be strongly opposed in Congress. House Speaker RAYBURN objects to that program, and President Kennedy himself has said there are 90,000 nonqualified people now teaching. Federal funds thus would go to the inept as well as the proficient teachers; no distinction could be made.

The President did not accept the recommendations of his special task force on education that calls for Federal grants of $30 per pupil, plus $20 per pupil in poorer States and another $20 per pupil in cities of over $300,000. The Kennedy plan calls for a minimum of $15 per pupil and an average of $19.75 per student, with Mississippi getting the highest per capita grant of $29.67.

Illinois would be one of 10 States getting the minimum of $15 per pupil. It is the old story of taking tax money from States which are meeting their school needs—and whose needs are the greatest—and of redistributing it among States unwilling to assume their responsibility.

Without Federal aid, 680,000 classrooms have been built since World War II. Those constitute more than half the classrooms now in use. In the past 10 years, teachers' salaries have increased 99.8 percent while the cost of living went up 23.6 percent. These figures clearly show that neither building needs nor teacher salary scales have been neglected.

Federal aid to education, despite all pious claims to the contrary, will mean Federal control. There are plenty of strings attached to President Kennedy's proposals—from formulas to special inducements.

Address by Vice Adm. John T. Hayward on the Occasion of the 154th Annual Meeting of the Washington Light Infantry

---

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith a magnificent address by the distinguished Deputy Chief of Naval Operations, Development—Vice Adm. John T. Hayward—on the occasion of the 154th annual meeting of the Washington Light Infantry, that venerable National Guard organization in Charleston, S.C., which bears the name of the Father of our country, delivered in Charleston on February 22, 1961:

Admiral Hayward's address not only inspires us to fight for our traditions and the perpetuation of our way of life, but it reminds us of the need for eternal vigilance if this Republic is to remain a republic:

It is a distinct pleasure to be here tonight to talk with you. Today is the birthday of the father of our country, George Washington, whose name your organization has carried for many years. You have a fine tradition and one to be proud of in these days. Tradition is not the evil some people would have us believe. Past is but the prologue and as Santanya said, "A nation who doesn't know history will be forced to repeat it." So in many ways it is good to look into past events and the challenge freemen have had to face in history.

We face a challenge now as serious as freemen have ever faced in the history of man. Twentieth century America is not accustomed to an underdog strategy that was expertly used by our Founding Fathers in time of peace as well as war.

Our people seem puzzled and upset that many choose the opposition over us. We are inclined to believe in many cases we are in a popularity contest. The truth of the matter is we are paying the penalty of leadership. In every field of human endeavor he that is first must live in the white light of publicity.

In art, literature, in music, in industry the reward and the punishment are always the same. The reward is widespread recognition; the punishment—fierce denial and detraction.

When a man's work becomes a standard for the world it also becomes the target for the shafts of the envious few. If your work is mediocre, you will be left alone—if you achieve a masterpiece you will set a million tongues wagging. Whatsoever you write or paint or play or sing or build, no one will strive to surpass or slander you unless your work be stamped with the seal of genius. Long after a great work has been done, those who are disappointed continue to cry out that it cannot be done.

Our forefathers led by George Washington did it. We are the leaders. We must understand the penalty of leadership. If the leader truly leads, he remains the leader.

This brings me to the point where I want to tell you how we in the Navy are facing this challenge to free peoples and to our country. Like our country we have a penalty of leadership to understand and use. We have been the leaders in our profession. The control of the sea has been ours for so many years people give little heed to the problems many psuedo experts lulled our people into thinking it didn't matter in the age of atom weapons. Fortunately, many people didn't believe this.

The slight shudder that went through the United States when Cuba became a forward Communist base was greatly diminished for we controlled the seas—the surface, the depths and the air above the seas. We would have been in a very tenuous position if this had not been the case.

The problem at sea does not resolve itself into a simplified solution. As you know, the Polaris system is our strategic system in the deterrent phase of our national policy. However, there are many other things we must do at sea. The reason for this, of course, is quite apparent in that the free alliance is, in truth, a maritime alliance. We have to be able to protect our power across the sea to help our friends and, if necessary, bring the battle to the enemy. This force must be a discriminating one to permit our policymakers to use only the necessary tools to accomplish our objective.

When one is faced with a limited situation it is necessary that we not incinerate our friends, but help them. We must have precise delivery of weapons on military objectives. The underlying philosophy that governs the entire approach to control of the sea by the Navy is based on the fact that we must be prepared to wage not only nuclear war, but war with conventional explosives. This requirement thus brings into being all of the present forces we have to do our tasks. It is not a question of submarines or something else, but of a balanced approach to the entire spectrum of the problem.

The tools of war change rapidly and always will. The Communists realize this and have instituted a change in philosophy on

war. They are the students and strong proponents of the protracted conflict covering man's entire actions so it is difficult to draw a line between actual war and peace any more. I am sure you have read of their approach to this protracted conflict philosophy. Their actions may vary and change and blow hot and cold but their objective is still clear; that is the domination of the world.

George Washington understood the value of seapower and his writings bring this forth very strongly. His greatest victory at Yorktown was dependent on seapower. Our country has long understood this necessity and particularly the people of this area. When you saw the U.S.S. *George Washington* proceeding to sea last fall you were witnessing one of our best technical developments in this time period. This system is as great a break with the past as was the famous *Monitor-Merrimac* battle. However, I want to emphasize it only meets one part of the challenge.

The rest of our technical developments and progress are made in many other areas. Our manned aircraft which, contrary to popular opinion, are not going to be replaced by missiles, are the finest in the world.

This vehicle will be with us for many years for obvious reasons. The flexibility of the manned vehicle, particularly in situations across the sea where we are helping our friends, is quite apparent. We most assuredly will use missiles from this vehicle to assist us in our job.

The Navy really does its tasks with many different types of vehicles. The manned airplane is only one. You have the surface ship and the submarine that go along as partners in the team. They all have their job to do and can do a particular task better than either of their partners. As an example, the airplane is the best vehicle for area search, whereas the surface ship can keep to the seas in all kinds of weather and for many days. The submarine is our best listening platform in the job of keeping control of the depths of the sea.

As we have a Marine Corps which is part of the Navy-Marine team which has the job of obtaining control of objective areas, we are also faced with many of the problems that the Army has. So you see with these various tools to do the job we have all the tasks in development that are associated with aircraft, ships, submarines, and amphibious forces. This makes our program very broad and complex.

I am glad to be able to tell you of many good things we have done in these various areas. I will just give you a few highlights. Our new Vigilante North American plane holds the world's record for load carrying to altitude.

It carried a thousand kilograms to 91,000 feet. Our McDonnell fighter goes at speeds well over twice that of sound. Our nuclear submarines are unsurpassed in the world today. We have combatant nuclear surface ships in process. These are all accomplishments that the United States can be proud of. We have many problems we have not solved, however, and I would be the last one to give you the impression that all is fine. However, I do say that we will work as diligently on these and as hard to make the same progress in the years to come.

Back in the days when our country was fighting for its existence John Adams wrote the commissioning document for the Brig *Lexington* in 1775. It was to be commanded by John Barry. The document stated the following: "Neither nature nor art have partitioned the seas into empires. The treasures of the oceans belong to all free men. Upon this ultimate foundation do I build and go forward to fortify freemen's rights".

I want to assure you that the U.S. Navy will continue to live up to that document and it could have been written today for the commissioning of any one of our new ships.

Support for Resolution To Curb Back-Door Federal Spending

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. PELLY. Mr. Speaker, I am proud to be an author of a similar resolution to the one introduced by my distinguished friend and colleague from Arizona [Mr. RHODES]. This is a resolution to curb the budget-busting practice of a backdoor approach to the Treasury. Therefore, I was delighted to find that editorial support for Mr. RHODES' measure had been given in the San Diego Tribune.

Under unanimous consent, I include this excellent newspaper endorsement in the Appendix of the CONGRESSIONAL RECORD for the benefit of all House Members—especially those eight members on the Committee on Rules who voted against this resolution to restore control of the Federal purse to Congress:

CONGRESS SHOULD IMPROVE HOLD ON REINS OF FEDERAL SPENDING

Representative JOHN J. RHODES, Republican, of Arizona, has introduced a resolution in the House of Representatives aimed at tightening congressional control over Federal spending. It deserves the thoughtful attention of every believer in sound fiscal practices, in and out of government.

"Every year millions of dollars are spent by the Federal Government without ever going through the regular appropriations process," RHODES said. "It is known as backdoor spending and, in my opinion, clearly violates the intent of the Constitution."

Back-door spending has been attacked by Senator HARRY F. BYRD, Democrat, of Virginia, and others in Congress, and by the U.S. Chamber of Commerce.

Congressional control over the Nation's purse strings has been weakened over the years in several ways.

Some Federal programs, involving the expenditure of vast sums, are administered through trust funds which do not show up in the budget and over which the Congress has no control. These are for such things as social security, highways, and railroad retirement. There is little chance of changing this type of financing, once it is established.

There is an opportunity, however, for greater congressional scrutiny of proposed legislation that carries its own built-in financing. Once such measures pass, future Congresses are committed to cough up the cash for them, come what may.

Thus, it would be possible for a Congress, under a runaway spending spur, to put the Nation in hock for years for vast and costly projects which our elected officials in the future couldn't lay a finger on.

Another way in which your taxes can be spent without specific congressional appropriation is through the contract authority of Federal agencies.

Most projects involving Federal spending of your money usually go through two steps. There is a bill to authorize such an undertaking. Then there has to be an appropriation of money to get it going.

But, as RHODES pointed out, under the Second Liberty Loan Act of 1917, drafts may be made on the Treasury to pay for programs which have been authorized, but for which the money has not been appropriated. Contracts may be entered into obligating the Government for amounts which Congress then must authorize because it has no other choice.

RHODES' resolution would prohibit Federal agencies from creating obligations by contract in advance of appropriations. It also would prohibit legislation authorizing the spending of Federal funds which have not been provided for in congressional appropriations acts.

The Constitution states: "No money shall be drawn from the Treasury, but in consequence of appropriations made by law."

The Founding Fathers gave the House of Representatives the responsibility of initiating all revenue bills. The Senate may propose or concur with amendments, as on other measures.

The sound theory behind this power to tax and to spend in the House is that Representatives, having to face election every 2 years instead of every 6 (as do Senators), are more readily responsive to the will of the people.

This control, exercised through elected Representatives, should not be weakened by back-door spending.

Oil King School Provides Care for Migrant Children

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. SISK. Mr. Speaker, we have been told about the deplorable living conditions of migratory laborers in this country during the past few years. I realize these conditions are very bad.

For example the television program "Harvest of Shame" showed evidence of these conditions. But I believe this program tended to cause a distorted picture of the situation because it did not show what is being done to improve the conditions of migratory laborers. It did not show the positive efforts of many State and local governments to solve the problem of migratory farmworkers.

I am going to speak of the efforts taken by Californians because I am most familiar with their problems. This does not mean I believe the problems are being completely resolved and that there are not things yet to be done. It means that I believe the problems of these workers are not being ignored.

I want to give an example of the positive efforts of one school in my district. The Oil King School near Coalinga has done an excellent job of training children of migratory farmworkers. This is pointed out in an article in the Fresno Bee on February 19, 1961, by Karl M. Kidder.

I want to commend the school; its superintendent, Mr. William S. Green; its faculty; and the school trustees for an exceptionally good job in providing for the needs of migratory workers' children. Also I want to commend Mr. Kidder for writing this story and the Fresno Bee for publishing it. This is a real public service in news reporting.

So my colleagues may learn about the positive program at Oil King School, I would like to read Mr. Kidder's article:

OIL KING TEACHERS PROVIDE FOOD, CARE AS WELL AS INSTRUCTION FOR MIGRANT CHILDREN

(By Karl M. Kidder)

COALINGA.—When Rodolfo Ruiz shows up at the Oil King Elementary School near here without his shoes—which is often—he is not scolded. Instead, the 11 year old is hustled into the dispensary closet to find another pair.

Then, with his sister and four brothers, Rodolfo sits down at a table in the cafeteria and has a piping hot breakfast before classes start for the day.

The lack of a scolding for losing his shoes, and getting another pair and breakfast, are all part of the curriculum of what perhaps is the richest school district in Fresno County.

Almost 90 percent of the pupils are children of migrant agricultural workers. Their stay at Oil King depends on how long their parents are able to find work on the big west side ranches, or how long it is before they harken to whatever it is that keeps them on the move.

William S. Greene is the superintendent and principal of this unique school. His goal is to instill in as many of his pupils as possible the idea that perhaps their present home environment is not the best in the long run.

"We hope to turn out children who will want to get away from their environment," Greene says. "We want to help them obtain a liking for education and an appreciation of the fact they are American citizens."

Quite a chore, but Greene and the eight teachers on his staff, as well as the custodians, the bus drivers and the three members of the board of trustees are dedicated to reaching it. They work on the principle that each child at Oil King needs, and gets personalized attention.

To accomplish this, the faculty has established and supports its own social service fund. From it they buy glasses for children with eye problems, shoes for many like Rodolfo whose parents cannot furnish them, and warm clothing and dental work.

The rule at breakfast, provided by the fund, and at lunch, paid for by the State and Federal Governments, is "fill them up." Second and third helpings are there for the asking.

Oil King has no parent-teacher association, so the faculty conducts its own rummage sales and frequent parties for the children. Food, favors, and prizes are paid for out of the social service fund.

The entire curriculum has the blessing of the district's trustees—Frank L. Lemmon, the chairman; O. Harry Niemela and L. James Anderson. They represent some of the major oil producers in this district whose taxes largely support the school.

Oil King started as a school about 1905, with a one room plant. In 1958, the district completed construction of a modern plant which cost $237,000. In the old days, most of the pupils were from oil families. One of these was Mrs. Harriet Whitney Haney, who attended the school in the 1920's.

Mrs. Haney went back to Oil King in 1952 as administrative assistant, and drives to school from Coalinga every day, about 10 miles. Greene commutes from Hanford. The Ruiz children and the others, take a long bus ride every morning to get to class.

The Ruiz youngsters are typical of a large segment of the pupils. Six of them attend Oil King. Four others stay home with their mother. Their father works when there is a job available. They share a spotlessly clean one room shack in a labor camp.

Greene admits the nomadic character of the parents of his charges makes his curricular goals difficult of attainment. He has an idea of following, if he can, the scholastic progress of the youngsters after they leave Oil King.

"I have in mind a 10-year study to try and determine whether our program is as effective as we think it is," he says. "These people need money for necessities, surely. But this is not the greatest need. We want to give the children, at least, a sense of direction by proving to them we are interested in each one individually.

"We go overboard to establish a common bond of friendship and a feeling that all of us at Oil King have the welfare of everyone at heart. The children are told that we hope they will go on to higher grades, if the time comes when they must leave here.

"That is when the true test of our program will come—what happens after the children leave."

As for Rodolfo, his mind already is made up. Instead of following the crops, as his father has done for years, Rodolfo wants to be a policeman. His twin brother, Adolfo, says he will become a teacher just like those at Oil King.

Education Problems

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. ELLSWORTH. Mr. Speaker, I want to bring to the attention of my colleagues the first installment of a two-part commentary on the subject of Federal aid to education, written by an extraordinary ordinary citizen of my district, Dr. Eugene Myers. As soon as I have the second installment, I will bring it to the attention of the House. Dr. Myers' comments appear as guest editorials in the Iola Register, Iola, Kans.:

EDUCATION PROBLEMS

DEAR MR. SCOTT: Your editorial, "Fallacy," in Thursday's Register, reveals a very important issue in the question of Federal aid to education. It also brings up two questions related to the issue, namely: Is this lot of money really necessary from either the State or Federal Government in the amount proposed? And, why did the Federal Government happen to get involved in the education question which has for 170 years been considered to be an area delegated to the States or to the people, by the Constitution?

Let's reverse the order and try the second question first. I doubt that all experts immediately look to the Federal Government to solve any problem which exists. Is it not more reasonable to suspect that when problems exist which the local and State governments have failed to recognize or to attempt to solve, that the Federal Government finally is called upon to find a solution?

Following are a few areas where we as individuals may soon observe three fingers pointing toward ourselves as we point one toward the experts and bureaucrats:

1. Failure to modernize our tax system to keep pace with modern economic changes. The ad valorem tax system began in Kansas 100 years ago at which time most wealth was visible and tangible. In an agricultural society, lands, homes, livestock, crops, household goods and implements were easily seen and taxed. Real estate mortgages, which were recorded, were almost the only investment of money. It was natural that these things formed the basis of revenue of all kinds of government support. But there have been changes.

2. There has been a steady decrease in assessed valuation of tangible property in the face of increased building and of property values. (A decrease of $2 million in assessed valuation in Allen County in 2 years, and at least one school district has a smaller valuation now than it had 25 years ago during the depression.)

3. Although we have had some form of State aid to elementary schools for some years, State aid to high schools was first adopted in 1955, and together this revenue amounts to only about 23 percent of the total school revenue. Now that the threat of Federal aid is imminent the cry is heard. "Education is a responsibility of the State."

4. Education is a responsibility of the State. Yet read the front page of Thursday's Register where a bill has been introduced into the House to consolidate small districts. The bill would allow a minimum of 300 pupils in grades 1 through 12. After authorizing the expenditure of $150,000 for a State school survey, which recommended a minimum of 1,200 pupils from kindergarten through grade 12 where possible (and there are only 18 counties in the State which in 1958, had fewer than 1,200 pupils and one of these had already obtained a county district), the legislature proposes to cut the school size by 75 percent from the recommendations of the survey report.

How well the State accepts the responsibility.

5. The only reason for school districts is for the purpose of maintaining a school to teach children. Yet there are 318 districts (1958) which levy some taxes, yet maintain no school. Two such districts were reported in Allen County as of 1958.

6. We continue to allow—even foster and promote—the continuance of small, inadequate high schools which may exceed $2,000 per pupil to maintain, through the complicated formula for distributing State aid. Smaller schools are allowed more money per pupil than are the larger schools. No one considers what the taxpayer is buying. Schools of 100 pupils or less may receive $275 per pupil, but schools of over 500 receive only $160 per pupil. Schools of 100 pupils may offer a total of 18 to 25 courses in the 4 years, while schools of over 500 pupils may offer from 50 to 75 courses in the 4 years.

The taxpayer is getting gypped—but it is the children that end up bankrupt.

Defense Strategy

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1961

Mr. COHELAN. Mr. Speaker, numerous concerns have been expressed recently that President Kennedy is planning to make major changes in the Nation's military strategy. These concerns have most frequently focused on the conjecture that the President is planning to downgrade nuclear weapons in favor of conventional armaments.

James Reston, writing in the New York Times March 1, has placed the problem of our national defense and President Kennedy's intentions in sharp perspective. He has astutely pointed out the administration's desire to achieve a

balance in our weapons arsenal which would enable us to deal with conflicts of both a global and limited nature.

This is a particularly pertinent article and I commend it to my colleagues:

DEFENSE STRATEGY

(By James Reston)

WASHINGTON, February 28.—There was a big flap in Washington today over reports that the Kennedy administration was changing its military strategy.

This seems to be the way it is every time a new administration comes to power. Much the same thing happened when Harry Truman gathered his military advisers in Key West to discuss the roles and missions of the various services. It happened again during the Eisenhower administration when John Foster Dulles announced the strategy of massive retaliation. And now it is Secretary of State Rusk who is in the middle of a swirl of rumors and denunciations.

Actually, there is nothing sensational in what is happening. The Secretary is merely saying what President Kennedy promised would be done during the campaign. He is talking of the need to strengthen the conventional or nonnuclear arsenal of the United States.

There is no plan in the State Department or anywhere else, so far as one can discover, to weaken the arsenal of nuclear and thermonuclear weapons. John J. McCloy, President Kennedy's disarmament chief, was hard at work today in preparation for the forthcoming conversations on arms testing and limitation, but pending agreement on an inspected arms control system, the production of the big weapons is going to continue.

What is going on, therefore, is a study to make sure that the Nation has the weapons and the air and sea lift to meet small or conventional wars with conventional weapons.

THE LOPSIDED ARSENAL

In the opinion of many officials here, our defenses had become lopsided, with big weapons to fight the big nuclear war nobody really expected, and with not enough small weapons to fight the limited wars almost everybody thought were bound to come.

The situation in the Formosa Straits illustrates the problem. There some of our best military minds felt that we did not have enough conventional weapons and air-sea transport readily available to meet a large-scale invasion from the Chinese mainland.

This raised the serious question of having to use nuclear wepaons to deal with such an invasion and thus to risk the danger of nuclear retaliation.

All the administration is saying now is that we must be in a position to make the punishment fit the crime. Neither the President nor the Secretary of State wants to use a sledge hammer to kill a fly.

This does not mean that they would stand aside and rely wholly on conventional weapons if the superior ground forces of the Communists were overwhelming our ground forces in areas vital to our security. No doubt any weapon would be used to assure the safety of the command in direct conflict with the Communists.

The administration does, however, want to be sure that it is prepared for any kind of conflict anywhere from Korea or the Congo to Cuba and that it is able to deal with the intermediate ranges of conflict without resorting to nuclear weapons except as a last resort.

HOW MUCH IS ENOUGH?

Two things have happened to force a review of the Nation's military strategy. This country now has enough atomic and hydrogen weapons to wipe out most of mankind so that while new and more spohisticated weapons are being developed all the time, the need for unlimited production of nation-busters is obviously declining.

Also, the strategy of massive retaliation with nuclear weapons, while preventing the big war, has not deterred the Communists from waging small conventional wars. For example, the threat of nuclear retaliation did not keep the Communists from continuing the limited war in Indochina.

Accordingly, President Kennedy has already ordered more strenuous training for antiguerrilla warfare and no doubt more scientific brains will be diverted to improving the capacity of the armed services to fight this kind of war more effectively.

All this, however, was foreshadowed weeks and months ago in public statements, and if this had been candidly explained, as it was finally by Secretary Rusk to the Foreign Relations Committee today, much of the usual hullabaloo over Pentagon "leaks" and inaccurate reporting would have been avoided.

Evaluation of the United States Versus the Soviet Union in Space

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, little more than 2 years ago the United States was startled by the orbiting of the first sputnik. In the intervening brief span of time this country has made unusual progress in the field of space exploration and technology.

The National Aeronautics and Space Administration has prepared an evaluation of the United States versus the Soviet Union in space which I am sure will be of interest to all Members.

I also insert in the CONGRESSIONAL RECORD an editorial on the same subject which appeared in the Washington Star February 28, 1961:

FATEFUL RACE

In a special report prepared for the House Science and Astronautics Committee, our top experts on the subject have declared flatly that the United States is far ahead of the Soviet Union in space research.

The report's main point is simply this: that although the Russians have achieved a number of spectacular "firsts" in putting heavy payloads into the high heavens (important propagandistic attainments made possible by the present superiority of the thrust power of their rockets), their spatial experiments are as yet not nearly so advanced, sophisticated or informative as ours. Further, we have sent into orbit and on interplanetary probes many more vehicles than they have, and the vehicles have been much better instrumented than theirs in terms of capacity to send back to earth data of great significance.

Thus, in the words of the report—which was drafted by the National Aeronautics and Space Administration at the request of Representative OVERTON BROOKS, chairman of the House committee—our country "has picked up momentum from a standing start and now surpasses the U.S.S.R. effort in its breadth of interest, originality of concept, and volume of research. * * * The contrast between the output of the U.S.S.R. space research program and our own cannot have failed to impress the Soviet scientific community itself and some elements of the U.S.S.R. Government. The contrast is, in fact, so great that we may expect a counter-reaction from the U.S.S.R. in the form of a greater emphasis on scientific effort in their space program."

In reporting all this to the House committee, NASA's experts have been at pains to warn, implicitly, that the United States—even though it appears to be very definitely ahead in the science and technology of space, as President Kennedy has said—has no reason whatever to feel the slightest degree of complacency. Far from it. Actually, as the experts have indicated, our country cannot hope to win this fateful race unless it undertakes something like the 10-year program that NASA has already advocated before Mr. Brooks' committee—a program designed to enable us not merely to catch up with the Russians in rocket thrust power, but also to wrest leadership from them, permanently, on the roadway to the stars.

Calling for expenditures of around $1.5 billion a year, this program would entail no fewer than 260 major experiments in space between now and 1970. The experiments, involving progressively heavier payloads and increasingly difficult missions, would include the launching of revolutionary new satellites, round-trip manned orbital flight around the earth, exploratory lunar shots, deep probes in the neighborhood of Mars and Venus, and numerous other celestial ventures preparing the way for human travel to the moon and beyond, conceivably in the early 1970's.

True, for this sort of thing the Russians have propulsive power far superior to ours. But it is a power that we can be confident of equalling, if not excelling, in the next 3 or 4 years. Meanwhile, judging from NASA's latest evaluation, we enjoy a decided advantage in the know-how of space, and this is something we ought to be able to maintain as we move ahead—as fast as possible—in developing rocket booster systems much more tremendous than anything now existing on either side of the Iron Curtain. This is how we shall win the race if it is ever to be won.

EVALUATION OF U.S.S.R. VERSUS U.S. OUTPUT IN SPACE SCIENCE

GENERAL IMPRESSIONS

The average quality of Soviet scientific research is the same as that of the United States. This conclusion is based on perusal of their literature, and on personal contacts between scientists of both countries in conferences held between 1956 and 1960, both in nuclear physics and in areas related to space research.

The range of ability of Soviet scientists is also approximately the same as that of U.S. scientists. A few are brialliant, as good as this Nation's best physicists, and the majority do conventional but necessary research.

It is a striking fact that in spite of equality of talent in the United States and U.S.S.R. science, nearly all of the highly original work in space research has come out of the U.S. program. The first two sputniks had little or no scientific apparatus, apart from a biological experiment; and while the third sputnik had a great deal of interesting geophysical apparatus, this flight was never followed up by the second generation of experiments with which the Russians could have capitalized on their experience with Sputnik III. However, these references relate only to basic scientific investigations and not to technology. The U.S.S.R. has achieved a number of successes, such as the Lunik III moon shot and the recent space cabin launchings, which were great achievements in space technology.

The United States, on the other hand, has been responsible for:

1. First detection of trapped energetic particles (Van Allen belts);

2. Launch of Explorer VI and Explorer VII energetic particle satellites; measurement of energy distribution and time variation of radiation in the Van Allen belts; coordinated observations of radiation belt and red auroral arc over Colorado;

3. Launch of Pioneer V space probe; communication with earth out to distance of 23 million miles; study of properties of interplanetary space; detection of cloud of energetic particles sweeping over Pioneer V en route from sun to earth at the time of a solar storm; correlation between ground-based atmospheric data and data received simultaneously from Pioneer V in deep space and from Explorer VII near to earth;

4. Correlation between solar weather activity and atmospheric density, via satellite drag measurements; first measurement of air density at an altitude of 1,000 miles, using drag data from the Echo satellites;

5. Launch of the ionosphere satellite; measurement of ionospheric disturbances electrons and ions in the upper atmosphere; measurement of ionospheric disturbances during the solar storm of November 1960;

6. Satellite contributions to geodesy and celestial mechanics: Precise measurement of variations in sea level, gravitational perturbations by sun and moon, effect of solar radiation pressure;

7. Tiros cloud-cover photographs; and

8. Echo passive communications experiment.

Another significant fact appears in the comparison of United States and U.S.S.R. papers published in the periodical literature or presented at international conferences: The United States and U.S.S.R. papers are of comparable quality but the number of United States papers greatly exceeds the U.S.S.R. contribution. This very sizable discrepancy in the level of effort constitutes the most significant difference between the United States and U.S.S.R. space research programs. The U.S.S.R. has capitalized skillfully on the advantage in payload capability which it acquired from its early successes in missile development. It has concentrated on a small number of flights, and has chosen its missions for these flights with close attention to their impact on world opinion and their effectiveness in reinforcing the public image of U.S.S.R. strength in science and technology. Yet the U.S.S.R. has done relatively little in space science, considering the resources at its command in payload capability. It is very difficult, for example, to understand why the U.S.S.R. failed to follow up the remarkable flight of Sputnik III with further geophysical satellite experiments.

Perhaps the explanation is that Soviet scientists are not in close contact with their program planning authorities, and have not been able to participate effectively in the formulation of their space program. The gathering momentum in the U.S. space science program, and the remarkable variety of fields in which highly original results are being obtained, must be credited, in part, to the insistence of U.S. authorities on the development of a sound and broadly based program in space science, and to their continuing efforts to enlist in the program an increasing fraction of the country's scientific community.

There is another circumstance which has probably had a major effect in determining the relative levels of effort in United States and U.S.S.R. space research. This is the fact that the United States has had a tradition of strong support for research over the last several decades, and has developed a powerful base for scientific operations in this country, including many large laboratories with highly trained staffs. This is true in nuclear physics and solid state physics, as well as in the earth sciences and other disciplines from which space research draws its problems and techniques. The base of research in the U.S.S.R., on the other hand, is not as deep as in the United States. It is new and relatively thin. For this reason the U.S.S.R. scientific effort is spotty, with excellent work in certain fields on which Soviet interest has been concentrated for one reason or another, whereas work in other fields of equal scientific interest is poor or entirely missing. Because the United States has tremendous scientific resources at its command it has been able to develop a vigorous program in atmospheric physics, auroral phenomena, geophysics, sun-earth relationships, and trapped particle research without appreciably reducing its level of effort in other fields of research. We have in fact developed an entirely new field to a very high level of activity in the short space of 2 years. The Russians may not have the reserve strength in laboratory facilities and trained talent to do this without disrupting established areas of research, and perhaps this is the primary reason for the paucity of their achievements in space science thus far.

It is important to note that this reflects the situation at the present moment. In making an assessment of the Soviet position it is also important to look at the rate of change of their effort, in addition to the current level. The U.S.S.R. is believed to be training its scientists at a rate several times greater than the rate of training in the United States and it is entirely possible that the U.S.S.R. may strengthen the weak spots in its scientific structure and move ahead in an effort to overtake us in every important area of research, in the course of the next several years or perhaps the next decade. It may be noted again that the intrinsic ability of the Russian scientific community is in no way inferior to that of our own; and that, therefore, there is no reason why they cannot overtake us in this period if we do not continue to develop and to strengthen our program.

Figures on the number of papers presented at international meetings suggest that the Russian level of effort in space science has not increased appreciably between the Moscow CSAGI meeting in 1958 and the Nice COSPAR meeting in 1960 in spite of the greater rate of training of scientists in the U.S.S.R. It is possible that the talent being trained in this area is still at the graduate student level and has not yet reached the level of responsibility at which this effect can be felt in Soviet contributions to conferences. It is the impression of a U.S. authority on upper atmosphere theory that this is the case in atmospheric physics and in sun-earth relationships. In any case, the contrast between the output of the U.S.S.R. space research program and our own cannot have failed to impress the Soviet scientific community itself, and some elements of the U.S.S.R. Government. U.S.S.R. scientists may succeed soon in persuading their government to initiate a more vigorous program in space physics under the stimulus of our own successes in this field.

In summary, the U.S.S.R. space science program has dissipated some of its momentum after the initial successes of the sputnik launchings; while the U.S. program has picked up momentum from a standing start, and now surpasses the U.S.S.R. effort in its breadth of interest, originality of concept, and volume of research. However, we should anticipate that the Russians will respond to this challenge with a more vigorous space science program of their own in the future.

SPECIFIC IMPRESSIONS

Quality of presentations

U.S.S.R. papers cover the same range as those in the United States. The top stratum of individual talents in the U.S.S.R. scientific community is also comparable to ours, according to impressions gained in meetings and by an examination of the translated literature. The Russians have very capable people working in some fields, such as cosmic radiation and energetic particle measurements and are also strong in mathematics, celestial mechanics, astrophysics, seismology, and observational aspects of oceanography. In certain other areas of the earth sciences and astronomy, either directly or indirectly related to the space program, the U.S.S.R. makes a less favorable showing in comparison with the work in the United States.

For example, the U.S.S.R. has published little on the geodetic applications of satellites, a most fruitful field of endeavor in the United States, and a major source of important developments in geophysics. The analysis of satellite orbits to obtain density data also has been carried out at a high level of activity by several groups in the United States. In particular, the discovery of a correlation between satellite drag and solar activity, one of the most significant developments in this field, was made by L. G. Jacchia at the Smithsonian Astrophysical Observatory, and his work has since been refined and extended to reveal important diurnal variations. There has been relatively little U.S.S.R. work published on this important and interesting problem.

It is possible that this particular field of geodesy is considered sensitive by the Russians, and that for this reason a substantial amount of U.S.S.R. material has been held back from publication.

Quantity of presentations

The United States stands strongly to the fore in the quantity of work, in its volume, and in the number and variety of fields in which we have been doing original work. The contrast between the level of our effort and that of the U.S.S.R. appears both in the comparison of presentations at international meetings, and in the survey of U.S. and U.S.S.R. scientific periodicals.

Presentations at international meetings. Two major international conferences in space research have been held in the last few years. The first of these was the CSAGI Conference in Moscow, in July 1958. The United States sent a large delegation to this Conference. U.S. contributions to the program were varied and extensive, and gave an impression of strength in our incipient space science effort, in spite of the weakness of our vehicle capability at that time. The next international meeting in the field was arranged by COSPAR, and convened in Nice in January 1960. The number of U.S. and U.S.S.R. contributions to these meetings is listed below:

	United States	*U.S.S.R.*
CSAGI (1958)	39	15
COSPAR (1960)	40	10

The U.S. and U.S.S.R. numbers are about the same for the two meetings. It might be noted that the Goddard Theoretical Division alone read five papers to the COSPAR meeting, half as many as the entire U.S.S.R. contribution, and ranging over the fields of celestial mechanics, geodesy, the moon and planets, meteorites, and trapped particles. A perusal of the table of contents of the recently published proceedings of the COSPAR Conference drives home the point that the U.S. program contrasts very favorably with the U.S.S.R. effort in its breadth and in the fullness of participation of the American scientific community.

Volume of publication. A bibliography has been compiled of U.S.S.R. periodical literature in space physics, appearing in reputable Soviet publications (proceedings of the Soviet Academy, Geophysics Bulletin of the Soviet Academy, Soviet Astronomy, Soviet JETP, Soviet Physics Express) and also the (British) Journal of Planetary and Space Science.

For comparison, NASA has examined the contents of the Journal of Geophysical Research for the years 1958–60. The Journal of Geophysical Research is the principal medium for the publication of space physics in the United States and contains approximately half of all papers on this subject and related topics in the earth sciences.

The Soviet series, Artificial Earth Satellites, has not been included in the U.S.S.R., lists because it does not constitute a part of the periodical literature on current research to be compared with the Journal of Geophysical Research.

The table below lists U.S. and U.S.S.R. contributions gathered from these sources for the years 1958–60. The 1960 figures are extrapolated from the volume of publications for the first 6 months of 1960.

	1958	*1959*	*1960*
U.S.S.R.	5	8	17
United States (JGR)	5	64	111

We see that the United States and U.S.S.R. efforts started at comparable levels, that the U.S.S.R. effort has shown a moderate increase in the last three years, and that the U.S. effort has shown a greater increase. It appears from these figures that the United States has reacted vigorously to the challenge of the first Russian successes in space rocket technology. Our pace program has been able to draw on the resources of U.S. research, and has greatly exceeded the modest increase in the Russian effort over this period.

The contrast in the level of United States and U.S.S.R. efforts in space physics is in fact so great that we may expect a counter-reaction from the U.S.S.R. in the form of a greater emphasis on scientific effort in their space program. There may in fact be a hint of this development in a recent unusual display of initiative on the part of the U.S.S.R., through its proposal for the organization of a conference on problems of lunar research to be held in Leningrad in December of this year under the joint auspices of the U.S.S.R. Academy and the IAU.

Detail of publication; openness at meetings. In the first post-sputnik period, U.S.S.R. reports on satellite experiments and calculations were sketchy, both at meetings and in the periodical literature. The papers lacked the details needed for the formation of an independent judgment regarding the validity of results presented. It should be noted that this secretiveness was confined to the rocket and satellite area; in other fields of physics and the earth sciences U.S.S.R. publications and presentations have been relatively open and detailed. Another factor may contribute to the sketchiness of some of the Russian presentations. It appears to be the practice of the U.S.S.R. to send a relatively small delegation of leading Soviet scientists to these meetings, who then read review papers on the work of a large number of their colleagues. For this reason some of the areas of research covered in their papers may lack the intimate understanding of the subject which is required to answer pertinent questions.

Since 1958 U.S.S.R. publication policy seems to have relaxed to some degree, although U.S.S.R. publications on orbit data and tracking systems are still virtually nonexistent.

Timeliness: Originally, the U.S.S.R. appeared to favor newspaper releases over publication in the professional literature, for early reports on their satellite results. After the Moscow CSAGI meeting, this situation improved considerably. Preliminary notes on U.S.S.R. results have been appearing as promptly as in the United States, about 6 to 8 weeks after launch, for the most interesting results. For example, Lunik I was launched on January 2, 1959, and the Vernov note describing cosmic ray and trapped particle measurements was submitted for publication in the U.S.S.R. Academy proceedings on February 25, 1959. Lunik III was launched early in September of 1959, and the paper describing the photographs of the hidden face of the moon was received for publication in the U.S.S.R. Academy proceedings on November 14, 1959.

These examples refer to the publication of preliminary notes, equivalent to our letters to the editor. The detailed papers appear somewhat more slowly than in the United States, typically after a delay of 12 months versus 6 months in the United States.

Channels of communication: As noted above, in the first period of the U.S.S.R. space program, the Russians appeared to prefer qualitative newspaper accounts for the layman to quantitative publication in serious scientific journals. An examination of the literature suggests that this is no longer the case. As in the United States, newspaper articles on achievements of exceptional interest appear in the Russian press or public media at approximately the same time their preliminary scientific reports are published. The impression of this earlier, but no longer valid circumstance, has persisted because the newspaper stories are picked up immediately and translated quickly by the Department of Commerce and other agencies for distribution to Government personnel; whereas the academy proceedings and scientific literature do not appear in translated form until a much later time. For this reason U.S. scientists often obtain their first reports on interesting results through a Pravda translation.

It appears that the Moscow CSAGI meeting was responsible for the change toward normal channels of scientific communication and away from the public press. The detail presented in the U.S. papers at the Moscow meeting, and the strongly critical attitude of the U.S. delegation regarding Soviet suppression of detail, seemed to have had a beneficial effect. The dates of publication quoted above for the Lunik I and Lunik III experiments demonstrate this clearly. It seems reasonable to say that Soviet officials and scientists have shown a positive response to U.S. criticism in these matters, and can no longer be censured as severely on this basis as in 1958. An exception is the area of tracking systems and orbit information, in which U.S.S.R. disclosures are still inadequate.

Project Hope

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. CHAMBERLAIN. Mr. Speaker, in seeking for ways toward a better understanding between the peoples of the world, Project Hope has been unparalleled in its universal appeal. Here is a program that everyone can support, regardless of his political beliefs.

I was profoundly touched recently when I heard of the efforts of 107 kindergarten and first grade students of the Walnut Street School, Lansing, Mich., to assist Project Hope financially through their own personal efforts. Since I attended this school myself, I can't help but have a personal pride in their accomplishments.

It was a privilege recently to read a heart-warming letter from Miss Armida Stewart, a teacher at the school, describing how these children raised money for the project—even to making and selling peanut butter and jam sandwiches.

Under leave to extend my remarks, I would like to have this letter appear in the RECORD so others may share the experiences of these compassionate children. They worked long and hard to raise a total of $30 to help Project Hope to continue the good work and good will of the American doctors, nurses, dentists, and medical technicians who are assisting to train and teach their southeastern Asian counterparts. As you will see from the letter, there was particular interest in the project because physically handicapped children in the city of Lansing are sent to the Walnut School for special attention.

I want to say that it is through efforts such as were made by these youngsters that this true people-to-people concept of Americans aiding the less fortunate of other nations can continue. I hope that all of us here in the Congress will show our full endorsement of the efforts and work of the People-to-People Health Foundation, Inc., Project Hope, and especially to those dedicated American men and women who are aboard the SS *Hope* the first.

The letter follows:

WALNUT STREET SCHOOL,
Lansing, Mich., January 15, 1961.

WILLIAM B. WALSH, M.D.
President, the People-to-People Health Foundation, Inc., Washington, D.C.

DEAR DR. WALSH: This check for $30, to the Hope project is sent with a true desire for friendship from 107 Kindergarten and first graders to Indonesian children who need medical care. These children have all had immunization against polio. They think that shots are no fun but will keep them safe and well. They want other children to have protection too.

The children earned half of the money by making and selling peanut butter and jam sandwiches in their own school. A group of mothers, pleased with the childrens efforts, donated bridge club prize money and one grandparent also sent a contribution.

The Walnut School children were motivated in this project through the theme, Understanding Our Friends, Near and Far adopted by our school for study during American Education Week, 1960.

Ours is also the orthopedic school for the city of Lansing and our normal children must learn to work, play, live with, and help the abnormal group. The children visited in the clinic and the special rooms. They learned about the work of the doctors, the physical therapists, the occupational therapists, the speech therapist, the visiting nurse, the dietician, and the special room teachers. They learned to appreciate the courage, effort and achievements of these children. Here were our nearby friends to know and understand.

Through My Weekly Reader and articles in Life magazine, the newspapers, and TV, the children found out about the *Hope* ship and its mission of bringing medical aid and education to people in far away places.

They constructed a ship, modeled after pictures of the *Hope* ship, to display in a store window during American Education Week. They converted the doll corner into a hospital ship where they cared for sick dolls that recovered with amazing alacrity only to be desperately ill again in a short time.

The culmination of their project was the sandwich sale and milk and sandwiches for

themselves at afternoon lunch period. Enclosed are additional pictures of the children and their ship. I hope this résumé of our project may be of some help to you.

Sincerely,

ARMIDA STEWART.

India: Its Plans, Its Progress

EXTENSION OF REMARKS
OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of my colleagues an article recently published in the Miami Herald of Miami, Fla. It was written by Mr. Don Shoemaker, editor of the editorial page for this leading newspaper, following his completion of an extensive tour through the young nation of India.

Mr. Shoemaker is a graduate of the University of North Carolina at Chapel Hill and began his newspaper career in that State as a reporter and telegraph editor of the Greensboro Record and in 1941 became associate editor and director of the editorial page for the Asheville, N.C., Citizen, a morning paper. He later was appointed executive director of the Southern Education Reporting Service and resigned this post to accept that of editor of the editorial page for the Miami Herald.

During the course of his career, Mr. Shoemaker founded and was first president of the Thomas Wolfe Memorial Association, a community enterprise memorializing the famous author of "Look Homeward, Angel." He was president of the Asheville Community Chest in 1951, was a director of the Asheville Chamber of Commerce, active in State organizations, and chairman of the first United Nations Association in western North Carolina. In 1952, he received a fellowship from the American Christian Palestine Committee for travel in the Middle East. From this trip came "Middle East Journey." In 1957 he planned and edited "With All Deliberate Speed," published by Harper & Bros. and now in its second printing. The book was widely and favorably reviewed and was featured on such TV programs as the CBS "Report in Integration," Dave Garroway's "Today" show, "Night Beat," and "Celebrity Parade."

As editor of the editorial page of the Miami Herald, Mr. Shoemaker will have additional opportunity to enhance what is already an outstanding career in the field of journalism. The Miami Herald is not only one of the finest newspapers of our country, it is distinguished in its keen interest in international affairs and its vital understanding of the problems and desires of people of all nations of the world.

Articles of this nature perform a very vital public service. Through the medium of firsthand, detailed accounts such as this by one of our country's leading newspapermen, our people are given background data on the history and social and political traditions of other peoples of the world. This is basic to a realistic understanding of their efforts to overcome their present-day problems and attain the goals they have set for themselves.

The first of Mr. Shoemaker's penetrating analyses of 20th-century India deals with the rampant poverty of 95 percent of its more than 400 million population in the midst of a land which is wealthy in agricultural production and industrial potential. This article undertakes the development of the 5-year plans under which this 13-year-old country has attempted to overcome its problems.

The article follows:

INDIA—ITS PLANS, ITS PROGRESS

(By Don Shoemaker)

(This is the first of four articles in a comprehensive report on the India of today—and tomorrow. It was written after an extensive tour of the multi-faceted young nation.)

One out of every seven humans is an Indian.

According to his racial strain he may be dark (Dravidian) or light (Aryan). According to his schooling, he may be functionally illiterate which the majority are, or he may be one of India's many philosophers. According to his income, which averages $60 per capita per year, he may enjoy hardly any of the fruits of life or a moderate portion.

But in any case he is an Indian, and proud of it.

His country is about half the size of the United States with more than twice the population. Disease is being conquered, but his life expectancy at birth is still only 32 years.

If he lives in the hill country of the north, where the great Himalayas were an agelong buffer against conquest, he huddles over a fire in winter. If he comes from the open spaces of the south, he hovers over a fan.

His land has nearly every known crop, except beef cattle (beef cannot be eaten by the Hindu), and practically all minerals save lead and tin.

His forests are rich in teak, satinwood and palm, and he has more land under irrigation and more power dams building than any other nation.

Yet India is desperately poor. The Government's planning commission estimates that 95 percent of the people live in poverty. And India's total income in the first year of independence was less than that of the United States for a single month.

One reason is that there are so many Indians—1,000 of them to the square mile in one State.

Another is the lack of domestic capital. Only 1 million Indians are rich enough to pay any income tax whatever.

Still another is the vast illiteracy of the people, most of whom live on the land and are accused of lack of ambition by their ambitious leaders. It will take another 5 years just to complete the enforcement of any kind of compulsory education—and then for the very young children only.

Further, India, despite its avowed pacifism and apparent neutralism, has enemies. Red China's antics in the past year have shaken India into a state of jitters.

To overcome most of these problems the people are engaged in a massive social experiment. They call it democratic planning.

Everything in India today is planned step by step—income, industry, farming, education, transportation, culture—even families.

By teaching methods of birth limitation and by sterilization of willing parents of large families, India hopes to halve the birth rate and cut the size of the average family from 6.5 children to 3.

To realize all these aims, India since 1950 has operated under a series of 5-year plans. A third plan begins in 1961 and a fourth is taking some shape.

Planning is arranged in two sectors, private and public. In the 1954 words of India's Parliament, the broad objectives of economic policy should be to achieve the socialist pattern of society.

The word "socialism" is flashed about liberally, and it gives some visitors the creeps. The fact is, however, that in real terms private enterprise is growing in India and that foreign investors are clamoring to get a lock on this huge, protected market. From oil in Assam to rubber factories in the Punjab, economic opportunity excites the foreign businessman. At the end of 1958 U.S. investments totaled well over $150 million, and they were just beginning to grow.

The work of the planning commission is carefully scrutinized by Parliament, which is dominated by the conservative Congress Party.

Parliament and the Congress evidently are not alarmed by the Socialist pitch of Prime Minister Jawaharlal Nehru and others. Nor are some foreign observers. A highly placed exindustrialist calls it an exercise in semantics.

Mr. Nehru simply explains that India must get done what it needs to get done by any available method, whether capitalistic or socialistic. Often the Government seems to prefer private enterprise, as in the case of aluminum, fertilizer and coal production.

In any case the emphasis is on democracy, and the heroes are Jefferson and Lincoln. There is complete freedom of the press and of assembly, and though the Government has in force a "preventive detention" law (under one like it the British Raj kept hundreds of Indian nationalists on ice), less than 100 persons have been in jail at any one recent time. Most of these are not subversives or political enemies of the state but criminals with notions of common violence.

On the farms, where nearly 80 percent of the people live and work, the Government is engaged in a giant community program which aims to elevate village life.

The countryside is organized in blocks of 100 villages containing 60,000 to 70,000 people. Each group of six or seven villages is served by what we would call a farm agent. These men and women are trained at centers which are often backstopped by consulting American farm specialists under contract with American universities. Each village has a council, or panchayat selected by the people. It in turn helps select state assemblymen, and so on up to Parliament. Indian democracy starts at the bottom and works up.

The third 5-year plan which begins in 1961 builds upon the success—some partial—of the two previous plans. It contemplates the spending of $21.4 billion. The first plan cost about $9 billion. New taxes must be found to finance the investment in the public secter, which is India's official term for Government spending.

The obvious base for much of this increase in expenditure and (it is hoped) in national income is new and expanded industry. Indians are now making more goods than you could shake a sikh at.

Even so, national demands and expectations continue to rise. India has reached what Mr. Nehru calls the age of the bicycle, at least one of which every Indian seems to own, and it might be added even in a mud-hut village where the people literally have no possessions but the clothes on their backs.

With the aim of doubling its per capital income to $120 by 1973–74, India would cut its village population to 50 percent of the whole and put the rest to work productively in the new factories. "Fifteen years from

now," says Deputy Planning Chief J. J. Anjaria, "we should have a fairly strong industrial base."

Whether India can beat its way into the 20th century via this route and not get bady sideswipped is the question of primary pertinence. The planning commission sets forth:

"The directive principles of state policy in the constitution have placed before the country the objectives of securing adequate means of livelihood and the right to work, to education, and to public assistance in cases of unemployment, old age, sickness and disablement, and in other cases of undeserved want. They have also affirmed that for realizing these goals, the ownership and control of the material resources of the country should be distributed as best to subserve the common good and that the operation of the economic system should not result in the concentration of wealth and economic power in the hands of a few. The successive 5-year plans which the country undertakes have to keep in view these basic considerations."

To the Indian who resembles Bill Arp's Confederate veteran, this may sound like heaven. Along with Johnny Reb, he has nothing and nothing to get nothing with and nothing to put nothing in.

To the student of government and economics it would appear that India is flirting with totalitarianism.

Whatever it is doing, it is humming. To the old Asia hand, the Orient was never like this.

Forty-third Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. GARMATZ. Mr. Speaker, for 21 years the Republic of Lithuania has been a Republic in name only. In actual fact, it has been under Communist domination with no freedom, no liberties, only oppression and practically slavery. Why then observe the 43d anniversary of Lithuanian Independence Day on February 16?

The fate of Lithuania and other Baltice nations, among the first to be swallowed up by Russian Communist expansion, serves as a reminder to all of us that freedom is not free. It is not something that once gained, is a permanent possession. The people of Lithuania know what it means to have had it and to have lost it. Rather, freedom requires eternal vigilance, something to be constantly defended from foes from within as well as from without; something we must be ready to protect at all times and to fight for when necessary. I am confident that the people of Lithuania would be eager to fight to regain their freedom, if given the opportunity to do so. Therefore, the annual observance of the anniversary of their former independence, should strengthen all of us in our determination to continue our efforts, through every available means, to restore freedom and independence to Lithuania and the other captive countries. It should bring encouragement and strength to the people of those captive countries, knowing that they have not been forgotten but are of continued concern to the free peoples of the world everywhere, not only to those of Lithuanian descent.

As it has done for many years, the Council of Lithuanian Societies of Baltimore, commemorated Lithuanian Independence Day with a dinner, which I was privileged to attend. Both the Governor of Maryland and the mayor of Baltimore proclaimed February 16 as Republic of Lithuania Day in the city and State:

THE STATE OF MARYLAND, EXECUTIVE DEPARTMENT—GOVERNOR'S PROCLAMATION: REPUBLIC OF LITHUANIA DAY, FEBRUARY 16, 1961

Whereas the people of Lithuania were deported, enslaved and mass-murdered by Communists; and

Whereas their religion was repressed and their freedom obliterated; and

Whereas a liberty-loving nation is not easily shackled, particularly when that nation has known the experience of freedom; and

Whereas the plight of Lithuania is known to all of us, and we cannot, as Americans, take a casual view of the loss of freedom by any nation; and

Whereas those whose ancestors came from Lithuania, and their friends of all national origins, join them in their hopes and prayers for liberation from communism.

Now, therefore, I, J. Millard Tawes, Governor of the State of Maryland, do hereby proclaim February 16, 1961—the 43d Birthday of Lithuania's Independence—as Republic of Lithuania Day in this State, in recognition of the faith and courage of the Lithuanian people and in support of all men who fight for freedom.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, this 30th day of January, in the year of our Lord, 1961.

By the Governor:

J. MILLARD TAWES.
LLOYD L. SIMPKINS,
Secretary of State.

PROCLAMATION BY MAYOR J. HAROLD GRADY, CITY OF BALTIMORE, DESIGNATING THURSDAY, FEBRUARY 16, 1961, AS "REPUBLIC OF LITHUANIA DAY" IN BALTIMORE

Whereas on the 16th day of February 1919, the Republic of Lithuania declared itself an independent, free and sovereign nation; and

Whereas in later years, this freedom-loving nation was crushed and destroyed by the imperialistic expansion of Soviet Russia; and

Whereas despite this oppression, the freedom-loving people of Lithuania behind the Soviet Iron Curtain, and those of Lithuanian descent throughout the entire world, constantly work and pray for the hour when, once again, their homeland can enjoy the status of a free, sovereign, and independent nation; and

Whereas annually, on February 16, Baltimoreans of Lithuanian descent join with those of Lithuanian ancestry throughout the world to observe the Independence Day of Lithuania, and to offer up prayers that their beloved mother country will soon be enabled to enjoy the blessings of freedom; and

Whereas the city of Baltimore is justly proud of its many citizens of Lithuanian birth or ancestry, who have made important contributions to the civic, social, and religious life of our community, and who have been enabled to enjoy here the freedom denied their compatriots in Lithuania.

Now, therefore, I, J. Harold Grady, mayor of the city of Baltimore, do hereby proclaim Thursday, February 16, 1961, as Republic of Lithuania Day in Baltimore, and do urge all our citizens to join with the people of Lithuania, and people of Lithuanian descent throughout the world in praying and working to the end that the blessings of liberty and justice will again return to Lithuania and to the entire world.

In witness whereof, I have hereunto set my hand and caused the great seal of the city of Baltimore to be affixed this 7th day of February, in the year of our Lord, 1961.

J. HAROLD GRADY,
Mayor.

Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to include also a resolution unanimously adopted by the council on this occasion:

Resolution unanimously adopted at the 43d annual banquet held under the sponsorship of the Council of Lithuanian Societies of Baltimore, held on the 11th day of February 1961, at the Lithuanian Auditorium, Baltimore, Md.

"Whereas the 16th day of February will mark the 43d anniversary of the declaration of independence by the people of the Republic of Lithuania; and

"Whereas the people of Lithuania are still suppressed by tryannical Communist dictatorship, her culture distorted and many thousands of her people deported into concentration camps; and

"Whereas the U.S. Government on July 23, 1940, condemned the aggression and refused to recognize Soviet occupation of Lithuania: Now, therefore, be it

"*Resolved*, That we Lithuanian Americans reaffirm our adherence to American democratic principles of government and pledge our support to our Government and our Congress to achieve lasting peace, freedom and justice throughout the world;

"*Resolved*, That our Government's foreign policy include the liberation of the enslaved Baltic and Central European nations as an integral and inseparable part of its program;

"*Resolved*, That toward the attainment of this end the U.S. Government introduce to the United Nations General Assembly the problem of enslaved Lithuania and demand that the Soviet Government withdraw all occupation troops and control from Lithuania, allowing the people to freely select their own form of government and to reestablish Lithuania as a sovereign nation with strict guarantees; and be it finally

"*Resolved*, That copies of this resolution be submitted to His Excellency, John F. Kennedy, President of the United States, to the Secretary of State, to the Ambassador to the United Nations and to the Members of the Congress representing the free State of Maryland.

COUNCIL OF LITHUANIAN SOCIETIES OF BALTIMORE,
THOMAS G. GRAY, *President.*
LUCY LASKAUSKAS, *Secretary.*

Right, You Are Right?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following letter appeared in the Daily Princetonian of February 27.

This letter is written by an undergraduate and is for that reason especially noteworthy.

We are being told that this is the era of youth, although in Washington we see little but retreads, back where they were 10 years ago. So it is refreshing to see a young man of independent views expressing himself clearly and intelligently. This is a hopeful sign for the future of our country. It is true progress when youth can break away from the teachings of the past and chart out his own course into the future.

RIGHT, YOU ARE RIGHT?

To the CHAIRMAN OF THE DAILY PRINCETONIAN:

Upon hearing of the faculty and administration reaction to the pending "aid to education" bill, I was not only surprised, but shocked. I was surprised that such learned men as Dean Brown and Mr. Strong should be blinded by the bright lights of Utopia when the record clearly shows that as state aid to education increases, so do undesirable state controls. And I was shocked to hear a statement that dripped greed: "Princeton would stand to benefit from both aid to construction projects and scholarship grants." I believe that Princeton is currently involved in raising $53 million for both construction, scholarship and faculty benefit; on the other hand, I see other worthy colleges—Connecticut College in New London, for example—whose total endowment is not even 10 percent of what we are raising in one five year period. And we want more. With this attitude prevailing, perhaps we do need Federal supervision to insure a more equitable and reasonable distribution of the nation's wealth.

Unlike most "conservatives," I am not worried that Federal aid to education would "limit states' rights"; my principal concern is that educational standards be raised. But I am fully convinced that local governments can do a more effective job of raising educational standards than can the Federal Government.

There are many areas in the country which view themselves as being unable to raise their education standards. However, as Arthur Krock pointed out in Thursday's New York Times, the facts show that these areas are more "unwilling" than "unable." The area which first comes to mind is the South. Accustomed to Federal assistance in developing their resources in the postbellum period, and used to coddling in the Roosevelt era, the Southern states simply do not know how to employ their local resources to the best possible advantage. The truth of the matter is, according to the President's Council on Education in 1958, that there are only 230 school districts in the country which have reached their bonded borrowing limit with regard to school construction. There are roughly 42,000 school districts in America. Thus, advocates of Federal aid are discussing a plan that is needed by only one-half of 1 percent of the country.

The local communities—which, I believe, are responsible for the education of the local children—have been far from stingy in their support of the local schools. Since World War II, Americans have built 550,000 classrooms at a cost of $19 billion, which was largely raised at the local level and State level. These classrooms have provided space for 15 million school children; during the same period of time, the school age population has increased by only 10 million. I think then, that the traditional method of handling school problems is more than adequate.

Still, however, the school problem is acute in one specific area: quality. There is no question that the quality of public schools, especially at the grade school level, can be improved. And again, the most effective way of improving the local school is to bring pressure upon the local board of education.

There are many good arguments in favor of Federal aid to education, the most outstanding of which is that local communities are negligent in taking the required action to improved local educational facilities. It is necessary, I believe, to prod these erring areas into action; but a gift of money does not prod, it only gives a false assurance that now everything is OK. That more money can be put to good use cannot be argued—who cannot use more money? But additional money is not a panacea; the real answer to the education dilemma is in internal improvement of the schools through force at the local level.

I am confident that if Americans do not panic but view the problems in a safe perspective and chart a sound course for improvement, that improvement will come.

Respectfully,

GEORGE H. GILLIAM.

Address by Dr. Wernher von Braun

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, recently, Dr. Wernher von Braun spoke to a group of American educators about the important part that youth can play in the advancement of the space age. Because of the major role that Dr. von Braun, director of the Space Agency's Marshall Space Flight Center, is playing in this new field of endeavor, I feel his words will be an inspiration to our young people.

Under unanimous consent, I therefore insert Dr. von Braun's remarks in the CONGRESSIONAL RECORD:

It is a distinct pleasure for me to meet here with you in one of the more widely known and respected cultural centers of our country—Columbia, S.C.

It is always a special privilege for me to speak before such a distinguished body of educators. Because it is you and your associates who are not only the instructors of tomorrow's leaders, but the inspiration as well.

But it is actually our American youth, more than the older generation, that has a profound understanding of the significance of the space age. Young minds appreciate the true meaning of the big rocket and rocket boosters that we are developing for the exploration of space.

With the mystery of outer space beckoning so strongly to them, it is little wonder that some impatient young men and women want to leapfrog the difficulties of mastering physics, chemistry, English, calculus, and so forth. They want to take off immediately for the moon without first getting a basic, well-rounded education. But it pays, as I know from an early experience, to get a good grasp of the fundamentals.

Shortly after the Russian sputniks went up there was a wave of breastbeating surging throughout America. Wild statements were made that American schools were no match for the Soviet educational system.

Although it is true that the Soviets have challenged us very seriously in the number of engineers they graduate each year, the quality of our schools need not fear a comparison. American schools need not apologize for the great men they have produced. Men of science, letters, and the arts. Men like the inventive Wright brothers; Harold C. Urey, Nobel Prize winner, chemist, nuclear physicist, astronomer, and one of the outstanding scientists of the 20th century; Architect Frank Lloyd Wright, a bold and brilliant innovator; Lee De Forest, inventor of the vacuum tube; William Faulkner, another Nobel Prize winner.

So you see, our schools can indeed produce the kind of men and women needed to accept and meet the challenge of space. At the same time, our schools can fulfill their obligation of giving to the Nation and the world—and even to the universe—men and women of culture, integrity, imagination, initiative, and usefulness to humanity.

I should like to mention a thought expressed by one of my principal associates, Dr. Ernst Stuhlinger. He said that the destiny of our Nation is being decided in today's classrooms. He also pointed out, "We have come to value a nation according to the esteem in which it holds its scholars."

I subscribe fully to these thoughts, and I should like to add this: More than ever before, our young people are being stimulated to develop their imagination, to satisfy their curiosity about the universe.

I would even go so far as to say that man's curiosity is the world's greatest resource. It is what sets his apart.

For example, the curiosity of a handful of people about "What makes the sun shine?" led to the discovery of the thermonuclear reaction.

When a 20th-century bacteriologist became curious about some physical reactions taking place in common mold, his efforts to satisfy his curiosity gave us penicillin.

But it takes curiosity and more than our schools, our teachers, and our parents to inspire today's youth to greater heights. It also requires informed public opinion. Our youngsters must obtain their knowledge of the world and of themselves from all possible sources in order to develop into mature, responsible citizens.

Every medium of information should be available to our younsters so they miss no chance to become—and remain—informed people. Even more so than some of their parents, I hope.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Award by Reserve Officers Association of the United States to Hon. Hugh Meglone Milton II, Former Under Secretary of the Army, as Minuteman of 1961

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. THURMOND. Mr. President, last week the Reserve Officers Association of the United States held its annual midwinter national council meeting in Washington. The members of this association came from all parts of the United States and our oversea commands, including Europe and the Far East, to discuss programs relating to national security with our military leaders as well as leaders of the Congress.

They had a most interesting and productive meeting as many of us who attended can testify.

One of the highlights of the week's program was the annual ROA national council banquet at which the "Minuteman of 1961" title was bestowed upon the Honorable Hugh Meglone Milton II, the former Under Secretary of the Army. General Milton is well known to all the Members of the Congress as well as to many of the citizens of these United States for the great service he has rendered to his country. This award was made in behalf of ROA by the distinguished senior Senator from the State of Georgia and chairman of the Senate Committee on Armed Services, the Honorable RICHARD B. RUSSELL, who himself was the winner of this award in 1959. Because of the significance of his remarks I am submitting the text of his presentation here, together with a telegram referring to the occasion from the Honorable Wilber M. Brucker, the Secretary of the Army under whom Mr. Milton served. I should also like to include in these remarks the text of the introductory remarks by the national president of ROA, Maj. Gen. Carl T. Sutherland. General Sutherland is the commander of the 81st Infantry Division. This outstanding Army Reserve division draws its men from Tennessee, Georgia, and South Carolina. I have personal knowledge of the very fine service of this division. It has also been a privilege to be a close friend of General Sutherland, and I know of his dedication to the welfare of this Nation as well as his outstanding confidence in serving as president of this great association of citizen-reservists. I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the address and telegram were ordered to be printed in the RECORD, as follows:

TELEGRAM

My presence as speaker at Rainbow Division reunion in Columbus prevents my attendance at Reserve Officers banquet tonight at which time my valued friend Hugh Milton is scheduled to receive your magnificent Minuteman of the Year Award. I can imagine no one more deserving of this superlative honor than Hugh Milton who has been a stanch, loyal, and enthusiastic champion of the preservation of the whole vital reserve structure for the defense of our country. Please convey hearty congratulations to Hugh Milton and count me present in spirit on this occasion as he receives this well deserved tribute.

WILBER M. BRUCKER.

REMARKS OF HON. RICHARD B. RUSSELL, OF GEORGIA, IN PRESENTATION OF ROA AWARD TO HON. HUGH MEGLONE II, MINUTEMAN OF 1961, FEBRUARY 24, 1961

Mr. President, honored guests, members of the Reserve Officers Association of the United States, ladies and gentlemen, it is a great personal pleasure, as well as a high privilege, for me to present you to our honored guest.

I have always had a high regard for the Reserve Officers Association of the United States.

One of the most highly prized honors of my life was that which came from you 2 years ago.

The symbol of that award hangs in the most prominent place in my office, beside my desk. It is a continuing source of inspiration, and satisfaction, to me.

I know that this feeling of pride, tempered with genuine humility, is shared by the two others here on this platform, who have received this honor during the past several years—Gen. David Sarnoff and Col. Bryce Harlow.

More than a century and a quarter ago, that great orator of our early history—one who inspired our forefathers in those "Days of Giants"—Daniel Webster told his fellow countrymen:

"A sense of duty pursues us ever. It is omnipresent, like the Deity. If we take to ourselves the wings of the morning, and dwell in the uttermost parts of the sea, duty performed or duty violated is still with us, for our happiness or our misery. If we say the darkness shall cover us, in the darkness, as in the light, our obligations are yet with us."

We honor a man tonight who symbolizes the citizen-reservist tradition, who always has been pursued, it seems, by a sense of duty. The honors he has achieved in a life rich in service to his country, and deep in devotion to our national ideals, are too numerous to recount.

Let us consider at this moment the significant acts of his life—acts on his part—which are notably accountable for this award.

As a boy, he left his college campus as a volunteer and was a member of the great American Armed Force which fought and won the war to make the world safe for democracy.

It was during that war that he earned his first commission as a lieutenant.

With victory in World War I, he went back to the campus of the University of Kentucky, in his native town of Lexington, and finished his work toward his degree. In 1919 he entered the field of education, accepting a position on the faculty of Texas A. & M. University. He later became president of the New Mexico State University.

With the outbreak of World War II, he again responded to a call to military service, and he gave again of himself to his country in some of the toughest, most grueling campaigns of the war. He became chief of staff of the XIV which fought its way from the Solomons to the Japanese home islands.

As American troops doggedly and heroically fought their way back up the Luzon peninsula, our honor guest tonight so distinguished himself in his valorous leadership that he merited promotion on the battlefield to brigadier general. After victory, he went back to education, becoming superintendent of New Mexico Military Institute.

Yet a third time he was called like Fabius, to exchange civilian life for the sword. In 1950 he donned his uniform again and accepted the assignment as chief of reserves and ROTC for the U.S. Army.

I submit that this man's service is in the very best citizen-reservist tradition.

That he continued to serve after retirement from the military, as Assistant Secretary and then Under Secretary of the Army, is not part of our story tonight, but we should not fail to note perhaps the most amazing part of his career—that he survived 10 years in the Pentagon.

But I can remind you that in his service, he had followed George Washington's reminder, "When we assumed the soldier we did not lay aside the citizen."

We all know, and we admire and hold in genuine admiration and deep affection, our honored guest tonight—Hugh Meglone Milton II.

"RESERVE OFFICERS ASSOCIATION OF THE UNITED STATES

"Annual citation to the citizen who has contributed most to national security in these times, 1961, Hugh Meglone Milton II."

AN ASSOCIATION RESOLUTION TO THE HONORABLE HUGH MEGLONE MILTON II

Because throughout your career—

(a) Profoundly knowledgable in the concept of freedom which was born and nurtured in our Nation, you have aided as a citizen and soldier in safeguarding this thought;

(b) Keenly aware of the citizen's obligation, three times you have laid aside your citizen's role to answer the call to serve in defense of your country; you have at personal sacrifice and with extraordinary effectiveness given of your talent and energy to the Nation;

(c) Nobly motivated in your public service, you have shunned narrow considerations including partisanship and have fixed your course on the highest standards of national interest;

(d) Deeply dedicated to honor and duty, you have given your strength and ability far beyond the call of duty.

In the name of the Nation's first minutemen, who gave our forefathers the instinct and the genius to contest to death for the liberty which is the life and breath of our Nation, this association proudly and humbly recognizes your service as a patriot, and

your meaningful contribution to national security which is shared by every citizen of the United States.

For the association, by the national executive committee, February 24, 1961:

CARL T. SUTHERLAND,
National President.
JOHN T. CARLTON,
Executive Director.

REMARKS OF MAJ. GEN. CARL T. SUTHERLAND

We are much pleased that so many of the members of the national council and of our various action committees have come here from many parts of the world to participate in our deliberations and to adopt resolutions to serve as guidelines to the national officers and to express our views and recommendations to our leaders in the Pentagon and on Capitol Hill.

These dedicated members have worked long hours during the past 3 days. For their fine cooperation and serious application to the business of the association, I express sincere appreciation.

We are of the firm conviction that our efforts in support of a strong defense system cannot be relaxed, indeed, they need to be intensified in these days of increasing world wide tensions. We are gratified that our own most distinguished member, the brilliant young President of the United States, has thrown to every citizen the challenge that we in the Reserve Officers Association long have accepted, "Ask not what your country can do for you; rather ask what you can do for your country." We take renewed inspiration from his forthright challenge to the American people and to people of all the world.

We invite our guests to join us in our renewed dedication to the cause for which we were founded 39 years ago, "to support the establishment and maintenance of an adequate system of national defense."

The Honorable Walter M. Mumma

SPEECH
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 27, 1961

Mr. KEARNS. Mr. Speaker, WALTER MUMMA was an especially good friend of mine and I always had high regard for him as a statesman for his keen adeptness in alayzing all phases of legislation.

This session of Congress, he moved to the important Ways and Means Committee which made him so happy and with his background he could have made many, many contributions to this great committee in the House of Representatives.

It is unbelievable that his career would be stamped out at this important stage of his life with this new challenge before him to further serve his country.

Having served with him for many years in the Congress, I shall not only miss him as a great statesman but as a good friend whose warm personal charm, great sense of humor and enjoyment of life enriched all who knew him.

My deepest sympathy goes to his son, Robert, and his grandchildren.

Resignation of Maj. Gen. Ralph J. Olson, Former Director of Wisconsin Bureau of Civil Defense

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. WILEY. Mr. President, the history of our country is star-studded with the work of outstanding individuals who have contributed selflessly to public service and progress in a great many fields of national endeavor.

At this time, I want to pay tribute to one such citizen, Maj. Gen. Ralph C. Olson, former director of the Bureau of Civil Defense for the State of Wisconsin.

Today, I received from Major Olson, a letter notifying me of his resignation as director of civil defense. I regret that he now finds it necessary—because of other broad-scope responsibilities—to relinquish his duties. He deserves, I believe, commendation for a job well done.

I ask unanimous consent to have printed in the Appendix of the RECORD this letter, which reflects the dedicated way in which he has not only performed his duties as civil defense director, but also continues to maintain an active interest in the program after his resignation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF WISCONSIN,
BUREAU OF CIVIL DEFENSE,
Madison, Wis., February 27, 1961.

HON. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: This is to notify you that I have resigned as State Director of Civil Defense for the State of Wisconsin, effective 1 March 1961; and Governor Nelson has announced that Mr. Willian K. Chipman will be the new State director.

I have considered this for many years because of the increasing responsibilities in the adjutant general's office, but was particularly anxious to remain on the job until we had completed and published the State operational plan and passed a State law which should greatly strengthen the civil defense program in our State. I do not believe it is possible to do justice to two jobs of this magnitude.

Naturally, I leave this job with mixed emotions. Having served as State director since 1950, I recall our early meetings with James Wadsworth when civil defense was more or less a stepchild in the National Security Resources Board. I saw the organization develop into the Federal Civil Defense Administration, under the leadership of Governors Caldwell, Peterson and Hoegh; and more recently when it was combined with ODM as the Office of Civil and Defense Mobilization in the executive department of our Government, under the able leadership of Gov. Leo A. Hoegh. We have endured the growing pains on the National, State and local levels, and we can all take pride in the fact that with our national and State plans we have the opportunity to develop an effective and realistic program.

I treasure the friendships made during the past 10 years, and I hope there will be opportunities to renew these acquaintances in the future.

Sincerely yours,

RALPH J. OLSON,
Major General, AGC, Wisconsin ARNG, the Adjutant General, Director of Civil Defense.

The Sick Economy

EXTENSION OF REMARKS
OF
HON. GALE W. McGEE
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. McGEE. Mr. President, I call attention to an article, by Walter Lippmann, on the state of the Nation's economy. In the article Mr. Lippmann quotes to a considerable extent from an objective study of the economy, written by Paul Samuelson, president of the American Economic Association.

Because of the sobering judgment set forth therein and the seriousness of some of the matters dealt with, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 2, 1961]

TODAY AND TOMORROW: THE SICK ECONOMY

(By Walter Lippmann)

There is as yet no evidence, unless it be in the behavior of the stock market, that recovery from the recession is underway or in sight. Unemployment is continuing to increase, steel is operating at half capacity, the automobile business is very poor. All in all there is a growing disposition to ask whether the extremely moderate measures proposed by the President will be sufficient to turn the tide.

The President's task force, which was headed by Prof. Paul Samuelson, the president of the American Economic Association, advised Mr. Kennedy in January that the first measures might not be adequate, and that if the upturn did not come by April, stronger measures would be needed.

Professor Samuelson does not hold any public office. But in many ways he is the economist to whom the administration economists listen most closely. He has just written an article for a Japanese newspaper, the Nihon Keizai Shimbun. The article discusses the Kennedy program as it has been formulated to date. Professor Samuelson thinks that "when you come to add up in quantitative terms what the whole package of programs can be expected to accomplish, you realize how limited the total package really is."

Professor Samuelson does not say this in criticism of the administration program. As a matter of fact, the current administration program is about what his task force recommended last January before the President was inaugurated. But the advice at that time was accompanied by the warning, which President Kennedy himself passed on to the country, that the first measures might have to be reinforced by a second set. It is a fair inference from Professor Samuelson's article in the Japanese newspaper that he is now

rather expecting that a supplementary package will be needed.

These ideas stem from the belief that the present recession, following upon a poor recovery from the recession of 1958, and coming at the end of several years of sluggish economic activity, is much more serious than Congress or the mass of the people who are not unemployed have yet realized. "It is well," says Professor Samuelson, "to have no illusions about the magnitudes of the proposed (Kennedy) measures."

Even, he says, if the economy begins to turn up by the middle of the year, "there is little reason to think that the end of the year will find us with unemployment much better than at the present time." What is more, a quickening of economic growth to the American average rate of 3½ to 4 percent, will have to wait until the second and third years of President Kennedy's term of office.

These are the hard judgments of a cool and expert mind. They will be unwelcome to many. They will be unwelcome to those who take the view that with words of confidence and optimism a recession like this one can be talked away and that the somber truths should be glossed over and suppressed. The more innocent among them go so far as to say that this recession and this slowdown are being prolonged, indeed made worse, because the Kennedy administration is telling the country that the economy is very sick.

There is everything to be said for keeping up the confidence of a sick patient. But an essential ingredient of that confidence is that the patient be convinced that the doctor is not deceiving himself. If, as seems so probable, we face a long, hard effort to revive the American economy, the confidence of the people will best be sustained by convincing them that the economic doctors are not treating nice words as a substitute for real actions.

Virginia Kelly

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. HOSMER. Mr. Speaker, to many of us who come to Washington to take part in the Government of our country meeting and working with Columnist-Reporter Virginia Kelly has been one of the unexpected and pleasant rewards of public life. Recently the Long Beach Independent, Press-Telegram ran a short biography of Mrs. Kelly which I know it will please her many friends in the Capitol and throughout the country to read.

The article is as follows:

BUSY VIRGINIA KELLY—TAFT STORY STARTED HER NEWS CAREER

A 5-foot-3-inch, 112-pound newswoman—who at the age of 4 complained to her father that she was "ashamed of being ignorant and unable to read the comics"—today is part of the Independent, Press-Telegram team covering Washington, considered one of the world's choicest newspaper beats.

And Virginia Kelly, wife of Rear Adm. Thomas J. Kelly, U.S. Navy, retired, after almost 15 years on the Washington scene knows her way around the Capital byways.

"Its not easy to get a job as a newspaper reporter—and even harder to get a job as a Washington correspondent," she explains. "Especially for me—I had no journalistic training, no newspaper experience except on my high school paper in Paris, Tenn., and my husband didn't own a newspaper."

But she made the grade when she covered a Senate speech by the late Senator Robert Taft and sent a story in to the editor of The Press Telegram—"because I had lived in Long Beach and had been a subscriber."

"To my amazement—and I'm still amazed—I received a letter and a check, plus a tear sheet with my bylined story. In every mail thereafter, the paper received a blizzard of stories from me," she says.

Some were bought, she says, and before long the editors decided it would be more economical to put her on the payroll.

In a kind of perpetual motion in those first years, I raced from the White House to the Capitol to the State Department to the Pentagon. I was the most ignorant, greenest, and most scared reporter in town, but I wrote everything from art to sports," she recalls.

Since then she has met three Presidents—Truman, Eisenhower, and Kennedy—most of the Kings and Queens of the world, numerous heads of state, congressional leaders, Ambassadors, Pulitzer prize winners, the world's leading musicians, artists, military men, poets, writers, and such leaders in their field as Jimmy Hoffa, Alger Hiss and Whittaker Chambers.

One of the best stories she helped cover, the newswoman maintains, concerned former Senator William Knowland.

"At the time, Assemblyman Bruce Allen was trying to put through legislation which would take taken all of Long Beach's oil royalty money. Malcolm Epley, executive editor of the newspaper, called from Sacramento to ask me to get a statement from Senator Knowland that might help Long Beach.

"Washington was closed tighter than a bank vault—it was Saturday—but Allen had the votes to get his bill out of committee on Monday. Senator Knowland's legislative assistant said it would be useless to talk to the Senator because he never commented on State legislation. I located Senator Knowland at his apartment and the statement I got is credited with stopping the Allen legislation."

But sometimes a newspaper's most important contributions to public welfare are never in print, she says.

For example, helping parents get a passport on Saturday to visit their critically ill son in England, or stopping the deporting of a young war bride less than 8 hours before she was to be taken aboard ship.

Mrs. Kelly, who attended Ward-Belmont Junior College in Nashville, Tenn., Peabody Conservatory in Baltimore, and the Pittsburgh Musical Institute, has had a varied career.

"During the depression, as a struggling young musician, I tramped from church to church and from radio station to radia station to get jobs. I've traveled by almost every means of conveyance, lived in every fashion in this country and abroad," she says.

As a Red Cross volunteer she helped nurse wounded servicemen and served in hospitals in the "locked" neuropsychiatric wards. She has sung in prisons and hospitals.

"The metropolitan daily paper is an encyclopedia produced in new editions daily," she says. "Most newspaper people are dedicated to truth, liberty, and learning, and to share—even in a modest way—in this profession is thrilling, inspiring, and challenging."

NATO Approaching New Phase

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. KEFAUVER. Mr. President, almost daily there appears in the press some article pointing up the fact that many problems besetting the North Atlantic Treaty Organization are going unresolved.

One of the latest of such articles is a Paris dispatch by the distinguished foreign correspondent of the Washington Star, Crosby S. Noyes. This article appeared in the Star on Wednesday, February 22.

In the dispatch, Mr. Noyes analyzed the unresolved and vexing problem of giving NATO an atomic deterrent, and concluded, in his words:

What is needed is nothing less than a full-scale review of the whole Western defensive picture and NATO's part in it.

Until such a study is completed, Mr. Noyes writes, NATO will have no solid basis on which to lay its plans, and the decisions on which the future of the alliance depends must be postponed.

There are, of course, confronting NATO many other problems equally perplexing and also unresolved and also deserving of prompt attention. These lie in the political and economic field; and until these, too, are given a full-scale review, the entire underpinning of the alliance will remain in doubt.

I wish to remind the Senate that the 86th Congress enacted, and the former President signed into law, Senate Joint Resolution 170, authorizing American participation in just such a review.

Under this resolution, which I was privileged to sponsor in the Senate, representative citizens of this country would join leading citizens of the other NATO nations in an Atlantic Convention—

to examine how greater political and economic cooperation among their peoples may be promoted.

Time is running out, for under the resolution the U.S. Citizens Commission will cease to exist on January 31, 1962.

I respectfully urge that those charged with the implementation of Senate Joint Resolution 170, of the 86th Congress, take steps at once to appoint the Citizens Commission, so that the Atlantic Convention can be held this year and some of the urgent problems facing NATO can be attacked.

I also ask unanimous consent that Mr. Noyes' article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATO APPROACHING NEW PHASE

(By Crosby S. Noyes)

PARIS.—There is plenty of evidence in Europe to back up Washington's belief that

the North Atlantic Alliance is indeed "on the eve of a new phase."

A fairly sweeping reappraisal of NATO, its aims, its scope and its basic strategy is in fact already in full swing here. Our allies have not waited for the lead from the new administration in Washington before coming up with many pointed questions of their own.

Of these, some of the most urgent queries are concerned with NATO's military defenses and its future reliance on atomic weapons as opposed to conventional forces. Specifically, they raise doubts about the wisdom of the American proposal to equip NATO with the medium-range Polaris missiles as a major element in the defense of Western Europe.

This offer—or rather suggestion—was made by former Secretary of State Herter at the last NATO council meeting in December. Although it has not as yet been renewed by the Kennedy administration, the permanent NATO council has been debating the proposal with vigor during recent weeks. And the debate so far has raised a good many more difficult questions than answers as to how the scheme would work.

THE PROBLEM OF CONTROL

Some of these were raised and deliberately left dangling by Mr. Herter at the time of the December meeting. The American proposal was simply that the council might wish to consider buying some 100 mobile Polaris missiles having a range of some 1,500 miles for dispersal in and around the NATO area. In addition it was suggested that a fleet of five Polaris-carrying submarines might be assigned to the NATO command.

One major problem which immediately was obvious was control of the missiles and nuclear weapons which they would carry. The idea clearly was for an independent NATO deterrent with the weapons under NATO—rather than exclusively American—control. But who, in case of an emergency, should decide whether or not the weapons should be used? The more they have mulled over the question, the greater the doubts of our NATO allies have become. The concept of "15 fingers on the trigger" seems hopelessly unwieldy, particularly if consultation of the NATO ambassadors in Paris with their home governments were required before action could be taken. The alternative idea of having a smaller NATO type of security council entrusted with the fateful decision raises many difficulties.

In fact, the more they think about it the better the present control system for NATO's nuclear weapons appears. Bilateral arrangements under which local forces control the means of delivery and the United States retains possession of nuclear warheads may still turn out to be the most workable system after all other possibilities have been explored.

FULL REVIEW NEEDED

Beyond the problem of control, however, more fundamental doubts about the value of a NATO nuclear deterrent are being raised. The British, supported by the Danes and Norwegians, have submitted a list of some 50 questions to the NATO Council which go deeply into NATO's basic military strategy. The main point raised is whether NATO is not already too committed to the use of nuclear weapons for the defense of Western Europe and whether in the coming era of missile gap or nuclear stalemate, more emphasis should not be placed on building up the conventional forces of the alliance.

The argument being heard frequently in NATO circles is that the Polaris offer would do little to provide any real deterrent power in the NATO area and might, in fact, increase the area's vulnerability. For anything short of all-out war, NATO already has a wide variety of tactical atomic weapons at its disposal. And the addition of longer range weapons might tend to change the posture of the alliance—in Russian eyes, at least—from defensive to offensive.

Even in its preliminary stages, however, the debate has shown clearly that NATO cannot by itself supply the answers to its own questions. What is needed is nothing less than a full-scale review of the whole Western defensive picture and NATO's part in it. Until such a comprehensive study is completed in Washington—and it can hardly be made anywhere else—NATO will have no solid basis on which to lay its plans. And the decisions on which the future of the alliance depends must be postponed.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1961

Mr. LINDSAY. Mr. Speaker, I rise today to pay tribute to the people of Bulgaria and to Americans of Bulgarian descent on the 83d anniversary of the liberation of Bulgaria from the yoke of the decaying Ottoman Empire. On March 3, 1878, the Treaty of San Stefano between imperial Russia and Ottoman Turkey reestablished the Bulgarian nation after 500 years of foreign oppression. Although the frontiers of the new nation were narrowed by the subsequent Congress of Berlin, the modern Bulgarian nation then came into existence. The liberation of Bulgaria followed a long struggle by gallant patriots, which won the sympathy and support of the free nations of the West, led by the great British Prime Minister William Gladstone.

A freely elected national assembly adopted the democratic Tirnovo Constitution over the opposition of czarist Russia. This democratic constitution was finally destroyed by the Communist satellite regime which was imposed on Bulgaria at the end of World War II.

From the time of their liberation from Turkish rule to the present day, the Bulgarian people have resisted the aggressive pressures of Russian imperialism, both czarist and Communist. At the end of World War II a Communist satellite regime was imposed on Bulgaria by the Red army. The Soviet Union violated its solemn promise in Bulgaria as it did all throughout Eastern Europe and permitted no free elections to be held. The Bulgarian people, like all of the subjugated peoples of the Soviet Empire, retain their hope and faith in ultimate liberation.

The Bulgarian National Front of America, which represents the patriotic younger generation in Bulgarian politics, has since 1954 organized solemn observations of Bulgarian Liberation Day in America.

It is eminently fitting, Mr. Speaker, that we in this body join with our fellow Americans of Bulgarian descent, with the Bulgarian people who bear the yoke of an alien totalitarianism, and with all freemen in commemorating the day of Bulgarian liberation from Ottoman tyranny and in expressing the hope that the day of Bulgarian liberation from Communist tyranny will not be long delayed.

The Old Order Changeth

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. ROBERTSON. Mr. President, a wide variety of reasons have been given for inflation that has eroded more than 50 percent of the value of the 1939 dollar, a wide variety of reasons have been given for great unemployment in the year in which both the produced national income and the gross national product reached an all-time high, but no reference has been made of the type of effort that went into the building of our Nation in the days of the first settlers in Virginia and Massachusetts down to the end of the 19th century. Hence, the enclosed news item—from the March 2, 1961, issue of the Clarke Courier entitled "Notice to Employees"—may serve as a pertinent reminder, as we move toward a new frontier, of how the old order changeth.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the news item from the Clarke Courier.

There being no objection, the news item was ordered to be printed in the RECORD, as follows:

NOTICE TO EMPLOYEES

(This notice was actually posted in an American factory in 1872 as a policy statement for employees of the Mount Cory Carriage and Wagon Works.)

Effective September 15 the following rules will apply:

Office employees will daily sweep the floors, dust the furniture, shelves, and showcases.

Each day fill lamps, clean chimneys, and trim wicks. Wash the windows once a week.

Each clerk will bring in a bucket of water and a scuttle of coal for the day's business.

Make your pens carefully. You may whittle your nibs in your individual taste.

This office will open at 7 a.m. and close at 8 p.m. daily, except on the Sabbath, on which day it will remain closed. Each employee is expected to spend the Sabbath by attending church and contributing liberally to the cause of the Lord.

Men employees will be given an evening off each week for courting purposes, or two evenings a week if they go regularly to church.

After an employee has spent 13 hours of labor in the office, he should spend the time reading the Bible and other good books while contemplating the glories and building up of the kingdom.

Every employee should lay aside from each pay a goodly sum of his earnings for his benefit during his declining years, so that he will not become a burden upon the charity of his betters.

Any employee who smokes Spanish cigars, uses liquor in any form, gets shaved at a barber shop, or frequents pool and public

halls, will give me good reason to suspect his worth, intentions, integrity, and honesty.

The employee who has performed his labors faithfully and without fault for a period of 5 years in my service, and who has been thrifty and attentive to his religious duties, is looked upon by his fellow men as a substantial and law-abiding citizen, will be given an increase of 5 cents per day in his pay, providing a just return in profits from the business permits it.

Tribute to Ambassador Thomas Whelan

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. YOUNG of North Dakota. Mr. President, a very fine editorial appeared in the Grand Forks Herald, published at Grand Forks, N. Dak., under date of February 14, 1961. This editorial pays well-deserved tribute to a fellow North Dakotan, Thomas Whelan, who has been Ambassador to Nicaragua for the last 10 years. Ambassador Whelan has done a truly remarkable job as Ambassador to Nicaragua. This is attested to, I believe, by almost every Member of Congress who has visited Nicaragua the past 10 years, as well as by many others. We should have more "Tommie" Whelans. We in North Dakota are very proud of him.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHELAN'S DISTINGUISHED RECORD

Thomas E. Whelan, of St. Thomas, who is retiring after nearly 10 years as U.S. Ambassador to Nicaragua, will return to his home in North Dakota with an exceptional record of service to his country.

The only North Dakotan ever appointed to a U.S. ambassadorship, Mr. Whelan has done his State proud in his difficult assignment. Not only his hometown but the State as a whole will welcome him back to his place in our business, political, and social life.

President Truman named Whelan to his Central American post on recommendation of the late Senator William L. Langer, who was actively supported by North Dakota's then junior Senator, MILTON R. YOUNG.

Mr. Whelan's selection proved a happy choice for he had marked success in winning the favor of the Government and the people of Nicaragua. In this he was ably assisted by competent and persuasive Mrs. Whelan.

Nicaragua became a pro-American stronghold in its opposition to communism, and it had a significant part in resisting the Communist movement in Guatemala. In this, Ambassador Whelan had an important role as a contact for his Government.

In the domestic life of the country, Whelan's knowledge of farming gained in practical experience in his own agricultural ventures with his brother, Louis, proved an effective medium for winning the friendship of the farm folk of Nicaragua. From him they gained new knowledge that helped them improve their agricultural practices.

While Mr. Whelan is expected to again take an active part in the business of Whelan Bros., at St. Thomas, farm operators and grain dealers, there is an expectation that he also will resume his interest in North Dakota politics.

He had long been active in Republican circles in the State before he became Ambassador, and he also had an important role in the affairs of the American Legion—an interest he has retained during his State Department assignment.

Whelan has made no statement regarding his plans, except that he has wanted to get back to private life for the past 2 years, but the Communist-created turmoil in Central America made it advisable for him to stay with his post.

This newspaper has no inside information regarding any political ambitions Whelan may have—in fact, it has been told definitely that he has none. However, it is within the range of possibility that he could be persuaded to get into the political picture on a statewide basis. He might be the man to oppose Senator QUENTIN BURDICK in 1966.

Quite apart from political and other considerations of a public nature, the Herald is happy to join with the rest of the State in welcoming his return to St. Thomas and North Dakota. He has made a considerable mark as the State's first citizen to represent this country in an ambassadorship.

Participation in the Organization for Economic Cooperation and Development

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. KEFAUVER. Mr. President, as even the most casual observer knows, many of the barriers to free world unity are economic in character; they run the gamut from balance of payments to tariffs.

In recent days, the Senate Foreign Relations Committee has been conducting hearings on a proposed treaty by which this country would participate with other free world nations in the Organization for Economic Cooperation and Development, commonly known as OECD.

One significant feature of OECD is that it would include as participants European neutrals, as well as member nations of the North Atlantic Treaty Organization. Ratification by each participating nation has been a primary goal of the NATO Parliamentarians Conference, whose past four sessions I have been privileged to attend. I hope this body will vote to ratify that proposal when it is reported from the Foreign Relations Committee.

In an editorial in its February 22 issue, the Washington Evening Star set out in precise terms the need for OECD, and effectively exploded some of the myths about it. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRACTICAL ECONOMIC UNITY

Spokesmen for the administration have made a good case from the outset for U.S. adherence to the new Organization for Economic Cooperation and Development. In simplest terms, this grouping of 20 nations of the Western free world would provide the machinery for economic coordination and planning of a sort which could create a firm line of defense against Premier Khrushchev's blustering threat to bury capitalism under an avalanche of Communist competition.

In other words, in the field of international economics, it parallels in some respects a defensive military alliance in which the strength of each member supplements and supports that of the others. In this respect, it is particularly timely from our own standpoint that such collaboration be formalized. In the last few years, most of the West European nations that have signed the OECD convention have reached a very high level of economic strength and recovery from the exhaustion of World War II. At the same time, it has become recognized that we cannot continue indefinitely our own massive expenditures abroad, public and private, to the point of an every-year deficit in our balance of international payments. Economic assistance to underdeveloped nations, for example, is a responsibility in which many of the now-prosperous countries of the new OECD are able to share, and this is one of the major projects to be worked out at the council table of the new organization.

Fear has been expressed that the group will turn into some sort of supranational body by which, for instance, American tariffs would be lowered to permit a flood of imports. Of this criticism, it seems significant that the first member of the Kennedy administration to urge strongly that our membership in the OECD be ratified by the Senate was Secretary of Treasury Dillon, who as a Republican and Under Secretary of State in the Eisenhower administration, was a leader in drafting the convention and was a signer for our Government. Neither Mr. Dillon personally nor the Eisenhower administration has been identified as "free traders" to a point of disregarding the welfare of American industry. Assurances have been given, furthermore, by Mr. Dillon, by Secretary of tSate Rusk, and by Undersecretary for Economic Affairs George Ball that there will be no infringement on the tariff-making functions of Congress, and that the objective of the OECD is to expand economic activity, including the markets available for American exports, not to contract it.

Critics of the new international agency will have their opportunity, of course, to present and explain their objections to the Senate Foreign Relations Committee. It seems certain, however, that the weight of evidence will support our full participation.

Award by Reserve Officers Association of the United States to Don C. Alexander, Chaplain Corps, U.S. Navy, as Chaplain of the Year

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. THURMOND. Mr. President, in connection with the annual midwinter council meeting of the Reserve Officers Association of the United States, the Chaplain of the Year Award was presented to Lt. Don C. Alexander, Chap-

lain Corps, U.S. Navy. Chaplain Alexander is a native of Greenville, Tenn., and has distinguished himself in many ways in his field which is so important to the morale and welfare of our military personnel. Chaplain Alexander and Mrs. Alexander were honored by ROA in the presentation of the Chaplain of the Year citation, the text of which is as follows:

Recognizing his extraordinary contribution to the welfare, morale, and effectiveness of those he has served, and acknowledging the nobility and clarity of his precept and example among those who must continually be aware of the spiritual value of life under freedom, this association, in humility and admiration, designates Lt. Don C. Alexander, Chaplain Corps, U.S. Navy, as ROA's Chaplain of the Year, 1961.

In connection therewith, I am submitting as a matter of unusual interest the attached article from a recent issue of the Officer, monthly magazine of ROA, which reflects the basis for this highly merited award. I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROA'S CHAPLAIN OF YEAR FOR 1961 IS CIRCUIT RIDER FOR EIGHT SHIPS—ONE OF THE BEST OF GOD'S GOOD MEN

ROA's chaplain of the year for 1961 is a "circuit rider" for eight ships. He is Lt. Don C. Alexander, of Greeneville, Tenn., a youthful clergyman who marked his 27th birthday last November 13.

He will be honored at ROA's midwinter conferences in Washington, D.C., on February 24 at the Sheraton Park Hotel.

In choosing Lieutenant Alexander for the honor, ROA's awards board had this to say about him:

"Chaplain Alexander, a clergyman of the Cumberland Presbyterian Church, has an outstanding record demonstrating force and initiative in his daily work. He has a warm, friendly personality. He is an effective preacher and has awakened interests in religious matters. As one commanding officer said, 'He is always completely cooperative himself and creates the same effect in others through his interest, sincerity, and response * * * demonstrates great maturity, sound thinking, and deep understanding of problems and solutions for personnel * * * outstandingly effective through his feeling and consideration for others.'"

Capt. Merle N. Young, fleet chaplain, Atlantic Fleet, added this about Chaplain Alexander:

"The Reserve Officers Association has selected a topnotch capable and dedicated person as chaplain of the year in the choice of Lt. Don C. Alexander, Chaplain Corps, U.S. Navy. He is a destroyer chaplain, circuit riding in eight ships, and in every way represents the highest ideal of the ministry of the Armed Forces chaplain. I know of his constant labors on behalf of men. I have seen him serve unstintingly and have heard him preach. He is one of the best of God's good men."

Chaplain Alexander is the son of Verna and Dale Alexander, the latter a famous major league baseball player who won the American League batting championship while playing with the Boston Red Sox in 1932.

The youthful chaplain was graduated from Bethel College, McKensie, Tenn., in 1955, and Cumberland Presbyterian Theological Seminary in 1958. In college, he won athletic letters in baseball (four) and football (one). He was president of his senior class, and is a member of Omega Phi fraternity, Cumberland Club.

He was ordained to the Gospel ministry by East Tennessee Presbytery of the Cumberland Presbyterian Church, November 27, 1955, and was pastor of the Union Cumberland Presbyterian Church, Fulton, Ky., December 1956–July 1958.

In the summer of 1954 he was with the Monsanto Chemical Co., and played on the championship baseball team of the State of Tennessee which placed seventh in the Nation at the National Baseball Congress, Wichita, Kans. In 1956, he supervised the summer recreational program for Gleason, Tenn., and was assistant football coach at Gleason High.

Chaplain Alexander entered the Navy in July 1958. He attended the Chaplain School, Newport, R.I., and was assigned to the Naval Air Technical Training Center, Jacksonville, Fla., for 13 months. He was ordered to his present assignment with Destroyer Squadron 28, in November 1959.

ROA's honoree for 1961 married Carolyn Ann Roberts, of Union City, Tenn., in 1955. They have two sons, David Dale and Dudley Don.

What a Peace Corps Man Could Do Overseas

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. REUSS. Mr. Speaker, President Kennedy has sent to the Congress his proposal for a Peace Corps in which young American volunteers may serve overseas in technical assistance missions as part of a worldwide war against hunger, poverty, disease, and ignorance. In carrying out the Peace Corps program, we are fortunately able to draw on the experience of various American voluntary organizations. Prominent among these is International Voluntary Services, Inc., of 3636 16th Street NW., Washington 10, D.C., of which Dr. J. S. Noffsinger is the executive director. The IVS has done a superlative job in its limited but thoroughgoing oversea ventures.

I include a copy of a newsletter recently sent to his friends in America by Don Schmidt, a University of Wisconsin volunteer in the IVS agricultural aid program in Vietnam.

I hope that those who are denouncing the Peace Corps program as a "boondoggle" read Don Schmidt's letter with profit:

THAP CHAM, VIETNAM,
February 14, 1961.

DEAR FRIENDS: Albert Schweitzer is 14 months behind in answering his correspondence according to author Norman Cousins in the book, "Dr. Schweitzer of Lambarene." From one point of view it is a remarkable achievement that the great jungle doctor, who has been in Africa over 40 years, is only 14 months behind. I have been in Vietnam merely 10 months but have a 6-month backlog of unanswered letters and the pile grows every week. Your letters of encouragement are much appreciated and I would like to answer each one personally but seriously doubt if I'll be able to do so.

The weather here during December, January, and early February has been very comfortable. The high daily temperature reaches 85° to 90° F., the humidity is neither too high nor too low and a pleasant northeasterly ocean breeze blows most of the time. This period of agreeable weather is sandwiched between two extremes. During the 2 days of November 26 and 27 a tropical typhoon dumped 20 inches of rain on the area. (While the average annual rainfall of this area is only slightly more than 20 inches, one of the other climatic characteristics is that the actual rainfall in any 1 year may deviate widely from the average.) In a few weeks we will be in the midst of the hot, dry season when temperatures are about 100° F. for a considerable portion of each day.

In my two earlier letters I tried to describe my impressions of the land and people of South Vietnam. In this one I will try to present a brief account of some of the IVS work activities with which I am familiar.

Jim Green from West Virginia, our Vietnamese interpreter Quy, and myself are now living in the village of Thap Cham. Most of our work is divided between the Nha Ho Livestock Experiment Station 8 miles from here and the Pasteur Institute near Nha Trang which is about 60 miles up the coast.

Our primary efforts at Nha Ho are devoted to research aimed at the efficient production of feed crops necessary for an expanding livestock industry. We are introducing and testing various forage and grain crops. These include corn, sorghums, forage grasses, and legumes. IVS personnel were the first to plant alfalfa in this area. This potentially valuable crop has shown promise here but much remains to be learned concerning adaption of different varieties, seedling establishment, fertilization, and insect control.

One especially intriguing crop we work with is ramie. This plant is unusual in that the stems produce the strongest of vegetable fibers and the leaves are a source of high protein livestock feed.

Positive contributions toward an improved livestock feed program will probably take quite some time before the results are of benefit to the farmers. We are also experimenting with crops which we hope positive results may be passed on to the farmers more quickly. Our experience with beans, one such crop, has taught us a valuable lesson. The Vietnamese farmers have been growing a small black bean for many years. My first impression of this bean was that it could easily be replaced by superior types. However, we have had a rather ambitious program of evaluation some 200 bean strains from 36 countries and only three of these approach the performance of the local strain. This area is heavily infested with a stemboring insect which killed or severely weakened most of our introduced strains. The local bean, however, apparently has natural resistance to the insect. This experience certainly taught us to appreciate the merits of what the illiterate but intelligent Vietnamese farmers themselves have developed and learned. It also points up that improving agriculture in a country such as South Vietnam is not a simple matter.

Our experimental plantings of kenaf, a fiber crop, are believed to be the first in this coastal plain area. We have hopes that it may be a new cash crop for the farmers here. By the way, the expanding industrialization of Japan is providing a market for fiber crops grown in this part of the world.

The Pasteur Institute, named in honor of the great French scientist, is a philanthropical organization devoted to benefit mankind through the advancement and application of science. The station near Nha Trang produces vaccines and serums used in South Vietnam, Laos, Cambodia, Thailand, and other southeast Asian countries. Over

300 head of horses, cattle, sheep, and goats are now used in producing the vaccines and serums with this number to be increased. We are trying to help in the development of a feed production program for the livestock. The promising results from our plantings of introduced forages and the splendid cooperation received from the manager at this station are very encouraging.

The primary objective of IVS is to carry out a people-to-people aid program. An introduction to Cu, a 12-year-old Vietnamese boy who lives in a neighboring village, provides an example of this phase of our work. Cu lost the use of his legs from an accident incurred when he was 3 years of age. He has been able to move about by pushing and pulling himself along on his knees which have open sores most of the time. Cu's mother is dead; he lives with his sickly father who earns about $20 per month tending a guard gate at a bridge used jointly by trains and highway traffic. A few months ago, several Vietnamese soldiers guarding the bridge were killed by raiding Communist guerrillas in the front yard where the boy and his father live.

Contributions of money sent by the Sunday school of the Ashland Methodist Church, ladies groups from the Arlington Evangelical United Brethren Church, and other friends were used to buy bicycle wheels, iron rods, angle iron, and bolts and nuts. Jim and Quy combined their mechanical ingenuity with these materials and built a wheelchair. A few days ago we had the pleasure of presenting this gift from Americans to an overjoyed Cu and his grateful father. This experience helped us to understand the plea of St. Francis of Assisi when he prayed, "Lord, let us be instruments of Thy peace."

Sincerely,

DON SCHMIDT.

Ethical Issues in the International Age of Agriculture

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a resolution adopted by the General Assembly of the National Council of the Churches of Christ in the United States entitled "Ethical Issues in the International Age of Agriculture," be printed in the Appendix of the RECORD.

I commend the National Council of the Churches of Christ for this excellent resolution urging that our God-given abundance be shared with our less fortunate fellow human beings.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ETHICAL ISSUES IN THE INTERNATIONAL AGE OF AGRICULTURE

(Resolution adopted by the General Assembly of the National Council of the Churches of Christ in the U.S.A., December 9, 1960)

INTRODUCTION

God's concern for the needs of all his children for nourishment, both for body and soul, is revealed in His act of creation, and in the gift of His Son, Jesus Christ. Our Lord made perfectly clear that man's duty to God includes the production and sharing of the material necessities of life. He described the conditions of salvation at the ultimate judgment to include the fact that we did—or did not "feed the hungry and clothe the naked."

In today's world the gap is wide, and in some areas widening, between the need for food and available food supplies. A large proportion of the world's population still lives in malnutrition and hunger. A few nations enjoy plenty; with us agricultural surpluses are a continuing problem. Such nations have achieved a major breakthrough in agricultural technology.

In fact, so great has been the advance in the science of agriculture and in the potential for producing reasonable food supplies for all people, that the era now emerging, and in prospect, has been characterized as the international age of agriculture.

Its major challenge is to devise ways to make available to the areas of greatest need both surpluses of food now being produced, and the knowledge of how to increase the production of food from their own fields. Growing populations present a further problem and, even with our present rate of technological advance, it cannot be taken for granted that we can continuously feed the growing population of the future.

Our responsibility in this country for effective sharing of our agricultural abundance has long been a concern of the churches. This was strongly affirmed by the general board of the National Council of Churches in a statement adopted on June 4, 1958.[1]

As a people, we inherited an abundance of God-given natural resources for the production of food, such as few other nations enjoy. To many hunger-ridden nations the use of our abundance for ourselves, and our mounting surpluses seem to indicate that we are spiritually isolated from their cry for food elsewhere.

To others our donation programs seem primarily motivated by a paternalism or for our own national advantage in the cold war. Many hold that we could transform our surplus from a problem into an asset by finding new uses for surplus commodities, new outlets for their marketing, and new ways of sharing them. This would lessen the fears that our surplus disposal programs may disrupt world markets upon which their own economies depend.

The spirit and manner of attempting to share our abundance and technological knowledge are, therefore, vital if this sharing is to serve the cause of peace and to enhance the sense of dignity on the part of the people with whom we share, as well as to meet the need for food.

As indicated in the earlier statement by the general board and supported by official actions of many of our constituent churches, these considerations lead Christians to renew their call for more vigorous action by our Government and, at certain points, by our religious and other voluntary organizations toward three major goals—food distribution, technical assistance, and economic development.

[1] "In Christian perspective the abundant agricultural production of America should be viewed as a blessing. * * * Efficiency in production must be matched by effective distribution, to the end that all people may be fed and clothed. This requires application of imagination and good will, both at home, and abroad, through expanded programs of trade, economic aid, and programs of distribution carried on by the churches and other voluntary agencies. * * * American policy should give both moral and financial support to the United Nation's Food and Agriculture Organization, and other pertinent international bodies. * * * Programs of technical and economic assistance to underdeveloped areas should be promoted with vigor."

SHARING OUR FOOD SUPPLIES

A traditional limitation of our national food policy has been a preoccupation with disposal of surplus as such. By itself this aim is too short sighted, too money minded, and too commodity concerned to result in policies commensurate with our production potential and today's needs.

Despite this tendency to a too-restricted outlook, our country has distributed large quantities of agricultural commodities abroad, both on a donation basis and for sales in foreign currencies under the authorization of Public Law 480. This legislation, enacted in 1954, has been continuously reviewed and substantially expanded through the years. Churches and church leaders should become increasingly aware of its vast significance and exert their influence on behalf of its full use and further development.

We welcome the fact that a broader idea of surplus utilization is now being put forward by responsible national leaders under concepts of "food for peace." The main focus is not on reduction of our stockpiles and storage bill, but on the need of permanent freedom from hunger here and elsewhere.

President Eisenhower, in his recent presentation to the United Nations, gave encouraging stimulus to our own efforts toward more effective distribution of food supplies and called upon other surplus-food-producing nations to join in this undertaking under the guidance and direction of the United Nations. This proposal was approved by the U.N. General Assembly after amendment aimed to assure that the program would be carried out with due regard to problems of the world market and the economies of the various food-producing nations.

Other constructive proposals now under consideration for both national and international approaches to this whole problem include development of world pools of surplus commodities under international control; extension of the sale of U.S. surpluses in needy countries for their own currencies by methods designed to cause the least possible disturbance to the farm economies of the nations involved; enlargement of the total flow of goods in international trade thus further expanding the movement of farm commodities from surplus to deficit countries; utilization of food as a form of capital for international economic development.

Pioneering programs along these and other lines still to be devised are greatly needed if hoped for progress is to be made by the surplus-producing nations in sharing their abundance of food and fiber with a needy world.

SHARING TECHNOLOGICAL KNOWLEDGE AND EXPERIENCE

We have the opportunity and responsibility to share with others the skills and knowledge which have been so important in the development of our own agriculture.

We commend the progress that has been made in recent years through both government and privately supported programs of technical assistance. Experience has shown the need for steady expansion of these programs, with the following considerations:

a. Continuous effort is necessary to identify and remove the basic causes of hunger and inadequate agricutural productivity.

b. With roughly 80 percent of the population of the developing areas of the world engaged in agriculture, technological development in agriculture is a first essential to them if there is to be any substantial release of manpower to commerce and industry.

c. Working through the U.N. and other multinational programs is increasingly important as this makes it possible to utilize skills wherever they may be found and to

minimize the fear of political manipulation within the recipient countries.

d. The rate at which technical assistance is made available must be governed by the recruiting and adequate training of personnel and the capacity of the receiving countries to use the offered assistance for the welfare of those who need it most.

e. All who participate in these programs, as well as possessing competence in their professional fields, need to be well trained in regard to the spiritual values, social organization, and mores of the people to whom they are sent.

The churches have a responsibility to assure continuance of the notable contribution of their missionaries. We believe there should be more who are trained in agriculture and home economics.

Many church members have been and more should continue to be recruited to serve in the Nation's governmental and private corps of technical agricultural advisers.

SHARING ECONOMIC AID FOR AGRICULTURE AND FOOD PRODUCTION

Peoples in the early stages of economic development desperately need capital resources. The gap between this need and the capital resources available from Government and private foreign investments is still wide.

This problem is closely related to achieving greater freedom from hunger because (a) it is largly through increase in industrial productivity (together with a rise in the levels of education and health) that buying power is created for food and clothing among nonagricultural workers; (b) in developing countries an increased supply of agricultural products is important to prevent inflation wherever increased industrial employment and wages occur; (c) aid for economic development directly affects food supplies when it is specifically designated for such projects as land resources development, dams with associated irriagtion systems, processing, and fertilizer industries, highways and transport systems, and food marketing institutions. It is equally effective when applied to raising the level of education and health of those who work on the farms and related food industries.

In supporting, as they do, enlarged programs of economic aid to underdeveloped countries both by this country and through the United Nations, church people with their deep concern for relief of hunger, should stress the need for special attention, among others, to these types of projects which directly promote food production and distribution.

ROLE OF RELIGIOUS AND OTHER VOLUNTARY ORGANIZATIONS

The National Council of Churches and its predecessors have consistently pressed concerns for economic development and raising the levels of life of people around the world. Especially through its departments of international affairs and church and economic life, the churches have conducted major campaigns of education and action, have set forth policies, have represented the concerns of the churches to the United Nations and the U.S. Government, and have stimulated both corporate and individual Christian responsibility in relation to humanity's problems of hunger and need. Our Christian faith, our experience in this field, and the desperate plight of most of mankind, all impel us to continuing and more effective efforts in these concerns.

The National Council of Churches also, through Church World Service, has cooperated with other nongovernmental organizations in the distribution of food to persons in need throughout the world. These agencies and their oversea affiliates carry on programs for distribution of relief supplies (including food furnished through the U.S. Government under Public Law 480) and technical assistance in over 100 countries. A recent report to the President with reference to the food distribution phase of Public Law 480 stated that "75 million American people support this program through their gifts, their work, and their membership in these voluntary organizations." In spite of many complex problems involved, experience has demonstrated both the economic effectiveness and the humanitarian value of this program through voluntary agencies. It should continue to receive the generous support of churches and church people.

A MAJOR GLOBAL PROGRAM

Also commended by President Eisenhower for support by governments and people of every nation is the worldwide, 5-year freedom from hunger campaign launched this year by the U.N. specialized agency, the Food and Agriculture Organization. Designed to engage the energies and resources of both contributing and receiving nations, this program seeks to build upon and apply in the best way suited to each developing nation any or all of the aids available through surplus food distribution, exchange of technical knowledge and assistance, economic development projects, and encouragement of still wider participation by voluntary groups and agencies. The basis of this program is self-help and its objective is not relief but permanent elimination of malnutrition and hunger.

In both purpose and scope this program is commended to our churches and their members. It received the endorsement of the central committee of the World Council of Churches at its meeting in August 1960. Our churches and church people are contribute tangibly to this constructive effort by informing themselves of the specific needs and objectives of the campaign; encouraging our Government to increase its support of the FAO and projects related to its freedom from hunger campaign; and giving generously to Church World Service so that it with other religious agencies may support projects of self-help and development encompassed by this worldwide program.

CONCLUSION

Our Lord taught His disciples to pray, "Give us this day our daily bread." Christians should continue to seek to achieve the goal implied in this prayer by breaking the barriers which persist between agricultural abundance and human need. Through their informed and sustained efforts toward this high goal Christians will thereby serve Him who provides and cares for His children everywhere.

Schenectady Union-Star, Radio Station WSNY Receive Special Awards From the Freedoms Foundation at Valley Forge, Pa.

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. STRATTON. Mr. Speaker, it was with a sense of pride that I learned the other day that the Schenectady Union-Star, one of the great newspapers in my district, and radio station WSNY, of Schenectady, an outstanding community radio station, both received the George Washington Medal Award from the Freedoms Foundation of Valley Forge, Pa., for the outstanding campaign which they jointly conducted last year in the "Speak Out for America" contest.

We in New York are proud that these two great institutions have been honored in this way for their positive contribution to keeping American principles of freedom and democracy alive and meaningful in the present day world.

Under leave to extend my remarks, I include an article from a recent issue of the Schenectady Union-Star describing this award and the campaign which led to it:

UNION-STAR, WSNY GET FREEDOM AWARDS FOR "AMERICA" DRIVE

The Union-Star and radio station WSNY have been selected by the Freedoms Foundation at Valley Forge to receive the George Washington Medal Award for the "Speak Out for America" campaign conducted jointly by the newspaper and the radio station last year.

Freedoms Foundation said the campaign was "an outstanding achievement in helping to bring about a better understanding of the American way of life."

Fostered by Steve Fitz, programing manager of WSNY, the "Speak Out for America" campaign became a joint sponsorship venture of the Union-Star and WSNY, assisted by the American Legion and numerous volunteer workers.

More than 4,000 workers signed "Speak Out for America" petitions, which were delivered by Fitz to the White House last Veterans Day. Accompanying Fitz and his wife were Henry Button of Mont Pleasant High School and Miss Nikki Ann Nagorka of Niskayuna High School, winners of a high school essay contest on patriotism.

Among those who signed the petitions were President Kennedy, former Vice President Richard M. Nixon and Henry Cabot Lodge, the Republican candidate for Vice President. Their signatures were obtained when they made campaign visits to Schenectady.

The Union-Star and WSNY were selected to receive the award in the general category by the trustees, directors, and officers of Freedoms Foundation at Valley Forge.

The "Speak Out for America" petition said "Freedom and justice are the most precious concepts of human liberty in the world. To uphold them, and if need be defend them, is not only a sacred obgliaiton but a privilege. We accept this responsibility with the confident pride that no force is greater, no belief is stronger, than our own unshakable conviction that the United States is the greatest nation in the world. We shall together dedicate ourselves to the ideals of freedom and peace for all and fear for none."

Last year the George Washington Honor Award was presented posthumously to James Barstow, Scotia artist, for a cartoon which appeared in the Union-Star. The award was accepted by Mrs. Barstow.

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. MUNDT. Mr. President, George E. Stringfellow, of New Jersey, past imperial potentate of the Shrine, recently delivered a George Washington's Birth-

day address in Philadelphia which I feel merits a place among the great testimonials to our country's first President. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WASHINGTON: THE MASTER MASON

(Address by George E. Stringfellow, of East Orange, N.J., past imperial potentate and for many years a daily business associate of the late Thomas Alva Edison, before the Pennsylvania Masonic Veterans Association, Masonic Temple, Philadelphia, Pa., February 22, 1961)

Thank you for inviting me to join you in honoring the memory of Past Worshipful Master George Washington, of Alexandria Lodge No. 22, Alexandria, Va. This is a great occasion and I am happy indeed to participate.

I recall very vividly addressing you on another occasion and am complimented by the return engagement.

I bring you the greetings of the Imperial Council of the Ancient Arabic Order of Nobles of the Mystic Shrine, which I had the privilege of serving as imperial potentate for the year ending July 9, 1959.

The shrine is not a part of Masonry, but it is Masonic in its birth and traditions. It will ever remain so for there are in Masonry the elements of truth and honor which George Washington exemplified and symbolized.

While the struggle for libert was still underway, a French-American firm, desiring to present a token of their respect to General Washington, arranged with nuns in Paris, France, to make a Masonic sash and apron of the finest satin on which the French and American flags were combined with various Masonic emblems embossed in gold. These were sent to the general with a letter from Lieutenant Watson, who in 1775 had been in charge of a convoy of powder from Providence, R.I., to the American camps at Boston. Watson, a Mason, wrote to Washington:

"We hasten to offer for your acceptance a small pledge of our homage. * * * Your glorious career will not be confined to the protection of American liberty, but its ultimate effect will extend to the whole human family, since providence evidently selected you as an instrument in His hands to fulfill His eternal decrees.

"It is to you, therefore, the glorious orb of America, we presume to offer Masonic ornaments as an emblem of your virtues. May the Great Architect of the Universe be the guardian of your precious days, for the glory of the Western Hemisphere and the entire universe."

Washington replied:

"If my endeavors to avert the evil with which the country was threatened by a deliberate plan of tyranny should be crowned with the success that is wished, the praise is due to the Grand Architect of the Universe, who did not see fit to have his superstructure of justice to be subjected to the princes of the world, or to the rod of oppression in the hands of any power on earth."

Washington, and your own Benjamin Franklin, who was the first grand master of Masons in Pennsylvania, were ever true and faithful to the teachings of our fraternity. Washington laid the cornerstone of our Nation's Capitol with Masonic ceremonies. It was thus fitting that the last human act before his body was entombed at Mount Vernon, Va., was the dropping of sprigs of acacia on his bier by his brothers from Alexander lodge. Washington lived Masonry as a way of life and, above all, as service to his fellow man.

In the long and glorious history of our Republic, there has been no other like him. He saved us from tyranny and for posterity, as the hope of the world.

It may well have been, as Watson said, Washington was selected by providence, or the Grand Architect of the Universe, as an instrument to fulfill His eternal decrees. There have been none in our history with his perception of liberty and its preservation.

"The lessons I learned on my admission to Masonry," said the father of our country, "were of encouragement in later years when I encountered * * * severe trials, especially those of the commencement and during the Revolution. There is no doubt in my mind," he continued, "that Masonry and its lessons were helpful throughout the Revolution, both on the battlefield and in the legislative assembly."

The lessons which Washington and his associates learned in our fraternity doubtless helped to hold together his little band of patriots at Valley Forge and thus made us a free people.

When Washington retook Philadelphia from the British, he and his keymen celebrated their great victory by attending religious services in a Masonic lodge here in Philadelphia.

I have felt for a long time that inasmuch as our way of life was virtually born in Masonic lodges, we 4 million Masons have a greater responsibility to keep America American than any other segment of our human family.

We Masons who practice the ritual in our daily lives, radiate good will which is more precious than a gold nugget and much harder to find. Good will is the measure of a man's success and often determines his usefulness to society. That is why our Masonic forefathers set such store by good will and decent living.

We Masons, who would save the world from tyranny, must, if we are worthy of our great heritage, emulate St. Paul who, crying that the days were evil labored to improve them. We must not follow Hamlet who cried that the days were evil and cursed them. We must be positive in our approach to all problems. We should be guided by what is right rather than who is right.

In his Farewell Address, Washington said, "All obstructions to the execution of laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract or awe the regular deliberation and action of the constituted authorities, are destructive of the fundamental principle that the power and right of the people to establish government presupposes the duty of every individual to obey established government."

This should, in my opinion, be required study for every American. The best of all governments, in my opinion, is that which teaches us to govern ourselves.

We may realine ourselves into new political groups, to establish the right of choice in the determination of the principles this Nation will follow, but unless the officials and the laws they enact, interpret and administer, reveal the same high quality of honor and integrity taught in our Masonic lodges and exemplified by Washington, then this great American experiment in freedom will be lost. Then the tyranny of despots will return to plague our people until another Washington arises to accept, teach, and apply the principles of Masonry that create an aura of freedom so dear to us.

Social Progress in the United States

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. KEFAUVER. Mr. President, it is often illuminating to look back into history and see how ideas which are now totally accepted were condemned when first presented. Change for the better never comes easily, for the forces against change are strong, at least vocally.

Today, as our Nation attempts to move forward toward new frontiers of all kinds, the forces for change and against change are again pitted against each other.

Mr. Nathan Straus, owner of radio station WMCA in New York City, recently broadcast over that station an editorial entitled "It's Socialism." In it, he traces the long and often difficult route of social progress in our Nation from the time when public education was attacked as communistic until the present when we are confronted with the problem of meeting the health care needs of our aged.

I ask unanimous consent that the text of Mr. Straus' editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S SOCIALISM

(By Nathan Straus)

The man who wants change asks us to think. Thinking is difficult—yes, painful. It is so much easier to believe than to think, to trust what we have been taught, rather than to doubt. In every age, the doubters, the men of ideas, have been disliked and feared. A new idea is more painful than a toothache.

We call such men idle dreamers, or dangerous radicals, or eggheads. When they ask us, not only to change our ideas and prejudices, but also to mend our ways, we damn them as Socialists. To fight current wrongs is socialism.

Let us look back at a few historical examples. Anyone who raises objection to our public school system today, would be known as a crackpot. But in 1878, public education was bitterly attacked not by crackpots but by some of the most respected people in the community.

The Reverend Dr. Joseph Le Conte, a teacher at California State University, wrote to a Senator: "I fully concur with you in your opposition to compulsory State education. This certainly strikes at the integrity of the State, for it makes children the 'wards of the State' ".

As late as 1886, only 75 years ago, Zachariah Montgomery, later an Assistant Attorney General, was one of a large number who characterized free compulsory education as, this communistic system of public schools.

In 1961, all agree that transportation is vital to our country and that highway building is a proper function of the Federal Government. Congress recently appropriated $50 billion for road construction. But in 1893, Gov. Roswell P. Fowler, of New York,

wrote that the cost of national highways would be inconceivable and that building them would overwhelm the Government.

In 1933, the prices of farm products had fallen so low that tens of thousands of farmers were faced with ruin by foreclosure of the mortgages on their farms. There was rioting in the farm States, defiance of the forces of law, bloodshed—and a real threat of civil war. Nevertheless, legislation recommended by President Roosevelt to provide relief was denounced by Congressman JOSEPH W. MARTIN, of Massachusetts, in these words, "We are on our way to Moscow."

The decade which began in 1920 and ended in the Hoover panic of 1929 has been described by historians as a fantastic era in Wall Street. Millions of dollars of the hard-earned savings of people of small means were wiped out as banks throughout the country closed their doors in bankruptcy. There had been scandalous abuses in the stock markets, such as artificial rigging of prices and gross misrepresentation of facts about securities. But when President Roosevelt sent a message to Congress asking for legislation to put an end to such fleecing of the public by unscrupulous bankers and brokers, the reforms that he proposed were denounced and ridiculed.

James H. Rand, Jr., of Remington Rand, who was chairman of the so-called Committee for the Nation, said this legislation was deliberately designed to push the Nation "along the road from Democracy to communism."

The president of the New York Stock Exchange, Richard Whitney, said to the congressional committee which was considering the bill: "You gentlemen are making a great mistake. The exchange is a perfect institution." But in 1938 Mr. Whitney was indicted, convicted, and imprisoned for grand larceny. He pleaded guilty to charges that he had used the securities of his clients for personal financial ventures.

There is food for thought when we reflect that the sanctimonious people, who consider themselves and the institutions which made them rich to be perfect, so often turn out to be characters of very dubious morality.

When a social security system was suggested in 1932, George P. Chandler of the Ohio Chamber of Commerce was one of several business leaders who maintained that, "With unemployment insurance no one would work; with old-age and survivors' insurance no one would save; the result would be moral decay, financial bankruptcy and the collapse of the Republic."

And when in the early days of the Roosevelt administration, concrete steps were being taken to enact a comprehensive social security program, the legislation was bitterly assailed by prominent individuals in the Republican Party as well as by leaders of industry, banking and by many of the great newspapers of the country. The voice of reactionary big business, the National Association of Manufacturers, intoned, it means the "ultimate socialistic control of life and industry." The Republican National Committee warned workers, "Under Roosevelt's so-called social security, in 1937 you will be assibned a number; that will be your number wherever you work as long as you live—no name, just a New Deal number."

After those dire predictions, it was not astonishing that the Republican candidate for President, Governor Landon of Kansas, said that, if elected he and his administration would bring about repeal of the Social Security Act.

Anyone who has read the history of social progress could foresee that President Kennedy's recommendations for righting social wrongs would be opposed by the reactionaries of 1961 just as every previous step in social progress has been opposed.

President Kennedy has asked Congress to enact a bill for universal medical care for the aged. This bill would benefit 14.5 million elder citizens, by providing health care and hospitalization. The bill also would increase Federal support for medical training and for research.

The passage of this bill is of the utmost importance. Sixteen million Americans over the age of 65 cannot afford adequate medical care. Indeed, nearly one-half of those over 65 have incomes of less than $1,000 a year. More than 2 million of them are officially classified as paupers. Yet these facts do not disturb the reactionaries, those who believe that present conditions should continue regardless of needless suffering.

The American Medical Association, an organization with a long record of protecting the vested interests of doctors and disregarding the interests of patients, has called the Kennedy program, "socialized medicine." Of course, the U.S. Chamber of Commerce and other like-minded conservative business organizations have joined the hue and cry.

Those who flaunt the banner of conservatism when they obstruct all social progress are not true conservatives. In his second inaugural address, President Franklin D. Roosevelt said: "The true conservative seeks to protect the system of private property and free enterprise by correcting such injustices and inequalities as arise from it. The most serious threat to our institutions comes from those who refuse to face the need for change."

If Federal payments for medical care constitute socialized medicine, then public parks must be socialized recreation, public schools, socialized education, and public roads, socialized transportation.

There are again today, leaders with imagination who want to right social wrongs. These men realize that a plan of medical care for the aged is a vital step forward for America. Passage of this legislation will show that the protection of the health of its citizens and the protection of their rights are both the concern of our Government.

Elimination of Bloc Voting by Cooperatives

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution recently passed at the annual farm bureau meeting of the State of Rhode Island endorsing the elimination of bloc voting by co-ops, as set forth under the provisions of S. 660.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ELIMINATION OF BLOC VOTING BY CO-OPS

Whereas Federal milk marketing orders throughout the United States allows the directors of farmer cooperatives to vote their entire membership in or out of an order; and

Whereas at Federal referendums held here in Rhode Island in 1958 with the above procedure of bloc co-op voting, the Federal Order No. 90 affecting all Rhode Island producers as well as those in southeastern Massachusetts was instigated; and

Whereas many co-op members feel bloc voting has destroyed the constitutional right of the individual: Therefore be it

Resolved, That the Southern Rhode Island Farm Bureau approve bill S. 3207 introduced March 15 in the 1960 Congress by Senator WILLIAMS of Delaware but pigeonholed in committee, or a bill with similar intent which will be presented again during this session of Congress.

FEBRUARY 1961.

Wage Earners' Problems in Bankruptcy Proceedings

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr HILL. Mr. President, the Honorable Clarence W. Allgood, of Birmingham, Ala., has served as referee in bankruptcy, U.S. District Court for the Northern District of Alabama, since July 1938, just a few short months before the effective date of the Bankruptcy Act of 1938, which had been signed into law by President Roosevelt on June 22 of that year. Since that time, Judge Allgood and his associates in cooperation with businessmen, creditmen, and attorneys of the Birmingham area, have compiled an outstanding and commendable record in connection with chapter XIII of the Bankruptcy Act which permits the court to assist a debtor to work out a reasonable plan with his creditors to pay his debts out of future earnings. By virtue of the concerted program established by Judge Allgood and by virtue of his wisdom in utilizing chapter XIII of the act, untold thousands of honest debtors have been able to successfully combat the threat and stigma of bankruptcy and thereby rehabilitate themselves to the extent that they have again become productive workers and good credit risks. The success of Judge Allgood's program is demonstrated by the fact that it has long served as a model to other referees in connection with the establishment of their proceedings in bankruptcy.

On February 9, 1961, Judge Allgood delivered an address at a meeting of the Alabama Consumer Finance Association regarding the experiences of his court in connection with chapter XIII of the Bankruptcy Act. I strongly commend the address.

I ask unanimous consent that the speech of Judge Allgood be printed in the Appendix of the RECORD. There being no objection, the article was ordered to be printed in the RECORD as follows:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The consumer bankruptcy committee of the American Bar Association has been kind enough to invite me to explain why wage earner proceedings have been so singularly successful in Birmingham. It is not a new

question, nor is chapter XIII of the Bankruptcy Act any longer the new and untested vehicle it once was for the solution of wage earners' problems. Inherent in the question and its answer are some of the fundamental concepts of bankruptcy and morals about which much has been written.[1]

Perhaps it is appropriate to answer the question by pointing to the problems we confronted when wage earner proceedings were initiated in Birmingham, and by relating what we have been able to accomplish through their use.

We first had to satisfy referees, credit men and business interests generally, that chapter XIII could be used successfully to combat bankruptcy, and that it offered the honest debtor a method for the payment of his debts out of future earnings without the stigma of bankruptcy and the loss of self-respect. We believed then, as now, that chapter XIII provided a means of economic rehabilitation to the wage earner who would otherwise be overwhelmed by financial pressures to the prejudice of his work and credit standing in the community.

We realized early that if chapter XIII was to do the job we intended for it to do, we had to make sure that the debtor's agreement to pay his debts out of future earnings was carried out. The only answer was to enlist the aid of the larger employers in the district, and to get them to make deductions of the debtor's payments for the court.

These people were quick to realize that our plan had possibilities. They were acutely aware of the fact that volunteer wage earner bankruptcies had for a number of years been creating such a hardship on the smaller businesses in the district that almost anything to better the situation deserved a try. They also realized that an employee harassed and worried by debt could not do a good job, and that without having his mind on his work he could be dangerous to himself and to his fellow workers. They were painfully aware that the cost of garnishment clerks and answering garnishment orders from the State courts had become a major cost item.

In the very beginning, the larger employers, such as United States Steel Corp., Woodward Iron Corp., Republic Steel Corp., and U.S. Pipe, agreed to work with the court and to make deductions for us. Today we have over 350 companies making deductions for the court. Others, mostly railroads and companies who have their payrolls made up out of the State, prefer to send the entire paycheck to the trustee.

Eleven companies, mostly small employers, usually fire any employee receiving a garnishment or an order from the court to deduct or send the entire check in. Strangely, one of these companies is involved as a creditor in a majority of our cases, and it always wants to get ahead of other creditors. It never seems to understand why we find it necessary to dismiss some cases.

There is also a small number of companies making deductions who are very slow in remitting collections to the court. Our cases involving these companies are naturally watched very closely.

From the beginning, creditmen have given us every chance to succeed. The creditman or attorney representing creditors who has not given us his wholehearted cooperation has been the exception instead of the rule. He is usually a new man from out of town who perhaps has had bad experience with chapter XIII in another district or who, more often than not, has had no experience at all with debtor cases.

The bar association has always given us its complete cooperation. By adopting a more than reasonable scale of recommended fees to be charged in these cases, they have helped us hold the cost of debtors' cases down so that the debtor could afford to file such a case rather than a bankruptcy. This fee is at all times controled and set by the referee. The suggested scale ranges from a minimum fee of $15 on up based on liabilities listed and actual work done. The average fee when last checked by the National Retail Creditmen's Association several years ago was $38.73. It is probably larger now due to the fact that our cases have listed much heavier indebtedness during the past 2 years than at any other time in our experience.

There can be no doubt that our bar association has had a large part in persuading the public in our area that to bankrupt is disgraceful; that it should be done only as a last resort; and that before taking such a step one should try, through the use of chapter XIII, to work out a reasonable plan with his creditors and, with the assistance of the court, to pay his or her honest debts out of future earnings.

Due to the combined effort of all of these groups we have virtually eliminated bankruptcies in this district. In fact we have been so successful that many of our business people have forgotten or, in case of the younger group, have never been aware of the many hardships worked on all business people by a flood of bankruptcies.

We receive some complaints about the debtors court, and we realize we are not perfect. We always want to do a better job, but we have learned the paradox that by doing a better job, we create a problem for ourselves and for creditors. It is only natural that the more successful you are in concluding cases the more cases you will have filed. For many years now we have had more cases referred to us than we could handle in the manner that we would have preferred. We have tried to remedy this situation by refusing to take cases where we are reasonably convinced that no feasible or fair plan can be worked out. As an illustration we do not allow domestic servants to file under chapter XIII. We have simply let it be known that we will not confirm such cases. We try not to confirm cases where the employment is such that our past experience leads us to believe that the debtor cannot be forced to make payments and where we do not believe that he will voluntarily do so.

We have learned as a general rule that taxi drivers, waiters, and waitresses, filling station attendants, and part-time and seasonal workers are hard to work out.

We probably make a mistake in confirming many cases that should be bankruptcies in their inception, yet we find it difficult to insist that a debtor bankrupt. We have fought bankruptcy for 23 years, and we are thoroughly convinced that in the long run no one can really benefit from a bankruptcy. More often than not, the debtor bitterly resents being told that he should bankrupt. Many, both men and women, actually break down and cry when so advised. They will almost always insist that they be allowed to pay their debts; that they are honest debts and must be paid. Many tell us that it is against their religion to bankrupt.

Should we discourage this attitude which frowns upon bankruptcy? We think not, especially when experience has taught us that many of the cases we initially think should be bankruptcies eventually pay in full. We always make a memo on these cases so that we can later see what happens to them. So many of them have fooled us that we are about to decide that we know very little about evaluating a case. We have literally hundreds of people paying half of their earnings to court. We are constantly amazed at the small amount of cash money some people can and do live on.

Our average overall costs, including attorney's fees, is slightly over 14 percent of the total claims paid in each case. Due to the fact that basic filing fees are the same regardless of the size of the case, the costs may be too high in the smaller cases and too low in the larger cases. In one case recently concluded in our court a debtor paid creditors $5,331.72 at an overall cost of $591.92, including attorney's fees. It took 5 years, 10½ months for him to pay the case in full.

No personal finance company could afford to lend money that cheaply. We certainly do not want to put the court in the position of competing for business that legitimate loan companies should handle. It is important that costs be held at a reasonable level. In the larger cases certain charges should be increased.

The authors of the amortization sections of the Chandler act deserve unlimited credit for their outstanding work. Very few amendments to the act have been required. Its terminology is so clear and so easy to understand that very few appeals have been taken to the higher courts.

Since my appointment as a referee in July of 1938, just a few short months before the effective date of the Chandler act, we have disbursed $26,395,389.41 to creditors. For the 3 years prior to 1960, we disbursed over $3 million a year; however, due to business conditions in the district, our disbursements were down to $2,367,006.32 last year.

There are figures which prove beyond question that we are justified in our claim that chapter XIII can be used effectively to reduce straight bankruptcies.

For the year 1938, the first year in which chapter XIII was in existence, cases filed under the chapter constituted 33.8 percent of all cases filed; 66.2 percent or 2,200 cases were filed in ordinary bankruptcy.

Each year from 1938 to 1949, with one exception, saw an annual reduction in the proportion of ordinary bankruptcies and a similar increase in the use of wage-earner petitions.

In 1939 only 52.7 percent of the cases filed were ordinary bankruptcies;

In 1940 there was a reduction to 42.6 percent;

In 1941, to 38 percent;

In 1942, to 37 percent;

In 1943 (a year of low total filings), the percentage of ordinary bankruptcies increased to 42.8 percent of the total; however, in 1944, we again find a decrease to 34.8 percent and in 1945 a further decrease to 33 percent of the total cases filed.

The reduction in 1946 was to 28 percent;

In 1947, 20.7 percent;

In 1948, 12.2 percent; and

In 1949, 10.3 percent of the total cases filed were ordinary bankruptcies, the balance being debtor cases.

Since 1949, the ordinary bankruptcy cases have leveled off to between 9 percent and 11 percent of the total of all cases filed, the balance of cases filed being debtor cases.

This represents a reduction in the ordinary bankruptcies and other cases from 2,200 in 1938 to a level of about 800 cases a year; and this occurred during a period when bankruptcy cases generally were showing a substantial increase.

There has been a steady and alarming increase in the number of straight bankruptcies filed in the United States since 1958.

In the northern district of Alabama, made up of 31 counties, several of which have been

[1] See, e.g. "Wage Earners' Plan", by Referee E. R. Sloan, Journal of the National Association of Referees in Bankruptcy, vol. 33, No. 1, p. 5 (January 1959), "Is Chapter XIII a Milestone on the Path to the Welfare State?" by Referee Ronald Walker, op. cit., p. 7; and "Chapter XIII—Referee Allgood of Alabama Replies to Referee Walker," Id., vol. 33, No. 2, p. 5 (April 1959).

designated as disaster areas, there has been a slight increase from 780 cases to 842 cases in 1959. In 1960, a year in which bankruptcies were increasing all over the country, our filings were reduced by 28 cases to a total of 814 cases. (These figures include all types of bankruptcies, both individual and business, voluntary and involuntary.)

In 1958, 6,258 chapter XIII cases were filed in the northern district of Alabama; in 1959, 5,409 cases; but in 1960, there was a reduction to 4,562 cases.

This year, we are considerably ahead of average; 545 cases were filed in January of this year, and in the first week of February, 129 petitions were filed.

Few parts of the country have received chapter XIII with the enthusiasm and regard we have for it in Birmingham. Perhaps these are some of the reasons:

1. Some few States have little or no need for bankruptcy or chapter XIII. Budget firms and voluntary plans have been successful in some areas.

2. Some referees, like many other professional men, have been reluctant to abandon the concept of ordinary bankruptcy in favor of the more challenging potentialities of chapter XIII.

3. The hostility of credit men, unfamiliar with a vigorous wage earner amortization operation, has also been partially responsible.

The record reflects, however, that there has been much improvement nationally in the past 10 years.

Why have we been successful? One visiting referee, after spending several days in our courtroom, expressed the whimsical belief that it was because people here were more honest than the people in his district. Of course, this is not true. While many factors are involved, we think the main ones are probably these:

First. This was the first district to attempt wage earner amortizations by use of the Bankruptcy Act. An earnest attempt was made to modify and adopt the procedure of section 74 to wage earner adjustments. Special procedures were molded and later incorporated into the Chandler act. We have been the beneficiaries of an early start.

Second. A referee who had never handled bankruptcy cases and who thus was free of predilections favoring straight bankruptcy, was appointed to the full-time task of handling wage-earner amortizations under chapter XIII. And he had specific instructions from the district court that appointed him to do everything possible to help people in financial distress pay their obligations through the court.

Third. The debtors' court, as it is called, has always enjoyed the full support of the district judges and other referees in the district. My associate, Referee Herbert Maulitz, deserves much credit for the success of the court. In addition to being learned in the law, he is a good hardheaded businessman with practical business experience. He is understanding, patient, and wise. It has been a real privilege and pleasure for me to work with him. We have no disagreements as to the law or on policy that we do not resolve promptly and without difficulty.

Fourth. The appointment of a salaried, full-time trustee to serve in all chapter XIII cases has proved beneficial to creditors and debtors alike. We were fortunate in the beginning to have a man well trained in accounting and in collections. He has, over the years, developed a highly trained and efficient staff to do the work in his office. At this time he employs 28 persons and has just signed a contract for the installation of IBM equipment. Mr. John A. Stubinger received his appointment in 1938. His training and dedication have been responsible in large measure for the success of our court.

And last but not least, we have had the full and complete support of credit men, business interests, and of our bar association.

There is no reason why districts with problems similar to ours cannot be equally or even more successful than we have been in the use of chapter XIII. Each year sees an encouraging increase nationwide in the use of this relief section of the Chandler Act.

Temporary Extended Unemployment Compensation Act of 1961

SPEECH

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 4806, to provide for the establishment of a temporary program of extended unemployment compensation, to provide for a temporary increase in the rate of the Federal unemployment tax, and for other purposes.

Mr. BYRNES of Wisconsin. Mr. Chairman, I hope that the chairman of the committee will not be offended later on in the year when I remind him of his concern about preserving States rights in this program and in the integrity of the States with respect to it, because as long as he holds to that position he will always find me on his side. I would mention to the Members here that that is an issue that will no doubt face us one of these days, because there is no secret being made of the fact that the present administration does intend to ask this Congress for the establishment of Federal standards and to superimpose our judgment on the States. I serve notice at this time that I shall oppose any such proposals and oppose anything in that direction with every capacity that I have at my command.

The legislation before us today, however, Mr. Chairman, I put in an entirely different light. It is not a Federal standards program. It is a temporary program. I will admit it is a program of Federal benefits with a Federal tax tied to the current Federal unemployment tax, but it does not involve a change of State systems. I will agree that this is not a perfect solution of problems we face in periods of general economic declines, where we have a high rate of unemployment over a protracted period of time.

I would suggest, as I suggested to the Secretary of Labor when he appeared before our committee, that we have two distinct problems with respect to unemployment. One is the problem incident to normal unemployment; the technicians refer to it as frictional unemployment. And to meet the problems of that type of unemployment we set up years ago the system of Federal-State unemployment compensation. I am proud to say that Wisconsin was one of the forerunners in establishing such a system. But it was never intended, and I do not think that it should be intended today, that the system should meet every kind of unemployment that may exist under all circumstances.

I think we have a special problem with relation to those periods when unemployment is for a protracted period and at a high rate, call it recession unemployment, if you will. In that situation we should recognize that a person who becomes unemployed has a much more difficult task of finding suitable employment in what would be considered a reasonable period of time.

I suggested to the Secretary that consideration should be given to the development of a permanent program of temporary assistance to the unemployed during periods of high and protracted unemployment. We should have a permanent program of some kind either at the Federal level or at the State level, or a combined Federal-State program that would be triggered into effect to take care of the problems of the unemployed when the rate and duration of unemployment is unusually high. We should not encumber the present Federal-State system of unemployment compensation that has worked so well with the responsibility of taking care of conditions that arise in a national recessionary period.

Mr. Chairman, the question now before us, however, is what our attitude should be with respect to the specific proposal before us. I think we have to ask ourselves two questions. No. 1, should anything be done at this time? Do we have a problem in many of the States and in the country which gives rise to a concern and a need for doing something for the people who are unemployed and who have been unemployed for some considerable period of time and who are unable to find jobs, and whose unemployment compensation benefits have expired? Frankly, I think we are justified in considering their plight and in doing something to alleviate that situation. I think we must recognize that although some States have taken some action which automatically triggers an extension of their unemployment programs in the case of protracted unemployment, the number is very, very small. We also know that the problem of doing it in each State presents serious difficulties if it is going to be of any particular effect at the present time. I come to the conclusion that something should be done.

Then we face the question of what should be done. We have no permanent program. We have only one thing to do; that is, we can look back to the experience this Congress and the country faced in 1958. What did we do then? Because of the fact that it takes time to develop the kind of program that we would be willing to enact on a permanent basis, we must find a temporary solution to this temporary problem. The people we want to help need help now. They are not going to need the aid, we hope, in September or October or November. If there is a need, it is now. The economists point to the fact that there is every expectation of an upturn in the economy.

I should say at this point that I think we would get that upturn faster if the President would stop talking about how bad everything is and how bad things might be tomorrow. But these people need something now. So if we are to do something we must act as soon as possible. To do this, we have to look at what experience we have had and what has been tried before. That is what we have done. In general we have taken the 1958 program as it related to the determination of who would be entitled to benefits, the amount of the benefit, the duration of benefits, and how they should be paid. This is not identical to the 1958 program, however, because, as has been pointed out by some of my colleagues, we do finance it in a different way.

I want to compliment the committee for not accepting the program in financing as sent to us by the administration. The administration proposed to finance the program by an increase in the base against which the tax rate applies, and they also proposed a permanent increase in the unemployment tax. The committee has made this a temporary tax that coincides with the temporary aspect of the benefits involved. This program is therefore separate from the regular program. It is not tied in with the general unemployment compensation program. A separate benefit, and a separate tax, both of which have definite expiration dates. Instead of increasing the base, as recommended by the administration, the committee bill increases the tax rate and does not disturb the base. This is a much more desirable way to raise the additional funds. To pay back the moneys advanced by the general funds of the Treasury under the administration proposal would have taken up to 6 years. We said no, we should pay it within a reasonable period of time to get it behind us, and not have it hanging over our heads. I believe this too was a wise decision. It will be financed in 2 years rather than 6.

I think one of the mistakes we made in 1958 and we still have it hanging over our heads today is that the States were not expected to begin paying back the loans until 1963. The very fact that that is hanging over the heads of a number of States made it inadvisable to have another loan program which would be put on top of a loan program already in existence which has not been repaid.

What we are faced with today is a matter of finding the most expeditious, the most equitable, and the soundest way of providing aid to those currently unemployed who have exhausted their normal unemployment compensation.

I think the bill before us is about the best we can do. As a temporary program, I support this bill. I would hope, however, that after the rainy day and in the sunshine we may consider doing something to repair this roof with a permanent program to take care of these temporary situations.

Mr. SCHENCK. Mr. Chairman, will the gentleman yield?

Mr. BYRNES of Wisconsin. I yield to the gentleman from Ohio.

Mr. SCHENCK. I understand this program is one which is administered entirely by State officials and under State laws. Therefore, we as the U.S. Congress have no part in determining any rules or regulations as to eligibility.

Mr. BYRNES of Wisconsin. As to eligibility or the amount of benefits or duration, that is generally true.

Mr. SCHENCK. Yes. Several suggestions have been made in various State legislatures, I understand, to require those applying for unemployment compensation to meet some duty for remaining eligible. I think we will agree that probably unemployment resulting from automation will be a continuing problem, and that the people most adversely affected will be those who are the least trained.

Mr. BYRNES of Wisconsin. I would agree with the gentleman.

Mr. SCHENCK. Therefore, I am wondering, Mr. Chairman, if any suggestion could be made to the appropriate officials of the several States to suggest to them that as a requirement of eligibility, they might ask those who are receiving these benefits to attend a vocational school at night in facilities already available in these communities, and whether or not the gentleman feels the new skills learned and whether such educational opportunities might be helpful in meeting the problem of automation and also the problem of unemployment.

Mr. BYRNES of Wisconsin. I would say to the gentleman there is no question in my mind that the need for greater emphasis on vocational training must be recognized if we are to cope with the problem of unemployment resulting from automation. Certainly, there is nothing that would prevent the States from taking action along the line suggested, but I would caution my colleague because I would not, under any circumstances, want to start writing here the criteria and conditions and standards that the State laws must comply with because as soon as we do that, we might just as well take the whole system into the Federal Government and operate it as a Federal system. I would be opposed to our dictating to the States, but I certainly hope the States read the remarks of the gentleman and perhaps get the idea.

The CHAIRMAN. The time of the gentleman has expired.

Imports Rise

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. DORN. Mr. Speaker, the following is from the Associated Press newsticker:

WASHINGTON.—Last year, for the first time since the Government started keeping cotton statistics, imports of cotton goods exceeded exports.

Preliminary figures gathered by the Agriculture Department for 1960 show imports increased 64 percent to a new high of the equivalent of 566,000 bales of raw cotton, exports were the equivalent of 522,000 bales.

The Story of Robert Hatton

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 3, 1961

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, excerpts from a historical address entitled, "The Story of Robert Hatton," recently delivered by Dr. Frederick Taylor Wilson, Nashville author and lecturer, before the senior class of Lebanon, Tenn., High School.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

All wars are curses, and the scourge of mankind. One of the most unfortunate in our American history was our so-called Civil War, the 100th anniversary of which is now being celebrated. There are in both North and South many lonely cemeteries where lie many onetime promising youths, slain in battle, of many of whom it might well be said as Gray expressed it. "Some mute inglorious Milton here may lie."

For years there has stood in the center of the square here in Lebanon, Tenn., the bearded, life-size statue in memory of one of the many noblemen who gave in the Civil War the full measure of their devotion. His name is Robert Hatton who died at Seven Pines near Richmond, Va., 8 days after becoming a brigadier general in the Army of the Confederacy.

Robert Hatton was born near Youngstown, Ohio, November 2, 1826, and spent the first 9 years of his life in eastern Ohio and western Pennsylvania, after which time his father moved to Tennessee and lived the remainder of his years in Davidson, Sumner, and Wilson Counties.

Robert Hatton came to Cumberland University from Gallatin as a junior when 19 years of age. He was one of the four members of the class of 1847. The following year was spent as a tutor in Cumberland, after which he entered its newly formed law department. After 1 year there, for financial reasons, he returned to Sumner County for 1 year as principal of a well-known academy.

In 1850, he came to Lebanon and was associated for the next 5 years in law with two of the great Lebanon legal lights, Jordan Stokes and Nathan Green. He later was chosen to represent Wilson County in the State house of representatives (1855). Before that he had won distinction as a leader for this section in an effort to raise money for the building of the Washington Monument in Washington, D.C. The completed State capitol was first being used. Andrew Johnson was Governor and Neil S. Brown, a former Governor, was speaker of the house. Hatton's major effort in the legislature was to get established a State normal school in Tennessee. He got his bill through the State house only to see it fail by only one vote in the State senate. That was more than 50 years before Tennessee finally established its present great normal colleges.

The next year (1856) was an eventful one for Hatton, then only 30 years of age. He was the elector for this district of the newly formed Know-Nothing Party, whose candidate for President that year was the former Whig President Millard Fillmore, of New York, whose running mate was Andrew Jackson Donelson, a Tennessean and nephew of Mrs. Andrew Jackson.

In 1857 Robert Hatton was the aggressive nominee of the Know-Nothing Party for

Governor of Tennessee. He lost. But the political bee of Hatton continued to buzz, and 1 year later he won a seat in Congress. As a new and studious Congressman he began service in the present Hall of Congress at its first session there (December 1859). John Brown had recently made his history-making raid at nearby Harpers Ferry, and Hatton as a student of history clearly saw arising in the distance the ominous clouds of war. Two months were spent choosing a Speaker of the House, and Hatton found Congress anything but a bed of roses as tension daily increased.

Like a majority of Tennesseans, at that time, Hatton first opposed secession and spoke ably both in and out of Congress against the threatened division of the Union. He was a native of the North and a loyal adopted son of the South. But, like Robert E. Lee, under whom he later served as a soldier in Virginia, when the die was cast and Hatton had to choose between fighting with or against his adopted people he turned soldier first as a captain, next as a colonel, and finally as a brigadier general, all within the period of 1 year. He fell in battle on May 31, 1862, still under 36 years of age. A few years later his body was brought home to rest forever in our local cemetery.

Such are the wicked ways of war. Let all passers-by who view the historic Hatton memorial, the only such monument between Nashville and Knoxville, ever recall the tragic days of a century ago. Though the name Hatton may be vaguely remembered, the story of the cause for which he died will be told and retold until the last syllable of recorded time.

Hon. Walter M. Mumma

SPEECH

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 27, 1961

Mr. STRATTON. Mr. Speaker, I was greatly shocked and saddened to learn of the passing of our beloved friend, the gentleman from Pennsylvania, Mr. MUMMA. I had a very special spot in my heart for WALTER MUMMA and I know that, like my colleagues, I too will miss his presence in this Chamber.

WALTER MUMMA and I were from different parties and had different points of view on some issues. But I never found a man who had a warmer sense of friendship or who went out of his way to be pleasant to his colleagues than WALTER MUMMA. We represented districts in this House which had many similarities. Both included major urban areas as well as substantial rural sections, and he and I in particular shared a concern for legislation that would be helpful to our dairyfarmers.

As a freshman Member of this body I found WALTER MUMMA a real friend and an understanding counselor. He served the people of his district with great distinction and his warm human personality and his outstanding ability as a legislator will be missed in these Halls of Congress.

To his son and family I extend my deepest sympathy.

Migrant Farm Labor in New York State

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 3, 1961

Mr. KEATING. Madam President, there has been considerable discussion over the past few months of the plight of migrant farmworkers. It is my impression that, although many people are vitally concerned about this subject, there is a serious lack of accurate information about the earnings of migrant workers and the conditions under which they are employed.

New York State has taken a number of significant forward steps to protect and register migrant farmworkers. This action has served as a model for other States and for the Federal Government. For example, the migrant farm crew leader registration bill which I introduced last year with Senator JAVITS was was based upon New York's crew leader registration requirements. I am a cosponsor this year of a similar bill to register migrant farm crew leaders and labor contractors.

In 1959, the New York State Department of Labor made another major innovation consistent with the State's long-standing concern about the problems and needs of migrant farmworkers. The department launched a careful and intensive investigation into the conditions of migrant farmworkers throughout the State. The results of this study are very significant, especially in light of the growing national concern about this problem.

Madam President, I ask unanimous consent that an article which appeared in New York State Department of Labor Industrial Bulletin for February 1961 on the department's investigation into the conditions of migrant farmworkers be printed at this point in the RECORD in order that those interested in this problem will have an opportunity to review and study a summary of this very useful and excellent document.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SURVEY REPORTS ON EARNINGS OF MIGRANT FARMWORKERS

There is an old song relating to railroad workers that contains the line—"whaddaya maka John, on the Delaware Lakawan?"

A 1959 investigation by the New York State Department of Labor asks a similar question of interstate migrant farm workers employed by contractors. At the peak period in 1959 the 23,000 interstate migrant farmworkers in the State constituted 60 percent of the temporary farm help employed. Included in the study were the three farm areas in the State that use the largest number of such workers. The remaining seasonal work force consisted of migrant workers employed by growers or processors, local workers, workers from other areas of the State, so-called offshore farmworkers, and foreign workers.

Each year a stream of migrant farmworkers moves up the Atlantic coast from Florida to New York and beyond to harvest the various crops as they come to maturity. In the past few years this movement has diminished somewhat in size as mechanical harvesters and chemical weeding lessened the need for hand labor.

With the objective of obtaining information on the total earnings of a sample of interstate migrant farmworkers throughout their stay in New York State as well as their employment patterns, 62 crews were selected (about 10 percent of those coming into the State) and an attempt was made to record earnings and collect employment data on each member of these crews during his entire stay. This technique was an innovation in this kind of investigation and was made possible by compliance on the part of farm labor contractors with a law passed in 1958 requiring the maintenance of records of wage rates, hours of work, wages earned, and legal deductions from wages for interstate migrant farmworkers. The law applies to farm labor contractors who bring in 10 or more migrant workers.[1]

The survey and the subsequent report, "Employment and Earnings of Migrant Farm Workers in New York State," covered three major farm areas in the State which demand the largest number of farmworkers; the Rochester area (Genesee, Livingston, Monroe, Ontario, Orleans, Wayne, Wyoming, and Yates Counties); the Utica area (Herkimer, Madison, Montgomery, and Oneida Counties); and the Suffolk County area.

Farm labor contractors in these three areas employed the bulk of the 23,000 migrant workers who are part of the interstate movement. That figure represents about 60 percent of the hired farmworkers employed during the height of the harvesting season. Although some interarea shifts by migrant crews were expected, only one crew moved out of its original area and this crew was followed to its new place of work.

Earnings data were obtained for the whole or part of the stay in New York State for a total of 3,945 interstate migrant farmworkers. For a smaller sample of some 1,158 workers, complete data were available for the entire period in which they were members of a crew working in the State.

A summary of the findings regarding earnings and employment patterns in the three principal areas studied follows.

THE ROCHESTER AREA

This eight-county area features a diversified crop pattern. Among the crops that required seasonal labor was the fruit crop—apples, cherries, peaches, pears, plums, and grapes. There is also a large vegetable acreage concentrated along Lake Ontario and adjacent to the urban centers. Migrant labor is used in harvesting snap beans, broccoli, cabbage, celery, cauliflower, onions, potatoes, and tomatoes among other crops.

Typical piecework rates for harvesting important Rochester area crops included apples, 12 to 14 cents a bushel; cherries, 2 to 2½ cents a pound; and tomatoes, 10 cents a hamper; snap beans, 50 to 75 cents a bushel; strawberries, 7 and 8 cents a quart.

Hourly work rates included: "pitching" peas (machine feeding), $1 to $1.10; pitching hay, 90 cents to $1 an hour; hauling, 75 cents to $1 an hour; general day farm labor, 80 cents to $1 an hour.

Rates for other work related to the harvest: topping onions, 10 cents a box; cutting cauliflower or broccoli, 20 to 35 cents per 25 pounds.

Average daily earnings of 1,505 interstate migrant workers in 23 crews in the Rochester area including earnings from both fieldwork and work in or related to canneries was $6.39

[1] In March 1960, this law was amended also to cover growers who bring into the State 10 or more migrant workers.

a day for days on which there was employment. Men's earnings per day, which averaged $6.47, exceeded those of women by 43 cents a day. Most of this difference may be attributed to the factory-type work done by some males for which higher wages were paid. Average daily earnings for farmwork were $6.27 for men and $6.04 for women. Men averaged $7.54 a day in factory-type work.

Average earnings of migrant farmworkers by type of work performed—Rochester area, 1959

Type of work	Daily		Seasonal	
	Number	Average earnings	Number	Average earnings
Total	1,505	$6.39	437	$298
Farm work only	1,367	6.23	402	282
Farm and factory work, primarily farm	138	7.50	35	515

THE SUFFOLK COUNTY AREA

In the southeastern part of the State the principal employers of interstate migrant farmworkers are the potato growers. Much of the harvesting work has been mechanized and as a result, the chief activity is potato grading. Workers employed in this work were included in the study although the main center of interest was in the earnings of fieldworkers.

The prevailing piece rate for hand harvesting of potatoes was seven cents a bushel. Potato grading, the work in which more migrants were employed than at any other job, was paid for at hourly rates, usually $1.15 for men and $1.05 for women.

At these rates the average daily earnings of some 560 workers employed at potato grading amounted to $5.92 a day. Fieldworkers engaged in harvesting work averaged $3.95 a day in this area while those who combined fieldwork and some factory-type work averaged $5.85 a day. Because of the differential in wage rates between men and women employed at potato grading, men's earnings in this work averaged $6.13 a day while women's earnings averaged $5.15.

It was only possible to obtain the complete earnings for the season for 50 workers in this area largely because some crews disintegrated and individuals shifted frequently to crews not included in the study. Overall, average earnings for the season amounted to $306 for crewmembers employed in Suffolk County. Potato graders earned an average of $488 during the season while other workers averaged $288.

THE UTICA AREA

The chief crop in the Utica area which requires employment of interstate migrant farmworkers is snap beans although some employment is available for harvesting a variety of other crops. The piece rate of 50 cents a bushel for harvesting beans has remained unchanged for many years. Recently, a few growers have paid 52 cents a bushel but this rate is rare.

Other piece rates for crop harvesting included green peas, 50 cents a bushel; potatoes, 7 cents a bushel; and strawberries, 5 cents a quart. Rates for hauling were $1 an hour; day farm labor, $6 a day, pitching hay, 75 cents to $1 an hour; pea vinery work, $1 to $1.25 an hour (mostly $1), and potato grading, $1 an hour.

The average daily earnings of 1,803 members of migrant labor crews employed in this area were $4.45 with the great majority (1,702) employed in the fields and earning an average of $4.34 a day. A smaller group of 101 workers, who also had some factory-type work in pea vineries, earned an average of $8.73 a day. Fieldworkers of both sexes had about the same wages per day.

In this area the average number of days worked in the season was 48 and only 16 percent of the crew members averaged more than 56 days of employment in New York State. The proportion of crew members who stayed with the crew from the beginning to the end of the season was larger than in other areas studied, but their season was shorter.

Total earnings during the season for the 671 workers for whom the information was available was $208 and $203 for the fieldworkers. A group of 32 workers who had some factory employment earned $330 for the season.

Obtaining data on the wages and hours of migrant farmworkers is a far different undertaking than obtaining similar information for factory workers and procedures were developed to validate the information on the payroll record to the extent possible.

Average earnings of migrant farmworkers by type of work performed—Utica area, 1959

Type of work	Daily		Seasonal	
	Number	Average earnings	Number	Average earnings
Total	1,803	$4.45	671	$208
Farmwork only	1,702	4.34	639	203
Farm and factory work, primarily farm	101	8.73	32	330

Some difficulties were encountered when investigators sought to resolve ambiguities in the payroll records through worker interviews, but fortunately this was not a frequent occurrence. However, as a result of such experiences it is felt that although these data which were obtained from payroll records are far superior to those obtained through interviews only, not all reporting errors have been eliminated.

The sampling unit for the purpose of this survey was the "crew," a group of workers of fluctuating size and changing composition under the leadership of a crewleader who was responsible for organizing the starting group and bringing them into New York State and recruiting additional workers during the season. The crew leader usually obtains employment for the group, provides or arranges transportation and exercises some general supervision. The crew leader—also called the farm labor contractor—is responsible for keeping the payroll records and for filing a registration statement with the industrial commissioner.

Crew work is, of course, not the only kind of seasonal work on farms. Individuals return to former places of employment and in other ways seek their own jobs or are recruited for them on an individual basis. These individual migrants are not included in this study.

As has been pointed out, the turnover rate of individuals in various crews is very high. In 14 out of 40 crews in which it was possible to obtain turnover information, fewer than half the original crew members were on hand at the end of the season. To some extent therefore, the seasonal earnings reported are those of the more stable elements in the crew.

The amount that a seasonal migrant worker earns depends on a great many factors including, most frequently, the basic piece rates paid, the availability of work, and the availability of the individual for work.

When a migrant worker arrives in New York for the season, neither he nor his crew leader nor even the grower to whose farm he goes can foresee clearly how much work there will be for him. The experience of waiting for work starts immediately for some crews which arrive at their destination only to find that the crops are not quite ready for picking. Two-thirds of 58 crews in the sample which reported on this point stated that they had to wait at least 1 day (not counting the day of arrival or weekends) before starting to work. In this group were five crews that waited 13 or more days before starting work.

During the season there are additional periods during which no work can be done because of inclement weather or because no work is available. A total of 37 crews reported on the number of days in the season on which the entire crew was without work. Of a total of 3,716-crew days spent in the State there was no work on 31 percent of the days for the following reasons: more than 19 percent, no work available; and more than 11 percent, weekends.

Worker unavailability—whether the result of personal illness or other reason—is also a factor in the seasonal total earnings. More than half of all workers in the survey who remained with their respective crews for the entire season had one or more weeks with no work at all during their 1959 stay in New York State either because of personal factors or because no work was available. (Division of Research and Statistics, New York State Department of Labor.)

Electric Utility Company Participation in Nuclear Power Development

SPEECH

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 2, 1961

Mr. HOSMER. Mr. Speaker, American electric utility companies are engaging in a broad program aimed at the development of economically competitive nuclear power, both independently and in cooperative efforts with the Atomic Energy Commission. Table I lists this participation according to plants in operation, plants under construction, plants under design, plants under contract negotiations, and projects in various planning stages. Table II indicates the estimated expenditures by these private investor owned organizations in the total effort. Table III lists individual companies participating in each of the 17 projects set out in table I and additionally lists 9 study, research, and development groups carrying on various efforts within that category. Table IV sets out the foregoing participation according to the types of reactors involved.

This is, indeed, a creditable and substantial effort of real value to the Nation and to the world. It will bring closer the day when the peaceful benefits of nuclear discoveries can become available not only to citizens of the United States but to the world at large. Since the effort is not as well known to the public as it deserves to be, it is my purpose to set out here some of the details of the 17 projects.

PLANTS IN OPERATION

First. Dresden Nuclear Power Station was designed and built by General Electric Co. for a firm price of $45 million. Bechtel Corp. was the engineer-constructor. Of the contract price, $15 million was paid as a research and development expenditure by Commonwealth Edison Co. and the other members of Nuclear Power Group, Inc. The remaining $30 million plus the $6,300,000 cost of the site and company overheads was capitalized by Commonwealth Edison Co. First criticality was achieved on October 15, 1959; first electricity was produced on April 15, 1960. The plant went in commercial operation on August 1, 1960, and was dedicated October 12, 1960.

Within its license limitation of 630 megawatts thermal, this dual-cycle boiling water reactor plant has demonstrated a net capability in excess of 180 megawatts. The plant has met or bettered all design specifications. Edison was preparing to apply for a modification of its operating license, to permit ruhning at a higher thermal level, when a metallurgical problem developed involving part of the control rod mechanism. The plant was shut down in November and General Electric Co. is now in the process of correcting the drives. Operating data accumulated prior to shutdown was as follows:

Reactor service hours	2,711.5
Turbine-generator service hours	2,239.58
Megawatt-days, electrical	11,482.4
Megawatt-days, thermal	37,597.9

During the above extended period of operation at various power levels, the plant demonstrated ease of operation and rapid response to system load requirements.

Second. The Yankee Atomic Electric Co.'s 136,000 kilowatt—net electric—pressurized water reactor at Rowe, Mass., has now been essentially completed and is in preliminary test operation a bit ahead of schedule and materially within the cost estimate. The fuel elements are stainless steel clad uranium oxide. Experience to date indicates that the plant's performance will somewhat exceed specifications.

The project was undertaken as part of the power demonstration reactor program and was estimated to cost $50 million. When all costs are booked, they are now expected to amount to less than that estimate. Arrangements have been made to finance up to $57 million, including cost of the initial core, working capital, and preliminary operating costs. In addition, the Atomic Energy Commission is contributing the equivalent of $5 million in the form of research and development work toward the completion of this project.

Third. The Shippingport Atomic Power Station, the country's first large-scale nuclear power station, was constructed as part of the Atomic Energy Commission's reactor development program. It is jointly owned by the AEC and the Duquesne Light Co. Shippingport was designed to function both as a test facility and as a power producer. Hence a large amount of instrumentation for the conduct of tests was incorporated in the plant's original design. Construction of the station was initiated in September 1954, and completed the latter part of 1957. Criticality was achieved on December 2, 1957, and on December 23, 1957, 60,000 kilowatts were attained. Over 600 million kilowatt-hours have been generated through November 30, 1960.

During 1960, as was the case during the previous years of the station's operation, extensive valuable information was obtained on uranium oxide fuel element performance, core reactivity changes and associated control problems, and the technical problems associated with operation and maintenance of nuclear powerplant systems and equipment, including health physics, radiochemistry, and waste disposal problems. More than 350 different tests have been performed, some of them more than once, resulting in a total number of tests in excess of 600.

In addition to its use as a test facility and power producer, Shippingport for several years has been used as a training facility for supervisors and technical personnel of other nuclear power stations, both in the United States and in other countries. The course provided has been formal in nature and covers, in detail, the operation at Shippingport.

Several years ago in keeping with Shippingport's role as a project producing data of value to all concerned with atomic power, information on the operation of Shippingport has been made available on a current basis to the electric utility industry in the form of monthly operating reports and early in 1960, a book was published on the "Shippingport Operations—From Start-Up to First Refueling, December 1957 to 1959."

On October 9, 1959, Shippingport was shut down preparatory to beginning the first refueling operation—replacement of the enriched uranium element in core No. 1. Following this refueling, the station was returned to active service on May 6, 1960, and testing and training were resumed.

Fourth. The Vallecitos atomic powerplant in California, a joint project of General Electric Co. and Pacific Gas & Electric Co., was started in 1956. It was completed and began feeding electricity into Pacific Gas & Electric Co. lines the latter part of 1957. It operated through 1958 and 1959, and generated over 25 million kilowatt-hours of electricity. Late in 1959 the plant was shut down for an extensive modification program designed to permit increased power output from the reactor. All reactor internals were removed and a new high-density core installed. Additional pumps were provided and the turbine was overhauled. The reconstruction was completed in the fall of 1960 and the plant is now undergoing an extensive testing program prior to being restored to full power operation.

Fifth. The Santa Susana plant—the sodium reactor experiment—is a part of the AEC's reactor development program. It was designed, constructed, and is being operated for the AEC by Atomics International. The reactor facilities which are operated for the AEC by Atomics International have been out of service for cleanup, refueling, and modifications from July of 1959 until September of 1960.

Since going critical on its second core loading, the reactor has been operated at very low power for the purpose of conducting the usual new core type of physics measurements. Consequently the steam-electric portion of the plant has been out of service for the entire past year. It is presently scheduled to resume operation shortly.

PLANTS UNDER CONSTRUCTION

Sixth. Construction of Consolidated Edison Co.'s 275,000 kilowatt Indian Point nuclear opwerplant is nearing completion. At the end of 1960 approximately 90 percent of the construction work at the site was completed. The cost of the plant is estimated at $100 million not including research and development or the cost of the first core. Construction work will be complete in mid-1961 and the plant is scheduled for operation in the fall of 1961.

Seventh. The Pathfinder project is a joint undertaking of Northern States Power Co. and Central Utilities Atomic Power Associates. In 1957, a contract was signed with the AEC to cover research and development assistance for this project under the third round of the power demonstration reactor program. This contract was modified in 1959 to include work on an internal nuclear superheater for the Pathfinder reactor. The construction permit for the plant was issued on May 12, 1960. Site construction work is 40 percent complete for the plant which is located on the Big Sioux River about 5 miles northeast of Sioux Falls, S. Dak. The preconstruction researeh and development program is reaching completion and equipment manufacture is well underway with the plant scheduled to be in operation in 1962. Northern States Power Co. will own and operate the 66,000-kilowatt plant which is expected to cost a total of about $33 million including research and development work. The CUAPA organization is contributing $3.65 million for research and development work with the AEC contributing $10.3 million for research, development and waiver of fuel use charges.

Eighth. The Pacific Gas & Electric Co. has completed the development program and is now constructing a 60,000-kilowatt advanced boiling water reactor near Eureka, Calif. This project, scheduled for criticality in the summer of 1962, is being financed entirely with investor funds, including research and development. Bechtel Corp. is designing and constructing the plant on a regular commercial basis. General Electric Co. is supplying the nuclear and electrical equipment. The total cost of the plant is now estimated to be $21 million. Escalation has added $1 million to its cost since it was authorized in 1958. During the past year the development program on pressure suppression containment which cost P.G. & E. about $400,000 was brought to a successful conclusion. Exclusive of this program and related costs, the pressure suppression design is esti-

mated to cost approximately $650,000 less than conventional containment. This unique containment design is believed to be a significant advance in the art. With it, in the event of an operating accident, escaping steam from the primary system would be quenched in a water pool, thereby limiting pressure rise. The construction permit incorporating this feature was granted by the AEC on November 9, 1960.

Ninth. The Enrico Fermi atomic powerplant is sponsored by the Power Reactor Development Co. and the Detroit Edison Co. Atomic Power Development Associates, Inc., is performing research and development and furnishing the reactor design for the project. In addition, APDA will assist in the nuclear testing of the reactor. Major construction began in August of 1956 and the entire plant was essentially complete by the end of 1960.

As of January 1, 1961, the general contractor had about completed its assignment with only personnel on the site for minor installation work and closing out the accounts. All subcontractors, except two, also had completed their work. The plant operating force had assumed control of the project and, together with APDA, were engaged in extensive nonnuclear testing. Fueling of the reactor could begin on farily short notice but must await a final decision of the U.S. Supreme Court concerning licensing problems now before it, and the issuance of an operating license by the U.S. Atomic Energy Commission.

Cost of this plant to the utility organizations concerned is expected to be $84,250,000. The AEC is contributing the equivalent of $4,450,000 toward this project, being constructed as part of the AEC first round power demonstration program, in the form of research and development work.

Tenth. The Carolinas Virginia Nuclear Power Associates, Inc., formed in 1956, made a proposal to the AEC in August of 1957 under the third round of the power demonstration reactor program for the development and construction of a heavy water moderated and cooled pressure tube reactor nuclear steam generator. The proposal was accepted as a basis for constructural arrangements by the AEC in May 1958. In January of 1959, a contract with the AEC covering the project was executed and a contract with Westinghouse Electric Corp. covering research and development work required for the project was completed in June of 1959.

The proposed plant having a design capacity of 17,000 kilowatts—net electrical—is scheduled for completion in 1962 and will be constructed on a site located at Parr, S.C., but changes in proposal may cause some stoppage. The associates under the proposed agreement would pay estimated capital cost of about $22 million. The cost of operating the plant will bring the total CVNPA expenditure to about $29 million. Total estimated cost to the AEC would be about $15 million. A construction permit for the project was granted in May 1960.

As of January 1, 1961, the plant was about 7½ percent complete. The foundation work is about one-third completed and over half of the structural steel has been erected. The vapor container is almost half finished.

Eleventh. A construction permit for the Saxton project was received from the AEC on February 11, 1960. Excavation for the containment vessel was started the week of February 8, 1960. Containment vessel erection was started June 28, 1960, and was completed September 30, 1960. The concrete foundation under the containment vessel has been completed and the concrete work inside the containment vessel is approximately 75 percent completed. The walls of the two-story control and auxiliary building have been completed and the steel joists for the second floor and roof have been erected. Roof slabs have been installed, but the floors have not been poured. Excavation for the waste treatment plant has been completed and concrete form work has been started.

All major equipment has been ordered and the pressure vessel is scheduled for delivery about now. Some of the smaller equipment such as pumps, valves, heat exchangers, and fans have started arriving at the site. The concrete work in the containment vessel is ready for the installation of equipment.

The concrete work in the waste treatment plant is approximately 35 percent completed. The floors and interior portions of the control and auxiliary building, and steel work and foundation work in the existing power stations are also substantially completed and ready for the installation of equipment. The facility is now scheduled for construction to be essentially completed by August 1961, and for reactor criticality in November 1961.

Twelfth. A construction permit was issued to Consumers Power Co. on May 31, 1960. Construction work on the Big Rock Point plant began immediately on issuance of the permit and proceeded on schedule through 1960. Erection of the containment sphere and initial testing is complete. The other major structures on the plant site were enclosed to permit work to continue throughout the winter season. The project is on schedule for a target date of fuel loading by September 1962.

Contract negotiations between Consumers Power Co., the Atomic Energy Commission, Bechtel Corp., and General Electric Co. have been completed and all contracts have now been signed. Selection of the supervisory staff for the Big Rock Point plant is complete and a program of academic and practical work training was started in the summer of 1960. Work has begun on all of the necessary environmental studies, including hydrology, meteorology, and background radiation.

PLANTS UNDER DESIGN

Thirteenth. A research and development program directed to advancing the gas-cooled heavy-water moderated pressure-tube-type reactor is being conducted jointly by the Atomic Energy Commission, East Central Nuclear Group, and Florida West Coast Nuclear Group.

Fourteenth. In November 1958, and in response to an AEC invitation, a proposal was made by Philadelphia Electric Co. in cooperation with the nonprofit High Temperature Reactor Development Associates, Inc.—a 53-company association—to design, construct, and operate a prototype high-temperature, helium-cooled, graphite-moderated nuclear powerplant. The plant will be designed to be capable of producing 40,000 electrical kilowatts and will be located at Peach Bottom, Pa., on the Philadephia Electric Co.'s system in 1963. The original plan called for the initial core to be metal clad and the initial capacity to be about 28,000 kilowatts. The initial core will now be graphite clad and when the plant is completed in 1963 it should have full rated capacity with the first core. The plant is being constructed on a fixed-price contract for $24.5 million. In addition, AEC will contribute toward research and development performed by General Dynamics an amount not to exceed $14.5 million, including $2 million in postconstruction research and development. AEC will also waive up to $2.5 million in fuel use charges during research and the first 5 years of operation. Research, development, engineering and layout work for the Peach Bottom project are progressing on schedule.

Some of the major conventional equipment has already been ordered and bids have been received on certain of the nuclear steam supply components. Application for a construction license has been filed and a hearing held with the Advisory Committee on Reactor Safeguards. The advisory committee has requested additional information on the research and development program, which may delay the issuance of a construction license.

PLANTS UNDER CONTRACT NEGOTIATIONS

Fifteenth. The Southern California Edison Co. has reached a preliminary understanding and is in the course of negotiating definitive agreements with Westinghouse Electric Corp. and Bechtel Corp. for the construction of a 375,000-kilowatt nuclear reactor plant at an estimated cost of $78 million. Construction of the project is dependent upon completion of the negotiation of such agreements, the negotiation with the AEC of contracts covering research and development and waiver of fuel-use charges, and the acquisition of a satisfactory plant site.

PROJECTS IN VARIOUS PLANNING STAGES

Sixteenth. A large-scale nuclear powerplant has been authorized for construction by the board of directors of New England Electric System. There is no material change in the status of this project since a year ago. The date for completion and the type have not yet been decided, but it is planned to be of the order of 200,000 to 300,000 kilowatts—electric—for operation not before 1966. Fossil fuel prices continue at a low level compared with 3 years ago. Installation of larger conventional units at Salem Harbor and at the new Brayton Point plant, the latter with two units scheduled, one each for 1963 and 1964, has deferred somewhat the original timetable for the New England Electric System reactor.

This plant must, of course, take its place in the orderly development of the future power supply program for the system. It is conceived as a production plant, not an experiment or prototype. In view of the proposed completion date, the system has as yet no necessity to freeze on the reactor's precise type or design, and can continue to analyze and take into account continuing developments in reactor operations and design.

Seventeenth. Pacific Gas & Electric Co. is studying manufacturers' proposals for a large-scale reactor. Efforts will continue to be given to the project until a satisfactory conclusion is reached. The utility is hopeful that a decision on the matter can be made in the next few months. A powerplant site suitable for a large nuclear powerplant has been acquired.

As far as I know, no other nation has a nuclear power developmental program as comprehensive as that of the United States and in which private enterprise has played such a large role. We have utility size power reactors in operation to give us necessary operating and maintenance experience and at the same time a broad diversified developmental program stressing research and prototype reactor construction. Time has indicated that such an approach is sound and that improvement in technology and not kilowatts is the essential ingredient for the ultimate success of our Nation's program.

TABLE I.—*Electric utility company participation in nuclear power development*

PLANTS IN OPERATION

Name of participating utility companies and plants [1]	Type of reactor	Electrical capacity of plant (kilowatts electric)	Owner of reactor	Operator of reactor	Estimated cost to utility organization	In operation
(1) Commonwealth Edison Co. (Dresden).[2]	Boiling water-dual cycle	[3] 180,000	Commonwealth Edison Co.	Commonwealth Edison Co.	[4] $36,300,000	August 1960.
(2) Yankee Atomic Electric Co. (Yankee).	Pressurized water	[3] 136,000	Yankee	Yankee	[4] 57,000,000	1961.[6]
(3) Duquesne Light Co. (Shippingport).	do	[3] [7] 60,000	Atomic Energy Commission	Duquesne Light Co.	[8] 25,149,000	December 1957.
(4) Pacific Gas & Electric Co. (Vallecitos).	Boiling water—Prototype for Dresden unit.	5,000	General Electric Co.	General Electric Co.	[4] 572,000	October 1957.
(5) Southern California Edison Co. (Santa Susana).	Sodium graphite	7,500	Atomic Energy Commission	Atomics International	[9] 1,697,000	July 1957.

PLANTS UNDER CONSTRUCTION

(16) New England Electric System	Not yet selected	200,000 to 300,000	New England		1966–67
(17) Pacific Gas & Electric Co.	Light water	300,000 or larger	California	[11] $60,000,000	1964–65

[1] See table III for utility company members of respective groups.
[2] Research and development expenditures of $15,000,000 were paid by Nuclear Power Group, Inc.
[3] Net.
[4] Exclusive of research and development expenditures paid by Nuclear Power Group, Inc.
[5] Final costs are expected to amount to less than the estimate.
[6] Critical August 19, 1960, commercial operation 1961.
[7] Initial net capacity, ultimate of 100,000 kilowatts gross expected.
[8] Includes $20,150,000 for the conventional portion of the plant and the site, and $5,000,000 toward cost of reactor.
[9] For turbogenerator portion.
[10] Gross.
[11] Approximate.

TABLE II.—*Electric utility company participation in nuclear power development with estimate of expenditures by electric utility companies for nuclear power development* [1]

	1956 and earlier	1957	1958	1959	1960	1961	1962
Expenditures for plants [2]	36,908,000	34,777,000	50,621,000	99,535,000	107,348,000	79,266,000	41,736,500
Other expenditures [3]	3,598,000	2,648,000	4,379,000	2,603,000	3,766,000	5,807,500	4,952,000
Total by years	40,506,000	37,425,000	55,000,000	102,138,000	111,114,000	85,073,500	46,688,500
Cumulative	40,506,000	77,931,000	132,931,000	235,069,000	346,183,000	431,257,000	477,945,000

[1] Based on information obtained from the major nuclear power groups and previous surveys made by Edison Electric Institute.

[2] Estimate of expenditures by electric utility organizations for the following plants in operation, under construction or contract, including accompanying research and development work, but exclusive of operating costs.

Dresden.
Yankee.
Shippingport.
Vallecitos.
Santa Susana.
Indian Point.
Pathfinder.
Humboldt Bay.
Enrico Fermi.
Parr Shoals.
Saxton.
Big Rock Point.
ECNG–FWCNG project.
Peach Bottom.

[3] Includes expenditures by individual companies and groups of companies for nuclear power study, research and development. These figures do not include expenditures associated with any of the projects listed in (2) above. Included in this category are the following groups:

Empire State Atomic Development Associates.
Texas Atomic Energy Research Associates.
Southwest Atomic Energy Associates.
Nuclear Power Group.
Rocky Mountain-Pacific Nuclear Research Group.
Atomic Power Engineering Group (up to 1959).
Pacific Northwest Power Co. Group.
Pennsylvania Power & Light Co. project (up to time of cancellation).
Pioneer Service & Engineering Group.

TABLE III

ELECTRIC UTILITY COMPANY PARTICIPATION IN NUCLEAR POWER DEVELOPMENT

Names of electric utility companies participating in nuclear power study, research, development, operating, and construction projects

Projects in Operation

1. Commonwealth Edison Co. (Dresden)—Nuclear Power Group: American Electric Power Service Corp., Central Illinois Light Co., Commonwealth Edison Co., Illinois Power Co., Kansas City Power & Light Co., Pacific Gas & Electric Co., Union Electric Co.

2. Yankee Atomic Electric Co. (Yankee): Boston Edison Co., Central Maine Power Co., Central Vermont Public Service Corp., Connecticut Light & Power Co., Eastern Utilities Associates, Hartford Electric Light Co., New England Electric System, New England Gas & Electric Association, Public Service Co. of New Hampshire, Western Massachusetts Electric Co.

3. Duquesne Light Co. (Shippingport).

4. Pacific Gas & Electric Co. (Vallecitos).

5. Southern California Edison Co. (Santa Susana).

Projects Under Construction

6. Consolidated Edison Co. of New York, Inc. (Indian Point).

7. Northern States Power Co. (Pathfinder)—Central Utilities Atomic Power Associates: Central Electric & Gas Co., Interstate Power Co., Iowa Power & Light Co., Iowa Southern Utilities Co., Madison Gas & Electric Co., Northern States Power Co., Northwestern Public Service Co., Otter Tail Power Co., St. Joseph Light & Power Co., Wisconsin Public Service Corp.

8. Pacific Gas & Electric Co. (Humboldt Bay).

9. The Detroit Edison Co. (Enrico Fermi)—Power Reactor Development Co.: Alabama Power Co., Central Hudson Gas & Electric Corp., Cincinnati Gas & Electric Co., Columbus & Southern Ohio Electric Co., Consumers Power Co., Delaware Power & Light Co., Detroit Edison Co., Georgia Power Co., Gulf Power Co., Iowa-Illinois Gas & Electric Co., Long Island Lighting Co., Mississippi Power Co., Philadelphia Electric Co., Potomac Electric Power Co., Rochester Gas & Electric Corp., Toledo Edison Co., Wisconsin Electric Power Co.

10. Carolinas Virginia Nuclear Power Associates, Inc. (Parr Shoals): Carolina Power & Light Co., Duke Power Co., South Carolina Electric & Gas Co., Virginia Electric & Power Co.

11. Saxton Nuclear Experimental Corp. (Saxton): Pennsylvania Electric Co., Metropolitan Edison Co., Jersey Central Power & Light Co., New Jersey Power & Light Co.

12. Consumers Power Co. (Big Rock Point).

Projects Under Design

13. East Central Nuclear Group—Florida West Coast Nuclear Group: Appalachian Power Co., Cleveland Electric Illuminating Co., Columbus & Southern Ohio Electric Co., Dayton Power & Light Co., Indiana & Michigan Electric Co., Indianapolis Power & Light Co., Louisville Gas & Electric Co., Monongahela Power Co., Ohio Edison Co., Ohio Power Co., Pennsylvania Power Co., Potomac Edison Co., Southern Indiana Gas & Electric Co., West Penn Power Co., Florida Power Corp., Tampa Electric Co.

14. Philadelphia Electric Co. (Peach Bottom)—High Temperature Reactor Development Associates, Inc.; Alabama Power Co., Arizona Public Service Co., Arkansas Power & Light Co., Atlantic City Electric Co., Baltimore Gas & Electric Co., California Electric Power Co., Central Illinois Electric & Gas Co., Central Illinois Light Co., Central Illinois Public Service Co., Central Louisiana Electric Co., Inc., Central Power & Light Co., Cincinnati Gas & Electric Co., Cleveland Electric Illuminating Co., Delaware Power & Light Co., Detroit Edison Co., Gulf Power Co., Gulf States Utilities Co., Hawaiian Electric Co., Ltd., Idaho Power Co., Illinois Power Co., Iowa Public Service Co., Kansas City Power & Light Co., Kansas Power & Light Co., Kentucky Utilities Co., Louisiana Power & Light Co., Mississippi Power Co., Mississippi Power & Light Co., Missouri Public Service Co., Montana Power Co., New Orleans Public Service, Inc., New York State Electric & Gas Corp., Niagara Mohawk Power Corp., Pacific Gas & Electric Co., Pacific Power & Light Co., Pennsylvania Power & Light Co., Philadelphia Electric Co., Portland General Electric Co., Potomac Electric Power Co., Public Service Co. of Colorado, Public Service Co. of New Mexico, Public Service Co. of Oklahoma, Public Service Electric & Gas Co., Puget Sound Power & Light Co., Rochester Gas & Electric Corp., St. Joseph Light & Power Co., San Diego Gas & Electric Co., Sierra Pacific Power Co., Southern California Edison Co., Southwestern Electric Power Co., United Illuminating Co., Utah Power & Light Co., Washington Water Power Co., West Texas Utilities Co.

Projects in Contract Negotiations

15. Southern California Edison Co.

Projects in Various Planning Stages

16. New England Electric System.

17. Pacific Gas & Electric Co.

Study, Research and Development Groups

18. Empire State Atomic Development Associates, Inc.: Central Hudson Gas & Electric Corp., Consolidated Edison Co. of New York, Inc., Long Island Lighting Co., New York State Electric & Gas Corp., Niagara Mohawk Power Corp., Orange & Rockland Utilities, Inc., Rochester Gas & Electric Corp.

19. Texas Atomic Energy Research Foundation: Central Power & Light Co., Community Public Service Co., Dallas Power & Light Co., El Paso Electric Co., Gulf States Utilities Co., Houston Lighting & Power Co., Southwestern Electric Power Co., Southwestern Public Service Co., Texas Electric Service Co., Texas Power & Light Co., West Texas Utilities Co.

20. Southwest Atomic Energy Associates: Arkansas Power & Light Co., Arkansas-Missouri Power Co., Central Louisiana Electric Co., Inc., Empire District Electric Co., Gulf States Utilities Co., Kansas Gas & Electric Co., Kansas Power & Light Co., Louisiana Power & Light Co., Mississippi Power & Light Co., Missouri Public Service Co., New Orleans Public Service, Inc., Oklahoma Gas & Electric Co., Public Service Co. of Oklahoma, Southwestern Electric Power Co., Western Light & Telephone Co., Inc.

21. Atomic Power Development Associates: Alabama Power Co., Baltimore Gas & Electric Co., Central Hudson Gas & Electric Corp., Cincinnati Gas & Electric Co., Cleveland Electric Illuminating Co., Connecticut Light & Power Co., Consolidated Edison Co. of New York, Inc., Consumers Power Co., Delaware Power & Light Co., Detroit Edison Co., General Public Utilities Corp., Georgia Power Co., Gulf Power Co., Hartford Electric & Light Co., Indianapolis Power & Light Co., Jersey Central Power & Light Co., Long Island Lighting Co., Metropolitan Edison Co., Mississippi Power Co., New Jersey Power & Light Co., New York State Electric & Gas Corp., Niagara Mohawk Power Corp., Pennsylvania Electric Co., Philadelphia Electric Co., Potomac Electric Power Co., Public Service Electric & Gas Co., Rochester Gas & Electric Corp., Southern Services, Inc., Toledo Edison Co., Wisconsin Electric Power Co., Wisconsin Power & Light Co.

22. East Central Nuclear Group. (See item 13.)

23. Nuclear Power Group. (See item 1.)

24. Rocky Mountain-Pacific Nuclear Research Group: Arizona Public Service Co., California Electric Power Co., Pacific Power

& Light Co., Portland General Electric Co., Public Service Co. of Colorado, Public Service Co. of New Mexico, Utah Power & Light Co., Washington Water Power Co.

25. San Diego Gas & Electric Co.

TABLE IV

ELECTRIC UTILITY COMPANY PARTICIPATION IN NUCLEAR POWER DEVELOPMENT

Reactor types

1. Pressurized water reactors: Shippingport, Yankee, Indian Point, Saxton, Southern California Edison project.

2. Boiling water reactors: Big Rock Point, Vallecitos,[1] Dresden, Humboldt Bay, Pathfinder.

3. Fast sodium-cooled reactors: Fermi.

4. Thermal sodium-cooled reactors: Santa Susana.[1]

5. Gas-cooled reactors: Peach Bottom, ECNG–FWCNG.

6. Heavy water reactors: Parr Shoals.

7. Epithermal thorium reactors: Southwest Atomic Energy Associates.

[1] Have made capital contributions to and participated in the operations of the conventional equipment only.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The American Institute of Architects Deplores the Apparently Impending Destruction of Certain Buildings Fronting on Lafayette Square and the Construction of Large Federal Buildings in Their Place

---

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. KEARNS. Mr. Speaker, I have been assured by Joseph Watterson, editor of the Journal of the American Institute of Architects, that the American Institute of Architects "deplores the apparently impending destruction of certain buildings fronting on Lafayette Square and the construction of certain large Federal buildings in their place."

Mr. Watterson goes on to say that—

Although by now many of the buildings on the square may be of a nondescript architectural character, the flavor and charm of the square have not been destroyed. It is still a fitting forecourt to the White House—which it must always be. This fitness would be lost with marble monumentality flanking the square—east and west.

Mr. Watterson makes, I think, a major contribution to the current consideration of the famed Lafayette Square when he adds that—

Since the Decatur House, on the northwest corner of the square, and the Blair and Lee Houses, on Pennsylvania Avenue, are to be preserved, and the new Executive Office Building designed to surround them with low wings and courts, it would seem that the same approach could be taken on the east side of the square. The Madison House, on the northeast corner, and the Tayloe House, in the middle of the block, are worthy of preservation and restoration, both historically and architecturally. Rather than preserve them purely as monuments, suitable uses can be found for these buildings, as is done in so many of the old cities of Europe. It is a brash generation, indeed, which will destroy all physical evidences of its great heritage.

I include herewith as part of my remarks the letter I have received from Mr. Watterson, as well as an excerpt from a brilliant article by L. Morris Leisenring, FAIA, which was published in the February 1961 issue of the Journal of the American Institute of Architects:

THE AMERICAN INSTITUTE OF ARCHITECTS,
OFFICE OF THE JOURNAL,
Washington, D.C., February 28, 1961.

Representative CARROLL D. KEARNS,
1034 New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN KEARNS: I am sorry that you were unable to see me last week, for we have noted with great interest the bill (H.R. 3982) which you introduced in the House February 7.

The American Institute of Architects is of course a strong supporter of any proposed legislation which would strengthen and improve the cultural opportunities here in Washington—or anywhere in the Nation, for that matter. But at the moment it is the last part (section 3) of this bill which prompts me to write you. The AIA has always had an active interest in the planning and architecture of the city of Washington, ever since its part in the inception of the McMillan plan of 1901, in the formation of the Commission of Fine Arts and the National Capital Planning Commission, etc. Consequently, the institute deplores the apparently impending destruction of certain buildings fronting on Lafayette Square and the construction of large Federal buildings in their place. Although by now many of the buildings on the square may be of a nondescript architectural character, the flavor and charm of the square have not been destroyed. It is still a fitting forecourt to the White House—which it must always be. This fitness would be lost with marble monumentality flanking the square—east and west.

Since the Decatur House, on the northwest corner of the square, and the Blair and Lee Houses on Pennsylvania Avenue, are to be preserved, and the new Executive Office Building designed to surround them with low wings and courts, it would seem that the same approach could be taken on the east side of the square. The Madison House, on the northeast corner, and the Tayloe House in the middle of the block, are worthy of preservation and restoration, both historically and architecturally. Rather than preserve them purely as monuments, suitable uses can be found for these buildings, as is done in so many of the old cities of Europe. It is a brash generation indeed which will destroy all physical evidences of its great heritage.

I enclose for your interest and information a copy of the February issue of the Journal of the American Institute of Architects, which contains an article on Lafayette Square. Its author makes no plea for preservation of buildings on the square, for the article was commenced months ago, when their destruction seemed inevitable. It is rather a somewhat nostalgic lament for their passing. However, with the interest displayed in the square by the President, and by the introduction of bills in the Congress, new hope has been aroused that perhaps the square is not doomed after all. This article has been widely circulated in Washington and has aroused considerable interest and comment in the newspapers as well as in Government circles. I hope you will find something of value in it.

Meanwhile I wish to assure you that support for this or similar bills will be forthcoming from the AIA and its 13,850 members all over the country.

Cordially yours,

JOSEPH WATTERSON,
Editor.

[From the Journal of the American Institute of Architects, February, 1961]

LAMENT FOR LAFAYETTE SQUARE

(By L. Morris Leisenring, FAIA)

What manner of people is it that destroys its shrines? True, our Nation has preserved many shrines—but it is now, in the name of progress and efficiency, everywhere destroying more than it is preserving. Our grandchildren will place the blame on our heads. As a people, we pay little heed to the voices of the few who cry a halt to this destruction. More shame to us.

Lafayette Square has been the scene of few great events in our Nation's history, but it has been always, since our beginnings, the forecourt to the home of our Presidents and the site of the homes of generations of the great and the near-great.

Although the square itself is not now to be destroyed, most of its surrounding buildings are, thus completely altering its character as the front yard of the White House.

As the journal has said before, and will, upon proper occasion, say again, the rebuilding of Washington is the concern of the entire Nation. It is not only our Capital, it is our national symbol.

Thus it is with pride and deep concern that the AIA Journal presents this story of Lafayette Square, written by a senior member of the Washington-Metropolitan Chapter AIA, its preservation officer and holder of architect's license number 3 of the District of Columbia.

In L'Enfant's first conception of a plan for the Federal City, two elements of the Federal Government, the Congress, and the President, were emphasized in his first report and shown on his subsequent plan of 1791. In all adjustments made in this plan, by Andrew Ellicott and others, the location and relative importance of these has remained unchanged—the Congress House with its Plaza and the President's Mansion with its park, joined by broad parked areas, one directly west from the Capitol along the "Grand Avenue"—now the Mall—to the site of "the Monument," a proposed equestrian statue of General Washington, authorized by the Congress in 1785, and from there on a cross-axis directly north through the President's Park and his mansion to H Street, extending east and west from 15th to 17th Streets. So here, at its northern limits, lies Lafayette Square, now as always a part of the President's Park, its present dimensions determined by a required traffic lanes and desired building areas, a beautiful foreground to the President's home and grounds.

The importance of the square in the city plan is emphasized by broad avenues extending from it to the northeast and northwest. Its north axis on broad 16th Street, extending out to Meridian Hill, is almost the exact north-south axis of the corners of the original "10 miles square." The President's House—the White House, as it has been called from the first years of its building—was placed on a direct line with the Capitol down broad Pennsylvania Avenue, a vista carefully preserved until the reputed impact of President Jackson's cane and his words "Build it here." Now we see the Treasury instead. Neither the L'Enfant nor the Ellicott plan shows the square separated by a street from the White House, but connection between New York and Pennsylvania Avenues early became necessary, so now the south boundary of the square is determined by the extension of Pennsylvania Avenue. The east and west boundaries were indicated by Ellicott and have become established highways very important in the square's history—Madison Place on the east and Jackson Place on the west. The land had long been the farmstead of the Pierce family from whom it had been

purchased, and there were still some orchard trees and the remains of the family graveyard there when the ground was graded after 1800.

L'Enfant had envisoned this as an area of residences fit to adjoin that of the President, and James Hoban's fine Georgian mansion has given good reason for great care to be taken to surround the square with buildings of proper scale and character. The area was slow in development, and when John and Abigail Adams, the first residents of the President's House, looked out over the square when they moved in during November 1800, it was not a thing of beauty. Fortunately its surrounding buildings lots were in no way suitable for development by the speculative syndicates building quite creditable groups of buildings during the 1790's, on Capitol Hill, on Greenleaf Point near the old Arsenal, and on Pennsylvania Avenue out toward Georgetown. Even in 1814, when President and Mrs. Madison had to find shelter while their home was being rebuilt after the fire, the unfortunate incident of August of that year, the White House was still the only building on the square.

By the time President and Mrs. Monroe moved into the refurbished mansion in 1817, building had begun on the square and before the end of his administration it was well underway. Happily, the first was a church, St. John's Episcopal Church, built north of the square on the corner of H and 16th Streets in 1816. It was planned as a Greek cross, by Benjamin H. Latrobe, and by 1820 the nave had been extended to form the present Latin cross with portico. After the church, residences gradually filled all three sides of the square and up adjacent streets and avenues, and until the end of the century and beyond, the square lived a life of glorious historical record not matched by any other American community and few abroad. As an architectural heritage it offered a picture of development from the Georgian, the Early Federal, the Classic and Greek Revivals, up through the post-Civil War period, the early and late Victorian and at the last, an example of H. H. Richardson's best in residential design.

The "Diagram of Lafayette Park and Its Surroundings," from Frank Leslie's Popular Monthly of April 1891 (from the Library of Congress) is a valuable document, for every one of the buildings shown was in place and occupied at that time, except those absorbed by the construction of the Arlington Hotel after 1869. The "Key to the Diagram" reads like a biographical index of those prominent in this formative period. It also shows the fluid quality of American political life as changing administrations brought new residents, anxious to be near the home and office of their Chief.

Before outlining briefly the history of some of the important buildings, it is well to remember that Washington was really a southern city, lying between two slave States, many of its residents slaveholders, with sentiment strongly divided and loyalties finally brought to a real test. From the very first it was a city of political and sometimes social antagonisms and these were nowhere more intense than around the square. Here there was no lack of drama nor of tragedy. The old houses had their share in these.

The buildings are listed below in approximate order of their age:

St. John's Church, 1816, often called the court church, as it was the parish church of the first Presidents, Madison to Buchanan, and frequently attended on special occasions by all the Presidents regardless of their denominational connections.

The Decatur House, 1819, the first residence. Built by Commodore Stephen Decatur on his return from his brilliant victories in the Barbary wars. This fine house, Latrobe its architect, with garden and dependencies, has been preserved almost intact. But Decatur and his lovely wife had not long to enjoy it, for in 1820 he returned to die here after his duel at Bladensburg with Commodore Barron—the square's first tragedy. Later came Henry Clay while Secretary of State to the second Adams. The year before he moved into the house a second duel occurred when he called his neighbor, the picturesque John Randolph of Roanoke, out to the Virginia hills, but this time with no physical injury. Later it was from here that Mrs. Clay and Mrs. Calhoun carried on their social vendetta against brilliant Peggy O'Neal Eaton, an innkeeper's daughter and wife of Senator John Henry Eaton, a special protege of Gen. Andrew Jackson, which almost disrupted his Presidential administration. In 1836 John Gadsby, an Alexandria tavern keeper, took over the house and auctioned slaves in the high walled garden. During the Civil War it was commandeered by the Government and later was bought by Gen. Edward Beale, under whose grandfather Decatur once served as ensign. Its last owner, Mrs. Truxtun Beale, restored it and deeded it to the Nation under the aegis of the National Trust for Historic Preservation. Many of Latrobe's original drawings were available for the restoration. Some years previously, in a wise move to save it from threatened destruction by Government intrusion, Mrs. Beale provided for the use of the carriage house area by the Truxtun-Decatur Naval Museum.

The Dolly Madison House, 1820, was the second residence on the square. Built by Richard Cutts, brother-in-law of Dolly Payne Madison, a simple colonial-type townhouse, given to Mr. Madison in payment for a debt, it was never occupied by him but was the scene of Dolly's triumphant widowhood. From 1837 to her death in 1849 this was a center of the social and political life of the Capital. The house was then taken over by Commodore Wilkes who added a third story to it and moved the entrance to H Street. It was occupied during the war by General McClellan while Wilkes was on sea duty. A dramatic incident illustrating the wide range of loyalties on the square was the arrest by Captain Wilkes of his neighbor, Senator John Slidell of Louisiana, who naturally had joined the Confederacy and had been appointed Minister to France. On his way he was taken off the British steamer *Trent* by Captain Wilkes, causing the famous Trent affair and a violent controversy with Great Britain. From 1887 to 1952 the house was the home of the Cosmos Club, involving more alterations. Still intact, it is now the property of the Government, and faces early destruction.

Greetings to the Estonian National Committee

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1961

Mr. ROOSEVELT. Mr. Speaker, in greeting you on the 43d anniversary celebration of Estonian Independence Day I sincerely share your sentiments for a free and independent Estonia. The joys of February 24, 1918, have been short lived, but I am indeed pleased to know that the spirit of freedom, the love of liberty, which brought about the birth of the Estonian Republic 43 years ago is very much alive in today's Communist-dominated Estonia. Through their unstinted sacrifices, and with the aid of their friends and sympathizers, the Estonian people will again regain their freedom. Just as their sufferings under czarist autocracy schooled them in adversity, so the more tyrannical and almost unbearable yoke of Communist totalitarianism steels them in their struggle against their oppressors. Let us pray for the victory of their righteous cause, and for their freedom.

Temporary Telephobia

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article and editorial from February 27, 1961 issue of Broadcasting:

TEMPORARY TELEPHOBIA

As everyone predicted, the House Rules Committee has again shelved the proposal to permit televising of House committee hearings.

Arguments of Representative GEORGE MEADER, Republican, of Michigan, that there's no better way for the people to know what their Representatives are doing than through radio and television met a stone wall of indifference from the political henchmen of Speaker SAM RAYBURN. Arguments that President Kennedy is relying heavily on television to sell his program to the Nation and reminders that many Senate committee hearings have been televised failed. The committee vote was 8 to 6.

Broadcasters may console themselves that the RAYBURN victory can be only temporary. The fact remains that our Government is a people's government and the voters have the right to see and hear their elected Congressmen in action. As more elected officials use broadcasting to report their problems and their activities it will be more and more difficult for reactionary forces to operate entirely behind closed doors.

Even though eventual victory seems assured, broadcasters must do their bit to hasten its arrival. Congressmen should be reminded at every opportunity of the advantages which live television and radio reporting can have for our form of government. Every vote helps in the effort to break down these artificial barriers to reporting the news as it happens.

RULES UNIT WON'T WAIVE THE RULES—RAYBURN BLOC BLOCKS HOUSE VOTE ON TV COMMITTEE COVERAGE

House Rules Committee Chairman HOWARD W. SMITH, Democrat, of Virginia, won new fame as a needler last week when his group held hearings on a proposal to permit the televising of House committee hearings.

But Speaker SAM RAYBURN, Democrat, of Texas, the object of the needle, had the votes, and used them to shelve the issue 8 to 6.

The Speaker has consistently ruled against radio-TV coverage on the ground that it would impair the dignity of House proceedings. However, broadcasters did cover committee hearings during the Republican-controlled 83d Congress, when Representative

JOSEPH W. MARTIN, Republican, of Massachusetts was Speaker.

Calling up the TV measure, known to be anathema to the Speaker, was Chairman SMITH's reaction to the House vote last month to increase the size of his committee and, in effect, transfer its control to Speaker RAYBURN.

That fight was over the issue that Chairman SMITH bottled up too much legislation. But last week it was Speaker RAYBURN's loyal majority that put the stopper on bills.

The Rules Committee action on electronic coverage was on a resolution submitted by Representative GEORGE MEADER, Republican, of Michigan, who since 1955 has vainly urged adoption of a rule that would authorize committees to permit camera and microphone coverage of their hearings, as presently authorized by Senate committees.

The hearing originally was scheduled for two resolutions authored by Representative MARTHA W. GRIFFITHS, Democrat, of Michigan. They called for opening the House Chamber as well as its committees to radio and television coverage.

HAVE BILL, WILL TRAVEL

But Representative GRIFFITHS, who has been introducing these resolutions since 1956 to no avail, was in Detroit when the hearing came last week. She said she needed more time, but some observers suggested she was absent on Speaker RAYBURN's advice.

Representative MEADER, whose resolution would give House committees discretion to set the terms for broadcasts of their hearings, said, "If self-government is to work, people have to know what their Representatives are doing." And there's no better way, he contended, than through radio and television.

He also appealed to the committee members' pride in their House. Pointing out that President Kennedy uses television to get his views across to the Nation and that some Senate committee members have become household figures because of televised hearings, he said, "Why should there be a blackout in the House? Won't that downgrade House Members?"

Representative MEADER received support from the only other witness to be heard, Representative J. ARTHUR YOUNGER, Republican, of California. He said the Un-American Activities Committee is an example of a House committee that would benefit from television. "It would show the public what that committee is up against and the public would have a different attitude toward it."

INDUBITABLE

The questions and comments of the Rules Committee members, however, removed whatever doubt there was as to how the vote would go.

Representative JAMES J. DELANEY, Democrat, of New York, remarked that the New York City Council permitted television coverage of its proceedings but had to end it when the meetings became a burlesque and a comedy show.

Representative RAY J. MADDEN, Democrat, of Indiana, indicated the extent of his interest by inquiring about color television, "Do we have to go into makeup rooms?" he asked. And Representative CLARENCE BROWN, Republican, of Ohio, expressed fear for the lives of many House Members who might get killed rushing to get in front of the cameras.

It was Representative BROWN, however, who gave the resolution's proponents the stiffest going over, even though he is presumed to have voted to clear the proposal for the floor. (He normally votes with Representative SMITH in the conservative coalition that previously dominated the committee.)

Representative BROWN's concern was with "doctored" telecasts of committee proceedings. "Would the TV camera be permitted to pick up what it wants to pick out and neglect what it wants to neglect?"

PLASTIC SURGERY

He observed that words can be erased and even transposed on tape, and film edited, and added: "A clever editor sitting in New York could change completely the picture of a committee hearing." Representative BROWN has introduced legislation to prohibit the broadcast of recorded discussion programs edited without the express consent of those involved.

"If it's broadcast live, that's all right," he said. "But if it's broadcast later, then it can be altered and edited. Many TV stations and national organizations are concerned about it, according to the mail I've received," he said. "They feel the programs are getting into the area of propaganda."

Representative MEADER conceded the possibility of distorted television, but said, "I have more faith in the honesty of telecasting than that."

The day after the defeat of his measure in the Rules Committee, Representative MEADER went to the floor of the House to score the Rayburn majority for being unwilling to let the House pass judgment on the resolution.

It Is a Brash Generation Indeed Which Will Destroy All Physical Evidences of Its Great Heritage

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. KEARNS. Mr. Speaker, the distinguished editor of the Journal of the American Institute of Architects, Joseph Watterson, has written me that:

It is a brash generation indeed which will destroy all physical evidences of its great heritage.

Mr. Watterson mentions the well-known interest of President John F. Kennedy in the preservation of the buildings fronting on Lafayette Square, an interest demonstrated in the most forceful and significant way when, on March 24, 1960, he introduced S. 3280 and, in a speech on the floor of the Senate at that time, declared that:

There is pending before the Public Works Committee a plan to locate the Court of Claims in Lafayette Square. This means that many of the historic buildings now fronting that square will be torn down. The Dolly Madison House, the Benjamin Tayloe House, and the Belasco Theater have long served as an inspiration to generations of Americans who have visited their Capital City. Certainly, berore any irrevocable action is taken to destroy these buildings to provide a site for a courthouse, other sites should be investigated.

In his letter to me Mr. Watterson says that:

With the interest displayed in the square by the President, and by the introduction of bills in the Congress, new hope has been aroused that perhaps the square is not doomed after all.

Mr. Watterson ended his fine letter by saying that support for the bills which Senators JOHN SHERMAN COOPER and WAYNE MORSE have introduced in the other House, and which I have introduced in this one, that is, S. 1020 and H.R. 3982, "will be forthcoming from the AIA and its 13,850 members all over the country."

This is very encouraging news indeed. Only the other day the 600,000 member National Federation of Music Clubs advised me that it has launched a national drive in the 50 States to mobilize support for saving the buildings on Lafayette Square.

In a memorandum to its national officers, its board of directors, its State presidents, and its State legislative chairmen, it is pointed out that:

It is even more important from the standpoint of history, culture, and economy that similar protection to that given historic buildings elsewhere throughout the United States, such as Philadelphia's Independence National Historical Park, and New York's Carnegie Hall, be given the historic buildings on Lafayette Square.

The fine old buildings on Lafayette Square give the Nation's Capital its distinct flavor and charm, and they teach significant lessons in patriotism to the youth of the Nation.

Tourists who come to the Nation's Capital from all over the world as members of conventions, or to attend national meetings, or as families intent on seeing the buildings and the sites where so much history has been made, spend, I have been informed, $300 million a year.

How many will take the trouble to visit the Nation's Capital if all of its buildings, which are such an intimate part of our Nation's history, are destroyed for the convenience of a few individuals? Not many, I am sure.

Only last year the Congress authorized the spending of up to $33 million, or one-third of the cost, to save the ancient treasures of the Nile Valley.

Perhaps the people of ancient Egypt will now reciprocate, and help us save our own buildings in this time when our young people feel so restless and so rootless, and when they so badly need to have the history of our Nation emphasized in every possible way.

I include as part of my remarks an excerpt from an article on Lafayette Square written by L. Morris Leisenring. The article appeared in the February 1961 issue of the Journal of the American Institute of Architects:

The Ewell house, about 1820, built by Thomas Ewell of the Navy, father of the famous Confederate Gen. Richard S. Ewell. From 1824 to 1834 it was occupied by three successive Secretaries of the Navy, but it is best known as the home of Dan Sickles, Representative from New York, who on Sunday afternoon, February 27, 1859, crossed the square and shot the brilliant young attorney, Phillip Barton Key (son of Francis Scott Key) whose affair with Sickles' young wife had long been a scandal. Key was carried into the John Rodgers House, then the Washington Club, where he died. Sickles' wife confessed; her husband was acquitted and forgave her. A few years later he was the famous Union General Sickles of Chancellorsville and Gettysburg. With one leg gone, he was a familiar sight on the square when he returned from the war to stump around his old neighborhood.

The Benjamin Ogle Tayloe house, built in 1828 by the son of the Col. John Tayloe who had built the Octagon in 1798–1800. This charming house, a distinguished design of the period, with garden and dependencies, had as a frequent visitor, William Henry Harrison, the owner's warm friend. Later it came to be called the Tayloe-Cameron house due to its long occupancy by Senator Don Cameron during the years of his greatest influence, then again the Little White House, as the home of Sen. Mark Hanna during President McKinley's administration. It still stands but will soon be lost.

The John Rodgers house built in 1830 by the commodore, one of the heroes of Tripoli. This site is said to have been secured by him from Henry Clay in exchange for a blooded Andalusian jackass, brought by Rodgers from Spain. This commodious square brick building was the scene of many events. While used as Washington's first important club it was here that Phillip Barton Key died. While the home of William H. Seward, Secretary of State, on the night of April 14, 1865, a near tragedy occurred when Lewis Payne, one of the conspirators of the Lincoln assassination plot, stabbed and dangerously wounded Secretary Seward. The Lafayette Square Opera House, later the Belasco Theater, was built on this site in 1895.

Another building on the east of the square facing the avenue, not shown on the diagram, the Gunnel house, was built in 1836 by Dr. Thomas Gunnel, a prominent dentist. This was the only framehouse on the square. It was a typical Maryland small-town house with a long two-story gallery on the square side and a fine garden. The incident most often told of this old place is that once the doctor, having received a hurry call from President Van Buren, his neighbor then in the White House, hastened there with the tools of his trade, expecting an emergency. Instead he returned with the appointment as postmaster of the city. The house has been gone for years, and its site is now occupied by the massive Treasury Annex of 1919 vintage.

It would be well to note that neither Madison nor Jackson Place was named or paved until several years after the Madisons had owned their house on the corner and General Jackson's statute had graced the square's center. Before then they had been gravel drives without names.

The Daniel Webster house, later known as the Corcoran house. Built by Thomas Swann, of Alexandria, the records say in 1822, though this seems very early for a design of Italian villa type such as this. Presented to Daniel Webster by admirers when he became Secretary of State in 1841, it was famous for his lavish entertainments. Webster sold the house to W. W. Corcoran, the philanthropist, who occupied it until his death in 1888, except for a short period during the war when, because of his strong southern sympathies he leased it to the French Ambassador to avoid its confiscation by the Government. With its beautiful garden reaching back to I Street, and with its next door neighbor, the dignified Greek Revival house built by Commander Stockton and the home of Senator Slidell, of the "Trent Affair," it survived until destroyed for the construction of the monumental building of the U.S. Chamber of Commerce.

Ashburton house, built by Matthew St. Clair Clarke in 1835, some say earlier. This very English, broad and high brick house, later brown stuccoed, was the British Legation and the scene, in 1845, of the signing of the Webster-Ashburton Treaty establishing our Canadian boundaries and other matters of mutual interest. In 1849 it was again the British Legation under Sir Henry Bulwer, brother of the novelist Bulwer-Lytton. Sir Henry's secretary was his nephew, Robert Bulwer, who wrote "Lucille," some maintain while stationed here. This fine old house still stands as the parish house of St. John's Church.

George Bancroft, patriot and historian, Minister to England during the war, took up his residence in this simple classic revival house with its extensive garden. Here he completed his monumental history of the United States, was the literary lion of his day, and gained fame with agriculturists by developing the American Beauty rose.

The Hay and Adams houses, built in 1884, designed by H. H. Richardson, for the two friends, John Hay and Henry Adams. Surely no two more famous men could have joined forces in adopting the square for their homes. Hay had come to Washington during the war as a secretary to Mr. Lincoln. Adams was the grandson of John Quincy Adams, a historian and writer of the first magnitude. Here for 20 years was centered the social and literary life of Washington. Hay died in 1905 after serving as Secretary of State for William McKinley and Theodore Roosevelt. Adams was the oldest of all the old square residents when he died there in 1918. The site of their houses is now occupied by a hotel, the Hay-Adams. Some might question the compatibility of the two Richardson houses and the White House. At least they were in scale, residential in character and fine examples of the development of architecture in the United States.

The Blair-Lee houses, just off the square on Pennsylvania Avenue, examples of the Federal period, were built in the 1820's. Both considerably altered, they now serve to house the official guests of the Nation and are to be preserved as such in the coming demolition of all but the Decatur house in this block. Both are historic, particularly Blair House. Here, at the request of Montgomery Blair, President Lincoln's Postmaster General, came Col. Robert E. Lee, from his beloved Arlington high above the Virginia shore of the Potomac, to be questioned as to his stand in the coming conflict. Colonel Lee returned to Arlington and his Virginia and determined that his loyalty with with his State. It has been well established that the President's intention would have been to place the colonel in command of all the Union armies. A few years ago a faithful guard was killed by a wild group bent on entering Blair House to assassinate President Truman, who with his family had temporary quarters there duirng the recent reconstruction work at the White House.

At the square's center is the remarkable statue of Gen. Andrew Jackson, rampant in every sense of the word, dedicated with ceremony in 1853. His rearing steed balances on two hindlegs by the help of a full-flowing heavily vermiculated tail. The work of Clark Mills, our first native American sculptor, it was cast in nearby Bladensburg of bronze cannon captured by the general in the War of 1812. The statues at the four corners came much later, Lafayette in 1891, Rochambeau in 1902, and Steuben and Kosciusko in 1910, all men who came from their home countries to aid in the Revolutionary Army. The square's name did not come from the statue. It had been given long before by the people, after the ceremonies attending the visit of General Lafayette in 1824 and not officially adopted until 1852 as Lafayette Park, later Lafayette Square.

Born as a part of the President's Park before the end of the 18th century, with its first house occupied by the President in the first year of the 19th, the square lived its first century with a glorious historic record and with a growing exhibit of our architectural development fully as worthy of preservation as a Boston or Philadelphia square. Too bad that the AIA was not then preservation minded or that the National Trust was not yet organized or that Congress had not yet enacted the Historic Sites Act of 1935, giving to the Secretary of the Interior great responsibility for the preservation of historic buildings and places—or that no civic organization saw and acted to save what it was about to lose.

For now came the McMillan Commission and the plan of 1901. It was and still is considered by many rank heresy to question any part of this plan devised by the foremost architects and planners in the country. In restoring the principles of the L'Enfant plan they swept away railroads, cherished departmental English gardens and the violently expressed opinions that L'Enfant's straight line was anathema and that "curved is the line of beauty." They re-created the Mall and established its architectural character and boundaries, a wonderful achievement. But when they turned north they changed the President's House and home and established it as the Executive Mansion, and in their thirst for sites for the executive department they swept the square of every historic element and assigned to it every side executive department buildings only.

It is hard to believe it, but this was approved. More difficult of belief was the advocacy of the design shown to surround the three sides of the square with the columns of the Treasury. This was actually begun in 1919 with the construction of the Treasury Annex, the first section of a proposed single building the length of Madison Place. The deed was done. Good bye to the Benjamin Tayloe and Dolly Madison Houses, St. John's Church, Daniel Webster and George Bancroft, the Decatur and all other buildings on the west. With its mind on planning alone the AIA approved the plan and soon did the National Commission of Fine Arts. No little plan had been made here—nor one with even a little consideration for historic values.

In line with this pronunciamento the Government soon bought all remaining property on Madison Place. The occupants were allowed to remain on short notice to vacate. More recently the Government has completed purchase of all property in the block between Jackson Place and 17th Street, except the Decatur House and the National Grange—an organization politically too difficult to move except to a site around the corner where it has built itself a new office building. On Jackson Place the Grange, the Brookings Institution, and others had built so as to change much of the old character. On H Street, the Government has done nothing and all ideas as to maintaining residential character have been lost, commerce has taken over and it is no longer a real part of the square. The first offender was the 10-story Veterans' Administration building that in 1919 took over the site of the Arlington Hotel. Little of the old will remain—St. John's Church, saved by the grace of God, and the adjoining Ashburton House, by the militant ownership of two elderly gentlewomen who wished to live in their ancestral home and more recently by its acquisition by the church. The Decatur House was saved by the same militant ownership and resistance to Government pressure and now by its ownership by the National Trust. Finally, we shall apparently always have the White House, by grace of the efforts of the Institute's resident Secretary Glenn Brown and his influence with President Theodore Roosevelt, as well as the talents of Charles Follen McKim, when during that administration the building was threatened by designs of a Government agency with many extended wings and columns. That is not all the danger it has faced. In the McMillan Commission report of 1902, three methods were considered for its greatest use: First, additions at the east and west ends (not advised). Second, to give it up entirely to public business and build a residence for the President "on one of the commanding hills overlooking the

city" (not recommended as being unpopular). Third, remove all executive offices and devote the President's house entirely to residence purposes. ("Favored by the present Chief Executive; and to the Commission it seems to be the best solution of the problem possible at this time.")

But the Square was treated roughly: "The location of the building to contain the Executive offices is a more difficult matter; but the Commission are of the opinion that while temporary quarters may well be constructed in the grounds of the White House, a building sufficient in size to accommodate those offices may best be located in the center of Lafayette Square. This suggestion must be taken in connection with the full development of the plan outlined below."

Here in a long paragraph is a statement of departments that needed quarters, ending, "The proper solution of the grouping of the executive departments undoubtedly is to be found in the construction of a series of edifices facing Lafayette Square." It had been previously written that these should be convenient to the White House, "which is their common center."

The die has been cast. Since the plan of 1901 there apparently has been no hope of preserving the old square, so now it must be seen to that the buildings facing it on the east and west complement in every way the President's House, so that the square remains as its beautiful foreground and visual approach. Some very bad designs have been proposed for these areas and wisely abandoned. Under the present program, much better results can be expected. Recent acts of Congress have directed that on the complete block west, there be a building for the Executive Offices of the President, and on the east, a building for U.S. courts. Franklin Floete, former Administrator of the General Services Administration, the Government agency responsible for nonmilitary Federal building, with two Washington members of the Institute, Leonard L. Hunter and J. Rowland Snyder, in charge of architectural design, engaged two well-known firms to collaborate on the designs for both buildings. He made known a letter he received from President Eisenhower expressing his desires as to these buildings. In his letter he said, "It is extremely important that the architecural plans for these buildings be carried out with the greatest of thought and with attention to the present and future dignity and beauty of Lafayette Square and its historic past." In it he requested that all plans be approved by the Capital Planning Commission and the Commission of Fine Arts. Mr. Floete has named the architectural firms which will collaborate in these important designs. They are: Perry, Shaw, Hepburn, and Dean; and Shepley, Bulfinch, Richardson, and Abbott, both of Boston.

There was a recent controversy over the proposed building for the courts on the east of the square, in which the author, as preservation officer for the Washington chapter, joined, partly to save for a time at least the remaining historic buildings, but largely to advocate the legislation proposed by three Senate bills introduced separately by Senators Kennedy, Morse, and Humphrey. These advocated the construction of a group of U.S. court buildings near the Supreme Court.

This grouping of the national judiciary was such a forward look that, invited to a hearing before the Senate Subcommittee on Public Housing, the author joined many civic groups in warmly endorsing the temporary saving of the old buildings and grouping the courts elsewhere. Furthermore, three courts needed quarters and there is room for only two on Madison Place. But the honorable judge of the Court of Claims appeared. He had been disposessed from the old Corcoran Gallery near the square and he intended to stay in the area. The Senate sided with him. The House had already done so without a hearing. Though a good judge of claims, he was not a good judge of city planning, but he had been a Representative in the House—and he came from Texas.

A word as to the President as Chief Executive. In his house the early occupants did much homework. Most of the diminutive departments found rented quarters after their move from Philadelphia. Just east toward 15th Street there was a small two-story building for the Treasury almost ready when Mr. Adams moved in, and soon after, one to the west for the War Office, later the Navy. After the War of 1812, larger buildings were built in front of these facing the avenue, on the east, the State Department, on the west of the War and other departments, separated from the White House grounds by what became the East and West Executive Avenues. Robert Mills' neoclassic Treasury was begun in 1836 and gradually completed. Then in 1869, by act of Congress as to location and dimensions, came the State, War, and Navy Buildings, designed under direction of a Commission headed by A. B. Mullett, Supervising Architect of the Treasury. It is interesting to compare the dates of design of these three buildings and the architectural thought of the Nation from the English Georgian White House, 1798, to the neoclassic Treasury, 36 years later, to the French Mansard 33 years after that—a historic sequence that should be preserved.

We may be thankful that the massive buildings proposed by the plan of 1901 did not immediately surround the square, but that the departments found the triangle to the east and the rectangle to the west. We may be grateful also that GSA is progressing as now planned and that we can leave the square as a park in the care of the National Capital Parks and the National Park Service.

Diplomatic Pusillanimity at Panama

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. FLOOD. Mr. Speaker, since the 1956 Suez crisis, I have made many addresses in and out of the Congress on its repercussions at Panama. Featured widely in the press of Latin America, these addresses have worked a large response through informative letters from well-posted observers on the isthmus and elsewhere.

The picture presented by these informants has been of the highest value. They made it possible to predict with remarkable accuracy the 1958 planting of the Panama flag in the Canal Zone, the two 1959 attempts of the Panama mob to invade the zone, and, finally, the servile surrender by our President to Panamanian mob rule, on advice of our Department of State, in which the President directed the hoisting of the Panama flag over the Canal Zone territory. The last was one of the most shocking executive actions in American history.

Unfortunately, the press of our country, despite the documented presentations that have been made in the Congress by members of both major political parties, has tragically failed to present an objective and adequate picture of this crucial situation to our people. The result is that many have been misled by what appears as a studied campaign of downright misrepresentation and inevitable confusion.

Of course, our people wish pleasant relations with Panama, and this, of course, is the desire of the Congress. But such relationship can never be established except upon conditions of mutual fair play and respect. They cannot be realized by a continuous policy on our part of grovelling and obsequiousness, with the surrender of rights indispensable to the proper maintenance and operation of the Panama Canal.

In this connection, Mr. Speaker, Members of the Congress who have been in touch with informed observers of the Isthmian scene, have not been confused and cannot be, and this despite nationwide telecasts of the controlled public information media. They understand too well to be misled.

As examples of the reports received from independent observers, I quote three recently received letters, omitting the names of the authors because of the possibility of official reprisals or even personal injury.

These letters confirm what every informed and objective American student knows of the Panamanian situation. The practice of servile surrender on the part of our Department of State and our Ambassador at Panama are ominous indeed for the future security of our country and subject our citizens in the Canal Zone to the utmost shame and humiliation.

The situation involved is so grave that our Department of State and its diplomatic appeasers sent to the isthmus have brought us into an unprecedentedly low state in the estimation of the Panamanian Government and people. By precedents thus being made in the isthmus they have emboldened communistic and other radical leaders in various Latin countries to make ever-increasing demands against the United States and to lower our prestige in those countries.

All these facts further stress what I have heretofore said on this subject and reemphasize the absolute necessity for a thorough and impartial investigation of subversive influence in our State Department.

The letters which follow are commended for reading by every Member of the Congress, especially those on committees charged with investigations:

BALBOA, CANAL ZONE,
February 18, 1961.

DEAR CONGRESSMAN FLOOD: I have enclosed a clipping from the Panama American, the anti-American English language newspaper in this area. As you can see, anything you or the House does becomes a matter of satirical interest to our Panamanian friends.

When last I wrote you and asked your advice relative to a proposal to rent space in a national magazine, to lay our case before the people of our country, you advised only that we, the citizens in the zone, continue to present a united front against appeasing the ultranationals in Panama. Shortly after I received your letter, it was announced that Governor Potter was leaving and that there would be a change in the American Embassy in Panama. In view of

these changes we adopted a wait-and-see attitude. Needless to say, we saw what we feared most—a complete and abject surrender to the Republic of Panama—a surrender that is so abject and servile as to cause many of us the greatest shame. In addition, no citizen on the zone had better forget that an "insurbordinate attitude toward the constituted authority" has recently become cause for removal of housing privileges. Of course, this is a veiled threat and can be interpreted two ways but nobody hereabouts feels up to making the test.

As for the raising of the flag of Panama in the zone, we all wondered what had happened to the intent of the Congress as was expressed following the November 1959 riots. The newspapers made much ado about this intent, in a lampooning way, of course. The flag went up and, as you pointed out, the State Department was the big "thief." The State Department has been more than that hereabouts. They have led the way in appeasement, they have "knuckled under" to such an amazing degree that it is hard for me to realize that this is the State Department of the U.S. Government. With the visions of the riots, desecration of the flag of our country, destruction of Government property, still fresh in his mind, Mr. Ambassador Farland led the entourage to the Presidencia where they presented the President of Panama with $3 million—money virtually picked from the pockets of our own people. Then the Eisenhower administration pathetically makes the big announcement concerning the gold-deposit depletion. This is an incongruity to which I cannot bring myself to understand. The State Department, under the able guidance of Mr. Farland, has seen to it that Panamanians of political influence are permitted to patronize the post exchanges of the Armed Forces. He has chosen, also to modify the Remon-Eisenhower treaty of 1955, by permitting certain influential Panamanians to trade at Canal Zone commissaries, while the peons are denied that privilege. American parents in the zone withdrew their children from a swimming meet in Panama when several of the American buses, carrying the children, were stoned and spit upon by Panamanians. Mr. Farland turned his oft-smote other cheek and invited the Panamanians to the military reservations and the use of the servicemen's pools. This is not the only case where State finds it convenient to use military facilities and funds for its particular purposes. CFN, the local Armed Forces station, must carry hourly spot announcements on "Operation Friendship" and how Panama was founded "100 years before the Pilgrims landed on Plymouth Rock" (this is an exact quote). This is an amazing bit of "statehood" in that my history book shows the date to be 1903 and as a result of Teddy Roosevelt's holding the Colombians at bay. This is another bit of propaganda which must be causing our schoolchildren no end of confusion. The latest is the new decal appearing on the doors of the Embassy cars: two hands in a clasp, one sleeve bearing the U.S. colors, the other the Panama colors. It was felt that the Great Seal of the United States was a bit too much like a show of force so this magnificent, weakling innovation was put in its place. So much for Mr. Farland. I could go on but it would only sicken you. Needless to say, the citizenry of Panama (those on top) petitioned our Government to retain Mr. Farland at his present post, which has been done.

Major General Carter, U.S. Army, the present Governor of the zone, has conducted himself in a parallel manner. Numerous photos of our Governor appear in Panama papers showing himself dancing the tamborita, a local style of dancing, similar to square dancing, and wearing a little straw hat, the type worn by the chollos or Indians of the interior. On the chollos it looks asinine, on the Governor of the Panama Canal Zone, it appears positively ridiculous and unworthy of his stature. The President of Panama, of course, does not deign to appear in such a ridiculous posture. Only our American Governor. The chauffeurs—two of them—who are assigned to drive the Governor and his family, used to be armed with a police revolver. This was something introduced by Governor Potter and with good cause. A small bleat appeal in a local Panama paper about this custom and it was promptly discontinued. However, I believe the Governor is on the spot and is doing what he has been told to do as a good soldier.

As for the flag on Shaler Triangle, two Canal Zone policemen were detailed to raise the flags. They spent hours practicing in order to avoid raising the American flag first—an act which might be misunderstood. As it was, and you may be interested in this fact, the President of Panama snubbed the ceremony and sent his chief of protocol to stand alongside our Governor at the ceremony. This, of course, endeared him to the hearts of his countrymen and—on this side of the boundary—caused the other cheek to be turned, again.

Thelma King, a deputy in the national assembly and an avowed friend of Fidel Castro, is a longtime and bitter enemy of the United States. She will stoop to anything. Her latest is the campaign to force the release of a Panamanian who is in Gamboa Penitentiary. This man is a felon, a convicted rapist. Thelma King is striving to make him a national hero. Coincidentally or not, a soldier of ours is presently in a Panamanian jail, where he has languished for months on as trumped up a charge as you can find in the annals of law. The Embassy, for all of their ability at shaking hands, cannot obtain his release. Not being a citizen of Panama he is denied bail and, of course, was returned to the Panamanian authorities when a kindhearted judge mistakenly let him out on bail. General Bogart, the commanding general in these parts, saw to that. Of course, I believe his mind was relieved of any hesitancy by Mr. Farland. This unfortunate lad was delivered to his persecutors by our own Armed Forces and suffered a delightful Christmastide in jail. If you have ever seen a Panama jail you can realize what he went through.

I hope it is to your advantage to receive this letter and that you can do something about this mess which embroils us more every day. * * * Incidentally, I am a retired soldier—23 years service, infantry in two wars—and find myself unable to secure employment in this area due to the new policies which tend to grant preference to Panamanians rather than to Americans.

Respectfully yours,

RETIRED SOLDIER.

P.S.—Note the additional clipping regarding the TV discourse on our troubles with Panama. It might interest you to know that this entire U.S. news team stayed at the Panma Hilton where they were feted, wined, and dined from day to day. This, of course, could have no bearing on the outcome and the slanted version being given to the public.

BALBOA, C.Z., *February 10, 1961.*

DEAR CONGRESSMAN FLOOD: By now you have my last letter concerning Mr. Farland and his capers in Panama. This letter includes the latest news clipping reporting his customary antics.

What remains the mystery of the whole affair is that Mr. Farland ostensibly is ignorant of what all of us know. Mainly, that these little people whom he is being so condescending toward are not the ones with whom we should be doing business. The weight and voice of these people mean nothing to the ruling classes of Panama. The latter group for the past 6 months has been very, very quiet insofar as lambasting the U.S. Government is concerned. Mr. Farland thinks this is due to his efforts in the field. He is sadly mistaken. The small group of ruling families have been shaking in their boots for fear that Castro will include Panama in his program. They know that were Castro to come to power in Panama their dynasty would be at an end. For this reason, and no other, they have found it prudent not to irritate Panama-United States relations—at least, not until Castro becomes a thing of the past. This same class I speak of smirk at Farland behind his back. He is considered a spineless, ingratiating buffoon, for whom they have absolutely no respect. Latins are particular about foreign representatives. They appear to affect the haughty pride of the Conquistadores, and any government which deems it necessary to approach them in servility is making a grave error. Mr. Farland's home at the Embassy has been looted by Panamanian vandals twice in 3 months. To this he merely smiles his most winning smile and continues on his backslapping campaign. He is most effective in selling the honor and dignity of the United States right down the Chagres River.

The next item enclosed is a clipping from the Star and Herald announcing the recent little dig by Panama's golden boy at the U.N. This item has stirred up the malcontents again and the murmurs are getting a little louder. It also ties in with the third clipping about a Mrs. Quintero, whom the USIS has hired to handle our information programs to the Latin people. I maintain, as do others, that had we capable people in USIS, those who have made our Government's interests their own, we could effectively counter these and other incidents. Certainly the current TV program making the rounds in the States and this speech were nicely timed. The only thing State finds convenient to do by way of counteraction is to hire a dedicated Panamanian to disseminate the viewpoints of our Government, after she does her little work of editing, clipping, etc. Jobs of much lesser responsibility in other branches of the Government are considered security jobs and can be filled only by U.S. citizens. An enlisted man assigned to I. & E. work in the Army (they usually have one of these for each company) must be cleared for "secret." It is difficult to believe that information and education given to our enlisted people in the Army is of a more critical nature than our Voice of America programs. The American Embassy in Panama is loaded with Panamanians. Not long ago I went to the Embassy. I saw six people and not one of them American. Still a U.S. citizen in these parts is hard put to find employment of any kind.

Respectfully yours,

RETIRED SOLDIER.

PENSACOLA, FLA., *February 15, 1961.*

DEAR MR. FLOOD: In connection with the Huntley telecast February 14, I wish to make some comments. (I worked many years on the Canal Zone as an employee, and, thereafter, for 5 years as a contractor in the Canal Zone and in the Republic of Panama.)

The implications of the Huntley report seem to be that the U.S. Government has moral and political obligations to increase vastly the yearly take of the Panamanian Government, and sheds tears of compassion for the assorted mestizos, mulattoes, and Negroes which make up the population.

I wish the people here could know all the truth about the Panama Canal and the Panama Canal management. There have been dumped there sums of money beyond all reckoning, certainly $2 billion and probably more, since its opening in 1914.

The Panama Canal Company may claim it is not losing money, but if so, they are ignoring a very large part of the cost and probably padding their toll receipts by interdepartmental charges. For instance, perhaps charging tolls for Government floating equipment. This is like a house-

owner charging himself a high rental for his property, and saying, "Hurray—I am getting rich." If the Panama Canal Company makes any such claims, it is by falsifying their books.

In short, the history of the Panama Canal has been a long, long record of bungling and waste. No other nation in the world would tolerate such management.

I doubt very much if you have ever heard of the Panamanian money scandal, which was uncovered in 1934. It was that year (at long last, after 30 years, mind you) that the Treasury Department became aware that Panamanian silver money was being received in Canal Zone post offices at a fictitious value, thereby extending U.S. Government credit to cover all coinage by the Panamanian Government; also to cover the external debt of Panama. This is a direct violation of the Constitution, article I, section 8.

Our sorry State Department tried to legalize this in the Panama treaty of 1936, but in fact, this cannot be legalized without a constitutional amendment. As far as I know, this is going on right now.

During the war, irresponsible Army officers were throwing the money around like confetti. I knew one contractor, working within a stone's throw of my own job, who on an item of $440,000, was able to make a profit of $400,000. Not bad, eh? (There was a commission sent to modify excessive profits, but it was not very effective.)

To summarize, the only one to profit by the canal has been the Panamanian Government, which is to say, the 20 families who run the country, and own about everything worth owning. All the benefits have gone into the big pockets. During the war, the big landowners * * * were renting land to the U.S. Government at rentals more than they had paid for the land. A real saturnalia of waste, and all for the benefit of the big owners.

The story of Latin-America, over 400 years, has been an unbroken tale of insurrections, assassinations, rioting, looting, destruction, and monstrous brutality. * * *

Sincerely yours,

RETIRED CONTRACTOR.

Cochrane Concoction: Killer of Farm Freedom—Rx From the White House

EXTENSION OF REMARKS

OF

HON. RALPH F. BEERMANN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. BEERMANN. Mr. Speaker, the House of Representatives is expected to consider the feed grains bill tomorrow, and prior to its consideration I want to insert in the CONGRESSIONAL RECORD Appendix two articles from a current publication called Farm and Ranch magazine. The Farm and Ranch articles were written by Bill Kennedy, the editor and a writer of unusual discernment, since he seems to have the ability to winnow through the chaff of legal phraseology in the bill and come up with what I believe to be the kernel of legislative intent.

I sincerely wish every farmer in the Third Nebraska District, every farmer in the Nation for that matter, had the opportunity to digest all these articles before we consider the feed grain bill. Unfortunately, all will not have, but I want to insert the articles in the Appendix anyway in the hope that my distinguished colleagues will have the time to read them and then, perhaps, be a little more aware of the position they are imposing on American agriculture if they support this measure.

The articles follow:

WASHINGTON WIRE: COCHRANE CONCOCTION: KILLER OF FARM FREEDOM

WASHINGTON, D.C.—The Kennedy administration has made its farm move, a la Orville Freeman. And a scary sight it is. The bill represents their first broken campaign promise—not to atempt controls without farmer referendum. It also shows that they think the stench of the Government-created farm problem can only be sweetened by more Government meddling.

The corn and feed grains bill is touted as a stopgap program. Actually, it's a tipoff to plans for other farm products. It is now being rushed through Congress for two too obvious reasons: (1) The administration wants to push the impression of doing something and (2) it wants to get in a lick for Government supply and price control while Kennedy's popularity is at its height (and before reaction sets in from the grassroots). The excuse for all this hurry is that it's planting time. (Truth is, planting has already started in the South.)

This bill is a move toward socialized agriculture. Charlie Shuman, of the Farm Bureau, wrapped it up when he said it is an attempt to set "an entering wedge to take control of marketing of all farm products." There is no better place to put that wedge than in feed grains, since they have heavy influence on all livestock, dairy, and poultry farming. An important key.

If this law passes, it will be the first time one man has held in the palm of his hand the right to absolute supply and price control. It gives the Secretary of Agriculture, whoever he may be, the power to drive feed grain prices down to any level he chooses, simply by dumping CCC stocks—the dictorial power to use surplus Government stocks to manipulate prices and force compliance.

Secretary Freeman hedged when asked if his long-term program for both wheat and feed grains would follow this same pattern (which is plenty evidence that it will). He said, "that is being considered." He also admitted that he wanted programs for all commodities that would dovetail with this one. His ridiculous move to chase after the strong market price of soybeans with a higher price support (which he promises, to encourage more planting) is a hint that crops now in good shape may not stay that way for long.

Freeman presented his case for the bill to committees of both Houses of Congress in a spirit of complete cooperation. There was no attitude of unyielding position. In fact, he seemed too cooperative at times. In Representative POAGE's (Democrat, of Texas) Feed Grains Subcommittee—during a half-day session in the witness chair—he offered to accept changes in every major portion of the bill (as different Congressmen suggested them), including an amendment which he brought in that morning.

All was sweetness and light during most of the House committee session, and the Secretary received mostly high praise from its members. It was pretty obvious this committee would go along with him.

Congressman COOLEY, Democrat, of North Carolina, who is chairman of the House Agriculture Committee, paid his respects during the subcommittee hearing. And although obviously there are parts of the bill he doesn't like, it is reported that he, too, will go along. (Rumor is he has to get himself "back in" at the White House because of his vote against the stacking of the Rules Committee—correct a right with a wrong.)

In Senate hearings, Freeman wasn't quite as royally accepted, nor was he so smooth. Repeated probing questions got him confused—so much so that he confused many listeners—and even the doubletalk of his economist, Dr. Cochrane, couldn't straighten it out. At one point Freeman said, "Cheap feeds mean cheap meat." A few minutes later, he was asked if higher grain prices would mean higher meat prices and he said, "We think not."

Actually, the bill is a Cochrane concoction. That's no recommendation for adoption. Dr. Willard Cochrane is the self-styled farm legislation expert who sits at Freeman's right hand. He sat in with the task force committee that recommended the bill; then supervised the writing of it. Someone said, during congressional hearings, that "This sounds like a wild dream out of the warped mind of some college professor who has little practical knowledge of agriculture." And Cochrane is his man. (No recommendation for either Freeman or Kennedy.)

He is (supposedly) a trained farm economist, who years ago joined in a sweep—all too widespread on college campuses—to prove with figures and sickly theories that a socialistic economy is the only salvation for America. He came to the Secretary's staff from the University of Minnesota, from which post he has spouted theories of Government-regulated farming subscribed to only by leftwing farm organizations.

While Freeman himself is a polished politician, Cochrane is not. And his attitude of childish stubborness and condescension irritated lawmakers time and again. Even Senator HOLLAND, Democrat, of Florida—who is by no means unusually rough on witnesses—halted the proceedings at one point to say, "I resent the attitude of Dr. Cochrane. * * *"

This is the man Freeman has now named Director of Economics (see "News"). One report is that Cochrane has a leave of absence from his college job until June. If the Secretary is as sharp as he seems, he'll either send him back there—if they'll have him—or stick him so deep into a cubbyhole that the public will never lay eyes on him.

The bill may be changed enough by the time it passes—if it passes—to pull the teeth out of it. If not, and it goes through with its power tools left intact * * * we are off on a freeway to complete Government control of all agriculture, with little time left in which farmers can find a limited exit. And Congress will have cut the right-of-way.

RX FROM THE WHITE HOUSE: FEED GRAINS BLAZE "FRONTIER" TRAIL; FIRST AID OR HABIT FORMING?

The administration's first move in the field of farm legislation is a corn and feed grains proposal that started out as H.R. 4510. It was labeled "a 1-year emergency plan" by Department of Agriculture officials who presented it to Congress, but was considered to carry far more significance by schooled observers, who see it as a sign of things to come.

The bill did not carry a Freeman (Secretary of Agriculture) tag; but was labeled "White House" from the start. Nevertheless, it created the hottest controversy caused by a farm proposal in several years. Whether a sense of urgency, plus the magic of Kennedy's popularity, could get it through Congress intact on time was a question mark at press time. (It is No. 5 on the President's must list.)

The bill itself deals only with corn and feed grains (not wheat). Without referendum, it would urge producers to put 20 percent of their allotted grain acreage (based on 1959–60 plantings) into a land retirement program. Per-acre payment for the acreage

would be made in cash, each farmer receiving support price for 60 percent of his average production.

A complier in the first part of the program would be eligible to take out an additional 20 percent of his allotment, for which he would receive payment-in-kind certificates. Certificates would be good for two-thirds his average yield on this acreage. He could present the paper to CCC and get the grain out of Government stocks—or take cash for it at market price—in which case CCC would sell grain on the open market to make the payment.

The program is described by its backers as voluntary. However, it has a controversial section 3, which makes it possible for the Secretary of Agriculture to force heavy participation. This section provides that he could sell stocks out of CCC at any price he chooses. He would be required to sell enough grain to cover the payment-in-kind disbursements—plus as much as necessary to pay all over $500 million paid out in the cash program.

This would give the Secretary power to use CCC stocks to drive the market price as low as necessary to force participation. By merely threatening to put it on the market at a given low price, he could frighten producers into the program, even on a 1-year basis. (They would have to come in to get the $1.20 price provided by the loan.)

It is claimed that the plan would cost only $500 million. However, this figure does not take into account the cost of grain in stock and the Government's investment in its storage. Assuming 100 percent compliance, which could be manipulated over a long pull as described above, the Government would be taking in all corn produced (at $1.20 per bushel) and selling it back at a so-called market price.

Secretary Freeman announced that he would also increase the support price on soybeans (to about $2.30 a bushel) in order to encourage grain producers to switch part of their feed acreage to that crop. (Soybeans presently enjoy a strong market, are selling at well above support prices.)

The bill received excited and immediate endorsement by the Farmers Union, and somewhat less enthusiastic approval by the Grange. But it got one of the sharpest blasts ever issued by the American Farm Bureau and was soundly lambasted by such groups as the National Grain Trade Council, the U.S. Chamber of Commerce and soybean people.

President Charles Shuman, of AFBF (the only nationwide farmer organization), pulled out all the stops—said the thing is an ill-conceived "pig in a poke," a "blank check" for the Secretary. He said it is "compulsory, not voluntary;" and that it would "cost billions," not $500 million.

"All this talk about the 'temporary' nature of this bill amuses me," Shuman concluded. "It is an obvious move to get control of all commodities; it's an entirely new concept of using Government stocks to manipulate prices.

"You cannot defend this bill before the people or the farmers," he told lawmakers. "Agriculture is too complicated for us to risk this kind of experiment."

President Hershal Newsom of the Grange said the proposal does not concur entirely with the position of his organization, but "we feel that we must make some concessions. We support it." Roy Battles, legislative director of the Grange, admitted that price fixing is dangerous, but feels "the alternate choice is even worse."

Reuben Johnson, who testified for the Farmers Union, suggested just one change—that the support price be raised to $1.30 (for corn). And Fred Heinkel, MFA, Missouri, who was chairman of the President's task force recommending the legislation, agree that it should be $1.30. Johnson said he wouldn't want to trust "some past secretaries" to set prices, but this one he would trust.

In Secretary Freeman's presentation of the bill he estimated that participation would be about 70 percent, which would take some 14 million acres out of grain production. He said another 2 million acres will be shifted to soybeans by increasing soybean price supports (not a part of the bill).

Asked if his long-term program, including wheat, would be approached along these same lines, Freeman said, "It is being considered."

He urged the Congress to pass the law by March 15.

Pattern for Patriots

EXTENSION OF REMARKS
OF
HON. STANLEY R. TUPPER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. TUPPER. Mr. Speaker, I would like to acquaint my colleagues with an exceptionally valuable address given by C. D. DeLoach, chairman, National Public Relations Commission, the American Legion, February 22, 1961 in Washington, D.C.:

ADDRESS BY C. D. DELOACH, CHAIRMAN, NATIONAL PUBLIC RELATIONS COMMISSION, THE AMERICAN LEGION, UPON THE OCCASION OF THE COMMEMORATION OF GEORGE WASHINGTON'S BIRTHDAY, AT THE WASHINGTON MONUMENT, WASHINGTON, D.C., FEBRUARY 22, 1961

PATTERN FOR PATRIOTS

The German poet, Heine, once said: "If all Europe were to become a prison, America would still present a loophole of escape; and, God be praised, that loophole is larger than the dungeon itself."

That poet was born in 1797. The very same year the man whom we honor today—and who more than any other individual was responsible for making America a haven of freedom from the tyrannies of the Old World—was quietly completing 45 years of utterly devoted, utterly selfless, and wholly distinguished service to his country.

Almost 8 months earlier, the aging statesman had advised his saddened countrymen of his determination to retire. He spoke of the weight of years admonishing him, and added that while choice and prudence invited him to leave the service to which he had devoted the greater portion of his lifetime, patriotism did not forbid it.

"Patriotism did not forbid it." Surely if any one word can be said to have been a ruling influence in the life of George Washington, that word is "patriotism." To him, patriotism meant a deep love of country, and the proof of that love was exhibited in a dedicated devotion to duty in service of his country. That unwavering devotion to duty marked every recorded thought and every recorded deed throughout his lifetime. It made him, more than any individual American, the pattern for patriots. It made him, during his lifetime, so revered that when the final page had been turned, and the book of his life was closed, a saddened Congress—itself comprised of scores of patriots who bore the marks of battle in their country's service—heard "Light Horse Harry" Lee sum up the Nation's feeling on the death of its first President: "To the memory of the man, first in war, first in peace, and first in the hearts of his countrymen."

And it was in such terms that generations of grateful and indebted Americans thought of George Washington. The first President's deep love of country, his devotion to duty, his utter selflessness made him the true symbol of the honor of America. And generation after generation rallied to the standard he had raised.

The totalitarian enemies of the spirit which America represents learned that as long as Americans upheld the standards set for them by that first great pattern for patriots, America would be invincible. And they set out to weaken and destroy those standards. Within our lifetime, we have witnessed the "debunking" of the heroic figures who earned our freedom with their effort, their blood, their sacrifices and, in many instances, with their lives.

We have heard the slick, the shallow, and the subverter attack those early Americans with the snide undercut. We have seen them wisecrack at a human weakness and deemphasize superb accomplishment. We have seen attempts to destroy the character of men who were, after all, only men even as you and I—yet who rose to heights of magnificence in their selfless service to God and country. We have witnessed attempt after attempt to devalue and weaken the blueprint which they gave us in pointing the way to preservation of our freedom—the Constitution of the United States. Never let us forget our debt for that marvelous, flexible means of government of which a great English Prime Minister said: "I have always regarded that Constitution as the most remarkable work known to me in modern times to have been produced by the human intellect, at a single stroke (so to speak), in its application to political affairs."

Today, ugly totalitarian forces are increasing the attack against all aspects of Americanism.

What do I mean by Americanism? Just what the dictionary says: loyalty to the United States, its traditions, interests, and ideals. We in the American Legion believe that means adherence to the standards set for all Americans by the Founding Fathers of these United States. We believe it means—in all things—placing God first, country second, and self last.

We believe it means preserving the freedom of the individual. We believe it means building America into a bulwark—both mental and physical—against the materialistic regimentation of encroaching atheistic communism. We believe it means standing up proudly for those principles which made America great and which are the only guideposts by which she can progress to higher pinnacles of greatness. We believe it means emphasizing the spirit of man—the soul—that sacred something which God gave to man alone, of all living creatures, and by which, God helping, man is enabled to design his destiny. We believe it means living for our country, but even more, in the words of a great American general, we believe it to mean: "Only those Americans who are willing to die for their country are fit to live."

The American Legion honors the memory of those first legions of Americans who served under George Washington. We feel that first commander in chief of all American forces believed with all his heart, and being that the men under his command had dedicated their lives to upholding the truths, enunciated in an immortal document given to the world on a hot summer day in Philadelphia. That dedication to something which was essentially of the spirit gave additional meaning to the word "American." The word no longer applied to all who resided on these shores. It no longer embraced the Tory who, throughout the great struggle, remained true to England. The word "American" came to mean those who held certain "truths to be self-evident," and who dedicated their lives, their fortunes, and

their sacred honor to upholding such truths. Washington unconsciously expressed his feeling that such men were, somehow, special, in an attributed remark based on his circular letter to regimental commanders on April 30, 1777: "Put none but Americans on guard tonight."

But if any test were needed to prove the meaning of the word "American," if ever a pattern were cut to which the word "patriot" might truly fit, that test was made, and that pattern was cut, at the site of Washington's encampment during the bleak winter of 1777 and 1778.

Some years ago, a magazine, no longer published, carried an excellent series entitled "The American Tradition." One feature was entitled "The Barefoot Patriots." It portrayed with cruel clarity the crucible of Valley Forge. It revealed the manner in which that small force of men earned their right to be termed, in the truest sense, "American." And it disclosed the manner of man who was their leader.

George Washington was a resourceful individual and a stern disciplinarian. He was the one strong, dependable, unifying force among the soldiers of the 13 widely diverse Colonies. When he led his handful of men—only an approximate 8,000, though more were on the rolls—into winter quarters 18 miles from Philadelphia, even he could not anticipate the agony of that terrible winter. Gen. Sir William Howe and his well-fed and well-equipped troops were wintering comfortably in Philadelphia. Washington dared not allow the English general's men to dominate the whole of eastern Pennsylvania and drive a wedge between North and South. He must, by threat of the Continental Army's presence, keep them in the city. And in mid-December he led his ragged soldiers into the triangle where creek and river joined and where the little Army was, in truth, to go through the times that try men's souls. The sunshine patriots were gone. The trials of Valley Forge put iron in the souls of those who remained. The ordeal is set out fully in "The Barefoot Patriots."

The first weeks sped by with men working, wrote Thomas Paine, "like a family of beavers." The straw-covered, rough log and mud cabins were only 16 feet by 14 and only a little over 6 feet high. The earth floor was cold and often wet. Oiled paper let in the only light except that from the smoky burning logs. Three-tiered bunks were meant to accommodate 12 men, but in daytime there was scarcely room to move and nothing to do if they could move. Quarrels broke out. Morale dropped. The patched rags of summer uniforms disintegrated. Replacements were not to be had. A general wrote that half of the troops were without breeches, shoes, and stockings and that some thousands were without blankets. By February, the plight of the Army was pitiful. Baron von Steuben wrote that the men were literally naked, some in the fullest sense of the word. Men on guard duty borrowed clothes from their hut mates and even then some were forced to stand on their hats to keep their feet out of the snow. A Massachusetts colonel wrote he had seen soldiers turned out to do their duty in such poor condition that he could not refrain from tears. There were, in truth, bloody footprints in the snow at Valley Forge.

But the shortage of clothing was by no means the worst of the trials in that crucible of cold. There was almost no food. Five hundred horses died of starvation. Men hitched themselves to carts to haul in wood and what little provisions were to be had. For days on end the sole food was firecake—a hard biscuit made of flour and water. A week before Christmas there was no food at all. Men sickened and died. Lafayette wrote that frozen limbs blackened and had to be amputated. Consumption and pneumonia ravaged the camp. Smallpox hit and, worst of all, typhus. A hospital was set up not far away and it had its own epidemic. Forty men of one unit were sent to the hospital. Only three survived.

Then, slowly, supplies began trickling in. Washington, having held the scarecrow Army together, began to hope. On the day after his birthday in that dreadful winter of 1778, Baron von Steuben arrived and began drilling troops. The spirit of purposeful preparation spread, and long before the dogwoods bloomed at Valley Forge, the Continental Army was an effective fighting force.

Who were some of the men tried in that most terrible time of testing? There was a young Frenchman of 20 with a wound in his leg and the rank of major general who had left his home and wealth to range himself on the side of liberty—the Marquis de Lafayette.

There was another 20-year-old freedom fighter from the British West Indies with the rank of lieutenant colonel—Alexander Hamilton.

There was a still younger major who had fought through the summer and now shared the winter hardships with his men—James Monroe.

There was a man of 22—John Marshall—who later wrote that it was at Valley Forge that he "was confirmed in the habit of considering America as my country, and Congress as my government."

These men—these youthful men—must truly be counted among the Founding Fathers. And, like their 45-year-old leader, Valley Forge was for them truly the test from which emerged the pattern of a patriot.

But when the war ended in victory, the task of the patriot was not complete. The fledgling country needed stronger ties than the Articles of Confederation, and in May of 1787, the Constitutional Convention met. George Washington was chosen to be its Presiding Officer. Two years later, the fruit of that Convention—our Constitution—was ratified.

Congress met in March of 1790, and counted the votes for President and Vice President. George Washington received the entire 69 votes cast and was declared President.

As a statesman, General Washington served as selflessly as he had as a soldier. And when he neared the close of that 45 years of service, he left, in his final address to the American people, a document rich in wisdom and advice not only for Americans of that age but for the ages. How long has it been since you have read his Farewell Address?

Washington warns of the ways in which freedom may be lost. He warns of ways in which cunning, ambitious, and unprincipled men might be "enabled to subvert the power of the people, and usurp for themselves the reins of government; destroying afterward the very engines which have lifted them to unjust dominion."

He warned against factionalism. And when change in constitutional powers is found to be necessary, he noted earnestly, "Let is be corrected by an amendment in the way which the Constitution designates. But let there by no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

He speaks of the indispensable supports of political prosperity—religion and morality, and states plainly that "reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

He admonishes us to observe good faith and justice toward all nations, yet warns "against the insidious wiles of foreign influence."

Soldier and statesman—first in war, first in peace, first in the hearts of his countrymen—George Washington, true pattern of a patriot.

Imports Cause Layoffs

EXTENSION OF REMARKS
OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. VAN PELT. Mr. Speaker, some 5 million American workers are presently unemployed. A portion of this unemployment results from foreign competition, which in effect has transferred American jobs abroad. Japanese imports have been especially harmful to Wisconsin industry in several fields including plywood, textiles, and related products. In this connection I ask permission to insert in the Appendix of the CONGRESSIONAL RECORD an article by Victor Riesel which appeared recently in the Milwaukee (Wis.) Sentinel.

The article, entitled "Japanese Batteries Spark Layoffs in Mineral Point" follows:

WILWAUKEE.—Our Japanese friends will Pearl Harbor us again—politically speaking, of course.

More and more of their powerful labor and management chiefs are allying themselves with their counterparts in Communist China. We get the polite bows. The Sovietized Chinese get the fraternal arm-around-the-shoulder embrace. Our intelligence service can, for example, tell you of a meeting in the headquarters of Sohyo in Tokyo February 8.

Sohyo is the American-hating Japanese national federation of labor. To its offices this day came honored guests Li Chieh-po, head of a Peiping Communist labor delegation visiting Japan. In Sohyo offices he was warmly received by Kaoru Ota, national and all-powerful chairman of Sohyo.

There is a tape recording to prove that Ota expressed gratitude to his Communist Chinese brother for the support given the Japanese workers during the Sohyo's drive against the Japan-United States security treaty. Ota added quite fervently that the "unity between Japanese and Chinese workers should be strengthened" to enable them to fight—guess who? That's right. Us.

Comrade Li said he was "deeply impressed by the fact that the Japanese workers had staged as many as 23 united actions against the Japan-United States security pact. Also, Comrade Li added that he expected Japanese workers to continue to oppose military alliance between Tokyo and Washington. Ota rose to the occasion. He said Li could count on it.

I report this exchange of profundities while I am in Milwaukee, because Wisconsin is one of the areas I've been visiting in search of industries threatened by Japanese imports. I seek a complete list of such industries so I can trace their Nipponese competitors. Then I will be able to pinpoint the Japanese unions in those Oriental plants—and it will be proved that most of them have members living off American dollars, but always plotting against American democracy.

One of the industries, for example, centered in Wisconsin and threatened by Nipponese imports is the production of dry cell batteries. Nationally, the dry cell battery business is not king size. But some 8,000 men and women do earn $35 million a year turning out this material. But size is not indicative of national importance. Without this industry—about a quarter of which is in Wisconsin—we would have no proximity fuse, no walkie-talkie, no communication system of the type used in World War II and in Korea and which would be needed in another military emergency.

But now this little industry is being pushed around by imports from Japanese factories—manned by members of Sohyo Peiping-loving unions. In 1961, it is expected that the Japanese battery industry will dump some 20 million transistors into the United States. This will be more than half their national production. And it does not include the transistors prepacked in some 3,500,000 Japanese radio sets sold in the United States last year.

How can U.S. batterymakers—part of our defense as well as civilian economy—exist if their $2-an-hour average wage must compete with 30 cents an hour paid in transistor factories in Japan?

How can our little industry compete with the Japanese who can sell a "216"-type transistor at our port of entry for 15 cents—while our manufacturers must sell it for 70 cents?

We can't compete. So, little by little, our people lose their jobs. We become so accustomed to vast figures that we overlook the human equation.

They told me 34 workers were laid off in tiny Mineral Point, Wis. They were employed by the Burgess Battery Co. In New York and Washington 34 more jobless are just a minute statistic. But 34 more jobless in Mineral Point is a very large and sobering figure to the people of the town—so distant from the Communist workers who bumped them from their bread and butter.

An injury to one is an injury to all our people. I, for one, would rather have the 34 folk eat regularly in Mineral Point, than save four bits by buying a Japanese gadget made by a Sohyo worker pledged to hate us.

Strategic Implications of the Lao Situation

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. AVERY. Mr. Speaker, the Communist drive into the little known country of Laos created another serious crisis for the free world.

Unfortunately, the objectives of the Communist master-planners who are directing this crucial drive into southeast Asia are not fully understood and appreciated by many in the Western World.

What is in many ways the most concise and informative analysis of Red strategy in Laos and southeast Asia recently appeared in the January 1961 issue of the VFW American Security Reporter, the monthly magazine on defense matters published by the Veterans of Foreign Wars of the United States.

The Veterans of Foreign Wars, of which Ted C. Connell, of Texas, is the national commander in chief, has taken a leading and most constructive role in alerting our Nation to the persistent and crucial danger posed by Communist aggression in southeast and far east Asia. This article, "Strategic Implications of the Lao Situation," by Brig. Gen. J. D. Hittle, the director of national security and foreign affairs for the VFW, discusses the immediate and long-range objectives involved in this Communist thrust into Laos. This brief article differs from many other strategic analyses in that it offers an affirmative line of action to counter the Communist expansion through all of southeast and southern Asia.

This article reiterates the sound strategic reasoning behind the recent public statements of VFW Commander in Chief Ted C. Connell who has vigorously urged the establishment of a U.S. Indian Ocean fleet in order to fill the vast power vacuum that extends between southeast Asia and the Mediterranean. It is this power vacuum, I believe, which encourages and facilitates the consistent Communist incursions into that area.

I recommend this article to the attention of all Members of the House.

STRATEGIC IMPLICATIONS OF THE LAOS SITUATION

(By Brig. Gen. J. D. Hittle, USMC (retired)

Communist aggression into Laos has profound strategic significance. It carries Communist power to the borders of South Vietnam, Cambodia, Thailand, and northern Burma. Thus each of these still independent, non-Communist nations are exposed to Red infiltration, subversion, and the threat of actual invasion. Strategically, Laos is like a broad corridor leading from the Communist power base in the north, southward splitting the anti-Communist nations of the crucially important southeast Asian peninsula.

Aside from the immediate threat to these struggling nations, the drive into Laos poses grave long-range problems.

Once Communist aggression reaches the southern shores of the southeast peninsula, bases will be established from which Red Chinese and Russian submarines and surface units will be in a position to threaten the vital sea lanes through the South China Sea to India, Africa, and the Middle East.

Another reason for this Red thrust is that southeast Asia is a rice-surplus area. Red China needs this "rice basket" as insurance against crop failures at home. Also, control of this food supply would give the Communists powerful economic influence over the Asian peoples who now depend on the rice from southeast peninsula.

There can be no doubt that the ultimate objective of this southern thrust is the key base of Singapore, controlling the straits of Malacca, all of which is part of the Communist master plan for the isolation and eventual subjugation of India and Pakistan. Every Red advance in southeast Asia weakens India's protection flank in the east and combined with Red Chinese pressure from Tibet against the border states of Nepal, Sikkim, and Bhutan in the north, draws the noose ever tighter around the subcontinent of India.

The timing of the Communist Laos offensive closely following the Moscow meetings strongly indicates that while Khrushchev and Mao may differ in detail as to the conduct of a Red aggression, there is a basic cooperation and understanding between them.

It should not be forgotten that the Communist aggression against South Korea was closely preceded by Russian-Chinese talks that laid the diplomatic basis for the Korean venture. Thus the typically methodical steps of Chinese-Russian coordination, preparing the diplomatic groundwork for impending aggression, have again been closely adhered to in Laos.

Communist aggression in southern Asia, with India the big target, is facilitated by the power vacuum existing in that vast area. India no longer is protected by the British Empire against Russian encroachment. No longer does the British fleet control the Indian Ocean. In the broad strategic sense, it was British sea power that thwarted, for almost 2 centuries, Russian land power in the continuing struggle for domination in that section of the world.

Controlling and utilizing the sea, England could support her forces in India more efficiently than could Russia who was confronted by the deserts and mountains of the Indian frontier.

The increasing seriousness of the Communist thrust in southeast Asia, and the continuing Red pressure toward India, underlines the necessity for the immediate creation of a U.S. Indian Ocean fleet.

If the course of the East-West conflict demonstrates anything, it is that if the West doesn't quickly fill a power vacuum, communism will.

Youth and Personal Responsibility

EXTENSION OF REMARKS
OF
HON. HUGH L. CAREY
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 1, 1961

Mr. CAREY. Mr. Speaker, it is with pleasure that I ask unanimous consent to have printed in the Appendix of the RECORD, the text of an address delivered by a distinguished resident of my district, Mr. John E. McKeen, chairman and president of Charles Pfizer & Co., Inc., at the annual distinguished service awards dinner of the Brooklyn Junior Chamber of Commerce, honoring Brooklyn's Young Man of the Year, Robert E. Fitzpatrick, humanitarian; and also a resident of the 12th Congressional District of New York.

This is a signal and refreshing departure in that the junior chamber sought out a man to honor, not in the scientific, economic, or business field, but rather, in the humanitarian and social welfare field of endeavor.

It is heartening and perhaps prophetic, that this year's pioneer acknowledgement of a worthwhile contribution to mankind, is that of a creative guidance of our youth by broadening the scope of their interests, the seeking of worthwhile associations, and the providing of opportunities for useful service.

As a member of the board of St. Vincent's Home for poor and friendless boys, sometimes known as the newsboy's home, I have been in a position to personally witness the administrative capabilities and deep personal devotion of the recipient of the award, Mr. Robert E. Fitzpatrick.

As Mr. Fitzpatrick indicated in his acceptance of this well deserved encomium, from his initial contact with the challenge presented by the needs of this orphan and homeless group, he has demonstrated that the very charity and care which improved their lot also broadened and enriched his personal status in the community.

He also paid homage and gave credit justly due to his mentor, a towering figure in the field of youth care and welfare, the Very Reverend William M. Casey, director of the home.

That our community is appreciative of its indebtedness to such individuals as these, and aware of the compass which should determine our contribution, is well evidenced in the text of "Youth and Personal Responsibilities" which I commend to my colleagues, as follows:

YOUTH AND PERSONAL RESPONSIBILITY

A talk by John E. McKeen, chairman and president of Chas. Pfizer & Co., Inc., at the annual distinguished service awards dinner of the Brooklyn Junior Chamber of Commerce, Towers Hotel, Brooklyn, N.Y., February 9, 1961

Look at a thin filament of thread in the early light of dawn, or in the fading twilight at nightfall. The eye can scarcely perceive any difference between a thread which is black and another which is white. And yet to the Moslem this difference has a profound significance, for it guides his worship in the month of Ramadan—the month in which the sacred book of the Koran was revealed to the prophet Mohammed. Throughout this sacred month, the faithful follower of Islam must fast from food and water from dawn to dusk, from the moment at dawn when his eye perceives the difference between a white thread and a black thread. It is the personal responsibility of the Moslem to make this distinction, as indeed, in a larger sense, it is the personal responsibility of all men to distinguish in life the black thread from the white.

Man is never more seriously intent than when he ponders this, when he recognizes that the great gray fabric of human destiny is the interlacing of black and white threads, that among these threads can be found profound truths about man and his destiny and that these truths are neither collective, nor socialized, nor organizational. They are deeply personal truths and they demand personal responsibility.

In America, there is a new generation emerging. It is a toughminded generation, wary of being deceived, skeptical, knowledgeable. And most heartening of all, it is a generation which seems eager to assume the individual responsibility that has been the source of man's progress down through the centuries.

There is a youthful face now in the White House, a young first lady and their children who belong to this new generation. Perhaps it is this youthful President—by the mere fact of his age—who has inspired a new sense of importance in the young.

These young people have been born into a world of deep trouble, a world in which our very way of life is imperiled. We face monumental problems and I do not think we can solve them without recourse to the fundamental spiritual truths of freedom, justice and personal responsibility that have remained at the root of man's progress while civilizations rose and fell down through centuries. That is why it is heartwarming that there exists among the young an image of this country and its destiny which has survived all of the accusations that this generation is apathetic, or too security minded, or concerned with nothing beyond its own personal problems.

If it is true that we are in danger of losing sight of our spiritual heritage, it is equally true that there is a growing realization among youth that without an underlying sense of idealism, of devotion to God-given principles, we stand a good chance of losing what we have so painstakingly gained.

All of this has meaning to you members of the junior chamber of commerce of this, our beloved Brooklyn, because you recognize how important it is to distinguish the black threads and the white, because you understand how vital it is in these times that man aline himself fixedly to principles that guard his freedom. And most important, you recognize that these principles are valid because they are God-given and not manmade.

This junior chamber is dedicated to the ideal of civic service through the organized efforts of young men of the community. You are attempting to better yourselves by promoting the welfare of the community and its citizens. Your principles embody the most cherished ideals of western civilization:

(a) That faith in God gives meaning and purpose to human life;

(b) That the brotherhood of man transcends the sovereignty of nations;

(c) That economic justice can best be won by free men through free enterprise;

(d) That government should be of laws rather than of men;

(e) That earth's great treasure lies in human personality;

(f) And that service to humanity is the best work of life.

These are noble thoughts of the kind that have inspired the scholars and humanitarians throughout history and they are forever at the root of man's freedom and his genius. But are they practical guides for today? Cynics will say, "No. After all, we live now in the rough-and-tumble world of competition; leave such ideas to the philosophers."

But just look at the dramatic and revolutionary events that are literally reshaping the world around us. Consider the sit-in strikes in our own South. The propriety of these strikes can be argued until doomsday. What cannot be argued is that those students believed deeply that segregated lunch counters were a violation of human dignity. What they did, they did with moral conviction, and a tradition that had lasted for generations began to fade away. This combination of moral force with decisive action is the new power of youth.

There is a story about Abraham Lincoln. During the Civil War Gen. George B. McClellan was conducting a waiting campaign in the field and was being so careful to avoid tactical blunder that little progress was being made at the front. So Lincoln sent him this dispatch: "My dear McClellan, if you don't want to use the Army, I should like to borrow it for a while."

So it is with some of our youth today. They are impatient. They seem suddenly eager to get things done, and they are not content to see a force stand idle while there is an adversary in the field.

Few ideas have so touched the hearts and imagination of young Americans as the proposal for a peace corps of young people to work in the underdeveloped lands abroad, contributing technical assistance and hard work—taking part in the building of a new nation. It is an opportunity for individual young Americans to lend a helping hand, to put their idealism, their faith in democracy, to work in the most heartwarming terms, and to participate in a personal counteroffensive against the Soviet's effort to influence people with a philosophy that means the destruction of personal liberty.

We have inspiring examples of what can be done through personal involvement by such men an Albert Schweitzer, the late Dr. Dooley of Medico, and others like them who have dedicated their lives to treating the sick in the most remote regions of the world. It has been our privilege at Pfizer to contribute drugs to these humanitarian causes, and I cannot help feeling a personal sense of satisfaction in being associated with Medico as a member of the board. Indeed, I can assure you that all of our people at Pfizer feel this same satisfaction in the knowledge that these medicines are helping some less fortunate humans. It gives everyone a sense of personal participation in the humane work of those medical missionaries.

Nationalism and the spirit of freedom run deep within those people now struggling against poverty. They will not trust us—nor should they—unless we show the same devotion to freedom. That is the practical need for idealism among young people in our national life. We cannot go into these countries as exploiters. We must be willing to share in their problems and contribute to their progress and prosperity. So over the past years, wherever Pfizer has built abroad—and we now have operations in more than 100 countries—we have gone to stay as local citizens, and not as visiting businessmen.

A leading Russian economist has predicted that in the next few years the ruble will supplant the dollar as international currency and that by 1965 the Communist-ruled countries will dominate world trade. That is why we need men of resourcefulness, ingenuity, boldness, and deep convictions. Let me assure you gentlemen that those who go into business today will find themselves very directly competing with Russian trade missionaries. They offer powerful inducements to the less developed countries who so badly need money for capital investment. They offer to build and finance factories at extremely low interest rates. Against this we offer free enterprise and modern technology.

This kind of bargaining—the free economy against state control—is going on this very day in many parts of the world.

At the international bargaining table, our young businessman must convince the world not only that we have better products and better technology, but a better ideology as well. If we do not have this capacity as a nation and as individuals we may fail in history's most challenging moment.

Wherever Pfizer has built abroad, our company has gained, the nations abroad have gained, and equally important, our own economy has benefited as gold and dollars have begun to flow back to the United States.

This is good business taken from any viewpoint, and it amply justifies the truth of another of the Brooklyn chamber's principles—that economic justice can best be won by freemen through free enterprise. We say this with conviction—but we say it with caution as well. We must be cautious lest we mistakenly believe that the economic and technological machinery of free enterprise is the principle itself. It is not. Our factories are marvelous and efficient beyond compare, our engineers and scientists have gained tremendous power over material things, and in so doing they have given us an unrivaled standard of living. We are rightly proud of the technological progress we have made and equally proud of the abundance our free economy has produced. But our pride can have real significance only if our progress is accompanied by a deepening awareness of the ethical principles of human dignity that are at its roots. A state-controlled economy, as we have recently seen, is also capable of tremendous feats of production and technology. But what they cannot provide, and what we cannot fail to provide, is individual personal liberty, freedom of choice, and freedom of action within the limits of the law, the moral law as well as the civil law.

When I mention this last point, I am touching on still another of the beliefs affirmed by this group of young men: That government should be of laws rather than of men. But it is men who make laws, and men who administer and interpret them. It is an irony of democracy that it carries within itself a self-destructive seed. Men who are free to make laws are able to make bad laws as well as good ones, or through indifference, they may give up the freedom the law was designed to insure in the first place. I hope the new, eager generation of Americans understands this.

I hope too that young people understand that what they profess to believe is not something to be taken out on special occasions, and polished and shined. It is rather something to be lived with their families, their

friends, their business associates. The things a man believes most profoundly—his philosophy of life—are seldom on the tip of his tongue or the top of his mind. They lie deep somewhere in his consciousness, there to be called upon in making life's daily decisions

There is a meaningful little story about a Scotsman who some 80 years ago rescued a boy from drowning. The boy turned out to be the son of a nobleman who, in gratitude, offered to rear and educate the Scotsman's son. In time, the Scotsman's son was graduated from St. Mary's Hospital Medical School. His name was Sir Alexander Fleming, the discoverer of pencillin. During the war, the nobleman's son was stricken with pneumonia. Fleming's penicillin saved his life. The nobleman's son was Sir Winston Churchill.

Here are two great men of our century whose lives and fortunes—and indeed the lives and fortunes of millions of people—are touched and changed by a series of human events that began 80 years ago. I know of no better illustration of the truth that, for better or worse, all of humanity is inscrutably bound in a single unity, and that no one of us can act without somehow affecting all of mankind.

We observe a similar unity, in fact, among all living things, and I cannot help thinking now of the rows of test tubes arranged on racks in a special vault at the Pfizer medical research laboratories in Groton, Conn. There are some 40,000 of them. Inside each is some form of microbial life—the seeds of molds or bacteria. They lie dormant in a state of frozen animation, freeze-dried and motionless. Many of them, like Fleming's penicillium mold, are capable in the hands of science of producing life-saving antibiotics. They are the progeny of the earth's most primitive organisms. If we guard them carefully, we can at will bring them to life and start them producing medicine. But if by neglect or mischance we do not take care to preserve that viable spark, then they will be snuffed out and with them will go this wonderful ability so carefully nurtured from one generation to the next.

Equally fragile in this day and age are the spiritual truths that have shaped man's progress down through time So if the young are concerned about their place in the world, they will listen with their hearts as well as with their ears to the words of our new President, John Fitzgerald Kennedy, on the occasion of his inauguration.

"Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans—born in this century, tempered by war, disciplined by a hard and bitter peace, proud of our ancient heritage—and unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed, and to which we are committed today at home and around the world."

This appeal to the young generation focuses attention where it properly belongs tonight—on the man who is honored here, Robert Fitzpatrick. It is a wise and well-deserved honor that goes to him. In choosing him as Brooklyn's Young Man of the Year, the junior chamber recognizes the truth of one of its tenets—that service to humanity is the best work of life. I am sure that he is one of those who long ago learned to distinguish the black threads from the white, and to recognize that it is in the acceptance of personal responsibility that we find the richness of life.

At St. Vincent's Home for Boys, he has taken homeless youngsters who might otherwise have been a burden or a harm to society and made them responsible, adult citizens. He has seen the value of psychiatric guidance, and he has instituted programs at the home that have helped many a young boy find his place in life. He recognizes that wholesome recreational activities can help build a man's character, and he directed the purchase and organization of a 70-acre camp at Columbia, N.J., some 7 years ago. He knows the value of a good, sound education and I am certain that the boys from St. Vincent's whom he has guided into college will prove worthy of his confidence. He knows how much the warmth of family life can help a homeless boy, and he has devoted a great effort to placing his boys in fine foster homes. This community will benefit greatly from Mr. Fitzpatrick's work, as will the boys who are under his care.

I am sure that he would agree that the one precious thing we can give to the young is a heritage which recognizes that though we live in a wonderful age of machines, it is man, his rights and his dignity, which must always be the subject of our study. Our problems are manmade problems, and the solutions we find for them, with God's guidance, will be manmade ones.

"Supremacy in Aerospace Is Essential to the Survival of the Free World"

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. BOYKIN. Mr. Speaker, on February 2, 1961, one of our outstanding Air Force generals, Gen. Sam E. Anderson, commander, Air Materiel Command, addressed the National Solid Propellant Rocket Conference in Salt Lake City, Utah, and discussed in a general way how the Air Force might carry out its objective of assuring aerospace supremacy. Under leave to extend my remarks in the RECORD, I include General Anderson's timely address:

ADDRESS BY GEN. S. E. ANDERSON, COMMANDER, AIR MATERIEL COMMAND TO NATIONAL SOLID PROPELLANT ROCKET CONFERENCE, SALT LAKE CITY, UTAH, FEBRUARY 2, 1961

I was honored to receive your invitation to speak this evening. The National Solid Propellant Rocket Conference, which you are conducting here, is one of the significant scientific events of this still young year of 1961.

It is an honor, also, to meet so many distinguished members of the American Rocket Society, one of the Nation's foremost scientific organizations. It also must be one of the Nation's fastest growing organizations.

It is significant that in 1959 the society's membership totaled 13,700. But by 1960 it had jumped to 17,800. It is hard to believe that as late as 1948, this organization had a grand total of 809 members—now a total of over 18,000.

The work done by Rocket Society members—a voluntary contribution of time and talents—is of immense value to the advancement of science and to our national defense program. The Utah section of the society, host to the conference, also deserves congratulations.

Although it won't be 2 years old until next March, it already has a membership of 180. It is the society's youngest section ever to act as host to a national conference such as this.

Many of those who are here this evening have been attending sessions, classified and unclassified, on the current state-of-the-art of solid propellants. That subject, I am sure, has been completely and competently studied. So tonight with your permission I will discuss in a general way how the Air Force might carry out its objective of assuring aerospace supremacy.

This supremacy in aerospace is essential to the survival of the free world. The threat to our survival from any military force must be recognized and dealt with accordingly.

We cannot boast of the scientific superiority we held prior to World War II over any nation. In recent years, technological progress of great significance has been spectacularly demonstrated by some of the heretofore backward countries.

Any threat to the free world has made it imperative that we possess a true deterrent to war. It happens that "deterrence" is a word about which there is a great deal of misunderstanding.

However, it is a term that should be understood by every American. It should be understood that to possess a true deterrent we must have the ability and will to prevail.

Some may wonder why I emphasize the word prevail. If deterrence succeeds and there is no war, why do we need the strength to win?

The true meaning of deterrence gives the answer. Deterrence is the effect produced in the minds of potential enemies when they understand the enormous striking power of our military forces and when they understand that it is our national will and intention to use this striking power swiftly and decisively if the need arises.

The conclusion is obvious: power that cannot prevail will not deter.

The Air Force concept is that a true deterrent requires forces capable of destroying any aggressor's military power to the point that he no longer has the ability to wage war.

That is what is meant by "counterforce"—a force that can win. The purpose of military power remains what it has always been—to destroy the military power of the enemy if necessary.

There are some who contend that a lessening of our defenses would be viewed as a good-will gesture, a sort of proof of America's desire for peace. They are mistaken. One of the grim realities of the world in which we live is this: Peace must be enforced: And weakness never enforced anything.

What sort of power is needed to provide a true deterrent? In general terms it is a carefully prepared and maintained blend of strategic weapons, both manned and unmanned.

There can be no doubt that missiles are playing an increasingly important role in our deterrent airpower. The ratio of manned to unmanned weapon systems is already shifting as we achieve reliable, operational models of both guided and ballistic missiles and phase them into our active inventories.

During this decade the unmanned aerospace systems will continue to increase in importance. However, for as long as now can be foreseen a blend of the manned and unmanned systems will be necessary, each complementing the other and each contributing its peculiar characteristics to our total capability.

The future needs of the Air Force that can be visualized are so numerous, varied, and complex that they could be covered only in a series of talks, articles, and books. I will mention two.

One is the development of a mobile striking force of nuclear powered aircraft that can penetrate enemy territory from any direction and at a choice of altitudes. Such a force would be able to range for days on airborne alert without refueling; it would be capable of sustained low-altitude flight.

Another use for long-range aircraft developed for such a force would be in defending against intercontinental ballistic missiles. Armed with air-launched anti-ICB's and equipped with supersensitive detection devices, they would have an excellent chance of destroying enemy missiles in the early phase of their flight. They also might have great value for extended antisubmarine patrols.

Our ballistic missile forces could be greatly augmented by the development of strategic missiles capable of high-speed, sustained low-altitude flight.

It is obvious that in order to develop aircraft and missiles with such long-range capabilities we will have to greatly improve our propulsion systems.

This brings us to the necessity of developing and putting into practical use different sources of power. Work is progressing on the development of airborne nuclear propulsion and—farther in the future—the development of ion propusion. I will have more to say a little later about these programs.

Let me digress here for a few moments to discuss the Air Force's ballistic missile program. Development of the intercontinental Atlas, Titan, and Minuteman, and the intermediate range Thor, required the greatest marshaling of men, money, materials, and scientific endeavor in American history.

Many laymen do not realize that the larger proportion of the national investment and effort in these programs is not in the missiles themselves, but in the ground environment—construction of sites as well as the maintenance and test equipment which supports the missiles.

As you know, since last July, managing the construction, installation, and checkout of missile sites has been the responsibility of the Air Materiel Command. Encouraging progress has been made.

The construction job involved is enormous. It is estimated that currently approved ballistic missile programs will use enough structural steel to build 26 Empire State buildings; enough concrete for 7 Pentagons; enough air conditioning for 29,000 6-room houses.

When you consider that the Air Force missile program is only a part of the total defense effort, you realize the tremendous impact that effort has on the national economy from the standpoint of employment and purchasing power.

Let us pause to examine the impact on the State of Utah. This area, in just a few years, has developed into a major center for rocket propulsion systems. Defense contracts in force in Utah during 1960 had a total value of a little over $500 million. The Air Force awarded approximately $431 million of these contracts, including more than $160 million for solid propellant systems.

Defense plants now in operation in Utah have a total value of nearly $60 million, and this figure will be increased by $15 million with the completion of two plants now in the initial stages of construction. The value of military installations in the State is in excess of $1,100 million.

Most recent figures show that 26,373 persons are engaged in defense activities in Utah, with a total annual income of $160,526,000. Of these, 19,570 are Air Force personnel, civilian, and military, including 4,565 working on solid propellant systems.

In Utah, where labor costs are about the same as the national average, the percentage of unemployment is below the average for the United States—4.9 percent compared with the national figure of 5.5.

The construction of ballistic missile sites is, as I indicated earlier, a job of immense proportions. I am happy to be able to report tonight that good progress is being made in this program.

An explanation of the background and organization of this effort may be helpful.

In July of last year, with the Atlas on the way to becoming operational and Titan and Minuteman moving forward under priority pressure, the Air Force assigned management responsibility for the site activation program to the Air Materiel Command.

Concurrent with that action, I placed Maj. Gen. Tom Gerrity in command of the Ballistic Missiles Center and charged that organization with the site activation job.

The Air Force immediately assigned senior military officers as site activation task force commanders, each directly responsible to General Gerrity for control of all phases of site activation. In turn General Gerrity is directly responsible to me.

The next priority requirement was for a system of rapid communication which would enable the Ballistic Missiles Center to keep abreast of activation progress and problems on a day-to-day, sometimes hour-by-hour, basis. This was accomplished by the establishment of command control posts at each complex, feeding into a central command post at headquarter BMC.

The use of sound management and communication techniques, we feel, has had the desired results. We are now able to voice the expectation that the established dates for delivery of the sites to SAC will be met.

Some of the weapon systems are already in place and being exercised. Bases at Warren I and Vandenberg are now operational. The complexes at Warren II and Offutt Air Force Base will become operational in the very near future. These are to be followed by Fairchild and Lowry later this year.

We realize the United States still has a long way to go and there are a number of factors that can interrupt and delay our program. I refer to labor disputes; difficulties of geography, and weather; slippage of industrial delivery schedules; and technological problems, such as propellant-loading systems—a major problem, and many others.

We are continuing to work under the concept of concurrency by which we simultaneously develop, buy, produce, and test any and all components of ballistic missiles. In a program as complex as this, with its ever-changing requirements, unforeseen problem areas can and do arise overnight.

That is why we must have improved and accelerated quality control procedures at manufacturing sources, and even at the lowest subcomponent level. That is why we must have maximum continuing effort on the part of everyone concerned with this program within the Air Force and industry. Having our ballistic missile sites constructed and operational is one of the most important factors contributing to our national survival.

Maintaining our aerospace capability demands constant advances across the whole spectrum of science and technology. It isn't necessary for me to recount the tremendous strides that have been made in solid-propellant rocketry. You are well aware, for example, of the technological breakthrough represented by the development of the Minuteman. You realize the enormous boost the Minuteman, successfully fired for the first time 2 days ago, gives to our ability to deter war—and our ability to win if war is forced upon us.

However, in spite of the great progress that has been made, I think you will agree that we have not yet developed the ideal propellant—either solid or liquid—the kind of propellant that could power the types of future aircraft and missiles I mentioned earlier.

As you know, the advantages of solid propellants—economy and instant reaction, to name two—are offset to some degree by advantages of liquid propellants, such as greater controllability, throttling, the ability to stop and restart.

This competition between the advocates of solid and liquid propellants is an excellent example of the American way of doing things. By no means does it represent a wasteful duplication of effort. This matter of alleged duplication of effort, incidentally, deserves some discussion. It is a subject about which there is much public misunderstanding.

Sometimes there are programs in the applied research area which have the same objective but are seeking alternate solutions. This is necessitated by the different performance requirements of weapon systems or the needs for information on which to base a choice among the various possible systems.

There are interservice committees on propellants and rockets where common problems are discussed and information is exchanged. Air Force rocket engineers assist NASA on various rocket programs and program information is exchanged on a regular basis. You can see that there are enough channels of information to assure that each Government agency is well aware of the other's programs.

The services, as a matter of fact, regularly take advantage of each other's research and development programs, regardless of sponsorship. Here are a few examples: The Air Force's use of Navy hydrogen peroxide developments in the X–1, the early Navaho rocket, and the superperformance rocket for the F–86; the Army and Navy's use of Air Force-developed ammonium nitrate propellants for target drones and gas generators; the Army's use of the Air Force Thor rocket engines for the Jupiter missile; NASA use of Air Force and Army rockets to put their satellites in orbit.

Returning to the situation of solid propellants as opposed to liquid propellants, you may be sure that the Air Force has no favorites. In developing and planning for the weapon systems and space vehicles of the future, we will use whatever materiel provides the best performance for a given function.

Economy, of course, is of great importance. On that score—as on many others—the Minuteman stands as a remarkable achievement. It is the first advanced weapon system to cost less than its predecessors—probably more than 75 percent less.

Important as it is, however, economy cannot be the sole decisive factor as we plan the weapons and vehicles we need to retain aerospace supremacy in the years ahead. It would be sheer folly to invest in a product just because it is cheap, if it cannot do the required job.

So, I am glad to say that a demonstration ion proplusion engine is being developed under contract for the Air Force and it may be sent into space in the near future for the purpose of testing its design. Still, there is a growing fear that Russia will put an operating ion engine into space before we do. In this, as in other fields bearing on our future aerospace capability, we cannot be content with second place.

Even though we must press forward toward the relatively long-range goals of airborne nuclear proplusion and ion proplusion, we know that for many years to come chemical propellant systems, solid and liquid, will remain the major source of aircraft and missile propulsion.

That is one reason why the great progress that has been made in recent years in the area of solid propellants is so heartening. The dedicated research people and scientists who are responsible for that progress deserve the highest praise.

Incidentally, I often have the feeling that there is not enough public awareness of the great extent to which the survival of human freedom depends upon our scientists.

That freedom is safeguarded by weapon systems that are beyond the wildest dreams of our ancestors. Members of our military forces have set records for speed, altitude, and range that once were considered unattainable.

The truth is that none of these accomplishments could have been possible without the hard, persistent and skillful efforts of those who labor in the fields of basic and applied research, in industry as well as in Government service.

The military has been able to do its job because we and the scientists have developed the tools—because we have overcome obstacles that not so long ago seemed insurmountable.

The obstacles that lie ahead—the numerous problems crying out for solution—are tremendous. Though much distance has been covered there are countless barriers along the road into the future. Many of those barriers have been put up by nature, but the chief one—the one that is the most difficult to overcome—is in ourselves. This is the barrier of our inadequate knowledge.

I believe the Nation and the free world can be confident that people gifted with talent and spurred by a sense of dedication—people like those who have attended this conference and are present at this meeting tonight—will be able to break through the knowledge barrier.

Ladies and gentlemen, I want to thank you for the privilege of visiting with you this evening.

Challenging Questions Asked by Dr. Edward L. Litchfield

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 1, 1961

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to insert the following challenging questions which Dr. Edward H. Litchfield, chancellor of the University of Pittsburgh, included in his address to the graduates at the midyear commencement exercises of the University of Buffalo, Buffalo, N.Y., on February 22, 1961.

Taking as his text, George Washington's prayer, "Bless Our Land With Honorable Industry, Sound Learning, and Pure Manners," Chancellor Litchfield told the graduates that America's willingness to work, in education and in industry, may decide her survival as a free nation. In appraising America's future prospects, he posed these five thought-provoking questions:

1. Can we afford our failure to educate the many who could benefit from higher education?

The Soviets see that all of those capable of such an education get one. In America 50 percent of the top 20 percent of our high school graduating classes never go on to college. In Pennsylvania, this percentage is even higher—58 percent, and lack of motive rather than lack of money is responsible.

2. Can we afford to use our educational facilities for only three-fourths of the calendar year?

"By dividing the year into three parts and teaching around the calendar," Dr. Litchfield said, "we can educate more students and enable individual students to get a better education. We have been doing this at the University of Pittsburgh for two years with great success.

"It has been estimated that capital expenditures for institutions of higher learning, to meet increased enrollment within the next few years, will cost us $10 billion. If these institutions operated on a year-round basis, we would need to spend only $6 billion for new facilities."

3. Can we afford our present attitude to the shorter workweek?

4. Can we afford our present attitude toward retirement?

"Setting 65 as an arbitrary time for retirement is a waste of experience and leadership in many instances. Industry is simply unwilling to exercise judgment by determining who is old at 65 and who is still young enough to contribute to the economy."

5. Can we afford the loss of our woman power?

"In Russia 35 percent of the faculties in colleges and universities are women; so are 39 percent of the engineering students and a majority of the surgeons.

"Why not plan for a productive life for women whose children have grown up. At 45, a woman still has a life expectancy of 37 years. Today there are 12 million women from 45 to 82 who are unemployed."

The vigorous, youthful chancellor of the University of Pittsburgh stated emphatically:

"In the world we live in today, we cannot afford business or school as usual. We cannot afford leisure as a greater value than 'honorable industry' or work.

"Above and beyond the urgent and practical necessities of our physical survival, stands the moral compulsion for this thesis—a command for full performance which we must recognize as valid if the very basis of our culture is valid.

"For surely, only by using his capacities to their maximum, does the individual faithfully reflect the universal, of which we believe him to be an expression.

"Thus did he find meaning; from that meaning does he derive his right and do we postulate the dignity of man."

American Industry Needs Tax Relief

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., of March 1, 1961:

During the campaign and following his election President Kennedy has advocated tax reform measures for industry which would stimulate investment, and enlargement and betterment of our industrial plant. He has been specific about this. On one occasion he said: "We must stimulate plant modernization programs, which are vital both to increased production, and to the building of industrial facilities which can compete successfully with the modern plants of Europe and the Soviet Union. Wherever we are certain that tax revision—including accelerated depreciation—will stimulate investment in new plant and equipment without damage to our principles of equity, we will proceed with such revision."

The accelerated depreciation need is at the heart of the problem. And so, along with it, is liberalization of depreciation allowances. As matters now stand, a producing enterprise can recover the cost of a machine or some other piece of necessary physical equipment over a long period of years. But, as a result of inflation, and also of increasing complexity of equipment, the new machine which is needed may cost 2, 5, or 10 times as much as the original. The money to make the exchange just isn't there. Most authorities think that depreciation, under present laws, is spread over much too long a time.

Henry Hazlitt has dealt with the matter in recent Newsweek columns, which have been reproduced in the Reader's Digest for February. He pinpoints it in these words: "America leads the world today in man-hour productivity because it has provided each worker with more and better tools than any other nation. * * * But today our growth is retarded because we are not replacing our tools of production fast enough to keep pace with the world's rapidly advancing technology and our own economic potential. If we are to increase our productivity and maintain our lead over foreign competitors, American industry must invest substantially more than $19,300 for each new job it provides for our growing population."

Mr. Hazlitt goes on to show that our tax laws and policies are the most restrictive of any leading industrial nation when it comes to plant modernization and new investment. In this we are behind Canada, Britain, France, Germany and others. All of these allow much faster writeoffs of equipment, and also allow much larger allowances. The result is constant improvement of their industrial plant. Liberal depreciation policies, for example, played a major role in the miraculous recovery of Germany.

"In this country, on the other hand," says Mr. Hazlitt, "leading economists and accountants have estimated that costs of replacement are outrunning depreciation allowances by $5 to $8 billion a year." The inevitable result is increasing obsolescence, and a steady weakening of our ability to compete.

An objection to liberalization of depreciation laws is that the Government would lose revenue. Mr. Hazlitt, like other writers on the subject, has the answer to that. There would be some loss at the very beginning. But, over the long pull, the Government would get the money. There would just be a longer time factor.

Second, and much more important, the new investment would be followed by increased production, employment, and earnings. And these in themselves would automatically increase the Government's tax take.

As Mr. Hazlitt sees it, "There is no more urgent task before the new Congress than to make this reform in our tax laws." He is not alone in this. A poll of leading American economists, made by the American Economic Foundation, shows that 70 percent of them favor liberalization of the depreciation laws.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. DAGUE. Mr. Speaker, March 3, 1961, marked the anniversary of the liberation of Bulgaria and her restoration as an independent state.

We in America have always been conscious of the people of Bulgarian extraction who are among us and we have marked with satisfaction their many contributions to the stature and security of the United States. And we have learned from their long years of suffer-

ing beneath the tyrant's heel the extent that dedicated people can endure hardship and then regrasp the sword of freedom when it is handed to them.

Those of us who adhere to the Christian persuasion owe much to those Bulgarian stalwarts who were able to keep their faith unsullied even though under constant pressure from the Turks in the centuries they were under the domination of the Ottoman Empire. The world will also recognize its indebtedness to Slavic culture and the Slavs in turn will render constant homage to Sts. Cyril and Methodius for the literary traditions that continue to this day.

American citizens everywhere should join in tribute to these great people and also in the pledge that we shall keep green the memory of Bulgarian sacrifices. It should be our purpose to continue to emphasize that so long as they are held in thralldom no man anywhere can feel secure and that we must work for their liberation from Soviet enslavement or accept a similar fate for ourselves.

Hon. Julia Butler Hansen

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. MAGNUSON. Mr. Speaker, my able colleague from the State of Washington, Mrs. JULIA BUTLER HANSEN, has been signally honored by the adoption of House Joint Resolution 35 by the Washington State Legislature.

The resolution expresses the appreciation of the legislature and the people of the State of Washington for the outstanding leadership and service rendered by Mrs. HANSEN during 22 years in the legislature before her election to Congress last year.

I wish to associate myself with the sentiments expressed in this resolution, which follows:

HOUSE JOINT RESOLUTION 35

(By Representatives Robert M. Schaefer, William C. Klein, and Shirley R. Marsh)

Be it

Resolved, by the House of Representatives and the Senate of the State of Washington, in legislative session assembled:

Whereas Congresswoman JULIA BUTLER HANSEN of Wahkiakum County has been recently elected from the Third Congressional District of the State of Washington to the U.S. House of Representatives, being the first woman Democrat from the State of Washington to be so elected to U.S. Congress; and

Whereas JULIA BUTLER HANSEN ably and conscientiously served the citizens of this State, and more particularly the citizens of the 18th legislative district, for 22 years in the Legislature of the State of Washington; and

Whereas JULIA BUTLER HANSEN earned an outstanding reputation in the house of representatives in many fields, particularly those of education, institutions, public assistance, State government, and highways; and

Whereas under the leadership of JULIA BUTLER HANSEN as chairman of the house highways committee and chairman of the western interstate committee on highway policy program of the 13 Western States, the State of Washington has achieved national recognition in the field of highway research and progressive highway legislation; and

Whereas Mrs. HANSEN has always demonstrated unusual astuteness in legislative matters, showing extreme fairness and responsibility which were reflected in the measures which came on the floor in her name or the name of her committee, the results of which were seldom questioned in either house; and

Whereas JULIA BUTLER HANSEN, while maintaining a successful career as a businesswoman and a mother and housewife, still gave unstintingly of her time to devote herself to the interests of the citizens of this State and the progressive betterment of the State of Washington: Now, therefore, be it

Resolved, That we, the house of representatives and senate, do hereby express to JULIA BUTLER HANSEN, not only as individual members but as spokesmen for the constituents whom we represent, our deep appreciation for her outstanding leadership and contribution to the State of Washington and our warmest wishes for all success in her new position in the Congress of the United States; and be it further

Resolved, That copies of this resolution be sent by the chief clerk of the house to the President of the United States, to Congresswoman JULIA BUTLER HANSEN, to the Speaker of the U.S. House of Representatives, and to other Members of Congress from the State of Washington.

Passed by the house February 21, 1961.
JOHN L. O'BRIEN,
Speaker of the House.
Passed the senate February 22, 1961.
JOHN A. CHERBERG,
President of the Senate.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, March 3, 1961

Mr. FRIEDEL. Mr. Speaker, today, March 3, 1961, marks the Bulgarian Liberation Day. One might ask why we in the Congress of the United States should note this occasion. The answer is simply this—that we Americans, who have been brought up in the tradition of liberty and freedom, have a natural sympathy with those who also long for independence and the right of self-determination as a free nation.

In order to keep the light of emancipation bright in the hearts and minds of the Bulgarian people, the Bulgarian National Front of America was formed 10 years ago. I should like to point out that this organization is an anti-Communist, democratic association of free Bulgarians in the United States. It rejects any kind of dictatorship, either from the left or from the right, and strives for the establishment of parliamentary government in Bulgaria. One of the major interests of this group is to promote friendly relations between the peoples of the United States and Bulgaria. Every March 3 for the past 83 years has been commemorated by the entire Bulgarian people, irrespective of political considerations, as their liberation day. Today, we join them in their celebration, ever remembering that in 1944, that brave nation was attacked and invaded by the Russian armies and the Bulgarian Democratic Party overthrown. It is, unfortunately, still held as a captive country by its Soviet overlords.

We, who hold liberty precious, pray with fervent hopes that our fellow human beings in Bulgaria may, in the not too distant future, also enjoy freedom and independence from the ruthless dictators in the Kremlin.

Judge William V. McDermott

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BOYKIN. Mr. Speaker, on February 24, the good people of the city and county of Mobile and of the State of Alabama lost one of our outstanding jurists, Circuit Judge William V. McDermott. Bill, as he was affectionately known by thousands of his friends, was my close friend down through the years, and just last fall, we had one of the most successfull and enjoyable hunts at my hunting preserve at McIntosh that we have ever had, and Bill McDermott invited all of his friends from Mobile County. He was truly one of God's noblemen, and it is a tragedy that we must lose men of his caliber.

Under leave to extend by remarks in the RECORD, I include a tribute paid to Judge McDermott by one of his colleagues on the bench, Hon. Dan T. McCall, Jr., at the memorial exercises in the circuit court of Mobile County, on Monday, February 27. The presiding judge, Hon. Robert Ervin, had requested Judge McCall to speak for the judges. The remarks follow:

Judge Ervin, ladies and gentlemen, we come here this morning to honor the memory of our departed friend whose call from our midst was so unexpected, and came so suddenly that none of us had that final opportunity of saying, "Farewell."

This now hopeless desire persists in our loving memory of him and lingers in our hearts like an empty dream, because Judge McDermott had truly gained the respect and admiration of all who knew him. His loss reminds us of a poem by an early New England colonist:

"They never quite leave us, the friends who have passed
Through the shadows of death to the sunlight above,
A thousand sweet memories are holding them fast
To the places they blessed with their patience and love.

Truly, Judge McDermott was a man of patience and Christian love under the precious influence of which he finished this life and entered into his eternal home. His devotion to his family, his church, and his country were natural virtues of the three sides of the equilateral triangle of life which he so truly typified in his daily pursuits.

Although his friends were innumerable, he never chose as one, the false, for sincerity and impartiality are parts of the character of a good magistrate, and Judge McDermott was a good magistrate. He sought the truth incessantly, because even an error of judgment disturbed his mind to no end; consequently, there were only few errors.

Judge McDermott commenced the practice of law soon after he became 22; and, following the advice of the sages of our profession, he spent a term in the legislature at our State House. This stood him in well in his law, and later, when the call came for him to ascend to the bench on February 27, 1957, 4 years ago to this day, he was prepared. Certainly, he put his talents to use, and he labored consistently with diligence and forthrightness.

So we have lost a good man, but heaven has gained a Christian. We must always keep in our hearts our love for him, and remember that this is a better world, because he lived in it.

Without pretense, as he was, perhaps our friend would prefer that we not eulogize him, but think of him in the manner described by Alfred Lord Tennyson in his beautiful poem, "Crossing the Bar":

"Sunset and evening star,
And one clear call for me!
And may there be no moaning of the bar,
When I put out to sea,
But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home."

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 4, 1961:

The tempo of legislative activity, in committee and on the House floor, is accelerating. The Temporary Extended Unemployment Compensation Act of 1961 (see last week's newsletter) passed after floor debate, 392 to 30 (10 not voting). Twenty-nine Republicans and one Democrat opposed the bill. Interesting enough, 12 of the 21 new Republican Members voted against it. A closed rule, with all points of order waived, without possibility of amendment (except by the Ways and Means Committee), accompanied the bill, prescribing the rules of debate. Tax bills customarily are presented to the House with the right of amendment excluded. This closed rule as a procedural matter is disapproved by many, including myself, because this limits the House Members in working their will in floor debate. Three hours time for debate proved adequate despite the technical nature of the bill.

Principal criticisms revolved around the treatment of an insurance bill as a relief and welfare program. Oddly enough, this is in fact an insurance measure but it is called compensation, while social security, a welfare program, is called insurance, examples, it seems to me, of politically befogging the nature of these Federal programs. Another oddity is the use of the 1935 congressional report on unemployment compensation which describes the danger today to unemployment compensation in these words: "Unemployment insurance cannot give complete and unlimited compensation to all who are unemployed. Any attempt to make it do so confuses unemployment insurance with relief, which it is designed to replace in large part. It can give compensation for a limited period and for a percentage of wage loss."

The basic provision of the bill is simply stated—that the workers of any State who have exhausted all their unemployment compensation under State law (Texas has a 24-week maximum) can receive an additional 50 percent more through Federal aid (Texas maximum of 12 weeks), if the State chooses to accept the help. The tax imposed is mandatory and compulsory. Every employer of four or more will pay $12 per worker more per year, regardless of State tax rates in effect. Naturally, it will be difficult for the States to refuse the employees within the State this additional aid which the employers are paying for anyway. Further, coercion on the State is provided by the promise of increased Federal reimbursement or aid if the State increases its present maximum (Texas, with 26, can then get 13 weeks more aid). So we have employer coercion in the tax and State coercion by offer of Federal aid and reimbursement—States' rights out the window, the beginning of Federal standards. Without any doubt the Kennedy administration is readying a permanent law of inflexible standards to replace completely existing State law. And so goes the Republic's balance of power down the drain in yet another area.

This is not the whole ticket. The added cost of this program, which is going to be passed on eventually to the people, the people of modest income, will be in addition to other increases these same people will be asked to pay for what they believe the Government is giving them. On January 1, 1963, under existing law and without any liberalization the social security tax goes up 1 percent. This is a cost on payrolls of $2.2 billion. Then there will be the administration changes asked of us in connection with social security for an additional cost of one-half of 1 percent, or $1.1 billion. Beyond that, there is the health care bill financing which is another one-half of 1 percent, or $1.1 billion. Then we have additional financing of health care by raising the taxable wage base from $4,800 to $5,000—this again hits the folks in the smaller income brackets by another $700 million. And the unemployment compensation bill will cost $1 billion. These figures total $6.1 billion increased taxes on payrolls. Who, then is really looking out for those of modest income unless it is those of us who are trying to keep down these ever-increasing Government-increased costs which constantly reduce the American citizen's take-home pay. It is the old cry of the bureaucratic government paternalist who suffers from that malady known as "federalitis," who says, "The Government can spend the taxpayer's dollar better than the taxpayer can."

The House Un-American Activities Committee (HUAC) won a resounding victory—and so did patriotic American citizens fearful of Communist infiltration and subversion of our beloved country. The resolution authorized an appropriation of $331,000 for continuing the investigatory activities of the committee. The vote approving the committee was 412 to 6 (14 absent). We learned through the vote and debate that the ruckus in California pictorially known as operation abolition, was Communist inspired, and that the concern of the six Members, as they expressed it, was the violation of basic rights of our citizens through the HUAC investigatory activities. Most important, we were reminded that the Communist conspiracy is not just another political party movement, but a conspiracy to overthrow our Government by any means, including force and violence, this and much more. Why any Congressman oppose the HUAC really is beyond me when I look objectively at the pros and cons.

The highway message sent to us by the President asked for a speedup in construction and an increase in tax. I agree with the pay-as-you-go plan, but I do not believe we should increase taxes or spend more (requiring tax increase) until we eliminate the waste and irregularities which we know exist in the program. Why accelerate corruption?

Politics Can Destroy Social Security

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. CURTIS of Missouri. Mr. Speaker, early this year I had the opportunity of addressing the Baltimore Estate Planning Council meeting in Baltimore, Md. At that time I discussed the social security program in this country and pointed out some of the threats which I find in today's proposals relating to it. I should like to enter my speech at this point in the RECORD:

POLITICS CAN DESTROY SOCIAL SECURITY

Two basic points must be kept in mind in any public discussion of the OASDI (Old Age Security and Disability Insurance) program.

1. The program is only 24 years old. It will not reach full maturity until the year 2026 when three generations have passed and it is 90 years old. It follows, therefore, that no one can say at this stage whether or not the program has been a success. It can be asserted with some justification that the system has provided a better method for government to finance the years of retirement for our indigent citizens than the old age assistance program of the States, which utilize the need's test and require the social workers to budget the elder citizen, just as the old age assistance program was an improvement over the country or State poorfarm.

This does not mean that the program might not turn out to be a complete success. An examination of the first 24 years of the program's existence should reveal only whether it is basically sound enough to warrant its being kept alive awhile longer.

Many premature statements are being made by casual observers that the program has proved successful simply because it has not broken down during its childhood and youth. If the general public were to adopt this premature judgment, damage and ultimate destruction of the system might follow. If these statements as time goes on prove not to be true, they will have prevented action to correct errors that honest constructive criticism might have called to our attention.

The second basic point I wish to make is that whether the social security system is sound or not, the fact remains that the bulk of the people in our society are relying upon it as a base or a part of their retirement programs. The people have been taught that the OASDI system is an insurance program even though it is not. Indeed, the subterfuge went so far that in 1940 the Social Security Act was amended to include the word "Insurance" in the title of the program. It is certainly wrong to call a program an

insurance program where the past beneficiaries have received $100 for each $1 they paid in premiums, and the beneficiaries presently receiving benefits are averaging about $10 of benefits for every dollar they and their employers paid in social security tax. Furthermore, unlike private insurance programs or pension programs, including civil service retirement programs and the railroad retirement program the OASDI does not constitute a contract which the beneficiary can enforce in a court of law against the Federal Government. The social security beneficiary has no enforceable legal right. What one Congress has given, another Congress can take away. The basic protection of the social security beneficiary lies in the political realities of life. Congress is going to be quite circumspect in taking away rights which the voters have been led to believe they possess.

Lest anyone still believe that social security is insurance consider the fact that the social security benefits have been held by the U.S. Supreme Court not to be income which the recipient must report in his income tax return. Why?

Because the Court held that social security payments were gratuities—unpaid-for gifts. If social security was insurance a Federal income tax would be due on it just as it is due on private annuity and insurance payments.

However, with the bulk of our people relying upon the soundness of the social security system for their retirement, it is equally wrong for critics of the system to allege that it is insolvent or broke simply because it is in a state of maturing. Furthermore, any criticism which by its nature might destroy the confidence of the people in the system should be closely connected with affirmative proposals, if at all possible, to correct the errors. Certainly there should be proposals which would minimize the damage that will ensue to our people if the system proves out to be as unsound as some critics allege it to be.

I believe we can and should approach the social security system in a constructive manner to determine whether, after going one fourth of the way toward maturity, it has revealed any basic structural flaws. We should agree to improve the system where we can if the flaws prove not to be basic and to minimize the damage if we have been pursuing a fundamentally unsound program.

An avoidance of public discussion or a negative approach in public discussion can destroy the social security system. Political discussion to date has not been healthy from either standpoint and a system that might still be saved is being doomed by the very people who claim to support it. Furthermore, the method of political discussion of the social security system has been such that the objective of the social security system, to assist people to finance the years of their retirement from the labor market, is being damaged. If the system is fundamentally unsound, for the sake of the retirement program of our people, the system should be abandoned as soon as possible and a sound system set up in its stead; if the system only needs some good correction and patching, the failure to apply the light of constructive criticism to it to reveal the flaws damages the retirement program of our people.

In my judgment, the basic concept of the social security insurance system is sound. It is a preferable way to meet the problems of the indigent aged than the old age assistance program which require the needs test and budgeting for the recipients. Furthermore, the social security insurance system operates on the basis of prepayment for retirement and insurance protection of a sort for dependents. The extension of the system to cover the risk of loss of earning power from total disability is likewise a basically sound concept. I think it is sound to make the system a cost of doing business as the use of the payroll tax to raise the necessary revenues does.

However, the system got off the track early in its conception. Instead of relating the objectives of social security to protecting against indigency, and handling the problem of indigency, the program was extended to cover large portions of our society where the problem of indigency is not and has never been present. It is interesting to note how the coverage of people to be included in social security has progressed. It has not progressed along the line of a philosophy relating the program to those who might become indigent. It has followed a course of pure expediency. What groups could be fitted into the program with a minimum of administrative and political difficulties were voted in by the Congress. Groups were excluded merely because of political action on their part and groups were included because of political activity on their part. Groups were excluded because of administrative difficulties, and groups were included because there were no administrative difficulties.

The act, as originally written, sought to get around the Supreme Court decisions which declared special and earmarked Federal taxes unconstitutional. This was done through the fiction of saying the social security benefits were unrelated to the payroll tax. The proceeds from the payroll tax were directed to go into the general treasury and were not specifically earmarked. It has been years since anyone has paid any attention to the original fiction that the social security tax was not a special tax, and so unconstitutional. I mention this only to demonstrate further the lack of philosophy contained in the original concept of the act, and the constant resort to expediency as it has developed.

I am satisfied an examination of the social security program as it exists after 24 years of growth reveals that it does contain within it the seeds of destruction. Yet I believe that those seeds can be successfully plucked out and the system made sound and whole so that it can be developed to a successful maturity. In 1954, I introduced an amendment to the Social Security Act and made a speech for the CONGRESSIONAL RECORD to explain the importance of it. This proposed amendment was to pluck out the seeds of destruction in the system. Also, this amendment was to make the social security system conform to our Constitution and our basic ideas of the place and function of our Federal Government.

The amendment which I reintroduced each Congress provides that any person who desires can take out his own retirement and dependency protection program. If adjudged by the Bureau of Internal Revenue to provide the equivalent benefits to the social security system he may remove himself from the social security program. This person and his employer then would escape the social security tax. The retirement and dependency protection program in lieu of social security, however, would require that if the person dropped it, the equivalent amount of social security tax that the person and his employer would have been paying into the social security fund, with interest, would be paid into the social security fund out of the cash value of the abandoned, program. The person would then go under social security and stay there unless he later wanted to take out another qualified private program of his own.

The criticism against this amendment has been this: "What fool would take out such a policy? No private retirement program can provide what social security provides for the same cost." This may be true today and this probably will remain true for a few more years. However, as the social security matures, the picture changes rapidly. In 1980, for example, the young employee who starts paying social security tax will find that he and his employer will pay a heavy premium for the next 45 years, until he reaches 65, and can start drawing his benefits, and the total amount will be more than he can anticipate will be paid to him in benefits. It is at this point that persons will not be such fools to take out their own private programs in lieu of social security.

But what difference does it make if we provide now the option for "fools" who might want to provide for their own retirement and not be in a governmental program? These people will be taking care of their own retirement and will not become a charge on society later in their life. Furthermore, the social security system presently will benefit from their withdrawal from the program because at this time they pay in much less than they can anticipate drawing out.

Why the opposition to my amendment? Is it just casual or is it fundamental opposition? I am afraid that it is fundamental opposition. The question arises whether those who originally conceived and developed the OASDI program to date sought to set up a system to solve a social security problem or whether their purpose has been to use a social problem, indigency, or possible indigency, as a vehicle to socialize the retirement programs of all of our citizens. The result of any socialized program like this increases the power and authority of the Federal Government. I will return to this question later.

Let me first turn to an analysis of some of the fiscal aspects of the present social security system wherein lie the seeds of destruction. The solvency of the social security system has been based upon a series of concepts. First, an actuarial system that is based upon the identification and limitation of the people who will receive social security benefits. The system is an insurance against loss of earning power through loss of wages received from employment. It has no relation to loss of income derived from other sources, such as inheritance, savings, and investments. The $1,200 a year limitation on income a beneficiary may receive from salaries or wages, modified somewhat by the 1960 amendments to the social security law, is an example of the criteria to which the actuarial system relates. Any liberalization of the limitations upon which the actuarial tabulations are based, of course, throws the social security fund out of balance. The actuarial estimates made from time to time by the Social Security Administration both as to increasing benefits and liberalizing limitations have been good and honest I am pleased to state.

The second concept upon which the fiscal soundness of the social security system is based is speculative and questionable. It presupposes an expanding population. We have been quite fortunate in the population increases which have occurred in the past 24 years. However, any leveling off of population increase can spell real trouble for the social security system.

The third concept is likewise speculative and not so sound. It presupposes an expanding economy. A review of what happened to the social security fund during the slight recessions since World War II demonstrates the insecurity of the expanding economy concepts. I hope we will never experience again a depression like that of the 1930's; however, a projection of a depression the size of that which we experienced in the 1930's into the actuarial estimates for the social security system would spell disaster and certainly calls for sober thinking.

The fourth concept is exceedingly infirm. This concept presupposes Congress by law will from time to time increase the social security tax rate according to a specific schedule. The experience of the past, where

many Congresses have failed to increase the tax rate as scheduled and where Congresses have increased the benefits and liberalized the concepts upon which the actuarial figures were based, leads any thoughtful person to question how many Congresses in the future are going to face up to the difficult task of increasing social security tax rates. This becomes particularly questionable as the rates reach higher levels. Even today people are beginning to look at the social security tax rates with some seriousness. I know from personal experience the difficulty those of us on the Ways and Means Committee have had in the past few years in making the principle of increasing taxes in accordance with schedules and to meet increased benefits stick. The demagogues have it all over us in appealing to the people on this score. They love the people, they say, and it is only mossbacks that prevent the people from getting the benefits to which their needs entitle them. How long can the line be held now is a crucial question, let alone for the future.

The social security system received an unexpected boost in its solvency picture from the impact of the post-World War II inflation. I trust that we will not look in the future to this kind of boost. It is illusionary in the long run. This same inflation took a big bite out of the hides of our older people who were on social security, pensions, and other fixed incomes. Inflation, by increasing the dollar amounts of wages and salaries, put the bulk of the people under social security into the full base wage bracket to which the social security tax applied. In order to relieve one damaging impact of inflation on the social security system—that of minimizing the spreading of benefits to reflect differences in wages, the promoters of the social security system argued for increasing the base salary or wage upon which the social security tax was levied. The result is that today the tax is levied on the first $4,800 of income.

In the process of increasing the base upon which the tax is levied, the Social Security Administration found a technique which assisted in making the program more solvent. The amount of benefits received from the tax on the first thousand is more than the benefits received on the same tax paid on the last thousand. Therefore, increase the amount of wages upon which the tax is levied and the income-expenditure ratio improves. In other words, built into the social security system is the seed of a graduated tax where the higher income groups pay more tax for less proportionate benefits than the lower groups. This is a more tangible reason why my proposed amendment is being fought by the Social Security Administration. The Administration counts not only upon the present graduated feature in the social security tax to keep it solvent, but would like to increase the base further and provide more graduation in the tax rate. Incidentally, Congressman JAMES ROOSEVELT introduced a bill to make the wage base $10,000 last Congress. Though this move failed there is no doubt the Social Security Administration counts on further graduation to assist in keeping the program solvent.

It is true that a complete graduation of the social security tax to make it more like the Federal income tax by basing it upon ability to pay, rather than upon insurance where everyone gets the same benefits for the same premium, can be the salvation of the system. I suspect, indeed, that this is where its original promoters look for salvation. In that event, however, the play will then be fully out in the open and all the original fiction which was used to get the program installed will be abandoned. It will not be insurance. It does not relate to the indigent. The program will then be what I am now convinced its original promoters planned and hoped it would be, an open, unashamed socialization of the retirement programs of our people.

If there were no other good way to see that our people had adequate and good retirement programs, I might be willing to go to the Federal Government to establish these programs. This hardly is the case. Quite the contrary, the retirement programs being set up in the private sector of our society exceed in goodness, and in flexibility any Federal program, including civil service retirement, which at one time was definitely a leader in the field.

I conclude my remarks with a reference to my earlier warning. Even though the social security program is now being unmasked for what it is * * * the base upon which it was inaugurated still must and should be retained. Government has a legitimate concern about our people, when retired, being able to live out their lives in comfort and dignity. The poor farm was a rotten system for caring for those who, for reasons unnecessary to consider here, many times as a result of forces beyond their control, had not provided for themselves. The State old age assistance programs were an improvement over the poor farm system. The social security insurance concept is a vast improvement over the OAA program which, in time, it will eliminate.

Furthermore, the Federal Government has already been in the picture for 24 years, and the bulk of our citizens are relying upon the solvency of the social security program in their present retirement plans. We cannot permit the errors of the system to damage their plans. I believe a gradual move to get the system back to the indigent or those who might become indigent is the correct way to proceed. As we get the program back to the less than 5 percent in our society who might fall into this category and free the 95 percent who have not needed and will not need Government help, if they are freed so they can do their own providing and planning, we will have a system that we can handle adequately and with reasonable ease. My amendment will accomplish this objective.

The social security fund as the present system matures will have to be increased to $50 or $60 billion. That is entirely too large a sum to be left in sterile investment, which investment in Government bonds essentially is. The retirement funds of our people ought to be invested in the growth of our economy. This can be done through private programs and should never be done through Government programs. But don't think the Socialists are not looking at this point with scheming eyes. Already there have been proposals that the social security funds be invested in public works bonds. These proposals are based upon the logic that the funds for the retirement of our people should not be sterile. But what will the Government moving into the investment field in this fashion lead to? The answer to this question, if not the answer to the other question I have posed, should make everyone in our society wake up to the realization that government of, by and for the people along with the private enterprise system is meeting some of its greatest tests today. Have we indeed lost faith in the basic concepts that have brought this society of ours to the highest point of achievement reached by any society in history? Faith in the individual in the field of economics which spells out the private enterprise system. Faith in the individual in the field of government which spells out the representative system of government. Have we indeed lost that faith?

Jobs for the Handicapped: A Community Challenge

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. AVERY. Mr. Speaker, the Governor's committee on employment of the physically handicapped recently conducted an essay contest among Kansas high school juniors and seniors on the subject entitled "Jobs for the Handicapped: A Community Challenge." I am proud to state that a constituent, Sondra Lee Chance, a senior at Frankfort High School won first place with her essay. Sondra and her teacher, Mrs. Leo McMullen, will be in attendance at the annual meeting of the President's Committee on Employment of the Physically Handicapped to be held in Washington on April 27 and 28. Sondra's travel expenses will be paid by the Kansas State Federation of Labor, AFL–CIO. Also, she will receive a $200 scholarship from the Kansas State Chamber of Commerce to be paid to any college of her choice. Mrs. McMullen's expenses will be paid by the Governor's committee on employment of the physically handicapped. I am sure that all Members of Congress will be interested in reading Sondra's essay.

The essay follows:

THE GOVERNOR'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED PRESENTS SONDRA CHANCE, A SENIOR IN FRANKFORT HIGH SCHOOL, AND HER ESSAY IN A CONTEST AMONG JUNIORS AND SENIORS IN KANSAS HIGH SCHOOLS ON "JOBS FOR THE HANDICAPPED: A COMMUNITY CHALLENGE"

"Left face. One, two. Well gang, you know I can't go with you, so do your best. This is where we show our stuff."

These words led me to the remarkable man whose friendship will influence my thinking and acting for the rest of my life.[1] This is how it was: Band Day 1960. Drumbeats. Vivid color. The personnel of 35 bands impatiently waiting for parade time. As all other drum majors, I stood beside my director. In front of us was a band in striking blue. A tall, slender man in a brown suit, lightly resting his hand on the shoulder of a uniformed boy, was saying, "Well gang, you know I can't go with you * * *." I turned a questioning look to my director and she smiled and said, "He's blind." My first thought was. "How fantastic—a blind man trying to direct a marching band." Then a wave of pity swept over me for this man. How tragic to miss all the bright colors, the intricate formations, the reflection of the sun on a thousand instruments. Whistles began shrilling commands and I lost sight of him as each band became a coordinated machine moving down the street. But that was where it all began—Band Day 1960.

I had been searching for something special on which to write a research paper. Seeing this director I felt that at last I had

[1] This is my personal experience. The man referred to indirectly throughout the essay actually teaches in a Kansas high school. His name is withheld upon request.

found exactly what I had been looking for. He granted me an interview. I remember how apprehensive I felt as I walked into the the school that day expecting to be confronted by a rather tragic situation. How could an individual, suffering a major handicap, hope to fill a position as demanding as that of a music director? However, he greeted me so normally and had such an air of self-confidence and genuine enthusiasm about him, that I lost all apprehension about the interview. Never again will the words "physically handicapped" hold the same meaning for me.

He told me that he had become permanently blind at the age of 14. My admiration grew for this man, who had continued his education and received a degree in music. He spent 5 years in his first teaching position and then had the opportunity to accept a position in this beautiful new county high school. School was in session and he invited me to accompany him to his classes. As I watched him direct his 60-member girls' glee club, I marveled at the efficiency with which he handled this group. It was as though he were no more handicapped than you or I. Then I realized, that for the first time, I was seeing his abilities and not just his disability.

As I watched him go about the building, up and down stairs, in and out of rooms, I marveled that he seemed to always know exactly where he was going. That was what impressed me most about this remarkable person—he always seemed to know where he was going, what he was doing and why he was doing it. I talked with some fellow faculty members and learned that he was not only an excellent teacher but an inspiration to them. He did so much more with his abilities than they did with theirs, that he was a constant challenge to them.

As I left the school that day, his last words lingered in my mind. He had pointed out to me that he had all the senses I had except sight. Should that make such a difference in our abilities? I began to appreciate the enlightened individuals in this community who had seen a well educated and gifted teacher, rather than focusing on his one handicap. I felt a growing admiration for the student body and the people of the community, for they have accepted him wholeheartedly for just what he is—a wonderful person.

Questions and more questions flashed across my mind. Are all communities this alert to an individual's abilities rather than just to his disabilities? What is the history of the treatment of the handicapped? What facilities are now available for rehabilitation? So the search began for the answers to these and many other questions.

Now, months later, I have found many of the answers. I have learned that the problem of the handicapped has always been with us. In ancient times the Spartans killed their physically handicapped. They were considered a risk to the group's safety and economic well-being. During the Middle Ages they were allowed to live but were objects of ridicule and jesting. As centuries passed, care and education were provided, but not until the 20th century did society realize that it must also prepare the disabled person to be a self-supporting, useful member of his community. This realization resulted in the establishment of the State-Federal vocational rehabilitation program in 1920.[2] Amendments to this law were made in 1954 and were designed to increase the number of disabled persons rehabilitated annually.[3]

[2] "History of the Treatment of the Physically Disabled," the President's Committee on Employment of the Physically Handicapped, Washington, D.C., pamphlet.

[3] "Government and the Handicapped," George R. Weir, p. 5.

The tremendous task of rehabilitation must begin within the disabled person himself. He must become physically and spiritually adjusted to his handicap and must then concentrate on the abilities he has left. No amount of expert counseling and training can rehabilitate him if he hasn't the determination to succeed. Counselors then help the individual select the vocation for which he is best suited, and he is given excellent training in his specialized field. At last he is ready to compete with his fellow man once again and to prove that he can live a normal productive life.

None of us in this modern 20th century would consider ourselves "Spartans," but every time we refuse to give a handicapped person an equal opportunity we kill something within him. Every American, who believes in the basic principles upon which our country was founded, owes it to himself to become informed concerning the employment of the handicapped. By looking about his community he can see the excellent job the handicapped are doing when placed according to their abilities. He can read good books such as Henry Viscardi, Jr.'s "Give Us the Tools." He can study surveys on the records of the handicapped in industry. He can become personally acquainted with the handicapped so that they are no longer simply a statistic in his life.

Let us consider one of the thoughts Dr. Anne Carlsen expressed, as she accepted the President's Trophy for "Handicapped American of the Year," "No man is an island and the handicapped are no exception. They need the help of family, friends, employers, and the community. With that help they can become contributing members of society and in the process be happy, useful citizens."

"Most barriers to employment of the physically handicapped are community made * * * and it is the community that must remove them."[4] The handicapped individual neither needs nor wants pity. All he asks is to be given an equal opportunity in your community and mine. Is this too much to ask in this great Nation which advocates so strongly the equality of man?"

Don't Be Fooled—Communism Can Happen Here

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Gaffney Ledger, Gaffney, S.C., of February 28, 1961:

DON'T BE FOOLED—COMMUNISM CAN HAPPEN HERE

(By Louis Sossamon)

Our Nation's heritage of freedom—too often taken for granted by Americans—is the subject of an intensive national program by Freedoms Foundation at Valley Forge, Pa.

The Foundation's "Freedoms Roll-Call" campaign is aimed at focusing national attention on the values and responsibilities of freedom under our Constitution and Bill of Rights, and calls for a personal rededication by all Americans to the principles of freedom.

It is a strange paradox that American citizens, beneficiaries of the abundance that springs from the efforts of freemen in a free land, need to be stimulated to thoughtful consideration, understanding and appreciation of the free system which made this good life possible.

Time was when faith in America and its free market economy was as implicit as the knowledge that robins will appear in the spring. We were a young country then, opening new horizons, striving for national greatness, and boldly proud of our unique American system of free men.

Unfortunately, with many, success has produced indifference and complacency. The privileges and safeguards which are ours by constitutional guaranteee no longer seem to require vigorous defense.

It is unfortunate—and dangerous—that many of us fail to realize that these guarantees can easily be whisked away, by default, unless we jealously guard them.

Freedoms Foundation, in a farsighted program, is offering all of us an opportunity to provide proof that Americans intend to remain free to speak their minds, to raise their children as they see fit, to risk their judgment and their dollars in business of their own choosing and to worship where and how they please, free from the dictates of an omnipotent, autocratic system of government.

We hope that every American will show his devotion to our American spirit in this repledge of our hearts and minds to our country.

Freedoms Foundation is worthy of your tax-exempt contributions. Your attention is invited to the message on page 6 [not printed in the RECORD] entitled "It Can Happen Here." The Ledger is pleased to print this message as a public service for the readers.

The Late Honorable Edith Nourse Rogers

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. COOLEY. Mr. Speaker, I submit for the RECORD a resolution of condolence adopted by the Veterans of Foreign Wars of the United States, Department of North Carolina, at a meeting held on the 18th day of September 1960, in Sanford, N.C.

Mr. Speaker, our late beloved colleague, Edith Nourse Rogers, served in this House with great ability and distinction for a long number of years. She was held in high esteem and was a dedicated public servant. The veterans of our wars never had a more faithful champion than Edith Nourse Rogers, and I am certain that the sentiment expressed in the resolution I am now presenting is a very sincere reflection of the feeling for, and admiration of, this honorable woman.

RESOLUTION OF CONDOLENCE: EDITH NOURSE ROGERS

Whereas the Veterans of Foreign Wars of the United States, Department of North Carolina, has learned with profound regret of the death of the Honorable Edith Nourse Rogers, a Member of Congress from the State of Massachusetts, United States of America, who was a sincere friend of this organization and all who answered our Nation's call in time of war; and

Whereas the deceased was a most honest, courageous, and faithful public servant being ever mindful of the problems of the veteran and his dependents; and

Whereas the members of this organization were shocked and grieved to learn of her death: Now, therefore, be it

Resolved by the Council of Administration of the Department of North Carolina Veterans of Foreign Wars in regular meeting assembled, That all officers and members of the council shall, in pursuance of this resolution, manifest their sympathy and condolence to her next of kin and other relatives; and be it further

Resolved, That a copy of this resolution be transmitted to the next of kin of the Honorable Edith Nourse Rogers, and that a copy thereof be laid up among the permanent records of this Veterans of Foreign Wars, Department of North Carolina; and be it further

Resolved, That a request be made to Congress that this resolution be incorporated in the book of memorial addresses printed in honor of the deceased.

Adopted on this, the 18th day of September 1960, at the VFW Council of Administration meeting at Sanford, N.C.

JOHN R. DICKERSON,
Department Commander.

Shall This Be Known as Kennedy Depression?

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. RHODES of Arizona. Mr. Speaker, I have been disturbed, as I know many other Members of Congress have, by the pessimistic picture of the American economy often painted by prominent Members of the Kennedy administration. Recently in a message to Congress, the President described the highway program as being in peril. In almost every message we receive we are warned of some peril which we are supposed to be facing.

The following are excerpts from the editorial of February 23, 1961, in the Tucson Daily Citizen of Tucson, Ariz., which contain some questions I think should be asked and answered. Under permission previously granted, I am inserting these excerpts in the CONGRESSIONAL RECORD. I hope the President has an opportunity to consider these questions. The excerpts follow:

SHALL THIS BE KNOWN AS KENNEDY DEPRESSION?

A battle of words has been raging in Washington over the Nation's domestic situation. One question which has not been fired yet point blank may well become a focal point of the controversy.

Is the current recession, or business slowdown, or economic adjustment—whatever you label it—to be described correctly as "the Kennedy depression"?

* * * * *

We can't readily forget that in 1958 the country hit one of those inevitable low spots in a free economy. The welfare staters, the proponents of big centralized government, and many leaders of the Democratic majority in Congress all tried to use the situation to promote their favorite brands of panaceas.

President Eisenhower stood fast against the onslaught, firm in his belief that the Nation's economy would right itself—which it did—and confident in his assurances given the people that welfare state panaceas were neither necessary nor desirable. Economists at that time credited the public's continued confidence, buoyed by Presidential leadership, with a rapid business revival.

* * * * *

Whatever the causes of the present situation, what does President Kennedy hope to accomplish by his extreme pessimism? It is time that question be asked.

* * * * *

It does not take a pollyanna to find that the true picture of America's economy is not possibly as grim as President Kennedy keeps trying to make it out. And this is not to disregard some decline in production and the extent of unemployment.

Is President Kennedy trying to make the economic picture all black in order to provide a favorable situation for the imposition of welfare State programs?

* * * * *

The next few months alone may provide the answers to all these questions. We will continue to hope that undimmed public confidence will not permit a "Kennedy depression" to occur and that American initiative and independence will not yield before the imposition of Washington's will under the guise of national welfare.

Resolution on State and Federal Legislation in Development of Nation's Water Resources

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following resolution, adopted by the Kansas Engineering Society at its 53d annual meeting held in Great Bend, Kans., on February 23–25, 1961:

RESOLUTION ON STATE AND FEDERAL LEGISLATION IN DEVELOPMENT OF NATION'S WATER RESOURCES

Whereas the Federal Government is expending large sums of public money in the development of the Nation's water resources; and

Whereas it is recognized that both Federal Government and the States have certain governmental duties and responsibilities and that there is need for legislation to define them in order that each may effectively carry out their respective duties and responsibilities; and

Whereas there is a need for acceleration of research, basic data, and development programs; and

Whereas the population and the economy of the State of Kansas and of the Nation is expanding and requiring ever increasing quantities of water to meet the complex needs of this modern civilization, there is need for more emphasis on water supply development for domestic, municipal, industrial, agricultural, and recreational facilities; and

Whereas the water resources committee of the Kansas Engineering Society has studied and endorsed the "Report to the 1961 Kansas Legislature Concerning State Water Policy and Program Needs" as prepared by the Kansas Water Resources Board: Now, therefore, be it

Resolved, That the Kansas Engineering Society urge enactment of State and Federal legislation to effectuate the following principles and policies:

1. Through the provision of additional funds between now and fiscal year 1964 to bring primary State water activities up to a level of program operations commensurate with current assigned responsibilities;

2. Through active support for creation of a Federal evapotranspiration research center in Kansas and provision of sufficient funds to permit the Kansas Agricultural Experiment Station to prepare a summary report on the evapotranspiration problem;

3. Through establishment of a policy of State assumption of financial responsibility for the initial costs of obtaining needed conservation storage in the major reservoir program and the watershed program;

4. Through the establishment of a policy of State financial assistance to watershed districts and other local units of government in carrying out flood control projects, either singly or in cooperation with other governmental units or agencies, whenever the projects will benefit lands outside the territory of the local unit and whenever the projects in question are determined to be an integral part of a State water resource development plan;

5. Through a legislative council study on means of implementing the new policies recommended in items 3 and 4; and

6. Through a concurrent resolution designed to satisfy the Chief of Army Engineers and the U.S. Congress relative to desired Kansas legislative assurance of recognition of the non-Federal obligations involved in providing water supply in the Milford Reservoir, and to provide similar assurances relative to the four other reservoirs for which similar requests for water supply storage have been made; be it further

Resolved, That a copy of this resolution be sent to the U.S. Senate Select Committee on National Water Resources and to the Kansas congressional representatives, and to the Water Resources Committee of the Kansas State Legislature.

Training for Rural Population: Indian Government's Hopes

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. FASCELL. Mr. Speaker, I call to the attention of the Members an article by Mr. Don Shoemaker, editor of the editorial page of the Miami Herald, in which Mr. Shoemaker capably outlines the target of full community development by 1963 through which the Government of India hopes to provide education and training to its rural population in cooperative farming, marketing, and actual farm management.

The article follows:

(By Don Shoemaker)

Contrasts as sharp as the green shades of an Indian ricefield help to make this a land of fascination.

India's economic problems are yawning big, yet its largest bank has deposits of only

$300 million. India is a land of philosophers with a thin but rich crust of intellectuals, yet it has only three or four daily newspapers with as much as 100,000 circulation.

These contrasts extend particularly to the economic development of the country, all of which is according to plan—5-year plans.

The first plan (1951–56) was a brass-bound beaut. It was "instrumental in bringing about a marked improvement in levels of production both in agriculture and in industry and the inflationary pressures could be kept under control" pronounced the Indian Merchants' Chamber of Bombay.

The chamber, which is a rough copy of our National Association of Manufacturers, is not opposed to planning or to the Government, but it is a right pert critic of both.

It points out that the second plan (1957–61) has missed some of its goals in the public sector (while exceeding them in the private sector) and that there is some considerable inflation. Further, the Government has had to engage for the first time in deficit financing.

The dose of inflation is not a mild one, but it seems nearly at an end. In 4 years prices rose by about 25 percent, or 5 percent a year. They have now leveled off.

India started out the second plan with substantial reserves of foreign exchange. However, deficit financing to the initial tune of $1.5 billion (in September it was trimmed to $1.1 billion) has cut seriously into India's resources. Its sterling balances are now down to 140 crores of rupees, or about $300 million. The average safe margin is Rs400 crores.

(The rupee is worth about 21 cents on the official market, 16 cents on the black side.)

In the next 5-year plan, beginning in 1961, India will need $6.6 billion in foreign credits to take up some of this slack. Right now it is highly embarrassed by a lack of foreign exchange, and has just clamped the most rigorous import controls even on Indians who travel out of the country: they can bring in no more than $15 worth of goods.

To counter this economic depressant the Government, under planning, is employing the usual devices but it is also hastening industrial development. Every little factory has on its bulletin board a progress chart noting foreign exchange earned by manufacture and export.

Americans here quickly note that the Indians make good industrial workers. This country had some industry under British rule, but its basis was not as diversified as it is today. There are many things Indians do not yet make, but the only one I noticed personally was camera film—and a French company will finance this venture soon.

India's avowed socialism disturbs some of its capitalists, who point to such statements in the draft of the third 5-year plan as the Government's power to assume direct responsibility for the future development of industries over a wider area.

But this has not deterred foreign investors. Most of the outside capital in India is British. It is even said that there are more Britons here than there were before independence. They, with the Americans, seem enthusiastic about investment possibilities. The giant redstone Ashoka Hotel in New Delhi has a daily caravan of trade missions smelling out the spices of new investment.

The reason that pickings are plump is pretty obvious.

Because it lacks foreign exchange to pay for imports, India wants to make all it needs within India. So it offers the investor a highly protected market clamoring for all kinds of goods. Government people say solemnly, "There is no element of risk."

Profits appear high. However, a British plant manager will tell you that taxes are prohibitive, and Britons in a Calcutta club will echo him.

But nationals of another country will assure you that the investor gets a fair shake. It is a fact that both dividends and capital may be repatriated. Further, the base tax rate on corporations is 45 percent, against our 52 percent, and there are tax remissions and depletion allowances which are, at the very least, attractive on paper. India and the United States also are signatories of a treaty for the avoidance of double taxation with respect to taxes on income and they agree that there will be just compensation for any properties which are expropriated.

Where India seems to shine in these respects is in the complete candor with which industrial development is laid out.

Some areas are public, some private. The industrial policy resolution of 1956 carefully spells out the public ones which are to be developed by the state. They include iron and steel, transport, communications, shipbuilding, most mining and electric power.

Yet, stockholder industries exist side by side in this broad area with government plants, and they seem to prosper. The giant Tata steel complex competes favorably with two government steel plants. The USHA sewing machine, which is produced with just about the highest wages in India, competes in the United States with a Japanese make. It has always occupied the private sector.

Indian manufacture seems efficient, but it varies. One of the nation's oldest jute mills, which is also in the U.S. market, employs more than 5,000 workers at a marginal wage. The management blandly explains, however, that the same production could be achieved in America or Britain with 600 hands. Hence the low pay and the antiquated, safety deviceless machinery.

On the other hand, a machine tool plant in Bangalore set up with Swiss help reached its estimated 1961 capacity in 1958—3 years early.

The Indians I saw in aluminum mills, motor coach factories, electronic plants and even in the cottage-type handicraft industries so dear to Gandhi, made like beavers. Some of these, too, were women.

Imagine a country only 13 years old in its own name and lacking any manner of industrial self-sufficiency a few years back, and you have the case history of India.

It aims at an annual increase of 8 percent in industrial production and it has already achieved a 3-million-ton steel industry. It is expecting aid from all countries yet it wants to be free of that aid in 10 years.

It is building up quality control and it is latching onto export markets in developed and underdeveloped countries alike. Those bicycles, for example, are sold in England. And Japan is getting iron ore and manganese. Russia sends machinery (I asked if it worked, and they said it did) and collects shoes and textiles on a self-balancing basis, plus a $600 million loan repayable over 12 years at 2½ percent.

Under the second 5-year plan the public sector of industry generally has trailed the private one in the achievement of goals. This does not seem to disturb Government planners, who in normal socialist circumstances might take reprisals against private firms.

Actually, in recent months the Government has conceded the aluminum and fertilizer development field to private enterprise, and it has encouraged U.S. firms to get into rubber production exclusively.

But this is no paradise for private business. (Where is there one, to be sure?) The loudest outcry is against Government bureaucracy.

Import licenses sometimes take months to acquire. The Government says that this is because it must have assurance of proper financing, since it cannot issue a license and then back up with its own currency an industry that needs to import some vital commodity.

The truth probably is that there is some little slippage in the governmental machine. The Orient simply does not change overnight.

But there is no absence of foreign businessmen hungry to cut into the Indian pie. The U.S. Embassy here had four trade missions through recently. Capital investors have bid for concessions like bridge players at a summer resort. If India in the Nehru vision of good means to a good end makes a a go of its capitalistic socialism, the dollar, the pound, the lira, the mark, and even the ruble will be swinging their weight along with the fabled rupee.

Our Foreign Relations

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of February 25, 1961:

OUR FOREIGN RELATIONS

The President has vast powers. A decision made, an order issued in the White House can set a tremendous machine in motion and the effects may be felt around the globe. This is especially true in the field of foreign relations where, constitutionally and by statute, the President's authority is virtually supreme.

Yet it is often a long way from the Executive desk to the actual administrative levels where policies are put into being. The channels are often complex—and they can be and sometimes are clogged to the point of impotence.

The lead article in the February issue of the Reader's Digest deals with an extremely important example of this. Written by Charles Stevenson, it is entitled "What We Must Do To Win the Cold War." At the beginning he observes that President Kennedy pledges that this country will take the initiative in that war. "But before he can make a start," Mr. Stevenson writes, "our new Commander in Chief must face up to a shocking and bitter reality. He must capture control of the defiant, faceless bureaucracy firmly entrenched in Washington. Its weak-kneed efforts merely to hold off communism instead of fighting back are leading us to defeat even as it tries to keep the White House from interfering."

These are strong words, but Mr. Stevenson supplies evidence to back them. For instance, he tells of a secret mission assigned by President Eisenhower to Nelson Rockefeller in 1955 to improve our cold-war strategy and tactics. This mission, Mr. Rockefeller now says, "was bitterly resented by the State Department," and was ultimately abandoned.

The point, as Mr. Stevenson sees it, is that "* * * too many men in the State Department have persisted in the dangerously wistful belief that if we don't annoy the Reds, they are bound to see how well meaning we are and will stop harassing us." The result is negative policy. By contrast, he goes on, the Soviets conduct extraordinary efficient cold-war operations. He cites the Japanese riots that caused the cancellation of President Eisenhower's visits as an outstanding

example. These were organized to the last possible degree, by highly trained experts. Every possible weapon was used to influence the Japanese, and to infiltrate schools and labor organizations. "This is cold war, Russian-style," writes Mr. Stevenson. "They have a name for it; agitprop—planned conflict in which agitations, propaganda, trade diplomacy, threats of war, and promises of peace are coordinated in an ever-changing, worldwide offensive." And it is all master-minded in the Kremlin.

Mr. Stevenson goes into much detail in pointing to our own weaknesses in cold-war maneuvering. We have, it seems, an entrenched bureaucracy bent on maintaining a status quo which is rigidly opposed to new or aggresisve policies. We also, he believes, have an appalling lack of understanding of Communist tactics—a lack which extends into high areas of government. One solution he believes urgent is creation of a Freedom Academy—a West Point to teach our own cold-war managers, diplomats, and others "the full scope of the Communist strategy and to equip them with the ways to carry the war back to the Communists and win."

Actually, a bill to create such an academy was passed by the Senate last session, but time was running out and the House didn't act on it. It is needed now with the utmost urgency, Mr. Stevenson is convinced—and so is a cold-war commander, who will work close to the President and head a professional staff skilled in the arts of total political warfare. Then we'll begin to win cold-war battles.

Savings Bonds Perk Up

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 2, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Sylvia Porter as it appeared in the Washington Evening Star of Februray 28, 1961:

SAVINGS BONDS PERK UP
(By Sylvia Porter)

Not in a long time have we been buying as many U.S. E and H savings bonds as we are now.

For the first time in two and one-half years, monthly sales of new savings bonds are exceeding cash-ins of the outstanding securities. In January new sales hit $456 million, up 8 percent from a year earlier, while cash-ins totaled $441 million, down 22 percent and in February the trend has continued. For the whole of 1961 the Treasury's sales goal is $4.6 billion of new E- and H-bond sales, a rise of 7 percent over last year, and the national director of the program, William H. Neal, expects redemptions will run 10 to 20 percent below 1960.

The upswing in sales reflects the fact that Americans generally have been saving more. To the extent that this mirrors the business downturn the savings rise is a mixed blessing.

It also reflects the fact that, under a 1959 law, the Treasury raised the maximum rate on savings bonds from 3¼ to 3¾ percent.

PROGRAM PROMOTED

And the upswing reflects the fact that the program is now being promoted more intensively because 1961 marks its 20th birthday.

On May 1, it will be 20 years since President Roosevelt bought an E-bond from former Secretary of the Treasury Morgenthau, and so set off the volunteer savings drive.

In the years since, close to $100 billion of series E bonds have been sold and over 2 billion individual E-bonds have been issued. Right now more than $43 billion of the E- and H-bonds are outstanding, an alltime peak total and representing 15 percent of the public debt. Today 8 million employees put an average of $20 a month in the bonds via payroll savings plans offered by 45,000 corporations.

NEST EGG STRESSED

While the savings bond program obviously is still alive and purchases help the Treasury manage the public debt in a sound way, does it still make sense for you to buy them? The "patriotic" appeal hasn't the pull it had in wartime. Critics rightfully point out that you must own a bond 7 years and 9 months to get the 3¾ percent interest, and many financial institutions pay this and more in interest annually. Lots of banks and others grumble that in peacetime the savings bond unfairly competes with private institutions.

An honest answer to the question, I think, is: Yes—for a part of your basic nest egg—yes. After you've built your basic nest egg in cash or savings bonds, you should diversify and invest in other mediums. But at least a part of your savings well might be in bonds, because:

First, the discipline of saving via these bonds is unrivaled. When you buy under a payroll savings plan, the money is automatically deducted from your paycheck before you have a chance to fritter it away. And little weekly savings mount into big annual totals.

Second, the 3¾-percent rate is fair for the long-term saver. Over the years ahead, it is unlikely that the average price level will rise by this amount per year. After you pay taxes on the interest, you won't have much net left, but you'll have some.

Third, the absolute safety of the bonds is a great virtue. You can't lose in dollars. You have peace of mind that will be worth a great deal in an emergency. You can cash in your bonds at any time.

It is fitting that the program should be perking up on its 20th anniversary. I still think its virtues amply justify its place in the basic savings nest egg of American families.

Mr. Speaker, obviously our citizens still have the utmost confidence in the American dollar and are relying on President Kennedy's statement that it will not be devalued.

Operation Abolition

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. DOYLE. Mr. Speaker, during recent weeks, there has been much written about the film "Operation Abolition." The following editorial in the February 23, 1961, issue of the Daily Report, published at Ontario-Upland, Calif., is very significant. By unanimous consent heretofore granted me so to do, I bring this editorial to your attention, and to the attention of my other distinguished colleagues:

"OPERATION ABOLITION"

Discussing the rioting at the U.N. in his column on today's editorial page, Ralph De Toledano declares: "U.N. officials and U.S. intelligence sources say flatly that Communist-led rioting will be repeated, both here, and in every capital of the free and neutralist world, and that it will grow bloodier and more determined."

"Operation Abolition," began long before the adult led rioting by students in San Francisco last May. That was only one more development in this international program which De Toledano is discussing. However, so successful was this San Francisco riot and its ensuing propaganda usefulness that it has become the Communist Party's model of what can be done on that score.

Making the House Un-American Activities Committee a special target up and down the Paicfic coast is a further part of that operation, for the House committee has done an outstanding job of exposing these Communist-directed demonstrations for exactly what they are. Thanks to steady perseverence and publicity, however, the Communist Party has been able to make the House Un-American Activities Committee, and in turn its film, "Operation Abolition," a prime target even among people who have no intention of helping communism.

The party has attracted this unwitting support of highly respected individuals and organizations by constant reiteration of charges that the House committee has violated individual civil rights. These charges are never documented. Yet right here in the West End area attacks upon both the film and the Committee on Un-American Activities already have been made by well-meaning groups and individuals who were obviously so blinded by their own prejudices against the committee that they have failed to recognize the root connections of this hate campaign with which they have allied themselves.

Without questioning, these people accept the doctrine that individuals reliably identified as members of the Communist Party, which in turn has been reliably shown to plan the destruction of the free government of the people of this country, must be given the benefit of every protection under the guise of civil rights. Yet the elected representatives of the people of this country have no right to inquire into the beliefs or motives of these people identified as Communists in order to formulate legislation to protect this Nation from internal destruction. To do that, they cry, means prying into personal beliefs. Nobody must do that, they say. Even if some of these people have engaged in activities that may have been contrary to the best interests of the United States, these were all private affairs.

As a result of this steady drumbeat of propaganda, some fantastic situations have arisen, even here in this community. Prominent individuals with a large stake in the preservation of liberty, and of our free economic system, have protested against exposure in the film "Operation Abolition" of the Communist technique of utilizing riots to launch hate campaigns because the film was controversial.

Who made this film controversial? Who made the House Un-American Activities Committee controversial? Every West End citizen should read the answers to these questions in two slender Government reports. One is entitled "Operation Abolition," released by the Committee on Un-American Activities on November 8, 1957. (Note that date. This is not a new hate campaign at all.) The other pamphlet is the FBI's report on the stage-by-stage development of the Communist-directed student riots in San Francisco May 12–14 last year, entitled, "Communist Target—Youth." (A summary of this report was

published in an editorial appearing in the Daily Report last July 20.)

This has become a serious situation. The ease with which the world Communist organization has spread its base of support across large segments of the American public that never knowingly would ally itself with the Communist cause is something to shake the most hardy American. The real issue today is not whether a particular film or a particular congressional body is controversial, or even whether it is doing properly the job for which it was intended. We have normal means of adjusting any bona fide, proven abuses without resorting to riots. The real issue is whether the American public any longer recognizes an enemy maneuver when it sees one, and whether the people any longer have the resolution necessary to defend themselves in this age of tranquilizers.

Are we for communism, or against it? That is the real question.

Freemen and Mr. Freeman and Farm Philosophy

EXTENSION OF REMARKS
OF
HON. RALPH F. BEERMANN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BEERMANN. In addition to two earlier articles that I have submitted—"Cochrane Concoction: Killer of Farm Freedom" and "Recipe From the White House"—I would like to add two more—"Farm Philosophy" and "Freemen and Mr. Freeman"—both from the March 6 issue of the Wall Street Journal. While all four articles make strong points against passage of the feed grains bill, one, "Farm Philosophy," by Mr. Joe Western, confirms an opinion of mine that this bill is the first step toward a complete Federal takeover of the American farm.

The two articles follow:

[From the Wall Street Journal, Mar. 6, 1961]

FARM PHILOSOPHY—ADMINISTRATION IDEA IS HOOKED TO AMBITIOUS CONTROLS

By Joe Western

WASHINGTON.—Orville Lothrop Freeman has a problem. He's firmly convinced that only strong controls by the Federal Government can save farming from its recurrent economic trouble. Yet, he knows from experience that the farmer is a most difficult fellow to control.

As Agriculture Secretary, he's about to try to engineer what promises to be the most ambitious program of controlled farming ever attempted by the Federal Government—President Kennedy's "managed abundance" farm philosophy.

Mr. Freeman will undertake this monumental task with the knowledge that the farmer he's seeking to help, though perhaps outwardly pleased with the jingle of extra coins in his jeans and gladdened by the departure of Mr. Freeman's predecessor, Ezra Taft Benson, nevertheless inwardly harbors an abiding sympathy with the free farming concept that Mr. Benson so tenaciously espoused. For, Mr. Freeman spent 6 years as Governor of farm State Minnesota, and he's keenly aware of the farmer's near-religious reverence of the soil's productive capacity and his resentment at being told what to grow and—more to the point—what not to grow.

To call the new scheme ambitious and far-ranging is perhaps an understatement. Under the new Democratic farm philosophy Uncle Sam will attempt to determine as closely as possible the actual human nutritional needs—not only domestic but global as well—and gear production directly to them.

Perhaps the best summary of this theory comes from the man who masterminded it, Willard W. Cochrane, former professor of agricultural economics at the University of Minnesota and now special economics adviser to Mr. Freeman. Says Mr. Cochrane: "By supply control I mean the conscious adjustment of supply to demand commodity by commodity, year after year, to yield prices in the market that have already been determined fair by some responsible agency."

The evil that the Cochrane-Freeman approach seeks to correct is demonstrated by the fact that by next July 1 Government-owned surpluses could mount to as high as 1.5 billion bushels of wheat. (Much of it piled up as a result of previous efforts to control farming.) That's enough wheat to satisfy domestic consumption needs for 2½ years, and the surplus of corn and other commodities equals about a half-year's production. Yet, Mr. Freeman points out, at the same time the Government has no surpluses of such protein foods as meats, oils and fats; thus the Kennedy administration, its storage bins bare, must buy these products in the open market for distribution to needy families, school lunch programs, and for other welfare projects.

THE GLOBAL SITUATION

According to the 43-year-old Agriculture Secretary, a similar situation exists in world markets. Sure the United States has mountains of wheat to dispose of abroad but so do Canada, Australia, and Argentina. Consequently, this country's wheat disposal program can have a disrupting impact on world markets. On the other hand, some items that are needed abroad, such as dry milk solids, are considered noncompetitive and would be ideal for oversea disposal. The problem, says Mr. Freeman, is that these products are not in surplus here.

In short, then, the Kennedy "managed abundance" farm philosophy seeks to cut surpluses that are not needed and create surpluses that will be considered desirable by the planners. Mr. Freeman has taken a few preliminary steps in this direction. He's asked the State Department, the International Cooperation Administration and his own Agriculture Department for a country-by-country breakdown of foreign people's food and fiber needs. He's also talking with heads of nonprofit foreign relief agencies about just what good has been accomplished with U.S. food distributed all over the world, who's benefited, and how to do the job better.

But when the preliminaries are over, the big programs will come. The first outlines probably will appear in President Kennedy's farm message to Congress this week. And before he's through, Mr. Freeman can be expected to produce a host of new schemes to jerk farm production up or down at the pull of Federal puppet strings—for, by his own admission, the Minnesotan is open to any and all ideas.

Nevertheless, Mr. Freeman demands that Federal controls be effective in what they set out to do. Take acreage allotments, for example. The Agriculture boss recognizes that this familiar system of production control has its limitations. For one thing, farmers may thwart Federal goals simply by pushing up yields on their limited acreage. To tighten the Government's grasp, therefore, Mr. Freeman believes commodities should also be controlled in the marketplace. At his confirmation hearing, he told Senators that eventually Government planning will have to include pounds and bushels marketing controls in combination with acreage controls.

Those who talk to Mr. Freeman about the soil bank—Mr. Benson's innovation, unsuccessfully designed to cut production—get another clue to his thinking. Democratic farm policy probably will include some form of soil bank to pay farmers for taking land out of production because most major farm groups favor the scheme. But the Agriculture Secretary has a new twist. As leisure time increases Americans need more parks and recreational areas, he argues. Doesn't it make sense to convert some of the soil bank land into public use? It could always be turned back to crops and pastures in an emergency.

Though the objectives of Mr. Freeman's plans are readily discernible, just how far he will dare go remains uncertain. Some of the ideas being tossed at him almost defy comprehension in their complexity, yet they come from reputable sources. Grapple, if you will, with Mr. Cochrane's proposal to control the production of feed grains—corn, oats, barley, rye, and grain sorghums.

Feed grains pose a special difficulty because many farmers feed most of these grains to their own livestock and sell the balance. The problem is how to measure what is fed to animals. Mr. Cochrane suggests that feed grain nutritional values be converted into something called total digestible nutrients or "TDN's." The Government, with advice from interested groups, would calculate (1) what level of prices would be fair for a given year for all livestock; (2) how many animals of various kinds would have to be marketed to achieve these prices; (3) how many TDN's it would take to produce that many animals; (4) allot TDN's to feed grain producers according to production history of their farms.

A conversion factor for each would convert the TDN allotment to bushels. That is, a bushel of corn would be worth so many TDN's, oats would be worth about half as many, and so on. A farmer then would be allowed to grow whatever feed grains he pleases as long as the total does not exceed his TDN allotment.

RURAL ARITHMETIC

When planting time comes, the farmer converts his TDN's to bushels of grain; the bushels are then converted into acres on the basis of average yields in the area. Finally, the farmer sows. When crops begin showing above the ground, an Agriculture Department agent computes the acreage planted to each grain to one-hundredth of an acre. If the farmer has done his arithmetic correctly, he may do whatever he wishes with the feed grain he harvests—feed it or sell it. If the farmer exceeds his acreage, he must agree to destroy the overage or pay a stiff penalty.

At the end of the marketing year, Government economists would review the nationwide results. If too many animals were marketed, the national TDN allotment would be reduced. In theory, this would make feed scarce causing a price rise that would prompt a cutback in livestock production. If too few animals were marketed, more TDN's would be decreed.

To be sure, there's no suggestion that Mr. Freeman has any intention of quickly adopting the Cochrane feed grain scheme; the temporary 1961 Democratic feed grain program recently sent to Congress proposes a comparatively simple formula: raising price supports for farmers who cut back acreage. But as the Government becomes more deeply involved in farming, there's no telling what new ideas may be tried. The point is, the administration is willing to try almost anything that may work.

How much will the greater Federal involvement cost the taxpayer? Mr. Freeman insists that tighter Government control of farming does not necessarily mean that Agriculture Department spending must rise enormously, whatever has been the result of past control efforts. Though Mr. Freeman probably wouldn't admit as much, the solution this seems to suggest is that through higher farm prices the consumer may become the prime candidate to bear the added cost of boosting farm income.

And, from the farmer's point of view, there's an argument of sorts that shoppers should pay more for food and fiber. It goes something like this: Americans pay far more for processing and marketing services than for the original cost of food; the wheat in a 1-pound loaf of bread costs roughly 3 cents, while bread sells for 20 cents or more. Yet, while farmers continue in a chronically depressed state, Americans in 1960 paid only an average of about 22 percent of their disposable income for food—compared to about 45 percent in Italy, 36 percent in Austria, and even more in other countries. Whatever the validity of such reasoning, it nonetheless is being offered by some close to the new farm planning.

MODERATE PRICE RISES

Mr. Freeman, himself, will argue that moderately higher consumer prices, with the Government keeping supply and demand in balance, are preferable to what he considers the alternatives: A continuation of farm poverty, or a soaring retail price level that would result if, in his view, the Government steps out of farming and allows a tight combine of corporate farmers to assume control. But some critics are already suggesting such price rises under the new Government plan would not be so moderate either.

So, this will be the philosophy Orville Lothrop Freeman will be trying to sell—to Congress, the consumer, and the farmer. In the end, the farmer may prove to be the toughest customer. If the Government does not engineer production, the Agriculture Secretary is convinced the result will be a population of poor and angry farmers. Yet, he knows that as the Government tightens its control, the farmer, though perhaps more prosperous, will resist the yoke.

Perhaps because he realizes the inevitable consequences of this dilemma, Mr. Freeman already has reached one decision: He does not want to become the whipping boy for the plan. Whatever new programs are produced will be carefully attributed to the Kennedy administration; there will be no Freeman plan.

[From the Wall Street Journal, Mar. 6, 1961]

FREEMEN AND MR. FREEMAN

We wonder, sometimes, if Secretary of Agriculture Freeman is going to have as much difficulty getting his farm program put into law as he seems to think he will.

The farmers, we are sure, are not going to like that program. For as our Mr. Western notes this morning, it envisions a system of direct controls over what the farmer does with his land that can hardly be matched much this side of the Iron Curtain. There will be no more of those loose acreage controls that farmers, with their skill and ingenuity, can outflank. The farmer will get his orders from Washington on what crops to plant, right down to how many seeds he can put in the ground. And there will be no ifs, ands or buts about it.

We are not sure either that the rest of the country will like this program as its full dimensions become clearer. For coupled with this direct control of the farmer there is a plan for Washington to decide on our nutritional needs; that is, what we ought to eat and what we ought not to eat, and to use these farm controls to see that our tables are set according to the grand designs of Government.

But like it or not, there is an inexorable logic behind Secretary Freeman's thinking. From the premises of long ago the consequences for tomorrow follow with an inevitability that would please any philosopher of Marx's historical imperative.

For consider: The Nation's farmers have already accepted the idea that it is a duty of Government to provide them with a fair share of the national income, the fairness of the share being measured by the Government. They have accepted the idea that to win this they will take their rewards not from the marketplace but from the public treasury, taxes being levied upon all to pay benefits to farmers.

In the beginning, more than a generation ago, many farmers thought they could receive the benefits without any regulation or control upon their production. This hope quickly passed, but the controls enacted at first did not seem too onerous, or at least a rather small price to pay for the rewards.

But as by now everyone has discovered, these controls are inadequate to deal with the consequences. The Government is guaranteeing the farmers higher prices than they would otherwise receive, and the inevitable consequence of this is that every farmer tries to produce as much as he can. And with advances in technology and the application of more capital to farming, yield-per-acre outstrips all efforts of the Government to curtail total production by curtailing acreage.

This has naturally led to all manner of other devices to hold down production while still holding up the farmers' fair share of income, the latest of these being the soil bank program. Inevitably, all these have failed too. And so the farm problem has grown from a little scandal to a big scandal to an impossibility.

An impossibility, that is, so long as the farmers insist upon both eating their cake and having it. So the Nation is approaching the time, inexorably, when the farmers will have to pay the true price of all their handouts from the Government, that price being the loss of their freedom to run their own farms. The Government cannot, and will not, continue indefinitely to pay them artificially high prices and at the same time permit them to produce as much as they want to sell at these prices. It's that simple.

True, the farmers could free themselves from the public trough and so retain their freedom from Government dictation. But it will not be easy for men, so long supported and sheltered by a benevolent State, to walk upright again by themselves.

And unless they can, they may talk all they please about being freemen, but in the end they will come to the kind of serfdom foreshadowed for them by Mr. Freeman.

Civil Defense: Resolution in Behalf of Fallout Shelters

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. ALFORD. Mr. Speaker, one of the resolutions adopted by the National Association of State Civil Defense Directors at their last conference, deals with the importance of providing adequate fallout shelters. Because of the significance of this topic, I ask unanimous consent that this resolution be printed in the Appendix of the RECORD.

The resolution follows:

Whereas shelter is the key to survival in a thermonuclear war: Be it

Resolved, That Federal action, including necessary legislation, be initiated to assure protection from radioactive fallout for all the people of this Nation, and that such action and legislation include the following general provisions:

1. Require that all existing places of residence have by (date to be determined) a place providing a specified minimum fallout protection for all regular occupants; such minimum protection to provide an attenuation factor of 100.

2. Require that new places of residence of all types started after (date to be determined), include the same minimum fallout protection for all regular occupants.

3. Require that existing business, commercial and industrial premises, schools, hospitals and other buildings of a public or semipublic nature, meet the following objectives by (date to be determined).

(a) Available protection should be surveyed and all reasonable measures taken to make available in each instance minimum protection for at least all those occupants who cannot be expected to reach their homes within 1 hour after attack.

(b) If such minimum shelter protection cannot reasonably be provided without undue hardship, the best alternate protection plan that is feasible should be submitted to the local enforcement authority. This authority may approve the plan, prescribe modifications or supplement it with other available protection under its jurisdiction and control.

4. Require that new business, commercial and industrial structures, schools, hospitals and other buildings of a public or semipublic nature after (date to be determined), include a specified minimum shelter protection for all regular occupants who cannot get home in 1 hour.

5. Require that the minimum survival supplies for planned shelter locations be added after the required dates of shelter construction. Survival supplies must be provided by owners who occupy their own residence and by tenants in rented residences. In hotels, clubs, dormitories, and roominghouses, etc., the owner must be responsible. Business and government must be responsible for those employees for whom they provide shelter.

6. Require the Office of Civil and Defense Mobilization to make plans for, and to guide the States and local governments in protecting the general public, i.e., transients, shoppers, those in transit, etc., who cannot reach home in 1 hour.

7. Require city, town, and village authorities be primarily responsible for the administration and enforcement of the fallout protection program in a manner comparable to present enforcement of building and fire-protection requirements.

(a) Require the State offices of civil defense be responsible for administering technical standards of protection or variations from prescribed procedures, with local civil defense authorities having the power to authorize local variations within the statewide standards.

(b) All required to provide shelters should have the right to appeal for relief where full compliance would be an undue hardship for financial or other reasons. Appeals procedures should be simple and be handled expeditiously by the local authority. Cities, towns, and villages could arrange a county appeal board, if desired.

(c) Appeals regarding residence shelters and from business regarding shelters for its employees whether for hardship or other rea-

sons, should go to the local city, town, or village department.

8. Supplement, if later experience proves it desirable, present sources of loans to finance shelter construction and equipment by private lending agencies. FHA guaranteed mortgages and home improvement loans with a national fallout protection finance agency. This agency could assist in financing the construction of shelters, particularly in cases where individuals may not be able to obtain credit or in other cases of hardship or unusual circumstances.

9. Encourage early compliance and help relieve the financial burden of the fallout protection program on all citizens by enacting the following tax relief measures:

(a) (1) Exclude the cost of reasonable shelter construction from local assessment for tax purposes; (2) exclude the cost of reasonable shelter construction from any applicable Federal tax based on the cost of real property; (3) the maximum exclusion for either tax computation purposes under 1 and 2 would be (dollar amount to be determined) per planned shelter occupant.

(b) Permit deduction of shelter construction and equipment costs, both residential and nonresidential, from taxable income for Federal income tax purposes, up to a maximum of (dollar amount to be determined) per planned occupant, the deductions to be taken over a period of 5 years.

10. *Be it further resolved*, That a copy of this resolution be furnished to the President of the United States, each Governor, the Director of the Office of Civil and Defense Mobilization, each U.S. Senator, each Member of the House of Representatives, each Congressman-elect and to the President of the U.S. Civil Defense Council.

Kansas Centennial

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BREEDING. Mr. Speaker, on February 28 the Kansas State Legislature adopted House Concurrent Resolution 27, commending the U.S. Navy for the formation of a Kansas centennial company honoring the 100th birthday of the State of Kansas, and further commending the U.S. Navy upon the 50th anniversary of naval aviation. Mr. Speaker, I, too, want to thank the Department of the Navy for making this special company available for the centennial year of the State, and under permission to extend my remarks in the Appendix of the RECORD, call the attention of my colleagues to the resolution:

HOUSE CONCURRENT RESOLUTION 27

(A concurrent resolution commending the U.S. Navy for the formation of a Kansas centennial company honoring the 100th birthday of the State of Kansas and the patriotic young Kansans enlisting in the Kansas centennial company, and further commending the U.S. Navy upon the 50th anniversary of naval aviation)

Whereas this year of our Lord 1961 is the 100th anniversary of the admission of the State of Kansas into the Union; and

Whereas the U.S. Navy has honored the great State of Kansas by forming a special Kansas centennial company of 100 select Kansas youth, to be trained as a unit under a Kansas officer and allowed to bear the flag of the great State of Kansas at all formations and official functions; and

Whereas, 100 young men of Kansas have answered the call to their country's service by enlisting in the U.S. Navy as members of the Kansas centennial company, in keeping with the fine example and high tradition of many Kansans of the past and present who have and are serving with great distinction in the naval forces to the lasting credit of the citizens of this State; and

Whereas the State of Kansas for several decades has been closely associated with naval aviation by having units of the naval air training command located within the borders of this State and having furnished a great number of young men and women for service in said forces; and

Whereas the year 1961 is the golden anniversary of naval aviation, thus warranting recognition for its service not only to the people of this State and Nation but to all peoples of the free world: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That the U.S. Navy be commended and the appreciation of the people of the State of Kansas be expressed for the Navy's recognition of the centennial anniversary of this State; be it further

Resolved, That the following members of the Kansas centennial company shall be and are hereby commended upon their voluntary entry into the services of our country in the finest Kansas tradition:

James Dean Adkins, Topeka; J. C. Anderson, Kansas City, Kans.; George Hershel Bettis, Plainville; Gary Lee Bilyeu, Kansas City, Mo.; Richard Louis Bilyeu, Kansas City, Kans.; David Lee Boedeker, Natoma; Ray Carl Breeden, Topeka; Coy Dean Brown, Kansas City, Kans.

Sydney Louis Cain, Wichita; David Franklin Caldwell, Kansas City, Mo.; Stephen Charles Casey, Manhattan; J. J. Cecil, Hutchinson; J. L. Cheever, Hutchinson; Eugene Edward Clark, Jr., Wichita; Charles Lee Chancellor, Kansas City, Mo.; James Samuel Coleman, Haysville; William Clarence Cooper, Kansas City, Kans.; John Stephan Corson, Roeland Park.

Steven Lee Courter, Arkansas City; Donald Myron Cress, Mayetta; Larry Jean Cyre, Manmattan; Wayne Alan Dissmeyer, Bonner Springs; Roger Lynn Dix, Kansas City, Mo.; Richard Dean Dobkins, Topeka; Robert Dale Dobkins, Topeka; Teddy Lynn Edwards, Wichita; Robert Claude Enslow, Kansas City, Mo.

Raymond Eugene Farmer, Shawnee; K. L. Feezor, Hutchinson; John William Filbert, Lansing; Ernest Wilson Fisher, Pittsburgh; A. R. Folkerts, Salina; Donald Deforest George, St. Joseph, Mo.; Rodney Irvin Green, Kansas City, Kans.; Frederick Allen Hall, Sylvia; Ronald Dean Harkness, Hays; Bobbie Eugene Haviland, Thayer; Rodney Roy Hays, Manhattan; Hector Edwin Hernandez, Parsons.

John Robert Hill, Manhattan; Merle Julius Ice, Wichita; Larry Ray Jeffries, Grandview, Mo.; George Vern Jones, Sylvia; L. D. Jones, Kansas City, Mo.; Trostle William Kalebaugh, Raytown, Mo.; Floyd Raymon Kannarr, Humboldt; Larry Joe Karman, Kansas City, Mo.; John Christopher Kramer, Topeka.

Raymond Leven Kramer, Atchison; Wayne Arthur Kratzer, Hutchinson; Ronald Norman Lavielle, St. John; Richard Dwayne Logsdon, Arkansas City; W. G. Long, St. Joseph, Mo.; Clifford Cornelius Lott, Bennington; Henry Patrick Malone, Jr., Kansas City, Mo.; John Robert Martin, Effingham; Larry Dean Massey, Salina.

James Michael McDonnell, Kansas City, Mo.; Johnny Lawrence McMurtrey, Salina; David Lee Milks, Parsons; Ronald Anthony Miller, Coffeyville; Bernham LeRoy Mundy, Ottawa; A. O. Myers, Independence, Mo.; Joe Lewis Newsome, Kansas City, Kans.; Dewight Mac Norton, Holden, Mo.; William Clyde Osborn, Hutchinson; Willis Leslie Piepergerdes, St. Joseph, Mo.

Robert Lee Roy Pond, Hutchinson; Darrel Wayne Pummill, Topeka; George Smith Pursell, Marysville; Francis Ralph Rees, Wichita; James Douglas Reynolds, Bates City, Mo.; Johnie Roy Roberts, Winfield; James Wesley Rupe, Horton; Howard Earl Saxton, Netawaka; Floyd Hayward Shaver, Jr., Kansas City North, Mo.; Donald Max Sheldon, Ness City; S. J. Smith, Kansas City, Mo.

Gerald Walter Soeliner, Kanorado; William Henry Spiker, Jr., Willis; Leonard Lee Steinhardt, Hutchinson; James Lee Steinmetz, Valley Falls; David Ray Stonehouse, Fowler; E. H. Suhler, Hutchinson; John Ernest Swengel, Concordia; Larry Clarence Taylor, Osawatomie; G. E. Thomas, Kansas City, Kans.

Klaus Michael Thomas, Junction City; Patrick Michael Towle, Topeka; Edward Patrick Varnal, Overland Park; Everett Harold Walker, Wichita; George Washington Walton, Wellington; Clifford Lee Wesemann, Harrisonville, Mo.; L. W. Williams, Hutchinson; Jerry Francis Willis, Willis.

David Charles Wilson, Cottonweed Falls; Robert Samuel Wilson, Willis; Gerald Lynn Wisegarver, Topeka; Harvey Lee Wright, Independence, Mo.; Richard Alan Zaman, Overland Park.

Be it further

Resolved, That the State of Kansas extend its hearty best wishes to the U.S. Navy upon the golden anniversary of naval aviation; be it further

Resolved, That the secretary of state be instructed to transmit enrolled copies of this resolution to the President of the United States, the Secretary of Defense, the Secretary of the Navy, the Assistant Secretary of the Navy for Air, and the commanding officer, Naval Air Station, Olathe, Kans., and each member of the Kansas congressional delegation. That the clerk of the house of representatives forward a copy of the house journal in which this resolution is set out to each member of the Kansas centennial company.

I hereby certify that the above concurrent resolution originated in the house and was adopted by that body February 28, 1961.

ALLAN L. MITCHELL,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Adopted by the senate February 28, 1961.

HAROLD H. CASE,
President of the Senate.
RALPH E. ZARKER,
Secretary of the Senate.

Our Crumbling Military Position in the Carribean

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. FLOOD. Mr. Speaker, as a longtime student of the Caribbean Basin and developments likely to affect the security of this strategic area, I have watched with growing concern the steady deterioration of the position of the United States in it.

Despite the vital importance of having friendly governments and peoples in these regions, long recognized as the

Mediterranean of the Americas, the conduct of our foreign policy in recent years has been a succession of failures, which, to say the least, appear not to have been entirely accidental.

Unfortunately, the editorial and news media in our country, have tragically failed to alert our people as they should have done to the growing dangers, with resulting public apathy.

Thus it was indeed refreshing to read an admirable summary of "Our Crumbling Military Position in the Caribbean," by Harold Lord Varney, distinguished author and editor, who is now president of the Committee on Pan American Policy, 60 East 42d Street, New York, N.Y.

Because of his clear and vigorous treatment of the subject, I quote the article as part of these remarks and commend it for study by all interested in hemispheric defense, especially cognizant committees of the Congress, executive agencies, editors, and publicists.

The article follows:

OUR CRUMBLING MILITARY POSITION IN THE CARIBBEAN

(By Harold Lord Varney)

The stabbing fact about Latin America is that the strategic Caribbean area is no longer safe for the United States. The whole carefully constructed American Caribbean defense system stands perilously breached. And the irony of the situation is that the United States has only itself to blame for the present plight.

Only a few years ago, the United States seemed invincible in the Caribbean region. The ring of great islands which girdle the approaches to the United States and which shield the Panama Canal were in the hands of governments firmly committed to American policy. Cuba, the Dominican Republic, and Haiti were our unquestioning friends, bound to the United States by many threads of common interest. Puerto Rico and the Virgin Islands were integral parts of the United States. Jamaica, still a British crown colony, was our stanch friend.

The South American mainland nations beyond the Caribbean were similarly friendly. Venezuela and Panama were ruled by anti-Communist and pro-American governments. Colombia was politically unsettled but remained in the American orbit. British Guiana was afflicted with a strong Communist minority but its leaders were barred from power by an unyielding London anti-Communist policy.

Central American, while presenting some trouble spots, had been fairly insulated against communism since the expulsion of Arbenz from Guatemala in 1954. Mexico, as always, was benevolently neutral.

The Caribbean of 5 years ago seemed securely locked against Communist penetration.

Hall a decade has witnessed an abrupt and frightening change in this tranquil situation.

Today, the island chain is a soggy marsh of widespread political uncertainty.

Cuba, thanks to the stumbling policies of our State Department, has been allowed to slip into the anti-American hands of the Communist Castro. Khrushchev himself placed the satellite seal upon Cuba by his lionization of Castro at the U.N. General Assembly. The Dominican Republic, which wanted to be our friend and ally, was publicly humiliated at San José in 1960, with the United States in a maudlin attempt to please Venezuela's Betancourt, leading the hue and cry. Haiti, as these words are written, is rocked with Communist-inspired rioting. Jamaica is no longer the fortress of British rule in the Americas: a new retreating British policy in London has shed British responsibility in the West Indies, leaving Jamaica to unpredictable self-rule. Only Puerto Rico remains as the unweakened part of the once impenetrable island shield.

On the mainland, America's position has reversed itself with equal sharpness. British Guiana, after repeatedly refusing to permit the Communist, Cheddi Jagan, to take power, weakly reversed its stand on the orders of London and accepted Jagan as its First Minister. In Venezuela, the pro-American Government of Perez-Jimenez was allowed to fall in 1958 and a jittery State Department placed its support behind the tarnished figure of Romulo Betancourt, the former leader of the Venezuelan Communists, and a lifelong baiter of the United States. Panama, stirred by the Canal Zone issue, has been drifting into an anti-American stance. Colombia, under President Alberto Lleras Camargo, is still anti-Communist but is a wavering ally of the United States in OAS and hemispheric decisions. Central America, while presently peaceful, has growing Communist troublemakers in Honduras, El Salvador, and Guatemala.

It is a situation loaded with dynamite for the United States. It has flared up with such paralyzing suddenness that few Americans have yet adjusted their minds to our reversed status. And the shame of the situation is that virtually every trouble spot which now faces the United States has been either encouraged or created by the softies in the State Department in Washington or by their opposite numbers in the British Foreign Office in London.

If this nightmarish situation confronted us in another hemisphere—in Europe or Asia or Africa—America's position would be perilous but not necessarily fatal. The significance of what has happened in the Caribbean is that it has happened in our part of the world. The danger is at our own doorstep. The countries which are now careening toward disorder and communism are links in our own inner defense system. Castro's Cuba—the No. 1 danger spot—is only 90 miles from our Florida Keys.

Can the United States exist in safety if the strong points in the Caribbean pass into the hands of Communists and unpredictable Socialists? The answer, of course, is, "No." Our soft southern underbelly would then be under the continuous threat of enemy missile bases, submarine pens, and air staging bases planted in Russia's satellite countries. Our whole Nation would find itself exposed to a sneak attack from the Caribbean which would reenact Pearl Harbor.

The peril is not fanciful. Already, credible news reports tell of the shipment of large quantities of Russian and Czechoslovakian tanks, artillery, and other war material to Cuba. One estimate from informed sources is that $300 million worth of military supplies has been sent by Communist nations to Cuba since the initiation of the Castro regime. Mystery Russian submarines have been sighted in Cuban waters. Hush-hush projects, presumably for missile base construction, have been reported in closed areas of Cuba.

What does all this mean to the United States?

A glance at the Caribbean map plainly indicates why it is imperative for our future that the Caribbean be kept American.

For over half a century, the primary objective of American policy in this area has been to safeguard the approaches to the Panama Canal. The nation which controls Cuba, the Dominican Republic and Haiti, flanked by Central America, holds the key to the canal. Hence the No. 1 Caribbean security policy of the United States has always been to make certain that the governments of these nations are friendly to the United States. The overriding importance of this objective has been so clearly recognized by past American administrations that we have repeatedly intervened with armed strength to supplant governments in the Greater Antilles and in Central America when they became dangerously unfriendly to U.S. interests. A security-minded Washington, in past years, has recognized unquestioningly that the security of the United States must always be paramount over any idealistic consideration of civil liberties or nonintervention in this vital area. Thanks to this attitude the United States for 138 years has kept this hemisphere free from foreign intruders. Interventions, when they were found necessary, have always been dictated by our basic security, not our choice.

Unfortunately our recent policymakers in Washington appear to have lost sight, almost completely, of this fundamental duty. Faced by a Communist challenge in Cuba, in its most poisonous form, the State Department has seen fit to pass the problem on to an indecisive and lukewarm Organization of American States, which, at San José, in August 1960, irresponsibly washed its hands of the whole Cuban problem and refused to condemn Castro by name. Empty, meaningless idealogy has replaced the exercise of firmness and force in our Latin American relations. An effete State Department has preferred to place America's whole future in jeopardy rather than revise the unworkable OAS structure of hemisphere defense. In a historic crisis, we are glued to a dogma.

What are the nature of our defenses in the Caribbean which are now being imperilled by the Communist advance Few Americans have a clear picture in their minds of the strongholds upon which our defense of the Caribbean rests.

No. 1 in our defenses is Guantanamo Bay in Cuba. The ousting of the United States from this position is high on Fidel Castro's unfininshed business, but hitherto he has found no way of doing it. Preferably, he hopes to get this powerful base bloodlessly by some weak gesture of appeasement which a pacifist minded Washington might offer in the future. He has little hope of getting such a gesture from President Kennedy.

Guantanamo Bay is not a new or temporary American position. Its 45 square miles have been an American leasehold since 1902. At that time, the Republic of Cuba wrote into the Cuban Constitution the provision that two naval bases should be leased to the United States, thus accepting the principle that the United States was responsible for the protection of Cuba. In 1934, the leasehold at Guantanamo Bay was reaffirmed by a treaty between Cuba and the United States. It was stipulated that no change could be made in the agreement except with the consent of both parties. In other words, there can be no unilateral repudiation of the Guantanamo lease by Castro's or any future Cuban Government. The only other stipulated situation which could break the agreement would be the abandonment of the base by the United States—an admittedly remote possibility.

Guantanamo Bay is also the site of two vitally important U.S. airstrips—McCalla Field for propeller planes and Leeward Point for jets. This air coverage proved of prime importance in detecting German submarines in World War II. With Castro providing facilities for Russian submarines, such protection is continuously necessary for the United States.

The role of Guantanamo Bay in our hemispheric defenses makes the political climate of Cuba a matter of major concern to the United States. This fact is sharply realized by responsible men in the Pentagon. It is being airily disregarded by many of the irresolute Inter-American strategists in the State Department.

A second link in the outer rim of American defenses in the Caribbean is the U.S. Guided Missile Tracing Station at Sabana de la Mar

in the Dominican Republic. Despite the breaking off of diplomatic relations with the Dominican Republic by the United States, Generalissimo Trujillo has stated publicly that he is willing to renew the Sabana de la Mar lease in 1961, when it expires. The possession of this tracing station gives the United States highly valuable surveillance protection against enemy missiles, in the event of hostilities.

A third defense position is Roosevelt Roads in Puerto Rico. This base, of course, is secure as long as Puerto Rico remains loyal. But without McCalla Field and Leeward Point in Cuba and Sabana de la Mar in the Dominican Republic, the Puerto Rican base can supply us neither complete surveillance against enemy planes and missiles, nor secure protection in an emergency.

The fourth link in our belt of Caribbean defense comes from the bases on the British islands which were leased to us on a 99-year basis by Great Britain in 1941. Here again our present position is full of anguished uncertainties.

Originally, we developed four bases on the British West Indies—in Trinidad, in Jamaica, in Antigua, and in Saint Lucia. After the conclusion of World War II, three of these bases were allowed to fall into disuse. Only one was maintained in full preparedness—Chaguamaras Bay on the island of Trinidad. This is a major naval base, complementing the great base of Guantanamo. It gives us protection for the southern approaches to the canal.

Then the British pulled the rug out from under us. In 1958, the British possessions in the West Indies with the exception of Bermuda and British Guiana were given self-government and their sovereignty transferred to the new West Indies Federation. This immediately put our tenure of Chaguamaras Bay in doubt.

Trinidad is now ruled by a Socialist, anti-American government headed by Dr. Eric Williams. Williams, a strong racist, had made the American presence in Chaguamaras Bay his principal political stock in trade. He demanded loudly that the U.S. Navy get out of Chaguamaras.

Eventually, the issue was decided after a series of talks in London in November 1960. Under the demand of the West Indies Federation, the U.S. lease on Chaguaramus, which ran until 2040, will now expire in 1977. In addition, the United States agreed to relinquish 21,000 acres which were included in the original lease. It was an agreement which showed the United States in a posture of retreat before its reluctant allies.

To salve American feelings, the federation agreed to permit the United States to retain 900 acres of its leased base in the island of Antigua. A missile and space station will be constructed here. Also, the United States will be permitted to modernize the airstrip.

The picture of United States preparedness in the Caribbean is not a reassuring one. As contrasted with our situation of 5 years ago, the present is fraught with uncertainties.

The problems which this weakening of the United States in the Caribbean have raised would not be so urgent if Soviet Russia had not openly indicated its intention to meddle in the Caribbean. Khrushchev has already raised the question of subjecting the Panama Canal to United Nations control. He has threatened to retaliate with Russian rockets if the United States takes armed action against the Castro regime in Cuba. He has powerfully armed Castro with Russian and satellite weapons and has sent Russian technicians to train the Cubans. He has given sweeping economic aid to Cuba.

For the first time since Napoleon III's attempt to install the ill-starred Maximilian in Mexico we are confronted by the problem of European power insolently invading our exclusive area of influence. In the case of Maximilian, the United States unhesitatingly told the French to go, and they went. Today's more irresolute national leadership draws back uncertainly from such a logical ultimatum to Russia. As Communist arms flow unhampered into Cuba, Washington makes no effort to throw an embargo against Cuba imports from Russia. In a life and death situation for America, our rulers are sitting on their hands.

The tragedy is that every year of delay sees us growing progressively weaker in the Caribbean. The trend, if not halted, will inevitably confront us with a crisis. In the shadow of a catastrophe, Washington continues to play blind man's bluff. We waste time in games of make-believe with the OAS, instead of taking resolute unilateral action.

We are approaching 11 o'clock in the Caribbean. The Eisenhower administration failed miserably in its Latin American cold war task. As the new Kennedy administration takes over the reins of power, it has an historic opportunity to reverse our retreat from greatness.

Agrarian Reforms in the Americas

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. WRIGHT. Mr. Speaker, in an effort to promote the latent resources of our hemisphere, President Kennedy has pledged to our sister Republics of the south "a new alliance for progress."

One step in the direction of this hemispheric progress is understanding. In this regard I would like to bring to your attention a recent editorial in the respected newspaper of Colombia, South America—El Tiempo—the Times—regarding a speech delivered before the 12th Inter-American Bar Convention by an eminent American lawyer, Mr. David Hume.

Mr. Hume, who presently practices law in Maryland, was born and raised in Eagle Pass, Tex. He graduated from the University of Texas and received his law degree with honors from Southern Methodist University. His father, David Hume, Sr., is one of our Nation's most prominent international lawyers, respected and loved the world over.

Mr. Hume's early exposure to and continued interest in the culture of our Latin friends have given him a most perceptive insight into their problems and feelings. Nowhere is this intense sensitivity and understanding better displayed than in his recent address in Bogotá.

On February 9, Senator GEORGE SMATHERS took the floor of the Senate and in the course of his remarks on Latin America inserted into the RECORD Mr. Hume's brilliant address on the complex problem of agrarian reform, praising it as "one of the finest and most perceptive speeches on this subject I have been privileged to read."

The El Tiempo editorial concurs with Senator SMATHER'S observation describing the address as one of the "most serious and important papers" of the day, "underscoring Mr. Hume's profound knowledge of the problem." The faculty of the Javeriana University in Bogotá were so impressed with the speech which was delivered by Mr. Hume in Spanish, that they are having the address reprinted for use by their students.

I urge all to read Mr. Hume's address since it is likely to be one of the most notable contributions a citizen of our country has made to the betterment of mutual understanding between ourselves and our Latin American neighbors. It is this kind of expert analysis we need for real hemispheric progress.

The above-mentioned editorial follows:

ON THE AGRARIAN REFORM

Mr. David Hume, member of the American delegation at the 12th Inter-American Bar Convention, in his paper presented before committee 15 of the convention, gave a most interesting dissertation on the "Agrarian Reform in the Americas," echoing one of the most serious problems of vital concern to all nations in the hemisphere. Mr. Hume's talk not only underscores his profound knowledge of the problems which face the various countries, but above all a purpose of making a valuable contribution to the science of jurisprudence, theoretic and practical debate which have been advanced in this field.

The most dominant aspect of the remarkable and searching study of Mr. Hume is his research into the historic background of agrarian reform. In this sense, the eminent American jurist reaches the remotest past events and facts, to build upon them a true balance of ideas, projects, movements and campaigns which have taken place over the years on the very concrete problems of landholding and the inherent socioeconomic implications.

On such a solidly documented fundation, Mr. Hume presented likewise a very critical analysis of the statutes drafted on agrarian reform at various times and in different parts of the world. From these he draws fine points of reference, of an inestimable value in appraising most recent attempts in this field. It is necessary here to underline that Mr. Hume analyzes and studies the problem of agrarian reform, basically, as a change in the ownership of the land, organized and directed by the state, to obtain a better distribution of the land, to be followed by additional measures to insure an increased agricultural production. From this one must realize that his conclusions are highly authoritative on the economic progress that an agrarian reform would bring about in the nations which approach it solidly and soundly to suit their own reality.

In the final part of his analysis, the author of this paper refers to the programs which in this regard are currently under development by the United Nations and the Organization of American States, particularly as concerns a study of the social and economic substrata, of the resources for technical and financial assistance which could be relied upon to support a sound and healthy agrarian reform. On the other hand, he lays great stress on the terms of the Bogotá Charter, and the special chapter devoted to the achievement of an effective and sound agrarian reform, as a prerequisite for social progress of our people.

Taken all together and in all its aspects, Mr. David Hume's dissertation on "Agrarian Reform in the Americas" may be given the unreserved and unqualified accolade deserved by one of the most serious and important papers brought to the 12th Inter-American Bar Convention.

Riot Film Not Far Off Base

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. GUBSER. Mr. Speaker, because of the controversy surrounding the film entitled "Operation Abolition," I submit herewith a report by the competent observer, Mr. Harry Farrell, political writer for the San Jose Mercury-News:

RIOT FILM NOT FAR OFF BASE

(By Harry Farrell)

No one will ever reconstruct with any great accuracy the total scene in San Francisco's city hall rotunda last May 13, when a protest against the un-American activities hearings erupted into a full-scale riot.

Too much happened in too short a time, over too wide an area, to make such a reconstruction possible. Witnesses at different vantage points got totally different impressions.

A couple of weeks ago the Santa Clara County Democratic Council issued a report denouncing the widely shown film, "Operation Abolition," concerning the riot, as a flagrant distortion of what occurred.

The CDC committee which prepared the report, headed by Sunnyvale Attorney Joe Lewis, says it took 500 man-hours to compile.

DISTORTION

It is the impression of this writer that the bitter critics of "Operation Abolition" are presenting as distorted a view as the film itself.

My statement is not based on 500 hours of research, but on a much simpler credential: I was there.

I covered the hearings and the riot. I was in the thick of it. I was sprayed with the firehoses, in fact.

And in many respects, "Operation Abolition" reproduces with great authenticity the flavor of what happened at San Francisco City Hall.

BIAS

It is true that the film gives the "committee view" of the events, and that its detractors have pinpointed several substantive errors. Allowing for these errors, "Operation Abolition" still contains much that is valid.

To reject it totally, as propaganda alone, is as senseless as to accept it totally.

Attorney Lewis was also an eyewitness to the events in San Francisco. He was there in the very proper, but certainly not unbiased, role of legal counsel for two of the hostile witnesses before the Un-American Activities Committee.

QUESTION

One of the central questions about the riots is whether the demonstrators were Communist-led dupes or sincere protestors of what they considered a trampling on their rights.

It is always dangerous, of course, to assess the motives of others.

But this much can be said with certainty of the students and others in the city hall rotunda: Whether they were Communist inspired or not, their actions and words were the actions and word of hoodlums.

Their refusal to comply with lawful orders of the police was deliberate and taunting. Perhaps the decision to turn on the firehoses was unwise; perhaps not. Perhaps certain officers were unduly rough. But what are police to do when confronted with outright defiance—surrender?

Veterans' Home Loan Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. TEAGUE of Texas. Mr. Speaker, I wish to announce that the Committee on Veterans' Affairs will begin hearings on Tuesday, March 14, 1961, on bills concerning the veterans' home loan program. We will hear from officials of the Administration, building and lending groups, veterans' organizations, representatives of the AFL–CIO, and spokesmen for the industrial, teachers, and public employees retirement funds.

The bills under consideration will be H.R. 4848 and companion bills. The bill provides that veterans' home loan securities will be sold to the public at an interest rate that will attract the vast pension and welfare funds of our country. The securities will be guaranteed by the Treasury and the proceeds of the sale of the securities will be used by the Administrator to make loans to veterans any place in the United States where a veteran cannot obtain a loan from a private lender. The bill will place the entire VA home loan program on a self-sustaining basis and will not require periodical withdrawals from the Treasury. It is true that the bill will place the securities in competition with other Treasury issues but I feel that there is ample room for such competition for I have faith and confidence that the private funds that are not invested in Government bonds will be greatly interested in investing in these veteran home loan securities, not only to help veterans, but to help the economy of our country, plus obtaining a reasonable yield on their investment.

We feel that legislation of this type is necessary because of the difficulties veterans are experiencing in obtaining mortgage financing. The tight-money policy of the previous administration brought the veterans' home loan program to the lowest point in its history. The veterans' housing program has been the Nation's leading residential housing program. During the 15 years it has operated the Veterans' Administration has made 5,600,000 loans at a face value exceeding $50 billion. In addition, it has made 177,000 direct loans in the amount of $1.4 billion.

Despite this large volume of business there has been a great fluctuation in the past 15 years in mortgage financing for veterans' home loans. For most of that time money has not been available to veterans outside the major financial centers and large communities of the country. More than one-third of the eligible veterans reside in the small towns and rural areas. On an average, about 10 percent of these veterans have obtained a home loan. More than 40 percent of the veterans residing in the 125 large communities in America have received a home loan.

There is still a great demand for mortgage financing in the rural areas and small towns and cities of America where money is in short supply. It is the purpose of the committee to find ways to make the veterans' home loan program operate in those areas. We have been operating the direct loan program, which functions in small towns and rural areas, and loaning funds at the rate of $150 million a year. Despite this active program, there are 29,000 veterans on the waiting list today and I am sure that this list would be much larger than it is if it were not well known throughout the country that it takes 6 to 9 months to reach the top of the waiting list.

The direct loan program has been a success and has accrued a surplus, which has been paid into the Treasury, exceeding $65 million. Foreclosure experience in the direct loan program has been very favorable and the record of repayment by veterans in both the direct loan and guaranteed home loan programs exceeds the performance of nonveterans in repayment of conventional mortgages.

Nineteen hundred and fifty-four and nineteen hundred and fifty-five were the best years in the veterans' housing program. There were 300,000 new home starts during each of these years. In 1956 this number dropped to 200,000. In 1957, 1958, and 1959 it dropped to a little over 100,000 starts per year. Nineteen hundred and sixty was the low point of the program. We had only 74,609 starts during that year.

The Veterans' Affairs Committee has maintained an active interest in the veterans' home loan program; nevertheless, there has been a tendency on the part of other committees to seek to make changes in the program. We have asked other committees not to invade our jurisdiction and, on occasion, have been forced to resist these changes on the floor. Another such change is being proposed. H.R. 4931 has been introduced and released with a statement emanating from the Housing Subcommittee of the Banking and Currency Committee. This proposal assumes jurisdiction over the veterans' home loan program by providing a mortatorium on veterans' home loan payments in certain depressed areas. Not only does the bill invade the jurisdiction of the Veterans' Affairs Committee but the proposals of the bill, as they effect veterans' home loan payments, are not necessary.

Section 1820 of title 38, United States Code, sets out in detail the powers of the Administrator of Veterans' Affairs. Under this authority the Administrator has issued regulations to encourage forbearance and indulgence in cases of default to prevent foreclosure on veterans' homes.

The Veterans' Administration regulations and procedures now in existence to encourage holders of guaranteed mortgages to cooperate in the extension of indulgence in hardship cases has proved satisfactory to date.

The holder may extend the loan, that is, lengthen its maturity, thus reducing monthly payments in order to cure an existing default or to avoid an imminent default. Also the lender may agree to reduced payments, or no payment at all, by the veteran during a temporary period until his income is restored. During

such periods of indulgence the interest continues to accrue and is charged to the guaranteed indebtedness so that the lender runs no risk in the event that the borrower does not recover from his default and foreclosure becomes necessary. Similarly, proper advances for taxes, insurance, ground rents, and necessary repairs or maintenance may also be charged to the guaranteed debt.

Normally these avenues of forebearance and indulgence should be sufficient to encourage lenders to hold off foreclosure action. However, even if the lenders' apprehension over the level of real estate values should become pessimistic to the point where he feels compelled to institute foreclosure proceedings, VA's procedures offer another course of action which would dispel such apprehension.

Thus, under existing regulations and procedures VA may go so far as to specify an amount which will govern in the event of ultimate liquidation of the property, and which will protect the holder against any marked decline in property values which otherwise could result in the holders' sustaining a loss on the unguaranteed part of the loan. For example, if the balance of the debt is $8,000, VA's guaranty liability would be $4,800—assuming a 60-percent guarantee—and the holder would be protected against loss so long as the property value does not decline below $3,200 plus liquidation expenses. The VA could, if the holder insists, specify an amount based on the current property value—perhaps $5,000—which will be the figure used in the event liquidation ultimately becomes necessary.

Also as a final resort in case individual lenders insist on foreclosure, perhaps because they do not believe that the economic dislocation is temporary in nature, the VA under existing regulations may refund the mortgage by paying the holder the amount of the outstanding debt. Under the assumption of a temporary economic difficulty it is not anticipated that there would be many cases where VA would have to buy the loan. As stated, this would be only a final resort and would be avoided if possible since such a method of solution requires additional Federal expenditures.

Insofar as direct loans held by VA are concerned, VA can and does extend forbearance and indulgence to worthy veterans who are in financial difficulties. This includes extending or reamortizing the loan, agreeing to accept reduced payments, or no payments, and making advances, if necessary, for taxes, insurance premiums, ground rents and necessary repairs or maintenance. Where inability to make payments is due to unemployment, VA is very lenient and does everything possible to assist veterans in retaining their homes.

I have requested the chairman of the Housing Subcommittee of the Banking and Currency Committee to delete references to the veterans' housing program from the bill when it is considered by the committee. If the bill should be reported by the committee, retaining the references to the veterans' housing program, I shall be forced to oppose it.

Mr. Speaker, the veterans' housing program has been a great success. It has been one of the major instruments providing housing for the young families of this Nation. It has created a great and wholesome influence on the lives of the people of this Nation. It has provided employment for the Nation's workers and has been of benefit to the Nation's industries, and it is sagging at a time when it should be in full operation.

I believe the method of financing provided in H.R. 4848 will bring money from private investors into the program and will do so without calling directly on the Treasury of the United States. We have contacted many of the managers of these pension funds and they have indicated an interest in this type of investment. We believe this legislation can go through the Congress in a short time and provide additional financing for veterans' homes for this building season and in time to assist the Nation in its economic recovery.

Our Expanding Foreign Markets for Agriculture

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. COOLEY. Mr. Speaker, all persons interested in building foreign markets for American-grown agricultural products will be interested in the splendid speech delivered by our former beloved colleague, Hon. Clifford R. Hope, of Kansas, at a dinner meeting in Washington on the evening of February 28, 1961.

The title to his speech, "Our Expanding Foreign Markets for Agriculture," was very appropriate and the speech was well received. Those of us who had the honor and privilege of serving in Congress with Cliff Hope will always regard him as one of the grand champions of American agriculture. Never on any occasion during his long service in this House was he prompted by partisan politics in dealing with the problems of farmers. During the time he served as chairman of our Committee on Agriculture, seldom, if ever, was partisan politics permitted to lift its ugly head. Cliff is a statesman in the truest sense of the word, and he is held in high esteem by all who have known him well. I take great pleasure in presenting his recent speech for the RECORD:

OUR EXPANDING FOREIGN MARKETS FOR AGRICULTURE

(A speech by Clifford R. Hope, president, Great Plains Wheat, Inc., at a congressional dinner in Washington, D.C., sponsored by six commodity groups, cooperating with the USDA, February 28, 1961)

The outstanding feature of American agriculture today is its tremendous productivity. Year after year we keep breaking records with monotonous regularity. Our capacity to produce has seemingly outrun our capacity and the world's capacity to consume. The result is surpluses, so-called, and surpluses are supposed to be problems. And problems they are perhaps, from the standpoint of management and their effect upon transactions in the normal channels of trade.

So much has been made of surpluses in recent years that some people in this country, perhaps a lot of them, have the idea that farmers have been guilty of some sort of a crime in becoming efficient and abundant producers.

Let us grant that there are some problems in surplus management. Let us grant that we need to do a better job in surplus disposal. Let us grant that perhaps temporarily we are going to have to put some restrictions on the production and marketing of a few crops where supplies at present seem somewhat overlarge, but heaven save us from the idea that there is something sinful or wrong about our present capacity to produce food and other agricultural products when they are as badly needed as they are in the world today.

I am sure there is no country which does not envy the efficiency and productivity of this Nation in the field of agriculture. Khrushchev may be able to boast of accomplishments in some fields but agriculture is not one of them. About all we've heard from him in that line has been wholesale firings of the people responsible for agricultural production in Russia. And I wonder if the rulers of China, where tens of millions are said to be starving or on the verge of starvation, think that we have agricultural problems in this country.

Agricultural productivity of the kind we have in this country is an asset and a blessing in more than one way. In fighting the cold war it is our most effective weapon. If you doubt this, just contemplate what the situation would be if the places of this country and Russia in the field of agricultural production had been reversed during the last 10 years.

And if our efficiency has resulted in an accumulation of supplies beyond our present power to absorb or distribute, any look at the projections of world population during the years ahead should convince us that we must increase rather than decrease productivity. Today world population is roughly 3 billion. Projections for the future call for 4 billion by 1975 and 6 billion by 2000.

These figures show that agriculture in this country and the world can't stand still if the world's people are to be fed, clothed, and housed.

Whatever measure we adopt to curtail or dispose of present surpluses, they must not be such as to impair the future efficiency and productivity of our farmers.

This productivity and efficiency didn't just happen. It is the direct result of enlightened and progressive policies followed for many years on the part of both government and farmers. Research and education largely on the part of the State and Federal governments in the fields of improved practices, eradication, and control of plant and animal diseases, better varieties of crops and strains of livestock have played a great part. Our system of farm credit, private, cooperative, and government, has made an important contribution. Soil and water conservation have been important. Mechanization and its acceptance by farmers has been a big factor. What we have seen in the last few years is spectacular but it is the natural and to be expected result of 50 years of research and education.

Where we have failed has been in not assigning an equal role during this time to research and education in marketing and distribution. While it would be wrong to say that no consideration has been given this

subject, it is a fact that only during the last few years has serious consideration been given in a systematic way, either in government or trade circles, to developing markets for agricultural commodities.

In 1946, Congress passed the Research and Marketing Act. Previously, in fact back in 1935, legislation was passed providing for marketing agreements and orders. This has been used to a considerable extent in the marketing of milk and fresh fruits and vegetables. Legislation relating to cooperative marketing has been helpful in stimulating marketing efforts. In the main, activities under these acts have related to domestic marketing.

In 1954, the pressure of accumulating stocks of nonperishable agricultural commodities, coupled with the existence of distress and shortages of food and fiber in many of the developing countries, brought about the enactment of a most significant and important piece of agricultural legislation. This was the Agricultural Trade Development and Assistance Act of 1954. Although this is generally referred to as Public Law 480, I like to use the full title so that everyone will understand that the basic purpose of the act is to develop markets for agricultural commodities.

This act, as amended and as it has been administered, has been an excellent vehicle for the development of foreign markets for American agricultural products. Among other things, the law provides that foreign currency derived from the sales of surplus agricultural commodities should be used "to help develop new markets for U.S. agricultural commodities on a mutually benefiting basis."

While provision was made for the use of such currencies for other purposes, the act itself and its legislative history including extensions shows that it was the intention of Congress that foreign currencies be used to the maximum extent possible for agricultural development and that first priority be given this use.

During the 6½ years since the passage of Public Law 480, producers and distributors of agricultural products have made increasing use of it. Under its provisions they have worked on a cooperative basis with the competent and experienced people in Foreign Agricultural Service and our fine corps of agricultural attachés in all parts of the world.

These commodity groups are matching the Government's contribution by substantial contributions in money and services. So far they have contributed about $12½ million of their own resources toward foreign market development programs. But this is only a part of the story. Equally and perhaps more important is their contribution of talent and technical skill and know-how.

There are sound reasons for this interest in market development. One reason, as I have already pointed out, is the continued increase in agricultural productivity, an increase beyond our capacity to consume domestically. In the meantime world population has increased so that today there is an actual or potential demand for all our production, great as it is. Some of this demand comes from countries which now lack hard currency sufficient to supply their needs for food and other agricultural commodities.

On the other hand, there are many countries formerly short of dollars which are now enjoying the most prosperous era in their history with ample supplies of gold and dollars. I'm referring now to Western Europe and Japan and scattered countries throughout the world which are particularly blessed with natural resources.

If there was ever a golden opportunity and need for market development, it is now. While world trade is increasing, competition is becoming keener. Economic and political shifts are taking place so fast it is difficult to keep up with them. Who knows, for instance, what effect the organization of the European Common Market is going to have with respect to foreign trade in the countries involved, and other countries in Western Europe.

And now with the crisis which has arisen because of our loss of gold due to the imbalance in international payments, the importance of expanding our agricultural exports has become even greater.

In his recent message to Congress on the balance of payments, President Kennedy was explicit on this point and said: "Our agricultural industry, which is of unparalleled efficiency, must make its full contribution to our payments balance. I am directing the Secretary of Agriculture to report on all feasible and internationally desirable means of expanding our exports of farm products and to emphasize the need for great expansion as a primary objective of our new farm programs."

I am sure that I am speaking for all of the agricultural and industrial groups engaged in this program when I say that we are in thorough accord with the views expressed by the President and want to cooperate to the extent of our ability.

And having further cooperation in mind, it is perhaps appropriate for me to take a little time now to summarize some of the progress which has been made in expanding agricultural exports in recent years, followed by references to specific commodity programs.

On that point, let me call attention to the brochures at each of our places entitled "Building Foreign Markets for U.S. Agriculture." Because this information is available to you in this way, it is possible for me to condense my remarks on this point to some extent.

The period since the passage of Public Law 480 in 1954 has been one of unparalleled progress in the foreign marketing of agricultural products. The marketing year ending June 30, 1960, saw the greatest volume of agricultural exports in our history. The value of these exports, $4.5 billion, was exceeded only by the record $4.7 billion of 1956–57, at a time when prices were higher; 1959–60 was a record year also in that agricultural exports were approximately one-fourth of total exports, the highest in any recent year. In 1959–60 dollar sales exceeded 70 percent of total farm exports, notwithstanding the amounts which moved out under food for peace and other special export programs.

Now, may I refer to some of the specific commodity programs. One of the oldest and most extensive of these is that of Cotton Council International. Cotton has been an export crop from our earliest days. In recent years it has had its problems with extensive production increases in other exporting countries and severe competition from synthetics. But cotton has been fighting back. Cotton Council International is now carrying out in the international field the same type of programs which have been so successful domestically, including advertising, merchandising, sales training, public relations, press service, and educational programs. These activities cover 17 countries.

In these efforts, CCI works closely with foreign industry groups which last year spent $1.5 million of their own money in this connection.

In the 1959–60 marketing year, cotton exports had one of the best years in recent history, doubling those of the previous year. Credit for a substantial part of this increase is given to the promotion program.

Wheat is another crop to which the export market has traditionally been important. Yet until market development activities were undertaken in recent years, both the quantity and quality of our exports were erratic. Three separate organizations, the Millers' National Federation, Great Plains Wheat, Inc., representing Great Plains growers, and Western Wheat Associates in the Pacific Northwest States, have cooperated in extensive foreign programs, including more than 60 countries on 5 continents.

Activities have included, among other things, market surveys, trade fair exhibits, nutrition education and promotion, technical assistance to millers and bakers, participation in school lunch programs, bringing in trade teams from importing countries, and kitichen demonstration buses.

Western Wheat Associates and Great Plains Wheat maintain joint offices for market development in Tokyo, New Delhi, and Karachi. Great Plains Wheat has offices in Rotterdam for Europe; in Lima for South America; and in Washington for the Caribbean area. Wheat exports including flour for the last 3 marketing years are as follows: 1957–58—410 million bushels; 1958–59—440 million bushels; 1959–60—512 million bushels. They are considerably higher so far this year.

Tobacco is a commodity with an export history going back to colonial days. It is still a leading agricultural export. During the past 5 years, U.S. tobacco trade groups have undertaken market development projects in 14 foreign countries. Four principal types of activity have been undertaken: market surveys, advertising of cigarettes which contain U.S. leaf, bringing of officials and personnel of foreign tobacco firms to the United States, and trade fairs.

Major advertising campaigns have been carried out in Japan, France, Thailand, and Burma on behalf of cigarettes containing high percentages of U.S. tobacco. These efforts are meeting with success. Japan is now using 12 million pounds of U.S. leaf annually, compared with 5 million pounds when the advertising project was started 5 years ago.

Large crowds have been attracted to U.S. tobacco and cigarette displays at trade fairs. Trade organizations cooperating in this program are the Burley and Dark Leaf Tobacco Export Association, Leaf Tobacco Exporters Association, and Tobacco Associates.

One of the most active groups in foreign market development is the Soybean Council of America, Inc. This organization is now working in 54 countries.

Its principal foreign office is in Rome, with other offices in Madrid, Jerusalem, Bombay, Rotterdam, Cairo, and Hamburg.

Activities of the council have included two international animal nutrition symposiums, livestock feeding seminars, exhibits at trade fairs, overseas study trips for U.S. industry representatives, and bringing foreign teams to the U.S. from Spain, Italy, Japan, and Israel.

Since 1955–56, soybean exports have increased from 67.5 million bushels to 142 million bushels. Oil exports have increased almost 75 percent, and meal, more than 50 percent. Increases in West Germany, Italy, Spain, Israel, and other countries where active market development projects have been carried out, have been even more dramatic.

Another brand new industry as far as export markets are concerned is poultry. When Public Law 480 was enacted, exports of poultry except to Canada, were practically nonexistent. Market development programs had to start from scratch.

In 1956, the Institute of American Poultry Industries, was designated to formulate and carry out foreign market development programs for the industry. Western Europe was selected as the most promising area in which to begin operations.

Almost immediately, it was found that the greatest problem was artificial trade barriers. Considerable progress has been made in overcoming this handicap, but much more remains to be done.

In the meantime, market development programs have been instituted in West Ger-

many, Switzerland, the Netherlands, Italy, and Spain. Techniques similar to those already in use in the United States to increase consumption are being used.

Results have been spectacular. Average annual exports in the 1952–55 period were 17 million pounds; in the 1958–59 marketing year, they were 125 million pounds; in 1959–60, this had increased to 180 million pounds. All of this represents a new dollar market for American feed grain and poultry products.

The most recent major market development activity is that of the newly organized U.S. Feed Grains Council. Its program includes providing foreign buyers with price, supply and grain movement information, including U.S. grades and standards; expanding contracts with trade groups; joint projects for feed grain utilization; demonstrating feeding values of U.S. grains; teaching economics of feed substitution; and exchange visits between foreign and American agricultural leaders.

Its activities are worldwide with much emphasis on Western Europe and Japan, where rapidly rising living standards have increased livestock, dairy, and poultry consumption.

The organizations to which I have just referred are the principal cooperators with Foreign Agricultural Service on market development. But there are some 40 others which directly or indirectly deal with FAS in market development programs. Among these are programs dealing with dairy products, hides, and skins, livestock, rice, and tallow. A complete list of all cooperating organizations will be found in the brochures at your table.

Now may I make a few further observations before concluding.

The cooperators in market development programs for whom I am speaking tonight believe that the way to avoid surpluses and to dispose of those which have accumulated is to assign the same importance to marketing agricultural products as we have heretofore given to producing them.

Our phenomenal increase in agricultural exports, particularly in the case of commodities on which cooperative programs between market development groups and Foreign Agricultural Service are now in effect, proves the value of the Agricultural Trade Development and Assistance Act of 1954. It expires this year and must be extended if programs are to continue in the field of foreign market development.

We must give attention also to domestic market development, but I think it must be realized that in a country like this where living standards are high and where most people already have enough to eat, that in the case of food products at least, consumption can be expected to increase only as population increases, although shifts may occur between commodities.

Thus, it comes about that increased consumption sufficient to equal our present and prospective production must in the main come from an expansion of world markets where demand and need are almost limitless. Of course, there are limits in the quantity of gold and dollars available.

This is where the special programs provided for in the Agricultural Trade Development and Assistance Act, such as sales for foreign currency, barter, and grants, come into play. Such transactions while dependent on the availability of surplus commodities, are to an even greater extent based on the maintenance of peace and the desirability of strengthening free nations throughout the world. Recognition of the importance of this program is shown by the fact that the agency dealing with it operates directly under the president.

My friends, while we have the most productive and efficient agriculture in the world, its strength and well-being can continue only if it has markets for its products. Farmers wil be able to benefit from the greater productivity of their land and their machines only if larger markets can be found for the greater output. In the long run, it is only by expanding markets at home and abroad that farmers can hope to avoid the heavy burden of surpluses and the hardship of restriction in the full use of their agricultural resources.

Rural Community Improvement

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BREEDING. Mr. Speaker, at the 19th annual meeting of the National Rural Electric Cooperative Association, a resolution was passed urging early legislative approval of an effective area development program. Under permission to extend my remarks in the Appendix of the RECORD, I wish to call this timely resolution to the attention of my colleagues:

RESOLUTION BY NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION

Whereas the rural electric systems serve most of the rural areas of this Nation that are identified as areas of underemployment and low incomes, and are heavily engaged in rural development work to improve rural incomes and rural living conditions; and

Whereas many of these areas are burdened with economic and related problems which exceed local means for dealing effectively with them, despite their inherent capability for natural resources and rural industrial development; and

Whereas the decline of population in these areas has resulted in large and still growing numbers of idle services, threatening the ability of many rural electrics to deliver low-cost dependable area coverage service and to repay REA loans; and

Whereas we have great faith in the ability of rural people to create new opportunities for themselves which will revitalize their communities if the tools for doing the task are made available; and

Whereas we believe that this age of international perils makes it imperative that the United States have, among all her citizens, the dynamic strength and economic and social health which underlie her supremacy among nations; and

Whereas the Rural Electrification Administration has established a record of more than 25 years, unmatched by any lending institution, public or private, in administering a loans program to help rural people help themselves; and

Whereas Senator DOUGLAS, of Illinois, and others have introduced in the Senate, and Representative FLOOD, of Pennsylvania, and others have introduced in the House, bills which provide area redevelopment loans, grants, and technical and retraining assistance for rural as well as urban areas which we deem vital to the success of the rural development work we have underway; and these bills are currently under consideration by the Committees on Banking and Currency of the Senate and of the House of Representatives: Now, therefore, be it

Resolved, That the President of the United States, the Secretary of Agriculture, the Administrator of the Rural Electrification Administration, and the members of the Committees on Banking and Currency for the Senate and for the House of Representatives be advised that we strongly endorse the position that assistance to rural areas, such as is provided by the bills introduced by Senator DOUGLAS and Representative FLOOD and others, is vital to the welfare of low-income rural areas and of the Nation as a whole; and be it further

Resolved, That all of these persons be advised that we urge that primary responsibility for leadership of area redevelopment assistance to rural areas be placed upon the Rural Electrification Administration; and be it further

Resolved, That we urge each cooperative to take steps to make an appropriate survey in its area and make plans to set up the organizing machinery necessary to aid in implementing the rural community improvement program.

Panama Line Must Be Preserved

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. FLOOD. Mr. Speaker, one of the pressing problems now before President Kennedy is that of the fate of the Panama Line.

The ships of this line, and its predecessor, the Panama Railroad Steamship Line, both agencies of the U.S. Government, have served the construction, maintenance, and operation of the Panama Canal enterprise throughout the years in the most efficient and indispensable manner. Like the Panama Railroad, also a governmental agency from the beginning of the U.S. canal effort at Panama, these ships have carried the great tonnage of concrete, machinery, and defense materials for the construction, maintenance, and fortification of the Canal; and also the great numbers of employees engaged in the canal work, during this period.

If our Government has been compelled to rely solely on private shipping, no one can say what delays, and what increased expenditures in all of these canal activities, might have been incurred. But having had its own ships as instruments for the accomplishments of the tremendous responsibilities assumed by our Government, the canal was built, fortified, and has since been successfully maintained and operated.

Now, at one fell swoop, and at the perisistent insistence of private shipping interests, already heavily subsidized by our Government, the effort is being made to liquidate the Panama Line, and to dispose of its ships.

The late administration gave an order for such liquidation but, because of the grave protests against such action, the new administration has temporarily suspended the order with the idea of reappraisal of the entire situation.

Like the Panama Railroad, the Panama Line not only forms gravely important services for the canal enterprise, but like the Panama Railroad, it also constitutes a policy of insurance for the better protection, maintenance, and operation of the canal in emergent situations.

Another consideration is the fact that the operation of the Panama Line serves as a corrective agency for the maintenance of equitable transportation rates in the Caribbean area.

Also, it must be kept in mind that the Panama Line serves Haiti as regards the transportation of passengers and frieght—a most important factor in the overall equation—and apparently, no private shipping line will undertake this service, at least in no comparable way. Thus, the termination of the Panama Line service to Haiti, which is altogether adequate, would constitute a powerful factor against the struggling economy of Haiti and have the effect of removing a most stabilizing influence in the affairs of the Caribbean countries now under the most serious communistic infiltration and attack.

We must also remember that the Panama Line has always operated without subsidies and still does so.

In addition to the considerations just indicated for the intention of the Panama Line is the fact that in Panama the proposed extinction of the Panama Line would be a severe blow to the Panamanian economy. This is particularly true of Panamanians who are engaged in the shrimp and banana industries, which have been rapidly growing in volume. The leaders in these businesses believe that their industries would gravely suffer if the Panama Line were discontinued because its ships are especially adapted for handling these products in exports; and they are not satisfied with the assurances of private shipping companies that the latter would meet these Panamanian requirements.

Again, as in the case of Haiti, the economy of Panama should be considered.

In addition, another very strong and most convincing reason against the proposed liquidation of the Panama Line is that the Secretary of the Army and the Panama Canal Company have opposed it. They are the immediate responsible governmental agencies as regards the canal and undoubtedly have spoken from the standpoint of national defense and the successful operation of the canal.

It must be fresh in the minds of all those who have followed Panama Canal history that a similar effort was made in 1955 to liquidate the Panama Railroad. This was only averted through the timely and effective intervention of the Congress. It was my privilege to join with all the vigor I possess to prevent the consummation of an act which would have been so unwise and hazardous for the operation and maintenance of the canal.

Now we have a similar problem facing us in the attempted destruction of the Panama Line; and we need to summon to the task of defeating this instant effort the same forces which united to save the Panama Railroad from extinction.

The labor organizations on the Canal Zone proved effective factors in the struggle to save the Panama Railroad; the Star & Herald, and perhaps other units of the Panama press, joined to aid the cause of such retention and powerful voices in the Congress were lifted in the same behalf.

The effort was successful and the Panama Railroad is still functioning as a most effective agency in and about the operation and maintenance of the canal, and stands ready, as always heretofore, to serve the canal enterprise in every normal and emergency situation that may arise, either in peace or in war.

The interest of any private shipping company should not transcend the interest of the Panama Canal itself nor the permanent obligations which our Government has assumed with respect to the operation of the great waterway. The overall national interest involved should be the prime concern. Our subsidies, coming from the tax money of our people, is intended to offset conditions of difficulty with which American shipping is confronted. The relatively small income received by our Government from the operation of the Panama Line, when compared to the tremendous subsidies that we have paid, and are still paying, to American shipping, is a comparatively insignificant item in the entire shipping pattern. Yet, for the reasons now urged, and for many other reasons which could be added, the Panama Line forms a peculiarly vital and effective service with respect to the Panama Canal and national defense. The situation must be faced realistically and not be influenced by selfish considerations.

If the Panama Line is liquidated, then the Panama Canal enterprise will be at the mercy of private shipping and will be unable to protect itself from the likelihood of increased shipping rates and failure of services in a time of need. Why take so great a chance in a matter of such vital and tremendous importance?

Mr. Speaker, I have studied Panama Canal problems from all significant angles that I can find and can think of none more important than maintaining the morale of our employees in the Canal Zone, which depends so much on the continued efficient operation of the unsubsidized Panama Line.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of a message I sent to the Bulgarian National Front of America in connection with their annual banquet and ball commemorating Bulgarian Liberation Day on March 3. The message reads as follows:

FEBRUARY 27, 1961.

Dr. KALIN KOICHEFF,
Secretary, Bulgarian National Front of America, Grand Central Station, New York, N.Y.

DEAR DR. KOICHEFF: Please extend my greetings and best wishes to all those attending the annual banquet and ball of your organization in commemoration of Bulgarian Liberation Day.

I join with all of you in hope and prayer on this historic day, which began as a day of freedom for your people in Bulgaria, and has since turned into a nightmare of oppression for them.

Since 1944 your ancestral homeland has been suffering under the yoke of communism. The people of Bulgaria are today a silenced people, unable to speak their minds, and unable to live as a free and independent nation. Their indomitable will for freedom, however, has not been crushed and will never be crushed. They are waiting silently and grimly, yet patiently and hopefully, for a better tomorrow, for a brighter future.

This indomitable will, this patience and hope, must be kept alive under all circumstances. To lose courage means to lose all hope for the future. By holding aloft the torch of freedom, Bulgaria becomes another great symbol, together with all other captive and oppressed nations, who are joined in the struggle against mankind's greatest and most ruthless enemy.

The anniversary of your people's liberation day occurs at a time when the United States is embarking on a new era and under a new leadership. Let us hope it will prove to be an era of freedom for all peace-loving nations, including the enslaved nations of Eastern Europe.

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

A Bill Relating to Import Regulations of Lead and Zinc

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BAKER. Mr. Speaker, I have introduced a bill relating to import regulations of lead and zinc. This bill, with only two minor changes, is the same one I introduced last year, H.R. 11584. It is largely based on the March 1960 report of the Tariff Commission, made pursuant to Senate Resolution 162, 86th Congress, and adopted unanimously by the other body on August 21, 1959.

Mr. Speaker, on August 17, 1960, the Ways and Means Committee considered H.R. 11584 and reported favorably thereupon with an amendment, and recommended that the bill, as amended, pass the House of Representatives. On June 18 the distinguished gentleman from Oklahoma, Mr. KERR, of the other body, introduced a companion bill; and, subsequent to the passage in the Ways and Means Committee, the Committee on Finance in the other body considered H.R. 11584, and reported favorably thereon and recommended that the bill, as amended, do pass. H.R. 11584 was an amendment to H.R. 5547. The vote relating to adopting an import tax on lead and zinc in the Committee on Finance was 12 to 2.

Because of the rush in the closing days of the 86th Congress, and the anxiety of all to return to their respective States and campaign for the coming election, it was considered that the time

was inadequate to debate the subject of imposing import taxes on lead and zinc. The lead-zinc issue is one which has become increasingly familiar to us over the course of the past 8 years, and only last year the U.S. Tariff Commission, on March 31, released its fourth report on the subject since 1954. I feel it is again my responsibility to propose legislation which will implement the exhaustive findings of this competent agency of the legislative branch of our Government.

It will prove valuable to refresh our memories by outlining the tortuous and frustrating path the domestic lead-zinc industry has been following since 1953 in its attempt to obtain lawful protection from injurious import competition. As we all know, the so-called escape clause provisions of section 7 of the Trade Agreements Act provides that upon establishment of injury or threat of injury to a domestic industry from absolute or relative increases in imports of a like or comparable article, the Tariff Commission shall report its findings to the President along with recommendations for appropriate protective measures.

After the cessation of hostilities in Korea, it became apparent that the domestic lead-zinc industry was qualified for relief under this provision of the law. As a matter of fact, in 1953 the Congress itself recognized this position in the form of a request that the Tariff Commission report to it a finding of fact on this industry's then current condition. Shortly thereafter the industry itself initiated an escape clause request with the Tariff Commission. The two reports were made to the Congress and the President, respectively, in the spring of 1954. The Commission was unanimous in its finding of injury and its report to the President recommended increases in the specific rates of duty on lead and zinc.

As a substitute for these duty increases the administration instituted a lead and zinc acquisition program under the sponsorship of strategic stockpiling and agricultural bartering. As anticipated, these programs had the desired effect of increasing the prices of the two metals, but it later became abundantly clear that the programs also encouraged the development of new production of the two metals far beyond the amount which could be absorbed in the program.

Consequently, for logical fiscal reasons the administration was forced to halt these programs in the spring of 1957. The result was inevitable. Domestic and world prices for lead and zinc declined over 25 percent in 5 short months and by November of the same year, 1957, a second escape-clause request was before the Tariff Commission. Again the finding of injury was unanimous and again higher levels of specific duties were recommended to the President, although at this time it was the opinion of three of the Commissioners that the industry's position was so acute that higher duties should be coupled with a temporary imposition of absolute import quotas.

The recommendations were made to the President in the spring of 1958. For the second time the administration deemed it unwise to implement the recommendations for higher duties, and on October 1, 1958, absolute import quotas on lead and zinc metal and ore were imposed. These quotas remain in effect today. The increased duty levels twice found appropriate and twice recommended by the Tariff Commission to the President remained unimplemented.

For the third time on March 31, last year, the Tariff Commission has found serious injury and for the third time recommended increased duty rates as the only practical solution to the lead-zinc industry's problem.

I emphasize the word only since this most recent report positively rejects quotas as a suitable instrument for the protection of lead-zinc products.

However, I wish to point out to my colleagues that in the two previous cases the Commissioners unanimously recommended increases in duties in varying amounts, but in this last case four of the Commissioners felt that recommendations could be extralegal in their nature and two Commissioners made the duty recommendations. I wish to further emphasize that the Commissioners unanimously reiterated that there was serious injury and rejected the use of quotas.

I quote from the Tariff Commission's report, pages 109–110:

> Import quotas affecting such a large and complex industry as lead and zinc have not proved a satisfactory means of curtailing excessive imports of these metals. The quotas adopted are rigid and inflexible and being incapable of adjusting the changing elements of domestic supplies to the changing and varied needs of industrial consumers, have tended to increase rather than to reduce instability of market prices, and thereby to thwart the best interests both of domestic producers and consumers of lead and zinc. The system of import quotas has been discriminatory in its effects upon various producers, importers, and consumers, and has created unusual difficulties for some while it has brought windfall advantages to others. In zinc smelting, especially, the absolute quota system has tended to eliminate small, though efficient, producers who, with little or no control over domestic ore supplies, are rendered increasingly dependent upon precarious foreign ore supplies. On the one hand, this has tended to reduce nearby markets for ores produced by domestic mines in areas near the location of such smelters. On the one hand, it has tended to concentrate control over domestic ore supplies in the hands of a few powerful integrated corporations, and, with imports strictly limited by quotas, to increase their control over domestic supplies and market prices. Finally, import quotas have seriously interfered with normal trade relations between smelters or importers and their suppliers and between producers or importers and their customers, thereby forcing unusually, unnatural, vexing, and often uneconomic adjustments.
>
> At public hearing before the Tariff Commission in January 1960, all interested parties, domestic and foreign alike, spoke against continuance of import quotas. Even the representatives of the domestic lead and zinc mining industry, which the quotas were designed to protect, made no defense of them and proposed import duties or import taxes in place of quotas.

With this background I feel sure my colleagues will understand and support my decision to introduce legislation which is designed to permit the prompt withdrawal of the quotas as unanimously recommended in this most recent report of the Tariff Commission and to substitute a reasonable tariff at levels not greater than those recommended by the two Commissioners who included specific recommendations in their report.

My bill does just this; for the basic unmanufactured products of lead and zinc ores and metals, except that at certain price levels the rates are reduced. As further recommended in last year's report, it provides the necessary commensurate protection for a limited number of semimanufactured products whose substantial or chief value is lead or zinc and the prices of which usually change with changes in the price of these metals.

The bill provides a tax on lead ores of 1.4 cents per pound on the lead content and on lead metal of 2 cents per pound; a tax on zinc ores on the zinc content of 1.05 cents per pound and on zinc metal of 1.5 cents per pound, with commensurate protection on related products. If the average price of lead is less than 13½ cents for 3 months, or the average price of zinc is less than 12½ cents for 3 months, there is an additional tax of 0.7 cent per pound on the lead content of lead ores, and 0.7 cent per pound on the zinc content of zinc ore, and 1 cent on each of the metals, together with a commensurate increase in the tax on the related products. When the price of lead is 14½ cents or more for a 3-month period, or the price of zinc is 13½ cents or more for a 3-month period, the additional taxes shall be removed.

I wish to emphasize that this bill follows the recommendations previously mentioned and such recommendation in its entirety cannot be implemented at this time under escape clause action within the terms of the Trade Agreements Act.

Two years ago the State of Tennessee became the Nation's largest mine producer of zinc. East Tennessee is responsible for 100 percent of this production.

There are a substantial number of unemployed zinc miners in east Tennessee. Their unemployment is due entirely to the low price of zinc ores and zinc metals, which is directly brought about by the conditions I have hereinbefore described.

I am reliably informed that the quota system imposed by the previous administration has not caused a single lead or zinc mining operation to be put back into production, and there are many lead and zinc mining operations and smelting concerns completely shut down.

Due to extensive prospecting at great expense, it has been proven that there are zinc reserves in the Knoxville and Mascot areas of east Tennessee to last a hundred years of normal production.

Neither lead nor zinc can be produced in the United States on a profitable basis in competition with the substandard wages and working conditions abread. Recent past history has proven conclusively that a healthy lead-zinc industry in the United States is vital to our na-

tional defense and to the well-being of our Nation's economy.

It is high time that we in this country take steps to protect the well-being of our own people.

Enactment of my bill, which would impose a very modest import tax on lead and zinc, will go a long way toward revitalizing the lead-zinc industry and in returning to work thousands of lead and zinc miners and smelter workers.

May I emphasize here that in the case of hard-rock mining, such as lead and zinc, reasonable protection by legislation has a chronological implication of the utmost importance. The risk capital required for exploration and development of new deposits generally will require 5 or even up to 10 years before return on investment can be anticipated. Only legislation will afford a durable solution because of the length of time required to develop new production. This is why tariffs rather than quotas are the appropriate solution. Tariffs permit the market to function and respond to changes in demand. Quotas do not.

Eight years is long enough to ponder this problem. We have the facts and the recommendations of the Tariff Commission and now we should translate them into sound, proper, and constructive legislative action.

Based upon testimony adduced in executive session in the Ways and Means Committee last year when my bill, H.R. 11584, was being considered, in addition to stabilizing the price and production of lead and zinc, this bill would produce revenue to the Federal Treasury of approximately $36 million a year, which, to me at least, is a matter of substantial and material importance.

Fountainhead of the Guard

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include a letter from Maj. Gen. D. W. McGowan, Chief of the National Guard Bureau in Washington, together with an article on the 182d Infantry, Massachusetts Army National Guard, which appeared in the March 1961 issue of the Army Information Digest:

DEPARTMENTS OF THE ARMY
AND THE AIR FORCE,
NATIONAL GUARD BUREAU,
Washington, D.C., March 3, 1961.

Hon. THOMAS J. LANE,
House of Representatives

DEAR MR. LANE: The enclosed copy of the March 1961 issue of the Army Information Digest contains an article (starting on p. 46) on the 182d Infantry, Massachusetts Army National Guard.

This article is one of a series published by the Army Information Digest on units of the components of the Army with historical significance. In addition to being one of the two oldest National Guard units (the other is also a unit of the Massachusetts National Guard), the 182d Infantry has an illustrious history of service.

The Commonwealth of Massachusetts may well take pride in this record of service for the common good of the early settlers, the Colony and the State, as well as for the defense of the United States.

We trust this inclosure will be of interest to you.

Sincerely,

D. W. McGOWAN,
Major General,
Chief, National Guard Bureau.

FOUNTAINHEAD OF THE GUARD

(By Tom Monahan)

From colonial train band to Pentomic battle group, the 182d Infantry of the Massachusetts Army National Guard has forged—along with the Massachusetts 101st Engineer Battalion—the longest continuous history of any military unit in the Nation.[1]

The 182d traces its origin to 1636, when a band of loosely disciplined but rugged pioneers joined together under Col. John Haynes, of Boston, to form the North Regiment of militia in the Massachusetts Bay Colony. Because danger of attack from hostile Indians was always present, these men kept themselves in instant readiness, carrying their muskets even to church.

The regiment first saw action with other militia units of the Massachusetts Bay Colony in the Pequot Indian war. In subsequent decades, as the threat of war waxed and waned, regimental discipline was often modified with the spirit of fellowship. But the history of the regiment demonstrates that when patriotism and courage were needed its members unfailingly responded, participating in almost every principal national war or local emergency that came along since that day.

Today the unit has come full circle in its readiness, for once again, like their forebears of three centuries ago, the men of the 1st Battle Group, 182d Infantry, are disciplined and ready to face an enemy who might strike without warning.

The North Regiment was formed on October 7, 1636, from train bands, or groups of trained militia, which had been instituted in the colony 6 years earlier. The regiment's commander, Colonel Haynes, had served as Governor of the Massachusetts Bay Colony and later became the first Governor of the Connecticut Colony.

In 1643, when Massachusetts Bay Colony was organized into counties, the unit was renamed the regiment of Middlesex County, and it is still known in its home communities as the Middlesex Regiment.

During the century, the regiment was twice redesignated, and defended Middlesex County in two more conflicts—King Philip's War (1675–77) to put down the bloody uprising of the Wampanoag Indians, and King William's War (1689–97), one of the European struggles between England and France that had its counterpart in a series of intercolonial wars in North America.

During much of the 1700's the regiment continued as a relatively informal organization, but the growing conflict with England imparted new urgency to local defense. As a result, all the regiments of Massachusetts were required to organize part of their numbers as minutemen, and as such, ready to take the field at a minute's notice. Thus, the predecessors of the 182d were among the first to bear the appellation that is so cherished by the National Guard today.

REVOLUTIONARY WAR RECORD

Immediately before the American Revolution, the minutemen of Middlesex County were among the patriots that made Massachusetts a hotbed of revolutionary sentiment. At this time the 182d had the designation 1st Regiment of Middlesex. When the colonial craftsman Paul Revere rode to every Middlesex village and farm it was to the minutemen of this famous regiment that Revere and his companions were giving the alarm.

One of the regiment's officers, Capt. John Parker, was in command of the company of 70 minutemen that waited on the Lexington Green at sunrise on the morning of April 19, 1776. It was Parker who is reputed to have said: "Stand your ground. Don't fire unless fired upon. But if they mean to have a war, let it begin here."

By the time the British Regulars reached Concord, other members of the regiment had gathered, and a small company went out to meet the Redcoats. It was this action by the rude bridge that arched the flood that Ralph Waldo Emerson hailed as "the shot heard round the world."

At this time, the regimental commander was Thomas Gardner of Cambridge. Therefore, when Gardner led many members of the regiment into the Massachusetts Army for the siege of Boston, this group was designated Gardner's regiment. The remainder of the regiment was thereafter called the 1st Middlesex County Regiment of Militia.

The strategic key to the siege of Boston was the control of Charlestown and Dorchester Peninsulas. So it was that on the night of June 16, 1775, the American patriots fortified Breed's Hill on Charlestown Peninsula. The orders had been to fortify Bunker Hill, a variation which gave birth to the misnomer of the ensuing clash and the anomaly of Bunker Hill Monument being perched atop Breed's Hill.

Gardner's regiment and the other patriots held their fire until they could see the whites of their eyes, and helped to repulse the first two assaults of the Redcoats. Conspicuous among the regimental units was Josiah Harris' Charlestown company, the indomitable defender of the rail fence that marked the patriots' weak left flank.

When the Colonials had to retire for lack of ammunition after the third British assault, and Gardner had been killed in the fierce hand-to-hand fighting, it was the brave Charlestown company under Harris that saved the withdrawal route to the mainland. The Charlestowners' attack was the only American offensive of the day. The regiment was called out several more times during the Revolution and responded to calls for replacements in the regiments of the Continental line.

It was in 1806 that the regiment first became the 5th Regiment, a designation it carries parenthetically today. In the War of 1812, the Charlestown companies of the 5th Regiment were called into Federal service and guarded Chelsea and Charlestown bridges for the safety of the U.S. Navy Yard. The regiment was redesignated the 4th Regiment in 1840, but regained its traditional "5th" in 1855.

CIVIL WAR SERVICE

The 5th was standing by on April 18, 1861—the 86th anniversary of the fighting at Lexington and Concord—when orders came to report for its first of three tours of duty in the Civil War. The initial service was for a 3 months' period, and was not over until the

[1] The 182d Infantry and 101st Engineer Battalion, both Massachusetts National Guard, were organized in 1636 as the North and East Regiments, and for many years before World War I were designated as the 5th and 8th Massachusetts, respectively. The 101st Engineer Battalion also carries the honors of the celebrated Marblehead or Marine Regiment, which manned the boats that carried Washington's army across the Delaware to fight the Battle of Trenton.

regiment had fought bravely at Bull Run. On the way down to Washington, the regiment was paraded amid wild cheering in New York City, and the New York Tribune said the 5th was "as fine a looking body of men as can be found."

The 5th was quartered in the U.S. Treasury Building and drilled on the grounds of the U.S. Capitol in the weeks before the Bull Run combat. On the day of the battle, the 5th crossed the ford at Sudley Church and advanced to a nearby hill under withering rebel fire. Their coolness and order under the terrific fire caused the green militiamen to be mistaken for regulars.

The 5th was one of the few regiments to behave like regulars that day and its withdrawal was in marked contrast to the confusion that generally prevailed. Most of the casualties of the 5th were suffered in some of the bravest action of the battle, when the 5th supported New York's Fire Zouaves in three times routing the Confederates from Ricketts' battery in the give and take of the engagement.[2]

In September of 1862 the 5th volunteered for 9 months' service and was sent by sea to North Carolina where it participated in several engagements, most notable of which resulted from the Goldsboro expedition in December of 1862.

Goldsboro was an important station on the main railroad line between Richmond and the extreme South; and the expedition was aimed at cutting Robert E. Lee's southern communication line while he faced the Army of the Potomac at Fredericksburg. The 5th helped drive the Confederates from Goldsboro, set fire to the railroad bridge, cut telegraph wires, and tear up a mile of track. Then the 5th climaxed the action by driving off a rebel attack as the expedition made its way back to New Bern, N.C.

In its third tour of duty in the Civil War, the 5th volunteered for 100 days service in July 1864. Garrisoned in Baltimore, the regiment supervised the movement of recruits and convalescents and guarded the polls when Marylanders adopted their new constitution.

Following the Civil War, the regiment reverted to its former State organization and was called upon several times for State emergency duty, particularly the Boston fire of 1872. In the Spanish-American War, the regiment served in the United States as the 5th Regiment Massachusetts Infantry, U.S. Volunteers.

IN FEDERAL SERVICE

The 5th responded to calls by the Commonwealth of Massachusetts for the Chelsea fire in 1908, a civil disturbance in Lawrence in 1912, and the Salem fire in 1914. But its next call to Federal status did not come until 1916, when the regiment went into training at El Paso, Tex., during the Mexican border service.

The 5th was again mustered into Federal service on July 2, 1917, but a few weeks later about 1,400 officers and men were transferred from the 5th to the newly formed 101st Infantry of the 51st Brigade, of the 26th Division. In February 1918, the 5th was redesignated as the 3d Pioneer Infantry Regiment, and underwent training at Camp Wadsworth, S.C., for duty as corps troops.

[2] A score of men from the 5th were taken prisoner at Bull Run and spent 10 months in Confederate prisons before their exchange. While at first housed in a Richmond tobacco factory, they were under the immediate charge of two Confederate officers, Capt. Henry Wirz and Lt. David H. Todd. The former was later to gain notoriety as the commander of the Andersonville prisoner camp and the latter was Mrs. Lincoln's half-brother.

Arriving overseas in September 1918, the Third Pioneer Infantry was assigned to duty with G–4 and participated in the Meuse-Argonne offensive. As part of the Army of Occupation, the regiment was detailed to the Chief of Ordnance for destroying German ammunition in the Meuse-Argonne area, and later the third served as the railroad police regiment of the AEF. Meanwhile, these men of the former 5th transferred to the 101st Infantry contributed to the distinguished combat record of the 101st.

Following World War I, the unit was returned to State status and reorganized first as the 5th Infantry before being designated in March 1923 as the 182d Infantry. When floods imperiled Massachusetts during March and April 1936, the 182d was called out for emergency duty at Lowell. The regiment was called out again in September 1938, as a hurricane struck New England and caused widespread wind damage and flooding.

PACIFIC ACTION

As the threat of war mounted late in 1940, the 182d again received orders for Federal service. After intensive training, the 182d was separated from the 26th Division and on January 23, 1942, it was sent to the South Pacific with task force 6814, the foundation of the famed Americal Division.

While other Army units had made attacks in order to repulse Japanese invasion forces, the Americal Division began the U.S. Army's first offensive combat in World War II when it was sent to Guadalcanal to reinforce the 1st Marine Division.

Beginning what was to be one of its proudest chapters, the 182d landed on the rugged tropical island on November 7, 1942. The regiment had its first taste of combat even while the ships were being unloaded that day as 30 Japanese fighters and torpedo bombers struck the anchored convoy. Members of Company H used one of their machine guns to bag one of the 26 planes shot down.

A few days later, the 1st and 2d Battalions of the regiment helped establish a bridgehead west of the Matanikau River against heavy Japanese opposition. All battalions of the regiment participated in the later operations that eliminated the stubborn Japanese resistance on Guadalcanal. For this initial and significant campaign, the 182d proudly carries a Presidential Unit Citation (Navy).

The 182d was then stationed on the Fiji Islands until it was sent with the Americal Division to Bougainville late in 1948. The 182d was in the front lines when the Japanese launched their last-ditch counteroffensive in March 1944. It has been said that heroism became routine in the 182d's determined 19-day fight for Hill 260, where the regiment engaged in some of the most bitter fighting of the campaign. It was here that Company E earned a Distinguished Unit Citation for its relentless courage in the face of staggering casualties.

In spite of heavy casualties, the 182d made repeated counterattacks before it shattered Japanese resistance. Until early in December 1944, the 182d maintained almost continuous contact with the enemy as the Americans subdued the remaining Japanese forces on the island.

In January 1945, the 182d landed in the Philippine Islands for the final stages of the Leyte campaign. The 1st Battalion liberated the Island of Samar; the 2d Battalion was assigned to patrol and guard missions in the Capoocan area and the 3d Battalion was responsible for elimination of remaining resistance in the Camotes.

On March 26, 1945, the 182d made an assault landing on Cebu in the southern Philippines and surged forward despite mine fields and suicidal demolition parties. The regiment took Cebu City 2 days later, and met heavy enemy fire throughout much of April 1945 as it took several strategic hills beyond Cebu City.

After helping to mop up the last remains of enemy opposition on Cebu, the 182d began training for the invasion of Japan. The regiment earned a Philippine Presidential Unit Citation for the period covering the Leyte and southern Philippines campaigns. Following the Japanese surrender, the 182d was among the early units to begin the occupation of Japan, going ashore at Yokohama on September 8, 1945.

POSTWAR ORGANIZATION

The 182d returned to the United States late in November 1945 and was reorganized December 5, 1946 as an element of the 182d Regimental Combat Team. The regiment was not called into Federal service during the Korean war, but more than 400 individual members of the regiment volunteered for active duty. Continuing its fine record as a unit of Massachusetts, the regiment came to the aid of the State several times during recent years including service during hurricanes in 1954 and 1956 and forest fires in 1957.

In May 1959, when the 26th Infantry Division was reorganized under the pentomic concept, the 182d became one of the division's five battle groups. Training for the atomic battlefield, the battle group is a far cry from its musket bearing predecessor, and its key position in the Nation's second line of defense fails to compare with its initial role as a community defense against Indians. But as a safeguard for free people, its elemental purpose has not changed in 325 years.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. ADDONIZIO. Mr. Speaker, I am indeed pleased to join in the observance of Bulgarian Liberation Day. I do this gladly because I have always been interested in the fate of the gallant Bulgarian people, and am very much concerned with their present plight. In this connection the solemn observance of their liberation day is of great significance.

We all know of the valiant attempts of the Bulgarian people, during their long subjugation to the Ottoman sultans, to free themselves. We also know how many of these attempts ended in veritable bloodbaths perpetrated by their ruthless oppressors. And of course we cannot forget their last and greatest fight in the years 1876–78 which brought them their freedom. Yes, the treaty of peace signed on March 3, 1878, between Russia and Turkey assured Bulgaria's freedom, thus paving the way for its complete independence in 1909.

Since Bulgaria's initial liberation, since that joyful March 3 of 1878, fate has not been too kind to the Bulgarian people. Though they regained their freedom and eventually set up a sovereign and independent state, wars have spelled tragedy to them, and the last war has once more robbed them of their freedom. Today these sturdy and dauntless fighters for freedom find them-

selves once more under the rule of alien tyranny in their homeland, a tyranny imposed upon them by Communist totalitarianism, one that is more ruthless than any they had known before. Therein is the tragedy of their fate today. Their life and their destiny is harnessed to the giant Soviet steamroller directed and controlled by the men in the Kremlin. But the Bulgarian people, schooled and trained during most of their modern history in the school of adversity, are not downhearted and are not in despair. They still cling to their love of freedom, and have no doubt of their eventual deliverance from Communist tyranny. I join in the observance of Bulgarian Liberation Day and wish patriotic Bulgarians in Bulgaria more power in their struggle for freedom and democracy.

Government Surplus Sales Hurt Production at This Time

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1961

Mr. FULTON. Mr. Speaker, I believe the Congress and the American people are interested in the adverse effect on production of Government surplus sales at this time. My good friend, William E. Clark, president of the Dravo Corp., of Pittsburgh, Pa., a large industrial, shipbuilding, and public works construction company of Pittsburgh, in whom I have much confidence, has sent me a copy of his letter of March 2, 1961, to Secretary of Defense Robert S. McNamara. I hope Congress will join with me in urging Secretary of Defense McNamara to stop surplus sales at the present time, as they are having an adverse effect on national production and the economy.

The letter follows:

DRAVO CORP.,
Pittsubrgh, Pa., March 2, 1961.

Hon. ROBERT S. MCNAMARA,
Secretary of Defense,
The Pentagon, Washington, D.C.

DEAR MR. SECRETARY: Recently the Government through its consolidated surplus sales office, specifically the Atlanta (Ga.) General Depot under the direction of Cameron Station (address: Duke Street, Alexandria, Va.), Department of the Army, sold standby items under the designation of sale No. 61–22 January 24, 1961, specifically items 78, 79, and 80, all being harbor tugs. At the same time the Government offered for sale items 73 through 76, being 149-foot light tugs, ocean-going; these were, however, later withdrawn from sale when another Federal requirement for them developed.

Respectfully, we protest this sale and similar future sales as not being in the best interest of the shipbuilding industry or the national economy in this period of business recession. For some time now the shipbuilding industry has been distressed. The sale of surplus boats by the Government can only serve to depress it further and cause layoffs of employees.

A few years ago Dravo Corp. spent over a half million dollars to develop a revolutionary-type tugboat and upon conclusion of its successful test runs decided to build several of these vessels. We have been negotiating for the sale of these tugs, but already because of the Government action a slowdown has occurred, leading us to believe the prospective purchasers are contemplating either buying from a broker, or waiting for further sale by the Government of bargain tugs.

We are also manufacturers of heavy duty cranes. It is rumored the Government plans to dump its surplus cranes on the market. To a company like Dravo, employing over 4,000 people, this again means loss of production and jobs.

It is our earnest belief that in this period when President Kennedy is doing everything possible to stimulate the economy it is unfortunate, if not indeed inconsistent, for the Government to place surplus goods on the market, thus hampering the efforts of concerns like ours to keep our heads above water in a tight competitive market.

Sincerely yours,

W. E. CLARK,
President.

Education Problems

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I bring to my colleagues' attention the second and final installment of a two-part comment on the education situation by Dr. Eugene Myers, of Iola, Kans. Dr. Myers' comments have appeared as guest editorials in the Iola Register, Iola, Kans.:

EDUCATION PROBLEMS

(EDITOR'S NOTE.—Following is the second half of a commentray on educational problems by Dr. Eugene Myers, former chairman of the Allen County School Survey Committee. The first half, dealing with primary and secondary schools, appeared here yesterday.)

DEAR MR. SCOTT: 7. Now to elevate our sights to the field of higher education to see if there is any waste or continuation of primitive fantasies, the elimination of which might allow the poor taxpayer to rest easier on his couch.

Dr. Keller's report on the higher education survey concluded with three major recommendations.

(a) An immediate need of an additional 477,000 square feet of classroom facilities.

(b) An immediate increase of 20 percent in faculty salaries in order to retain our faculty.

(c) An increased enrollment of 25 percent in the next 5 years.

There was offered no plan for accomplishing the tasks which needed to be done, except by the same method that the Federal Government intends to do it—increase taxes.

However, Dr. Kirk, president of Columbia University, has reported a plan that might be worthy of consideration and which seems on superficial examination to be a solution to part of the immediate problem. Dr. Kirk suggest the universities and colleges convert to a trimster system, thus:

(a) Allowing the student to obtain a 4-year course in 3 years.

(b) A 25-percent increase in enrollment could thus be housed in present classrooms—continuing of course the replacement of obsolete facilities.

(c) The $6 million plus which we are now planning to use for expansion would be unnecessary.

(d) By extending the school from 36 to 42 or 45 weeks, faculty salaries would of necessity be increased, but the additional fees of the extra trimester would certainly aid in making such funds available (60,000 students times $100 per student equals $6 million).

8. Another aid to the taxpayer, student and parents of students, which has been achieved by some States, is being studied by others and which seems worthy of close scrutiny in Kansas is the organization of a statewide system under control of the State board of regents. They should be situated in such areas that the majority of the students would be able to live at home, have a minimum enrollment of 350, utilize existing private college facilities, where those colleges will accept some degree of State control during the first 2 years, and maintain a vocational school.

Such facilities would:

(a) Decrease the enrollment at the 4-year State schools, with a corresponding decrease in the expansion of those schools.

(b) Encourage more high school graduates to continue in school for 1 or 2 additional years, learning a skill which they can use to enjoy life more fully and to contribute their share of the taxes which the new frontier is going to allow us to contribute.

(c) Provide additional incentives for industry to move into Kansas.

(d) Decrease the cost of college education. (The prediction has been made that by 1970, the annual cost of a college year will be $3,400, or double the amount in 1960).

(e) Allow small private and denominational colleges to upgrade their faculty and curriculum.

One example of the junior college with a vocational school is the Coffeyville Junior College, where 65 percent of the high school graduates attend the college, although only 20 percent of the JC graduates continue to a 4 year college.

The above are only some of the sins of omission and commission which may be responsible for the Federal Government stepping into the void which we have created through apathy and the American version of ancestral worship. Federal aid, however, is not the messiah that will wash the educational system white as snow, for the crown of glory, which the proponents of Federal aid would keep glittering before us is that the Federal Government would have no control over the schools which are to be the recipients of the Federal blessing.

There is no assurance that additional money will alone improve the quality of education. When over 50 percent of the high schools of the State have fewer than 75 pupils enrolled and 267 high schools are rated by the State below a class "A" rating, it is doubtful that Federal funds distributed on a per capita enrollment basis will elevate the scholastic standards to any measureable degree.

Federal aid—if we must have it—however, could be a tremendous incentive to raise the standards of our schools. By limiting funds to those schools which maintain a certain standard of excellence, as defined by a qualified council of authorities in the field, a great improvement could be obtained; it is also possible that by doing this many school districts would find that Federal aid was unnecessary.

For some reason, which is not completely clear, the idea of any degree of regulation of Federal funds for education, sends chills through the entire body of educators as well as a good percentage of all American citizens. I know of no other area where Federal funds are dispensed on a loyal or State basis without some rules as to the method of distribution. We accept the idea of FHA loans, Hill-Burton funds, social welfare money, social security, highway funds and even a portion of the salaries of vocational agriculture and vocational home economics teachers, without having a bureaucrat peering at us at all times. In fact the papers took considerable space for several days recently to expose the contractor who failed to build a highway according to Federal regulations. If money for highways should be regulated why should not funds for education?

Yours truly,

EUGENE MYERS, M.D.

Back-Door Spending

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1961

Mr. FULTON. Mr. Speaker, in support of the passage of Congressman HOWARD SMITH of Virginia's resolution, House Resolution 125, and my similar resolution, House Resolution 186, I am asking to have printed in the CONGRESSIONAL RECORD, the editorial of the Pittsburgh Press for Sunday, February 26, 1961, entitled "Back-Door Spending."

The editorial follows:

BACK-DOOR SPENDING

In its first action, the newly packed House Rules Committee has smitten the taxpayer with a grievous action. It has voted 8 to 6 to bottle up a resolution which would have barred back-door raids on the U.S. Treasury.

For years, Congress has been permitting this "back-door" spending. It does this by authorizing Government agencies to "borrow" from the Treasury, instead of making specific appropriations for these agencies.

This "back-door" spending isn't counted in the budget. But it is spending all the same. And it is one of the reasons the national debt continues to pile up, all out of hand.

It is like giving a blank check to a profligate offspring. There are few, if any, limits on how much will be spent. And no control by Congress.

This is in direct violation of the Constitution, which plainly says:

"No money shall be drawn from the Treasury but in consequence of appropriations made by law."

In the House, a "committee against back-door spending" had been organized and 130 of the 437 Members had signed up. This group was back of the resolution eight members of the Rules Committee now have killed. Senator HARRY F. BYRD, Virginia Democrat, has a similar resolution in the Senate, and we hope the Senate Finance Committee will not treat it so recklessly.

The aim of these resolutions, as explained by Representative THOMAS M. PELLY, Washington Republican, one of the sponsors, is to "combat inflation, create confidence at home and abroad in our dollar, and give assurance to the taxpayers that their elected representatives can control the spending of their money."

As it is back-door spending enlarges the debt and stimulates inflation.

The elected representatives do not control Government spending, or even know the why and wherefore of it.

All this tends to diminish confidence in the dollar for the simple reason that unsound spending practices by the Government make people, at home and abroad, uncertain about the future value of the dollar.

As Senator BYRD says, the need for orderly and intelligent control of Government spending is "obvious." Nothing is more obvious.

G.E.'s Role in Nation's Security

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a report on General Electric's contribution to the jet engine business, as outlined to me by R. L. Miles, manager, relations and utilities operation of the small aircraft engine department, General Electric Co., in West Lynn, Mass.:

Congressman THOMAS J. LANE,
House Office Building
Washington, D.C.

DEAR CONGRESSMAN LANE: This year of 1961 marks the 20th anniversary of the jet engine business which began right here in Lynn in 1941. We here at the small aircraft engine department, of course, are proud of the role our engines have played in the Nation's security.

I thought you might be interested in an occasional note about the kind of progress we're making here with our engines and with our employment. The small aircraft engine department, as you may remember designs, develops, and manufactures small aircraft gas turbines for military and commercial aircraft.

Some notes of interest:

We shipped 138 engines in 1959, 339 in 1960, and built up to a rate that will permit us to ship 1,000 engines in 1961.

We started 1960 with 4,300 employees, added 600, and finished the year with 4,900. (Figure includes 550 employees at our Rutland and Ludlow, Vt., plants.) In 1961 we anticipate increasing by another 300 bringing the employment total to 5,200.

The 3-week strike in October was a setback not only to individuals but to the department. We were, and still are, concerned about the complicated Massachusetts law which makes it virtually impossible to obtain injunction relief prohibiting violence and misconduct on the picket line.

Our department has demonstrated its confidence in this business by continuing to invest considerable sums of money in development work and additional facilities here in Lynn.

In 1961 we are involved not only with a busy production schedule, but a vigorous worldwide marketing effort. We'll keep you informed on our progress.

Both Gerhard Neumann, our general manager, and myself extend to you best wishes for an outstanding congressional year.

Sincerely yours,

R. L. MILES,
Manager, Relations and Utilities Operation.

International Voluntary Services

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD I want to include an article entitled "So You Want To Be a Volunteer," prepared by my good friend, Dr. Daniel Russell, a field program officer for International Voluntary Services, Inc.

Dr. Russell is a professor in rural sociology at the A. & M. College of Texas and was a former instructor of mine when I attended his course. Dr. Russell has always manifested a sincere interest in world affairs and has contributed much of his own money and time in an honest endeavor to bring about friendly relations with foreign countries. He has actively been engaged in CROP—Christian Rural Overseas Program—and other movements of this nature. He is a good Texan, a wonderful American, and I believe that his article will be of interest to a number of Members of this body:

SO YOU WANT TO BE A VOLUNTEER

(By Daniel Russell)

Just before you drop your application in the mail you should pause long enough to answer the question, "Why do I want to be an IVS volunteer?"

Do you want to sign up so that you can travel abroad, visit and live in "enchanted lands" you have read about so that you may know and understand "strange" people in distant places? Such an objective would be valuable for your country because the United States, the greatest of the free world powers, needs many of its people to know better the people and their problems in foreign lands. It would hardly be worth the sacrifice to you, however, to take 2 years out of your life just for this purpose.

You may want to be a missionary to these people. If so you may be sadly disappointed because absolutely no preaching or proselytizing is allowed. You will be sent back home at once if you start it. You will be working under a contract between your Government and the host government where you will live. You are a U.S. Government employee under contract as well as an IVS volunteer. The Founding Fathers of our country made it clear and plan that church

and state must be forever separate. You are in name and in fact a social and economic missionary to raise the level of living of the people with whom you work and bring them a better way of life. Christ, you remember, spent more of His time on this earth improving this area of peoples' lives than He did in preaching. Also the way you live among these people every day in the true Christian spirit may preach a greater sermon than all the words you could utter. This will be excellent training for you if you want to serve your church later as a missionary.

Do you want to be a volunteer so that you can render great service to needy mankind? This you certainly can do, but this, as worthy as it is, is hardly enough. Just a "do good" attitude will hardly be enough to sell your idealism overseas. The people with whom you live will not follow you if you have a condescending or superior attitude because they want to think of you as an equal, as a friend, and a neighbor. People in these countries have a civilization that is thousands of years old, while American civilization is a babe in the wilderness. You will learn more from them than you will teach them. Put yourself in the attitude of the student. Then the people will accept you, adopt and use gradually your great American know-how and give to you graces and arts of living that will mean much to you.

Infact, should you not want to be a volunteer because you will have a chance to infinitely broaden your horizon, mellow and enrich your personality, test your strength of character, temper and harden the weak spots of your lives, make you tolerant and understanding of other people, teach you lessons of self reliance and independence, test your life's training and skills, teach you to adjust to difficult and quite different situations? In other words are you not getting your final testing for the great life's task that lays out before you? Some of us who have had rich foreign service late in life can see how much better it would be for us if we had gotten this experience earlier in life, as you have a chance to do.

You should because of this experience have an infinitely richer life as a foreign service worker, teacher, research person, missionary for your church, writer, artist, extension worker, business man or what-not. If this is your aim come on aboard. If you expect it to be easy don't apply. The going will be rough some time, but never so rough to cause your fine spirit to despair. You will be living out away from the population centers with conveniences often comparable to what your pioneer American forebearers had, but if you are not afraid of such inconveniences the experience will be mountain top for you. You then will have a chance at world travel, to render service to your fellow man, to be a real missionary of the kind described, and broaden yourself for your future life's work no matter what field you chance to follow.

You as American youth are ambitious and eager beavers who want to get at the job and get it done at once. Put some brakes on this part of your personality for a while. Many adult foreign service personnel are told to wait 6 months before they start a program. You should not have to wait this long. However, spend the first 2 or 3 months studying the language intensively (help will be given here), meeting the people, analyzing the situation and preparing yourself for the work ahead. If you can team with a volunteer of several months' experience it will help a lot.

Because you are living in an undeveloped area, don't get the idea you can go back to nature, with abbreviated, dirty, slovenly dress, unshaven beards or other ill manners. Dress, shave, act like you do on the farm in rural America. These people are seeing America through you. What kind of America are you letting them see? You are not an individualist, but a member of a team. Only by team spirit, loyalty, and cooperation can success be obtained. You have an adult leader. You follow him as you do your adult leaders back home, your parents, your county agent, or teacher. If he tells you to wash your hands and put on a shirt before coming to the dinner table, or suggests that you ought to get a shave or haircut, he does it for your own good.

In America a favorite pastime is criticizing the Government and public officials. Don't expect the same prerogative overseas. You are a guest under contract with the local government. If you cannot say something complimentary, be quiet. Certainly you will learn of graft, but remember that is back home, too. Remember you do not like to hear or read about foreign people criticizing our Government. The shoe is on the other foot now. Sometimes native people will try to get you to express yourself unfavorably about the local government and local government officials so that they can go tell their officials what Americans think of them. Because of snares and traps, be careful.

In America we rightly honor our youth and give them high positions of responsibility. In the Orient and most of the rest of the world, they revere and show deference only to the elder. Elders are approached by youth with diplomacy, deference, and humility. Don't ever criticize, correct, and show an elder person to disadvantage. Oriental people love their children dearly. Often an elder can be won through his children by praise, flattery, and special attention. However, do not ever do anything for or with the children without the approval of the elders. Subtly and indirectly valuable lessons can be taught and demonstrations given.

There are diverse social forces in foreign as in American communities, only more so. These forces must be understood, won over, or at least neutralized for you to have success. These forces may be Buddhist bonzes, Moslem sultans, Catholic priests, Protestant missionaries, army commandants, police chiefs, provincial governors, medicine men, Animists, schoolteachers, village council chiefs, businessmen, opium merchants, or a combination of all these and more. Most of you likely will be Protestant, although a volunteer can be one of any faith or possibly no faith at all. Be friendly and cooperative but be careful not to show partiality to the Protestant missionaries. The first job you may be asked to do is to help the bonze repair the Buddhist temple. If you can do it, pitch in with all your might and help. Many friends and supporters may be gained. If there is a church of your choice in the village, attend as regularly as you can. They will expect that of you, but be friendly and cooperative to all.

Now you see why you had better not rush into your job as anxious and ambitious as you are. Take plenty of time to analyze the situation carefully before you set forth. Yes, you will come to know some announced Communists. Don't cooperate, but live around him and all others so as to make a blank wall out of his propaganda of what Americans are like. Thus, you will heap a ton of coals on his head and neutralize his influence where he works.

You are a volunteer so your pay is $60 a month so you will never accept the place for financial reason. All of your travel, maintenance (room, board, and laundry), and clothes are furnished to you. If you do not drink alcoholic beverages or smoke heavily, or have to be entertained often by commercialized amusements, the $60 is quite adequate and some to spare. It is a wonderful opportunity to learn, make a contribution, and live ruggedly for 2 years. Why not come aboard? Be a volunteer.

President's Endorsement of "Soapy" Hard To Swallow

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. CHAMBERLAIN. Mr. Speaker, we are all acutely aware of the unrest, confusion, intrigue, and tension that makes the continent of Africa the tinderbox of the world; and we are all equally aware of the furor that our new Assistant Secretary of State for African Affairs has fanned with nearly every breath he takes on his current tour. I realize that many are genuinely alarmed about the effect this visit may have upon our world position and I thought that my colleagues might be interested in a Michigan view of its ex-Governor's African diplomacy.

Under leave to extend my remarks, I wish to place in the RECORD an editorial from the Flint (Mich.) Journal, dated March 2, 1961, and entitled, "President's Endorsement of 'Soapy' Hard To Swallow." Certainly if we are to be concerned with our prestige in that troubled and crucial area, already none too good, we must make every effort to insure that our position is not further jeopardized.

The editorial follows:

IN OUR OPINION: PRESIDENT'S ENDORSEMENT OF "SOAPY" HARD TO SWALLOW

In view of the diplomatic storm which the ill-conceived statements by G. Mennen Williams blew up in Africa and Great Britain, it is difficult to swallow President Kennedy's vote of confidence for our former Governor.

The President reminded those in attendance at his Wednesday press conference that "the problems of Africa are not easy." As Sherlock Holmes was wont to say "that, my dear fellow, is elementary." Most of us are well aware of the seriousness of the African situation.

Mr. Kennedy also pointed out that "there are a good many conflicting forces that are loose in Africa as well as in all parts of the world."

If anything, this might be described as a classic understatement. The African fuse is burning dangerously short. At the moment, that is the trouble spot of all trouble spots on the cold war front.

Because the African situation is so precarious is precisely why Williams' statements were so inflammatory. As we always have contended, such a delicate international situation should be entrusted to a skilled, highly trained statesman. Our representative to Africa should not be an amateur diplomat being rewarded for his political influence in this own backyard.

Mr. Kennedy said he did not consider Williams' statement about "Africa for the Africans" to be very unreasonable.

It was not only unreasonable, but unnecessary and thoughtless. "Soapy" tried to repair the damage by later explaining that he was talking about all people who felt that they were Africans, whatever their color or race might be. However, if he had studied or read anything about Africa he would have realized that in Africa the term "African" generally refers to the original inhabitants of the continent, and that the very statement he used was the slogan of militant African nationalists.

As Michigan's ex-Governor he could express any opinion he might have about Africa, or any other part of the world. Few outside this State would have given two hoots what he thought about the situation. But as the representative of the United States on a special mission to Africa, his apparene off-the-top-of-his-head remarks was accepted as our country's official attitude.

Mr. Kennedy's statement that he is "wholly satisfied" with "Soapy's" conduct in Africa not only must be interpreted as an endorsement of making political plums out of such strategical important assignments, but could also indicate a determination to follow a go-it-ourselves policy in Africa.

That Williams should have put our President in a position where he was forced to take a stand in opposition to one of our Western allies is only a further indication that he is out of his element as a foreign diplomat.

The African situation is complicated enough without needlessly creating new friction. The mission of our representatives in any country, and especially in Africa, is not only to improve relations and instill confidence among neutrals and antagonists, but to maintain and strengthen ties with our allies.

To accomplish this it is as necessary to know, among other things, when to keep your mouth shut and be a good listener as it is to know when to speak out. This, as the people of Michigan long ago discovered, is not Williams' cup of tea. We hope it will not be too expensive a lesson for the President to learn.

Boston College Students Support Peace Corps

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. REUSS. Mr. Speaker, I should like to include in the RECORD the text of a petition which was sent to me by Miss Kathleen Lorden, secretary of the World Relations League of Boston College. Over 600 students at that college signed this petition. The petition follows:

The undersigned students of Boston College, recognizing the need for trained workers in the underdeveloped countries of the world, firmly believing that there is an untapped reservoir of American young people anxious to provide this assistance; strongly recommend the following provisions be included in a Peace Corps bill:

The U.S. Government shall form a corps of educators, professionals, and trades people in an independent agency under the International Cooperation Administration.

This corps shall be a voluntary program. Its members shall be a maximum of 5,000 in number.

This corps shall have a minimum service time of 3 years. Service in the corps shall be accepted in lieu of active military service.

Persons in the corps shall be at least 21 years of age. They shall be qualified to give constructive aid in underdeveloped countries. They shall have a sincere desire to help the people of underdeveloped countries help themselves.

Persons entering the corps shall participate in an intensive 4- to 6-month program studying the language and customs of the country in which they will serve. They will then serve a 6-month period for advanced training under supervision in the country to which they are assigned.

Salaries paid to members of the corps shall be equal to those paid to personnel of the Armed Forces.

Resolutions Adopted by Textile Workers Union of America, AFL–CIO

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions adopted by the executive council of the Textile Workers Union of America at its recent meeting.

RESOLUTION ON UNEMPLOYMENT

The problem of unemployment has mushroomed into the No. 1 domestic issue facing the American people. In January 1961, unemployment jumped to a high of 5,385,000, or 6.6 percent of the labor force, on a seasonally adjusted basis. Forecasts are for an even higher rise in unemployment in the immediate future.

This Nation cannot tolerate the continuance of such a high rate of unemployment. As President Kennedy stated in his message to Congress on economic recovery and growth, "The Nation cannot—and will not—be satisfied with economic decline and slack. The United States cannot afford, in this time of national need and world crisis, to dissipate its opportunities for economic growth."

Employment in the textile industry has been severely hit by technological advances which have cut into jobs at an annual rate of 5 percent. Over the last 10 years, more than 400,000 production workers have lost their jobs, although the industry produces the same volume of cloth as it did then. Some 700 mills employing approximately 220,000 workers were completely closed down. Others were squeezed out by the reduced need for their products.

Large-scale textile unemployment has created depressed communities in the States along the Atlantic seaboard, running from New England to the South. Tens of thousands of former textile workers seek employment, but have been unable to find it in their own communities, and their search in other communities remains unrewarded.

A program of immediate relief to these workers must be matched with a plan for long-term revitalization of the total American economy and the textile industry: Therefore, be it

Resolved, That the executive council of the Textile Workers Union of America, AFL–CIO, CLC, urges the President and Congress to adopt an adequate, immediate program of relief and aid to the unemployed to maintain and rehabilitate their competencies, well-being and morale and fit them for new jobs. Such a program should include:

1. The promotion of economic growth to assure full employment.

2. Provision for a 35-hour week with no reduction in pay.

3. The organization of a National Development Council to initiate a crash program for innovating new products and services.

RESOLUTION ON NLRB INVESTIGATION AND AMENDMENTS TO TAFT-HARTLEY ACT

In many parts of our country today, an unorganized worker must be cast in almost a heroic mold to carry out his desire to join a union. Despite the theoretical protection expressed in the language of the Taft-Hartley law, many prounion workers are virtually helpless before the intense and unlawful pressure anti-union employers exert upon them.

A wide variety of threats, as well as discharges and even plant shutdowns, are typical of the methods employers are using because the National Labor Relations Board and the Taft-Hartley Act are not performing the functions Congress intended them to. As the Textile Workers Union of America has pointed out in the past, the National Labor Relations Board has failed to meet its responsibility to protect workers in their right to organize.

Part of this failure is due to laxity. The Board moves with incredible slowness and its most serious dereliction is evidence in discharge cases involving lowly paid unorganized workers who cannot afford to be out of work for weeks, let alone years.

Another part of this failure is due to antilabor bias. The Board often grants the employer immediate relief by seeking injunctions against unfair practices by unions; it does not seek comparable action against employers when the situation is reversed. In fact, the Board has stretched and twisted many Taft-Hartley provisions to the utmost in order to avoid protecting workers in organizing situations.

Still another part of this failure is massive incompetence and indifference. The pertinent provisions of Taft-Hartley which are designed to protect workers have been in effect for more than 20 years and are derived from the original Wagner Act. Their principles are well known. Yet, through subtleties and trickery, antiunion employers can single out and fire prounion workers. Only vigorous and imaginative investigations can detect such violations; instead, we get routine National Labor Relations Board investigations which amount largely to going through the motions of enforcing the law.

Our union has outlined the changes that must be made if Taft-Hartley is to insure that its preamble, which guarantees the right to organize, has real meaning. These include revocation of the free speech immunity now enjoyed by employers; a change in the agency rule to make employers responsible for the conduct of union busters acting in their behalf; a restoration of prehearing elections to avoid the deadly toll of stalling and delay; adequate penalties for employers who chronically and deliberately commit unfair labor practices, and a return to the principle of uniformity in labor laws governing employers engaged in interstate commerce, so Federal law shall prevail over State laws.

TWUA has documented in a 77-page white paper entitled "Almost Unbelievable," what happens to workers who must rely upon the National Labor Relations Board and Taft-Hartley to protect their rights. The story this paper tells, coupled with the experiences of other unions, points up the urgent need for a remedy. That remedy lies in a sweeping investigation of the National Labor Relations Board and its administration of the Taft-Hartley Act.

The executive council of the Textile Workers Union of America, AFL–CIO, CLC, is gratified to learn that the House Labor and Education Committee has decided to launch such an investigation and that its chairman has already moved to have a subcommittee undertake this task. We are convinced that such an investigation will corroborate what we have charged, and we are hopeful that a thorough and exhaustive study will lead

to changes in the Taft-Hartley Act and eliminate the injustices of its administration.

To help achieve this end, we offer the House Labor Subcommittee our fullest cooperation, backed up by the documented record of our experiences in this area over the last 14 years.

RESOLUTION ON GATT COMMITTEE ON MARKET DISRUPTION

The newly formed GATT Committee on Market Disruption is charged with the responsibility of studying instances of market disruption caused by the rising volume of international trade. The textile industry has been chosen to be the first area of consideration.

This Committee representing all of the contracting countries of the General Agreement on Trade and Tariff was organized at the initiative of the U.S. Government represented in the person of Douglas Dillon, then Under Secretary of State and now Secretary of the Treasury.

The textile industries of many countries which enjoyed a sharp upturn in activities in 1959 and 1960 are beginning to suffer from economic setbacks. The United States and Canadian textile industries have been sharply affected by recessions.

Similarly, the Japanese, Hong Kong, and Taiwan textile industries report widespread unemployment, idle capacity and price cuts. This condition will spread if the current worldwide economic slowdown spreads through the non-Communist world.

Some of the difficulties confronted by these countries is the result of the haphazard growth of new textile capacity throughout the world. New plants have been built to export goods at a time when the world demand is unable to absorb them without concurrently causing injury to older textile industries. What is necessary above all else is a coordination of national programs for textile expansion to avoid such overexpansion and to control exports in such a manner as to permit newer countries to enjoy an increasing volume of world textile trade without injuring the established industries or interfering with the industry's progress and development: Therefore be it

Resolved, by the executive council of the Textile Workers Union of America, That we urge the U.S. Government to immediately petition the GATT Committee on Market Disruption for the development of a system of multilateral agreements on international textile trade and to guide in the development of textile producing capacity in the newer countries.

RESOLUTION ON TEXTILE DEVELOPMENT AGENCY

Although the textile industry has been advancing technologically, it has continued to lose markets to competitive materials such as paper and plastics, with the consequent closing of mills and displacement of workers.

New machines and methods of production have reduced labor requirements in the remaining mills, with the result that we have had an overall reduction in employment amounting to more than 400,000 in the last 10 years.

The textile industry has found enough money to finance the introduction of new machinery and methods which have reduced labor requirements, but its investments in research are among the lowest of all American industries.

Its failure to devote sufficient funds to research and development has limited its ability to find new uses for textiles and to open up new markets for its products, a practice which would offset market losses and create new employment for textile workers. Other industries have been able to do so. The textile industry should follow in their footsteps by using research and development to open up their markets: Therefore be it

Resolved, by the Textile Workers Union of America, AFL–CIO, CLC, That we urge the establishment of a permanent Federal Textile Development Agency, composed of representatives of labor, industry, and the public, which shall conduct or arrange for research designed to develop new uses, products, and markets for textiles.

RESOLUTION ON LEGISLATIVE OBJECTIVES

The executive council of the Textile Workers Union of America, AFL–CIO, CLC, herewith lists a set of high priority legislative targets in its efforts to help correct the ills of our economy and a variety of social inequities.

1. A $1.25 FEDERAL HOURLY MINIMUM WAGE WITH BROADENED COVERAGE

The proposals recently made to Congress by the Kennedy administration are so modest in scope that they should be enacted without delay. From the standpoint of social justice and economic necessity, however, we believe the coverage sections of this proposed legislation should include many more wage earners than are contemplated by the administration's recommendations. There is overwhelming evidence that the $1.25 hourly minimum for those workers already under the law should be made effective at once, instead of progressing to $1.15 now and arriving at the $1.25 figure 2 years hence. However, in view of the urgent necessity to stimulate our basic economy by whatever increased purchasing power that can be generated now, we support the administration's minimum wage bill in its present form, provided that no deletions in coverage or any other weakening provision are inserted.

2. SUPPLEMENTARY UNEMPLOYMENT INSURANCE BENEFITS

Because unemployment in the textile industry, since 1952 has been consistently at higher levels than the national average, we are more acutely aware than most other groups of thep rivations and suffering inflicted upon jobless workers because of the shocking inadequacy of unemployment insurance laws in most States of the Union. Every effort must be exerted to secure an interim measure along lines of the recommendations made by the Kennedy administration, which will provide immediate relief to workers whose benefits have been exhausted and who have no prospect of reemployment in the months ahead.

3. FEDERAL STANDARDS FOR UNEMPLOYMENT INSURANCE

There is an urgent need to press once more for legislation requiring all States to improve their unemployment insurance standards to meet uniform and higher minimum Federal standards. The fact that stopgap or emergency legislation is also being introduced to help workers currently unemployed must not diminish our campaign to win enactment of a bill similar in scope and purpose to the measure introduced on several occasions by John F. Kennedy, when he was a Member of the Senate, and by Representatives Karsten and Machrowicz.

4. MEDICAL AID TO THE AGING AND IMPROVED SOCIAL SECURITY

Militant support is needed of legislation to provide medical aid to the aging under social security and along the lines laid down in the Forand bill of 1960. We can testify from firsthand knowledge and careful observation to the pressing necessity for speedy enactment of some type of Forand bill which will provide, as a matter of right, essential health protection for persons covered by the Social Security Act. At the same time, we endorse the enactment of increases in minimum social security benefits which have been recommended by President Kennedy.

5. AN EXPANDED HOUSING PROGRAM

A program of this type not only can help the Nation take a giant step forward in slum clearance and in meeting the housing shortage, but it can also help provide the economy with the strong stimulus needed to end the slump which grips our Nation.

6. FEDERAL AID TO EDUCATION

Education is in trouble in this country for two reasons: Public school enrollment since 1946 has grown at twice the rate of the total population and will continue to grow; in addition, rapid scientific and technological advances demand a higher quality of education. Even the Eisenhower administration admitted a shortage of 130,000 classrooms 2 years ago and it is even more drastic today. Moreover, the average wage for all public school teachers stands at only $4,800 a year; thus, it is impossible to keep good teachers in our system. There should be no delay in securing enactment of a sound measure to provide Federal grants to the States for more classrooms, and to support teachers' salaries.

The above items head a list of legislative objectives which the executive council of the Textile Workers Union of America, AFL–CIO, CLC, considers basic to its objective of helping to strengthen the economy and eliminate social injustice.

We urge all of our affiliates to work energetically with us and the rest of the labor movement to make them a reality in this, the 1st session of the 87th Congress.

A Challenge in Civilization

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Worcester Telegram dated Friday, March 3, 1961, entitled "A Challenge in Civilization." I recommend this excellent editorial which sums up the legitimate arguments in favor of a Cape Cod National Park.

A CHALLENGE IN CIVILIZATION

Cape Cod's national seashore project will come up for hearing in Congress on Monday and Tuesday. The importance of these hearings and what Congress decides to do on the basis of the facts presented is so great that no description is really adequate.

If the plans are approved in the form presented by the National Park Service, the fine, wild beach which stretches along the full ocean forearm of the cape, can be saved for the public and for future generations.

If the public-be-damned group wins out, the developers will make quick profits and the spoilers will come in with their bulldozers, their asphalt paving, their trailer parks, and the cheap, dreary desolation that has already swallowed up so much of our New England ocean frontage.

If the park plan can be passed without being cut to pieces in the process, Massachusetts will enjoy just about the last stretches of virgin seashore on the Atlantic coast. If the commercial interests have their way, Massachusetts will lose its last and best natural resource.

The loss will be permanent. And the denial to our children and our grandchildren of what we have enjoyed in our own time will be just about complete.

Actually, it is to be expected that the park plan will require some compromises. Senators SALTONSTALL and SMITH have studied the requests for excepting certain areas. In fairness to communities where land takings might really involve public sacrifice now and where the project might not be seriously hurt, they have recommended changes.

But reductions in the proposed park simply for the convenience of individual interests are quite another thing. Our natural resources belong to all of us. They belong, also, to the Americans who will want to use them in decades and centuries to come. And there are moral as well as practical obligations for preserving and protecting the beauty of this seashore region while there is still time to do so.

Congress, we hope, will take into consideration that the conservationist is always at a disadvantage when he sets his arguments against commercial spokesmen. The commercial groups can bring more political pressure to bear. And political pressure is always apt to overwhelm the best pleas for saving what we have—saving is simply because its natural state is a delight to the eye and the spirit.

But the ability to weigh these values fairly is a measure of civilization. We hope Congress votes for civilization instead of commercialization.

H.R. 4510, Corn and Feed Grains Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM H. HARSHA, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. HARSHA. Mr. Speaker, I realize that these remarks may be a little premature, but I offer them at this time in the hope that my colleagues may have an opportunity to read them before voting on H.R. 4510 which is scheduled for debate and vote tomorrow.

The Kennedy administration has made its farm move a la Orville Freeman and a disastrous move it is. H.R. 4510, corn and feed grains bill represents a broken campaign promise—not to attempt controls without farmer referendum. Not only does it break this promise but it flaunts the mandate of the farmer right back in his face. Farmers overwhelmingly voted corn allotments out in 1958 and now the administration is completely disregarding this mandate and forcing controls and allotments on the farmer when he has expressed his will to the contrary.

This is a complicated, dangerous proposal for a special 1-year program for feed grains. It is touted as a stopgap program. Actually, it is a topoff to plans for other farm products. As has been previously stated by Charles Shuman, it is an "entering wedge to take control of marketing all farm products." There is no better place to put that wedge than in feed grains since they have heavy influence on all livestock, dairy and poultry farming.

This is a move toward socialized agriculture. It is certain to cripple for all time the free enterprise system in the field of agriculture and further hamstring the farmer. This bill will put all of the grain dealers in the country out of business and the Government would take over the fundamental responsibility of buying and selling these items. The Government would be the market for these grain products. It would discriminate against the farmer who has been carrying out good soil management programs and reward the farmer who has abrused his farm by overplanting. It would provide an incentive to farmers to overproduce and increase per acre yield, thus adding to the surpluses rather than decreasing them.

This type of legislation provides a windfall for the large corporation farmer and deprives the family farmer of earning a decent livelihood.

If this law passes, it will be the first time one man has held in the palm of his hand the absolute right to control supply and price. It gives the Secretary of Agriculture, whoever he may be, the power to drive feed grain prices down to levels he chooses, simply by dumping CCC stocks—the dictatorial power to use surplus Government stocks to manipulate prices and force compliance.

The bill has been labeled as voluntary, but it is anything but—it is quite compulsory. A 1-year land-retirement program will be of no consequence. In order for a land-retirement program to function successfully, land must be retired from production for a number of years.

In my opinion, this measure will resolve into a complicated, expensive, surplus-producing blank check for the Secretary of Agriculture, depriving the farmer of more of his rights and freedoms, ending free enterprise in agriculture, and resulting in socialized farming.

I recognize the need for sound legislative action to deal with wheat and feed grains, but H.R. 4510 in its present form is not sound legislation and should be defeated.

The Vocabulary of Brotherhood

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. RODINO. Mr. Speaker, I wish to recommend to my colleagues a recent editorial which appeared in the Bloomfield Independent Press. This is one of the most eloquent statements on the meaning of brotherhood which has come to my attention:

THE VOCABULARY OF BROTHERHOOD

Brotherhood.

What is brotherhood? It is not a word to be used in glib, hackneyed phrases at public gatherings but forgotten in the real vocabulary of private life.

Brotherhood is a feeling, a personal emotion, an individual response to the hurt or the wound of another human. It is the anguish apparent in the horror and shock with which the Secretary General of the United Nations announced the murder of six Congolese prisoners. It is the feeling of personal responsibility that causes the hurrying shopper to pause to comfort a lost child.

It is the deep compassion that drew a dying Dr. Dooley "home" to Laos for Christmas. It is feeling on your own flesh the light lick of the whip that mutilates the flesh of another human in distant Africa. It is the stifled sob in your own throat, that echoes the keening anguish of an Asian mother cuddling the deathstilled form of her undernourished child.

It is the understanding of our own guilt with which we accept with a "meaculpa" the hate reflected in the angry young faces of Cuban Communists.

It is caring enough to try to understand our fellow humans, it is according to others the dignity we accept as our own natural right, it is attributing to men of all races and creeds the same nobility of purpose with which we try to guide our own actions.

Excise Tax on Automobiles

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. CHAMBERLAIN. Mr. Speaker, it is gratifying, indeed, to know that other municipalities in Michigan are joining the city of Flint in expressing support of H.R. 3647, the bill to eliminate the 10-percent discriminatory Federal excise tax on automobiles.

Under leave to extend my remarks, I wish to call my colleagues' attention to the resolution adopted by the Council of the City of Dearborn, Mich., on February 21, requesting, unanimously, that the tax be removed.

I believe that as more and more local officials become aware of the depressive effect of the tax on automobiles production and the stimulation that repeal of the tax would have, not only in automotive center but throughout the entire country, we will be hearing from many other municipal organizations urging that action be taken by the Congress in this matter as soon as possible:

FEBRUARY 21, 1961.

The council convened at 8 p.m., President of the Council Ralph B. Guy presiding. Upon rollcall, there were present: Councilmen Baja, Bondie, Dombrowski, Fordell, Hart, ImOberatag, and President of the Council Guy; absent, none. A quorum being present, the council was declared in session.

From Charles A. Mobley, mayor, city of Flint, Mich., submitting suggestion that House bill 3647, eliminating the 10-percent Federal excise tax on motor vehicles, be endorsed.

By Councilman Baja supported by Councilman Bondie.

Whereas House bill 3647, eliminating a 10-percent Federal excise tax on motor vehicles, has been introduced at the present session of Congress; and

Whereas it is believed that elimination of this Korean war nuisance tax, imposed then to brake car production, would stimulate the depressed automobile industry; and

Whereas the city of Dearborn, being home of the Ford Rouge plant, is vitally affected by the discouraging conditions in the industry as evidenced by unemployment rate of more than 10 percent: Be it

Resolved, That the mayor and council of the city of Dearborn do hereby endorse House bill 3647 and strongly urge its adoption; be it further

Resolved, That the city clerk is hereby instructed to transmit a true copy of this resolution to each member of the Michigan congressional delegation.

The resolution was unanimously adopted.

Don't Spoil the Peace Arch Park

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. WESTLAND. Mr. Speaker, again I wish to bring to the attention of the Members of this body the attempt that is being made to construct fences in the International Peace Arch at Blaine, Wash. It is the only place along the 3,000-mile boundary between Canada and the United States where a fence will exist if the Bureau of Public Roads continues to hold to its policy.

An editorial that appeared in the Bellingham (Wash.) Herald February 27, 1961, points out the problems involved. Safety, of course, is desirable, but the record shows that there has never been an accident to an automobile nor an injury suffered by a passenger or pedestrian since the park opened in 1921. Indications are this safety record will continue.

Mr. Speaker, I agree with the Herald that the full beauty and usefulness of this distinctive and historical park should be preserved. Under leave to extend my remarks in the RECORD, I include the editorial:

DON'T SPOIL BEAUTY OR FUNCTION OF PEACE ARCH PARK

If it's a question of safeguarding the lives of children, that's one thing. If it's simply an attempt to make a unique situation conform to a general pattern, that's another.

We're speaking about the international border at Blaine where unarmed rebellion is erupting against what the natives construe as an unreasonable bureaucratic ruling.

The problem is that Highway 99, in its long journey from Mexico to Canada, goes through Peace Arch Park at its northern extremity. Interstate Highway regulations call for fencing off freeways in populated areas to protect lives. Highway agencies of the various States also are on record for this access control provision.

State highway officials indicated they feel that some obstruction is necessary and promise attractive landscaping to preserve the park beauty. Which still leaves the problem of access between different parts of the park. Movable fence sections which could be folded back during the Peace Arch observance or other such large get-together were tossed out as a possibility.

Meanwhile, Congressman JACK WESTLAND has labeled the Federal regulation as "silly" and indicated that he will intervene in the National Capital.

For our part, we sympathize with any safety requirements which are based on the specific situation, but whether a fence is necessary for the short stretch from the southern park limit to the border stations seems questionable. Speed limits will be in force and drivers must slow down and stop to clear customs and immigration, so it is not a matter of needlessly slowing down through traffic.

Whether a satisfactory fenceless solution can be worked out is still to be determined. We earnestly hope the interested parties can come up with something which will preserve the full beauty and usefulness of a distinctive and historical beauty spot along the border.

No "Distress" Here

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BATES. Mr. Speaker, I wish to insert in today's RECORD an editorial which appeared in the Haverhill Gazette of January 31, 1961, under the heading of "No 'Distress' Here." Haverhill, Queen of Shoe Cities, continues to maintain her leadership in shoe production and as indicated by the editorial writer "It is unfair to a city which is in good shape to have the word spread around that it is in trouble."

The editorial follows:

NO "DISTRESS" HERE

Inclusion of Haverhill in a U.S. Department of Commerce statistical grouping with Lawrence has resulted in an unfortunate impression being created in this State and throughout New England.

Lawrence, because of a high unemployment figure, is classified as a "distressed" area.

Haverhill, which does not have anywhere near the same unemployment percentage as Lawrence, comes under the same classification in all the statistics that are being compiled.

Proof of the incorrect impression that is being created has come to our attention twice in the past week. Last week Gov. John A. Volpe made it a point to mention Haverhill as one of the cities which could be considered a "distress" area. In a statement yesterday, our new U.S. Senator, BENJAMIN SMITH, of Gloucester, also specifically named Haverhill as a city that will benefit by proposed legislation affecting areas with substandard employment.

The only way in which Haverhill is distressed at the moment is through the concern some persons are expressing about this classification.

This city is in considerably better shape than some of its neighboring communities in Massachusetts. It should not be placed in the same category with those cities which are experiencing real employment problems.

It is unfair to those cities which need help badly to include communities which have only minor problems. It is also unfair to a city which is in good shape to have the word spread around that it is in trouble.

Haverhill is grouped with Lawrence in a metropolitan statistical district because Haverhill does not have the required 50,000 population to become the "core city" in a district of its own.

For this same reason, Haverhill cannot form its own regional planning group and under current regulations must be lumped with Lawrence to get Federal funds for regional planning, if it cares to engage in such activity.

Haverhill thus loses its identity and individuality as far as governmental statistics and classifications are concerned.

This is unfortunate, because detailed statistics and studies involving this area do not separate the two cities, and it is virtually impossible to tell what figures apply to Haverhill and which figures concern Lawrence.

It might even be that Haverhill will benefit from legislation designed to help "distressed areas." There may be many advantages to that classification, and certainly every avenue should be explored if and when the legislation is passed—and it now seems likely that it will be passed by Congress in the near future.

But it behooves every city official and every agency to make clear to all that Haverhill is not a "distressed" city, despite the classification in that category by the U.S. Government.

The Only True Deterrent to War Is Power Sufficient To Win if War Is Forced Upon Us

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Gen. S. E. Anderson, commander, air materiel command, to Holloman Squadron, Arnold Air Society, at North Carolina State College on February 7, 1961. I join with General Anderson in his tribute to the vision and foresight of Gen. "Hap" Arnold:

ADDRESS BY GEN. S. E. ANDERSON, COMMANDER, AIR MATERIEL COMMAND, TO HOLLOMAN SQUADRON, ARNOLD AIR SOCIETY, RALEIGH, N.C., JANUARY 7, 1961

It is a pleasure to visit the campus of North Carolina State College to share this evening with you. North Carolina, as you have been told, is my native State. I lived in the State until I was 18, when I left to enter West Point. North Carolina can well be proud of this institution, which has gained recognition throughout the country as a leader in scientific research and training, especially in the field of nuclear energy.

I take pleasure also in meeting the members of the George V. Holloman Squadron of the Arnold Air Society. You chose well in naming your squadron after the late Colonel Holloman, one of your distinguished graduates. His early research in guided missiles and automatic flight and landing of aircraft produced milestones in aviation history.

This society represents a fitting tribute to Gen. "Hap" Arnold and the part he played in building an aerospace force second to none. Much of the future leadership of the Air Force will come from the Air Force Reserve Officers Training Corps, and especially from those who are members of the Arnold Air Society.

Back in 1944 General Arnold recognized the Air Force's continuing need for the services of the best scientific brains in the country. He set up an organization of scientists known as the Army Air Forces Scientific Advisory Group.

"I told these scientists," General Arnold later wrote, "that I wanted them to think ahead 20 years. They were to forget the past; regard the equipment now available only as the basis for their boldest predictions. I wanted them to think about supersonic speed airplanes, airplanes that would move and operate without crews; improve-

ments in bombs; communication systems; television, weather, medical research; atomic energy and any other phase of aviation which might affect the development and employment of the airpower to come."

One of the descendants of this Scientific Advisory Group is the present Air Force Scientific Advisory Board, which reports directly to the Chief of Staff and provides a close link between the Air Force and the civilian scientific community of the Nation.

Today, almost 20 years later, the Air Force, together with the Scientific Advisory Board, is still looking out into the future. Living as we do, under the dread possibility of nuclear war and with a policy based on deterring such a war, the greatest assurance of our survival is our aerospace counterforce capability.

You will note that I specified aerospace counterforce capability. The word "aerospace" has come into common use to describe the continuous operational medium that extends outward from the surface of the earth. No one can pinpoint where air ends and space begins. Yet aerospace is the medium we must dominate in order to survive and to maintain our national integrity.

For years the Air Force has devoted most of its efforts, funds, and dedication to aerospace operations. This function dates back to the earliest flights beyond man's natural environment—when he first had to learn to live with an oxygen mask. The result has been the development of an aerospace force that deters war through its ability to destroy enemy forces that otherwise could destroy us.

Weapons systems beyond the wildest dreams of our ancestors are being added to our aerospace arsenal—we now have the Atlas, Titan, and Minuteman missile systems. Under development is the supersonic B–70. Experimental and research craft such as the X–15 and Dyna-Soar will furnish much valuable data for further development of advanced aerospace vehicles.

The world was given some striking demonstations of Air Force competence in aerospace during a short period in August of last year. Let me give you a brief rundown:

The experimental aerospacecraft, the X–15, set speed and altitude records near the outer fringe of the atmosphere. On August 4 it was flown at a speed of 2,196 miles an hour, and on August 12 it reached an altitude of 136,500 feet. It was given additional trials in November and December, preparatory to turning the rocket plane over the National Aeronautics and Space Administraion. NASA hopes the craft can be taken on the next step towards manned space flight early this spring.

The Atlas ICBM on August 9 was flown over 7,000 miles with an apogee of more than 1,000 miles.

On August 11 the first capsule was recovered from a satellite, Discoverer XIII, which had been sent into orbit from Vandenberg Air Force Base in California.

The first midair snatch of a capsule from space was accomplished on August 19 by a C–119 team. This had been ejected from Discoverer XIV. Incidentally, the feat was repeated in November and again in December.

The communications satellite, Echo I, was launched by the Air Force for the National Aeronautics and Space Administration on August 12.

In making tests of value to aerospace pilots, Capt. Joseph W. Kittinger, Jr., on August 16, ascended to an altitude of 102,800 feet—a record for balloons—and parachuted from the gondola.

This gives you an idea of the dividends accruing as the Air Force forges ahead in its search for improved vehicles and techniques. The drive is always for higher altitudes, faster speeds, and longer ranges.

The objective of the Air Force and the other services is, and has been, to build and maintain a deterrent to war. I want to go into this subject in some detail, because deterrence is a much misunderstood word. It is a term which should be understood by every American. Our survival almost certainly depends on this Nation possessing a true deterrent.

Real and effective deterrence is provided only by the ability and will to prevail.

This policy of true deterrence has forced the enemy into cold war tactics because he could not be sure of weapons superiority and ultimate victory. Any other strategy would degrade the enemy's belief in our capability. It would invite him to consider the advantages of unlimited military aggression as a means of attaining his goal of world domination.

There are some who contend that a lessening of our defenses would be viewed as a good-will gesture, a sort of proof of America's desire for peace. They are mistaken. One of the grim realities of the world in which we live is this: peace must be enforced; and weakness never enforced anything.

Now let's consider what sort of power is needed to provide a true deterrent. In general terms it is a carefully prepared and maintained blend of strategic weapons, both manned and unmanned.

There can be no doubt that missiles are playing an increasingly important role in our deterrent airpower. The ratio of manned to unmanned weapon systems is already shifting as we achieve reliable operational models of both guided and ballistic missiles and phase them into our active inventories.

We have solved many critical problems in this process. A notable example is the development of a space capsule which can survive the tremendous friction and temperatures of reentry into the earth's atmosphere. This is a significant step toward manned space flight.

All trends point to a situation in which the decisive weapons of the future will be aerospace weapons. We expect the B–70 to be a high performance aerospace weapon. Aptly described as a "manned missile," it is expected to fly at speeds of 2,000 miles an hour, at an altitude of about 80,000 feet, without sacrificing range.

The X–15 research craft, as I mentioned earlier, has so far successfully passed its tests. Beyond the X–15 is a craft known as Dyna-Soar, a name derived from the words "dynamic soaring." This piloted, boost-glide aerospacecraft is another step toward a manned strategic aerospace system.

As you know, we have operational intermediate range ballistic missiles, the Thor and Jupiter. We expect the Atlas intercontinental ballistic missile to be fully operational shortly.

Development of our Titan ICBM is progressing satisfactorily. It has greater range, a larger warhead and a more sophisticated guidance system which should give it greater accuracy and make it a more effective weapon.

The Minuteman will be a mass produced ICBM propelled by solid fuel. We expect to begin deployment of some Minuteman missiles on mobile missile trains next year. Others will be installed in widely separated hardened underground sites. This project is well ahead of schedule.

Other unmanned systems include certain satellites designed to add to our military capabilities. There is the Midas satellite which will be capable of detecting ballistic missiles shortly after they are launched. There are the Discoverer satellites, which the Air Force has launched in a polar orbit in a program to test the technique of recovery of satellite payloads and to conduct certain biomedical experiments.

These manned and unmanned systems of the future—and it is not a distant future—all play their part in assuring us of attaining predominance in areospace. And a nation which possesses that predominance possesses the means to survive.

I have dealt at some length with aerospace weapons of the present and future. Now I would like to speak about what is, in my opnion, the most important single element of our defense team—the supply of human talent available to it. Air Force officers, like all men, are subject to the workings of time—age catches up with them. Many of the present Air Force leaders will reach retirement age in the near future.

We are probing now toward the vehicles which will open the new frontier of space. The fruits of our research will be inherited by generations to whom the weapons which immediately concern us will seem as obsolete as the bow and arrow and—we hope—as unnecessary as the plague.

From this research will also come—indeed have already come—new sciences, new tools of research, whole new areas of investigation with infinite possibilities for both military and civilian application.

Ours is an era of corroding fears and tensions, of grim pressures generated by the massive struggle between free and slave ideologies.

Due to these pressures and the exploding technology of the space age, we have come to a sharp, new recognition of the importance of cultivating and using our mental resources. To sustain effective deterrent power for our own safety and for world peace we must have superior quality rather than sheer mass of weapons. To win the quickening sprint for space we must think our way over the scientific and technological hurdles.

The result is that a new premium has been placed upon the creative mind. There is, for example, a significant fact about numerous recent mergers in the missile industry. The primary incentive for many of these mergers was not the pooling of facilities or material resources, but rather the pooling of scientific and technological brains and skills.

During the years there has been much talk about the ultimate weapon. Some people applied the term to the atomic bomb, the hydrogen bomb and later to the intercontinental ballistic missile. They were in error. There is now and there will be in the future only one ultimate weapon upon which the Nation must depend to deter war or win it if it comes. That weapon is man.

The weapons of the future will be conceived by man and designed and built by man. And if the weapons have to be used to assure the safety of this Nation, it will be man who will use them.

There is no better sign of a nation's good health than a youthful generation that is forward looking and eager to cope with the tasks that face it. Without intending to belittle the great accomplishments of the past, I suggest that we are better off looking ahead than looking over our shoulders.

There are pessimists who view our times and the future through dark glasses. We are facing ruthless and powerful enemies in a cold war, the end of which no man can see.

We live under the constant menace of all-out nuclear war, threatening the end of civilization. Everywhere, say the pessimists, people are living in a condition of bewilderment, tension and fear—wondering if survival is possible, or even worth the effort.

Such gloomy comments don't tell the whole story. True, we face problems of enormous gravity and complexity. True, we are engaged in a deadly competition, a race with time, in which the prize may well be survival. But there has never been a time so spiced by challenge, so rich in promise. That challenge, that promise must have special meaning for groups such as this and

all who are helping to fulfill the mission of the Air Force.

In carrying out that mission, you may be sure, man will not be subordinated to the machine. During this decade the unmanned aerospace systems will continue to increase in importance. But as I indicated earlier, for as long as now can be foreseen a blend of the two will be necessary, each complementing the other and each contributing its peculiar characteristics to our total capability.

If the time ever comes when pushbutton warfare is a reality, two qualities will still have the highest priority—leadership and creative human thinking. Those are qualities no machine can provide.

The Air Force is going to need those qualities in full measure in the years ahead. Where is it going to obtain them? A large part of the answer lies with the AFROTC, which furnishes approximately 4,000 of the 9,500 new officers who come into the Air Force each year. That is, roughly, 42 percent of the total. Of these new officers, members of the Arnold Air Society should be uniquely qualified to become leaders of the Air Force during the next 10 or 15 years.

What are the qualities needed by potential leaders of the Air Force? I consider five of prime importance. They are, not necessarily in the order of their value: intelligence, motivation, health, education, and character.

Too often in this country intelligence is looked upon as an oddity rather than an asset. In some circles the bright boy is not a regular fellow, not one of the gang. He is a "longhair," an "egghead." As a result, he may tend to conceal intelligence in order to win acceptance. This is a tragic waste of human resources—a waste for which we could pay a high price in the race with Russia, where intelligence is venerated. Our young people must be encouraged to respect mental capacity, to develop it and to use it.

The value of motivation cannot be overestimated. The man who knows why he is doing a thing, what its significance is to him, his organization, and his country can survive trials that would destroy the man who lacks firm motivation.

Only the healthy can make the grade in today's Air Force. The requirements of effective aerospace power place heavy demands on the human body. There is an unrelenting race against time on the flight line, in the production plant, in the laboratory. This doesn't mean, for example, that a man who wears glasses is disqualified; but it does mean that general good health and stamina are essential.

The Air Force needs men who are completely competent in their particular fields of specialization. Rapidly evolving technology calls for the development of knowledge and skills to a higher degree than ever before. Yet the ivory-tower-type of specialist will not do. The real leader must have a broad general knowledge. He must know about the culture, institutions, and environments of all kinds of men in a world where the farthest country is only a few hours away.

All of this adds up to education and in the Air Force education doesn't end with a college degree. It is Air Force policy to provide continuing educational opportunity for personnel. This requires a heavy investment in time and money and the Air Force cannot afford to invest in men who have not made a sufficient investment in themselves.

The last requirement I listed was character, but it is one of the most important qualities we seek in a man. The word may be a little out of fashion in a day when phychological testers probe into such things as emotional resilience, sound adjustment, and self-confidence. These, along with such homely virtues as honesty, courage, wisdom, humanity, and a sense of justice, can be lumped together under the heading of "Character." It is an indispensable requirement for Air Force leadership.

Air Force standards for its personnel are high. They have to be. As never before in history, our need is for highly qualified men.

What does the Air Force have to offer those who can come up to its specifications? I could talk with you at length about the opportunity for growth and continued education. But I think there is a greater reward than any of these.

The reward I refer to is the opportunity to be a part of a twofold adventure. We are coming closer every day to manned exploration of space. Success in this endeavor—and it will come—will mark the fulfillment of one of man's oldest and greatest dreams. What a reward to have had a part in this achievement.

An even greater reward will come from having played a part in attaining the goal of world peace. For peace is the objective and the purpose of all that the Air Force is doing, of all that is being done by the other components of our Armed Forces.

I have been speaking about our urgent need for young men of talent and their importance to the present and future of air defense. But I would not like to give the impression that we in the Air Force are forgetful of the importance of women. Our WAF's—Women of the Air Force—are doing a fine job every day. In addition, we are fully aware that a great share of credit for all accomplishments by our men belongs to their wives who build the environment and create the climate for their achievements.

In closing, I want to reiterate one thought that I consider of the utmost importance: The only true deterrent to war is power sufficient to win if war is forced upon us. Such power has effectively deterred aggression and will continue to do so as long as it is maintained.

To maintain it will require the dedication of all Air Force members, the aid of all specially concerned groups such as this one and the support of an informed public.

The task is formidable; it is one of enormous complexity, but it can be done. In fact, if this Nation and the free world are to survive, it must be done.

Ladies and gentlemen, it has been a great privilege to have had this opportunity to visit with you tonight. Thank you.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. KEOGH. Mr. Speaker, 83 years ago the czar of Russia concluded a pact with the Ottoman Empire resulting in the independent Bulgarian State after five long centuries of subjugation of the Bulgarian people. For nearly two-thirds of a century thereafter, the spirit of independence flourished and the Bulgarian people made many friends throughout the world particularly in the United States. The liberation of 1878 has been commemorated each year since then by Bulgarians of all political persuasions. Unfortunately, 66 years later the Russian Communist armies that invaded Bulgaria on September 8, 1944, snatched that freedom and commenced an era of indestructible oppression and suffering under it. Even today, the people are deprived of their freedom and liberty.

Today the Bulgarian National Front of America is the rallying point of free Bulgaria in the United States. This anti-Communist association has for its objective the establishment of a parliamentary government in Bulgaria. Its fifth annual convention is being held in New York City on March 4 and 5 and it is celebrating 10 years of work in the United States. The organization was formed abroad 5 years earlier. It publishes an organ called Borba of which Mr. Spas T. Raikin is the editor and which designates the democratic principles and aims of the free Bulgarian people.

We are happy to mark this occasion and to extend our felicitations to this worthwhile cause.

Project Hope—1961

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. CHAMBERLAIN. Mr. Speaker, as a member of the subcommittee of the Armed Services Committee 2 years ago to study the proposal to use ships to carry medical supplies, doctors, food, and technicians to needy or disaster-stricken peoples around the world, I became very much interested in the humanitarian, peace-promoting Project Hope.

Since I believe the story of the SS *Hope* the first, which is now touring the islands of Indonesia with some 100 dedicated Americans aboard, is of interest to all, I ask unanimous consent to place in the RECORD an article from the January 1961, issue of Lather, the official organ of the Wood, Wire & Metal Lathers' International Union. I want to commend the union for printing this article about our fellow country men and women who are helping the less fortunate people of Indonesia by training and teaching them in the more up-to-date ways of the world of modern medicine and medical practice. I am only sorry that the pictures which accompany the story cannot also be printed in the RECORD.

I feel that Project Hope, which operates the SS *Hope*, is a true people-to-people program. The entire endeavor of the organization is carried through the generous contributions of individual Americans and groups who are convinced of its value. I hope that all Americans will continue their interest and their contributions to this most worthy cause.

The article follows:

PROJECT HOPE—1961

On October 19, 1960, a bright white ship from the United States, the SS *Hope I*, appeared in the harbor of Djakarta, Indonesia.

Greetings to the ship from the Indonesian press included this, from the Times of Indonesia: "We want to tell the Americans who are sending that good ship here how grateful we are to them for their interest in our wel-

fare. It will be a long time before this act of American generosity is forgotten by us."

Indonesia is one of the neutralist countries. Never before had such praise of America been seen in Indonesian papers.

This is the story behind that praise. It is a story which the American labor movement has helped to tell.

Project Hope (health, opportunity for people everywhere) began with the idea of one man, a Washington doctor who has, for more than 2 years, been holding down two full-time jobs—carrying on with his practice as an internist and heart specialist, and building Project Hope.

Dr. William B. Walsh realized the especially desperate need for advanced medical training in the newly developing nations of the world, and he believed that the American people could do the job best on a direct basis. His program would be direct personal contact between American medical specialists and doctors and nurses abroad, and it would not be financed through the third party of Government, but paid for by the American people out of pocket.

Specifically, Dr. Walsh saw the project embodied in a floating medical training center which could go to the areas where it was needed.

First needs were a ship, money to run the program, and personnel to staff it. Dr. Walsh spent weeks discussing the possibility of getting a mothballed hospital ship from the Navy and financing the program privately. Early 1959, he took his idea to the President who told him, "If you can raise the money, we'll see that you get the ship."

From then on, Project Hope existed.

Financing and support came from many directions. The labor movement was one of the first groups of Americans to endorse the project. In his speech at the ship's christening ceremonies in San Francisco last year, Peter McGavin, executive assistant to AFL–CIO President Meany, recalled "The AFL–CIO at its third national convention unanimously adopted a resolution endorsing Project Hope and has since pressed a campaign throughout our movement for financial support to the project."

Unqualified endorsement came quickly from both 1960 Presidential candidates, from Members of both Houses of Congress, from business and industry, and from individual Americans.

Staffing the ship presented no problem. During the first months of 1960, hundreds of applications piled onto Dr. Walsh's Washington desk from doctors, nurses, dentists, and medical technicians who wanted to serve aboard the SS *Hope I*. These were the people who brought to life the spirit of Project Hope. They were unselfish Americans, willing to leave familiar surroundings, security, families, homes, and in many cases, lucrative practices, for a chance to give to others.

Organized American labor is helping in a literal way to keep *Hope I* afloat. Affiliate unions represented aboard include: International Organization of Masters, Mates & Pilots, Inc., American Radio Association, Marine Cooks & Stewards, Marine Fireman's Union, Sailor's Union of the Pacific, Marine Engineer's Beneficial Association, 97, Inc., Marine Staff Officers, Office & Allied Personnel.

On March 16, 1960, the former Navy Hospital ship U.S.S. *Consolation* was turned over to Project Hope by the Navy for renovation.

In late September, the SS *Hope I* moved out of San Francisco Bay and into the service of humanity.

Dr. Walsh sums up the effect of the first months of *Hope I*'s voyage: "A total of 60 physicians, nurses, dentists, and medical technicians make up the permanent medical staff, and up to 35 medical people are aboard the vessel on a rotating basis for tours of 4 months. While some of the rotators remain aboard the vessel, others travel inland with mobile units and some work at onshore hospitals.

"The progress made by *Hope* in the first 2½ months in which it was in Indonesia during 1960 has been tremendous. We have received requests to visit Vietnam, Cambodia, Thailand, and Korea; to aid in staffing the School of Tropical Medicine, Dacca, East Pakistan; to help establish a cardiac clinic in Karachi, capital of Pakistan.

"The Indonesian Government has requested us to help staff a new 600-bed hospital, built by the people of that country; and, we have requests from the medical and public health authorities of Indonesia to develop a program to mail them used medical journals and technical books.

"Accomplishments of Project Hope during 1960 include aid to Pakistan flood victims with shipment of drugs and medical supplies, establishment of a manufacturing and training center for artificial limbs in Indonesia; and help in establishing and training the staff of a 50-bed orthopedic clinic at Djakarta."

Looking ahead, Dr. Walsh said, "There are many other areas of the world which could use a *Hope* vessel. We hope that through contributions in 1960, we can outfit another *Hope* vessel for South America and still another for Africa. There are millions upon millions of people throughout the world who are sick or maimed, and have not had the opportunity of the most up-to-date medical care.

"And, to aid these people, there are hundreds of thousands of doctors, nurses, dentists, and medical technicians who are starving to know what we, the dedicated men and women who would board another *Hope* vessel, can teach them."

Project Hope is today our finest example of Americans creating goodwill for our Nation and our system of government. It is proof that our democracy is made up of people working to help those less fortunate than ourselves.

Through the support of organized labor, as well as other facets of American life, Project Hope can and will continue to represent America and Americans at their best.

A Bill—H.R. 4455—For Extension of National Wool Act of 1954

EXTENSION OF REMARKS
OF
HON. ARNOLD OLSEN
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. OLSEN. Mr. Speaker, on the 16th day of February, 1961, I introduced H.R. 4455, a bill to extend the operation of the National Wool Act of 1954. Passage of this legislation is vital—it is absolutely necessary to prosperity of the wool growers of the Nation and of Montana. To some extent, the prosperity of the people of Montana generally is dependent upon the extension of the operation of the National Wool Act because the prosperity of Montana people generally is greatly affected by the prosperity of the wool growers.

Montana ranks fourth in sheep production among the 50 States of the Nation, with a January 1, 1961, stock sheep population of 1,643,000 head. This industry is extremely important to Montana in that it utilizes many land areas that would otherwise be wasted. It provides substantial taxes for roads, schools, and other needs of the State.

In 1954, the U.S. Tariff Commission, after investigation, recommended an increase of 10 cents per pound in the tariff on imported wool. President Eisenhower felt at that time that we could not jeopardize our relations with friendly countries such as Australia and South Africa and did not implement this tariff recommendation. The National Wool Act was then evolved and adopted to aid domestic growers in lieu of an increase in the tariff. Existing tariff duties on wool and wool manufacturers are used as the basis of payments made under the act. Payments are limited to 70 percent of these duties.

Since it has not been possible to raise our tariff on imported wool to levels which would reflect differences in costs of production here and abroad, this program is an extremely sound approach to the problem. In spite of drought conditions, during the early years of the Wool Act, shorn wool production has increased from 234 million pounds per year at the inception of the program to 265 million pounds in 1960. We are therefore moving toward the 300-million pound per year goal of shorn wool production set by Congress as the minimum necessary to our defense needs.

The Wool Act expires March 31, 1962, and should be extended in the present session of Congress so that growers can make their plans for next year's production and obtain from banks and other lending institutions the necessary financing to purchase replacement breeding stock this year. In other words, sheep production is a long range proposition and plans have to be made many months in advance of future production.

Extension of the act is especially vital due to the present competition from imported lambs and mutton as well as wool fabrics. In the case of the latter, the imported fabrics are coming from countries with low wage and production costs and are seriously affecting production of domestic mills, our only customers.

Also, the farm price of live lambs is presently only 65 percent of parity, which also points up further the need of extending the National Wool Act.

Impacts of Pollution on Fish and Wildlife, Recreation, and Esthetic Values

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the CONGRESSIONAL RECORD excerpts of an address by Mr. Seth Gordon, of Sacramento, Calif., distinguished national leader in the conservation movement, and a prominent member of the

Surgeon General's Water Pollution Control Advisory Board as well as former Director of the California Department of Fish and Game, to the National Conference on Water Pollution held at the Sheraton-Park Hotel on December 12–14, 1960.

The address, entitled "Impacts of Pollution on Fish and Wildlife, Recreation, and Esthetic Values," is a thoughtful commentary on the desperate problems of pollution and the danger of water pollution not only to our people but also to the recreational demands of this country which are increasing day by day:

IMPACTS OF POLLUTION ON FISH AND WILDLIFE, RECREATION, AND ESTHETIC VALUES

(An address by Seth Gordon, Sacramento, Calif.)

Leaders of public thought, especially conservationists, early in this century sought to arouse public opinion on the effects of water pollution and their broad long-term implications. The medical profession was concerned chiefly with waterborne disease.

* * * * *

Little was done about the problem, however, in an organized way until 1927 when the National Conference on Outdoor Recreation was organized by President Coolidge. It operated over a 4-year period under direction of a committee of Cabinet members who asked the Izaak Walton League of America to undertake the task of surveying pollution in the Nation's inland waters.

The results of that first survey were startling. They were reported in the May 1927 issue of Outdoor America, the league's official publication. Basic concepts underlying the survey are revealed in this one-sentence quote:

"A civilized community is morally bound to take care of its wastes in a decent and sanitary manner, and not throw its filth out the back door to incubate and spread disease."

The survey established that 85 percent of the Nation's inland waters were polluted, and that only 31 percent of the urban population of the United States then lived in sewered communities which boasted facilities, many of them very inadequate, for the treatment of their wastes.

A few months after the survey was made public, Vice President Charles G. Dawes, in a nationwide broadcast, commented:

"The fresh waters of young America are defiled beyond those of any other nation in the world whose civilization and development are comparable to our own. * * * Our problem is to purify our lakes and streams, not only for the contribution that clean streams make to the health and recreation of our people, but also for the economic value of the aquatic life they ought to support."

That organized campaign, launched some 35 years ago, and pursued unceasingly, brought about the Federal Government's current responsibilities in connection with the pollution menace.

The Federal Water Pollution Control Act specifies the development of comprehensive programs with due regard given to improvements which are necessary to conserve waters for public water supplies, propagation of fish and aquatic life and wildlife, recreational purposes, and agricultural, industrial and other legitimate uses.

* * * * *

According to recent Public Health Service reports, 21.5 percent of the 102 million people living in communities served by sewers still discharge their raw sewage into public waters. Nearly 2,900 new plants are required for the treatment of this raw sewage. Some 3,000 other communities need replacement or enlarged facilities to meet their obligations to downstream neighbors.

Industrial waste treatment construction also is still woefully short of current needs. Even the needs themselves are not accurately indexed. Roughly, an additional 6,000 industrial waste treatment projects should be in operation right now.

Since the turn of the century the volume of municipal wastes discharged into our watercourses has more than tripled and the volume of industrial pollution is said to be 10 times greater.

Obviously, these are some of the things Congressman HULL of Missouri had in mind last year when he told a convention of the National Wildlife Federation that:

"As the result of accumulated misuses of our water resources * * * we are faced today with a monumental water problem * * * which if not attacked aggressively today will overwhelm us tomorrow. * * * Polluted water can kill people, and it can kill industry."

Recent widespread usage of new chemicals and synthetics, including insecticides and herbicides, has dramatically changed the character of the Nation's wastes. Known methods of waste treatment won't remove these and other new organics being spewed into our watercourses. Some of them have been traced downstream for distances as great as 1,000 miles. Just how harmful are they? What can we do about them?

Someone has wisely said that this type of pollution is an ugly, creeping menace which does not make itself immediately evident. An unsuspecting public does not see it, and is therefore unaware of what is happening.

Biological changes resulting from pollution are like creeping paralysis. They may be a long time developing. But once a stream or other surface water dies, an equally long time may be required to restore the natural usefulness, productivity, and beauty of it, even after rehabilitation gets underway.

* * * * * *

Let's cite a few examples of what has happened to fish and wildlife, including aquatic resources not commonly classed as either.

On the Atlantic coast there are many. Oyster harvest from certain polluted waters has long been prohibited. In many badly polluted beds the oysters have actually disappeared.

Other commercial fisheries, as well as sport fishing, have likewise suffered severe setbacks at numerous points along the Atlantic coast.

Many hundreds of miles of fishing streams in the East were rendered worthless by combined municipal and industrial pollution. The latter includes acid water from hundreds of abandoned coal mines and culm banks, some of which have been remedied, but not enough.

And I suggest you take a look at what has happened to the production of aquatic resources right here on the Potomac. More of that later.

A serious decline of the Atlantic coast brant population some years ago was directly attributed to pollution. In large areas normally covered with eel grass, staple item in the brant's diet, this food was found to have been wiped out by pollution.

During the big duck decline of the midthirties, the diving ducks, especially the canvasbacks and redheads, became alarmingly scarce. Unfavorable breeding-ground conditions, plus destruction of their favorite feeding grounds by pollution, caused the decline, not overshooting.

These two favored species of the duck hunter are again in trouble. No shooting of canvasbacks and redheads is allowed this year. How much of the present decline is chargeable to polluted waters on winter feeding grounds?

* * * * *

There have been heavy losses of waterfowl to pollution on the Great Lakes and their connecting waters. One occurred last December, when some 10,000 ducks—mostly the scarce canvasbacks and redheads—were destroyed on the Detroit River by the release of untreated sewage.

In the great Midwest hundreds of miles of some of America's beautiful streams are still so badly polluted that fish productivity is far below its potential, and phenol taste has ruined market outlets. Recreational values in general have been ruined or badly impaired.

* * * * *

In the intermountain region many miles of choice fishing waters have suffered heavy losses from pollution, both municipal and industrial. Often implicated here are flows from both operating and abandoned mines and mine tailings dumps. Many of the latter are most costly to correct and frequently the owners cannot be located.

In the same region the Bear River National Waterfowl Refuge is not producing its maximum. The 500-mile long interstate streams for which the refuge is named is badly polluted. This river could produce wonderful fishing its entire length if cleaned up.

In the Far West pollution's impact on fish and wildlife, aquatic resources, recreation, and esthetic values has presented some unique problems. It has been most difficult to maintain salmon and steelhead runs in streams there. These anadromous fishes are of vast importance to both commercial and sport fishermen, as well as the many businesses of the region which depend solely upon them.

Salmon and steelhead must surmount high dams, rapids, and other obstacles to reach their freshwater spawning grounds. But worst of all is the fact that some of the major streams are so badly polluted in their lower reaches that the fish are blocked in their migration.

Experimentally, in California, young salmon raised in a big Federal hatchery are being hauled overland to brackish waters to bypass the dangers of known polluted areas.

Some of the western salmon and steelhead streams have the same abandoned mine and mine tailings dump drainage problems mentioned earlier. They are also bedeviled by large gravel dredging operations which not only destroy salmon spawning riffles and beds, but also cover the eggs downstream with silt.

Periodically these sources of pollution destroy many thousands—yes, millions—of young salmon, steelhead, and other fishes, both sport and commercial.

Thirty years ago (August 1930), Dr. W. A. Clemens, director of Canada's Pacific Biological Station, discussed problems inherent in the conservation of the famous sockeye salmon runs of the Pacific coast. Naming pollution and high dams as the two greatest obstacles, he said this with reference to pollution:

"The pouring into the water of substances injurious to plants and animals is inexcusable. In this age of science there should not be a single problem of industrial waste incapable of being satisfactorily and economically solved."

Dr. Clemens' contention has been proved correct in many of the situations of the West. But science and the willingness to apply it still lag in eliminating pollution. Annual losses to the commercial and sport fishing industry continue to run into the millions of dollars.

The Pacific coast no longer sustains its native oyster fishery. It was practically wiped out by pollution more than a quarter-century ago.

Today, thousands of cases of seed oysters, from parent stock far less desirable in flavor and quality, are imported each year from

Japan to sustain the industry. Since these exotics do not reproduce in west coast waters, the industry is being maintained as an annual put-and-take program, an enormously costly process.

The bays, estuaries, and lagoons along the Pacific coast play a tremendously important role in the production and maintenance of both commercial and sport fishes, and the aquatic food supply upon which the fishes depend. But many of these waters have deteriorated badly through pollution.

San Francisco Bay, for example, the scene of large occasional fish kills by careless industrial operators, is still badly befouled by pollution, including large volumes from Federal installations. The production of aquatic resources there is far below its potential. Public health authorities must issue annual warnings against eating any of the clams which reproduce abundantly in the South Bay. Swimming and other skin-contact sports are forbidden.

Along the beautiful southern California coast several large metropolitan areas pour enormously large volumes of sewage and industrial wastes into the Pacific. They are given primary treatment only, then widely dispersed through expensive diffusers.

These large outflows are believed to be seriously impairing the reproduction of both commercial and sport fishes, and the food organisms upon which they feed.

* * * * *

I predict that very soon public demand will compel the operators of all such sewerage systems, on the Atlantic, the Pacific, and the gulf to install secondary treatment plants.

Long outmoded is the contention that unlimited volumes of partially treated wastes can be dumped indefinitely into salt water with safety.

* * * * *

The U.S. Fish and Wildlife Service reports that nationally the area of fish and wildlife habitant rendered unproductive each year by pollution is greater than that created by all public agencies conducting fish and wildlife restoration programs.

* * * * *

More than 32 million Americans purchased hunting and fishing licenses last year. Additional millions, mostly youngsters, pursue these sports, but are license exempt. The Nation's fishermen and hunters spent an estimated $3.5 billion. By 1980 it is predicted that 60 million persons will be buying such licenses, and they will pour $6.3 billion into our economic stream.

* * * * *

In 1947 we had 2,440,000 pleasure boats in use on our rivers, lakes, and coastal waters. Ten years later, it was over 7 million, and today it is estimated to be 8 million. In 1959, recreational boating was a $2 billion industry, almost three times its size of 8 years earlier.

Skindiving, a sport which developed since World War II, has soared into a $100 million business.

These are but a few of the recreational pressures which are dependent upon clean water to survive and prosper. Additional millions of Americans enjoy picnicking, beachcombing, bird watching, and otherwise relaxing along our streams, lakes, and ocean fronts. To them, esthetic values are paramount. Who among us would want them to do their picnicking, and so forth, by the edge of unsightly, polluted waters?

* * * * *

Last year a New York City newspaper reported that only 36 miles of the city's 400 miles of waterfront were still fit for swimming.

On San Francisco Bay two additional important beaches were added to the long list of California's waterfront areas closed to public recreation uses.

Narrangansett Bay, long the playground of New Englanders, was invaded by algae induced by cesspool seepage.

Along the shores of the Great Lakes pollution is increasing faster than are efforts to control it. Milwaukee, one of the pioneers in city sewage treatment works, was forced last year to close seven beaches because of pollution in Lake Michigan. And Cleveland is losing its fight to keep beaches open for swimming along Lake Erie. Buffalo gave up long ago.

Sampling of water in the fall of 1960 at Great Falls, Md., showed that the Potomac River was more polluted than at any time in the past decade. No one will deny that we have made an open cesspool of George Washington's river, and that great recreational and esthetic values have been needlessly sacrificed right here at the Nation's Capital.

On the Oregon coast obnoxious odors and foamy liquid wastes turn tourists away from Newport Beach. Raw sewage flows into the beach through an open stream, and wastes from a nearby papermill are piped only 1,400 feet offshore.

Some months ago the speaker of the house headed a delegation appearing before a congressional committee to urge appropriations to help stop salt water from oil wells from downgrading the famous Lake Texoma, on the Texas-Oklahoma line, because "needed factories refuse to come into the neighborhood" due to lack of desirable recreational opportunities.

Our Nation's recreational facilities are woefully inadequate now. What will they be 40 years hence, unless we clean up our polluted waters without further delay?

The foregoing examples of pollution's impact on fish, wildlife, recreation and esthetic values should convince the most skeptical that we need some new philosophies, some bold, new approaches.

Immediately there are those who will say, "Yes, but what?"

1. First and foremost, the current philosophy of how much pollution can we add to our waters without public rebellion must be replaced with one of pollution removal and stream enhancement.

2. Those who are legally and technically responsible for cleaning up the pollution mess must join hands with the conservationist. Though their approaches may differ, both are working for the same objective—clean water.

3. Some States set maximum pollution loads for municipalities or new industries seeking approval for new waste outlets. In such situations are we allowing an ample cushion to accommodate future users of the same watercourse?

4. Sanitary engineers have been most efficient, but their training should be broadened to recognize social values. All water pollution elimination programs should include biologists, and probably recreation specialists as part of the working team.

5. The drive to stop publicly owned institutions and other installations from polluting our waters should be given top priority. President Eisenhower showed the way last spring with reference to Federal installations. Isn't it time that our Governors and mayors do likewise?

6. Why are we so slow in complying with repeated recommendations from conservation and other organizations that we stop dumping atomic wastes into our streams and ocean waters?

7. Finally, we must aim much higher in all of our pollution control efforts. Informed people are saying that water pollution is much bigger and much more important to this country than its present administrative level in the Public Health Service indicates. If this be true, and I believe it is, isn't it time we do something about it?

And what is true of our inadequate Federal effort is equally true at the State level.

We must aim much higher if we are to win the battle for clean waters. We must be much more aggressive if we would avoid a water crisis in America. Complacency won't get the job done.

An Eyewitness Testifies

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. PELLY. Mr. Speaker, much is being said and many opinions freely expressed as to the student demonstrations during the hearings last May in San Francisco of the House Committee on Un-American Activities. Some persons who never were there stoutly maintain the film "Operation Abolition" distorts what happened. Others who were not there, including myself, with equal fervor insist the film is fair and factual.

As for me, I do not join any defenders of the film who infer the critics of it are all soft on communism. To the contrary, it seems to me that fiercely patriotic and freedom loving individuals should be willing to defend, as a Congressman does his voting record, their positions on such an issue. Debate clarifies and strengthens and refines the truth. It is wholesome and prevents mass error and emotionalism.

In the case of the controversial issue of continuation of the Un-American Activities Committee, the Members of the House in all conscience studied the facts and heard both sides of the question. Then 412 to 6, they voted their support of the committee. The chairman was given a standing ovation such as seldom is given to a House Member by his colleagues. That tribute was the real expression of confidence.

Yet, like every supporter of a cause, I know there are intelligent, intellectual, and patriotic persons who disagree with the decision and with me. Their sincerity or honesty I for one would not question.

I subscribe to the Marquis of Queensbury rules, but one cannot be too squeamish against an enemy who is not using these rules.

Since the end of World War II, the Communist ideology has made significant gains as against the free world philosophy of freedom of choice because in devotion to individual rights and freedom the salient fact that we are engaged in all-out war for survival is ignored. By contrast, it must be recognized that the leaders of the Communist conspiracy are waging an all-out effort with no holds barred.

As to the student disorders, I believe, as the chief opponent of the Un-American Activities Committee in the House has conceded, they were instigated and abetted by Communists. Furthermore, no one can honestly justify such disregard of law and order or of a duly constituted congressional committee whose

rules of procedure have been approved, not only by Congress, but also by a committee of the American Bar Association.

However, as to what happened, the testimony of eyewitnesses should hold water as against hearsay. A letter from one such witness appeared in the Washington Star last week. This description points up that the students were dupes and makes one realize why after the riots, congratulations were sent by a Communist leader to his co-conspirators, for a job well done.

The letter of this eyewitness follows:

OPERATION ABOLITION

The city hall riots in San Francisco last May have boomeranged on the Reds with the wide-scale distribution and showing of the film "Operation Abolition." Since they have not been able to suppress this effective visual account of their activities, the Communists are attempting to discredit it by attacking its validity. By stimulating controversy regarding authenticity of the film, they hope at the very least to destroy its value in a fog of confusion. This is a typical Communist tactic.

Moving toward that objective, the Communist Party is ably assisted by the usual dupes and "front" organizations and a large segment of the metropolitan press.

Most of the individuals responsible for the issuance of official pronouncements by large organizations attacking the reliability of the film were not anywhere near the scene of the riots, hence in no better position for undertaking judgment than the general public.

Having been present at city hall during the 3 days of hearings and riots by virtue of the fact it was and is my place of employment, and having observed the film "Operation Abolition" at one of the churches here (where, incidentally, a number of the participants in the riots were also present and brought about another disturbance), I trust it is not altogether presumptuous on my part to also make a few observations and venture an opinion.

This was not just a peaceful student protest as has been loudly proclaimed by apologists for the mob. As the FBI stated, in publicly announcing the reports of its counter-agents in the Communist Party, preliminary to the hearings (that is, the reports were made to the FBI prior to the riots, and later published), the city hall disturbance was the result of a carefully engineered conspiracy of the Communist Party. The students involved were unwitting dupes of the Communist Party and were easily manipulated by trained agitators.

Anyone naive enough to expect a Communist riot to take place under the hammer and sickle while openly proclaiming its objective of overthrow of the Government of the United States, at this stage of the game, will wait in vain. The atmosphere surrounding city hall from beginning to end of the hearings was one of revolutionary anti-Americanism and as distinctively a Communist demonstration as anyone is likely to see in America for some time yet. The mob displayed blatant hostility to the proceedings from the outset of the hearings and long before there was any opportunity for provocation of any sort, unless the refusal to allow them to pack the committee room could be considered such.

The crowd was so wild and unruly that much of the normal business of the city hall was obstructed, to say nothing of the hearings of a duly constituted committee of Congress.

The film "Operation Abolition" may have a few shots out of sequence. This occurred in the haste and confusion of piecing together hundreds of feet of tape. But to say that this is a gross distortion or that it destroys the validity of the film is patently ridiculous. Aside from this insignificant feature, "Operation Abolition" accurately portrays the situation here in May 1960.

THOMAS R. WEBSTER.

SAN FRANCISCO.

A Patriot To Retire: A Tribute to the Honorable Francis E. Walter, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include, herewith, an editorial from the Charleston (S.C.) News and Courier of March 3, 1961, lamenting the announcement of the decision of the Honorable FRANCIS E. WALTER not to offer for reelection in 1962.

The sentiments contained therein, receive my hearty approval, for indeed they reflect the mood of every citizen devoted to America today. The News and Courier expresses regard for Congressman WALTER as one of the outstanding patriots of his day. By those who know him personally, not only is Congressman WALTER regarded as one of the outstanding patriots of his day, but he is also regarded as one of the outstanding patriots of our great country throughout its entire history.

As chairman of the House Un-American Activities Committee, Congressman WALTER was quick to earn the confidence of the American people. By carrying out the American will in the interest of national security, against partisan criticism of astonishing magnitude, he has justified that confidence to the fullest extent imaginable.

In stepping down as chairman of one of the most vital committees in congressional history, Congressman WALTER is to leave behind a record his successors will find hard to equal, in brilliance, in zeal or in humble nobility. Seldom in the past have the American people been benefited by the work of so diligent a defender of the common cause, whose interest in the Nation overruled his personal interest at every turn. He has been a strenuous, persevering and absolutely indefatigable champion of a righteous cause. His efforts have been not only interminable but productive as well. In losing this distinguished lawmaker, the Nation will lose one of the ablest men who has ever served in the Congress of the United States.

I commend this editorial to the attention of my colleagues:

PATRIOT TO RETIRE

The News and Courier notes with regret a decision by Representative FRANCIS E. WALTER, Democrat, Pennsylvania, not to offer for reelection in 1962 for reasons of health.

Mr. WALTER is chairman of the House Un-American Activities Committee, which has been under fire of radicals, liberals and their dupes. He is confident their efforts to abolish the committee will fail.

Mr. WALTER has been reelected regularly since 1932 by his constituents around Easton. He has been advised by his doctors to seek a dryer climate than Washington affords on account of a chronic asthmatic condition. The Congressman, whom we regard as one of the outstanding patriots of his day, is 66 years old. He was coauthor with Senator Pat McCarran of an immigration bill that bears their names. He attributes attacks on him to this bill's exclusion of foreign-born Communists and setting of a quota system on national origins.

We sympathize with his health problem. The Washington climate is bad for more things than asthma.

A Positive Approach to Automation

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of Saturday, March 4, 1961, entitled "A Positive Approach to Automation." This subject—automation—is not something about which we can postpone our thinking and action, and I believe that this editorial presents some poignant observations in which my colleagues will be interested.

A POSITIVE APPROACH TO AUTOMATION

A Senate subcommittee has added to the administration's depressed areas bill a provision that strikes at the heart of one of the new frontier's chief problems. The amendment would provide $4½ million for the retraining of workers in depressed areas. The aim is to provide new skills that the individual could use either in his own community or elsewhere. We see here a hint of the strategy to deal with the growing force of automation.

The scope of this second industrial revolution was dramatically depicted by President Kennedy in his economic message. In broad outline, it is not unlike what happended during the first industrial revolution. Then, great benefits resulted, but at the cost of much job dislocation. There is, in the 1960's, a significant difference. It arises from the compression of time. Automation is relatively new. Yet just as we are already seeing the benefits in greater production, so, almost at once, the effects on employment begin to grow apparent.

Presumably Mr. Kennedy's Advisory Committee on Labor-Management Policy will study the effects of automation. It is equipped with high-powered talent from industry, labor, government, and the public. But such a system moves slowly. And it is difficult to see how the Committee could recommend any other approach than that of retraining and, with a tactful nod to the deep roots that people have in their hometowns, of relocation.

For the fact is, we are confronted at once with a dual problem: Automated production has decreased the need for certain skills and certain types of workers. Moreover, in some areas longstanding industries have been eased out by changing demands or have

moved on to more favorable locations. Thus there is a backwash of unemployment, while, in other regions, certain skills are in short supply.

We do not suggest that the program proposed by the amendment to the depressed areas bill is necessarily the best. Indeed, State and local governments as well as industry and labor, have their responsibilities. This is a modern-day urgency that confronts the entire Nation, not just Washington. But at least the Senators have pinpointed the need. Americans have talked about automation's problems for some time. Now it seems advisable to start doing something about them.

The Great Challenge

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from Foster's Daily Democrat, Dover, N.H., on February 27, 1961, entitled, "The Great Challenge":

THE GREAT CHALLENGE

In our security-conscious, steam-heated society, boredom and a loss of real zest for life are rather common. People complain that there is no challenge in daily living, that everything moves along in a prearanged, or at least readily predictable fashion. Yet the challenges are there, all right.

It is true that a man can no longer get together a few household goods in a wagon and head west toward a frontier. It is not at all true that there are no longer any challenges that will test the mettle of a courageous man or woman.

We have in mind one challenge in particular. It can be simply stated: Try applying the precepts of your religion, without reservation or sail trimming, to daily life. Although this may sound rather simple, a challenge not to be compared with the hardships and hostile savages that tested the pioneers, it is actually the most demanding challenge of all.

Suppose that the concept of the brotherhood of all men—not merely those whose skin is the same color as ours, whose political and moral ideas are the same as ours, but literally all men—were to be applied unstintingly to our dealings with others? Suppose the admonition to sell all we have and give to the poor were to be followed to the letter? Suppose everyone accepted as a solemn obligation the demand to feed the hungry, clothe the naked, comfort the oppressed—without, be it noted, first taking precautions to assure personal comfort?

Those are only hints of the immeasurably great challenge that confronts us all. There is still plenty of pioneering to be done.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Capital Budget Makes Commonsense

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address delivered by Senator VANCE HARTKE before the National Rural Electric Cooperative Association at its annual meeting in Dallas, Tex., on February 16, 1961, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CAPITAL BUDGET MAKES COMMONSENSE

You will excuse the play on words if I say at the outset that I come to Dallas to address this meeting from a city that is electric with excitement. Such has been the advent of the new Kennedy administration. These are, indeed, busy days in Washington for all of us.

A new mood appears to have taken hold of the city and the people in it. I hope these remarks are not misunderstood. I have the highest respect for President Eisenhower personally and I feel that America owes him a great debt for his long years of service. He is respected throughout the world. He is admired in this country for his sincerity, devotion, and honesty.

But now is a time to look ahead, glancing behind at history only to learn from the past as it affects the future.

The differences in views of the same situation are seen most graphically in the two state of the Union addresses. The outgoing President saw few problems. The incoming President saw many.

To many people in this country, a man who sees problems realistically is a "prophet of gloom and doom." It seems to me that a person can look realistically without rose-colored glasses and not be a pessimist.

I think of this as I would the doctor examining a patient. He cannot say: "Your symptoms seem to indicate cancer, but I do not want you to have cancer so I will treat you for a sore throat." Also the doctor cannot say: "Your symptoms indicate a sore throat, but you can have cancer so we had better operate."

It appears to me that too many symptoms of an unhealthy economy have been glossed over by the outgoing President. I do not need to call to the attention of this audience the fact that farm income as a whole has dropped 25 percent in the last 8 years. Employment today off the farm is in an even more dangerous position.

Now, I know it is possible to point to growth figures and say that all is well.

But all is not well.

The growth of this Nation's economy has not kept pace with inflation and the growth in population. In other words, inflation and more people should have forced us to grow faster than we have. The misery and hopelessness of unemployment is more widespread than ever since the great depression of the 1930's.

The warning for this state of affairs came in the persistent recession on America's farms. These conditions always foretell hard times in the cities. And unemployed workers cannot buy the abundance of America's farms or the abundance of her factories.

There is nothing so expensive in America as a man who does not produce. He adds nothing. Yet, he must be supported.

Recession is expensive. It is most expensive in the personal misery it causes. It is also expensive in the failure to produce what needs to be produced.

In 1958, this Nation ran up the largest deficit in history—$12 billion or $12,000 million. Was it because of some wild spending program? No, indeed.

We did not spend more that year; we earned less.

The recession produced less taxes than had been anticipated. It is that simple.

The threat of another recession such as that of 1958 faces us again today. But it is only one challenge faced by this Nation in 1961. Some are new; some are old.

There is a threat from Red China as well as Soviet Russia. Within 90 miles of our Florida shore lies another Communist threat—Cuba. In Laos, a SEATO ally fights for existence.

We find ourselves surpassed in many fields of science and technology. Yet one-third of our brightest youngsters cannot afford college.

Our farms produce such abundance that the abundance itself is regarded by some as a curse rather than a blessing. Yet millions in the world are starving and thousands of our own people in America subsist on meager handouts of food from relief offices in their communities.

Without knocking the old administration, we can look forward to new drive, new energy, and new ideas for the new decade, the new challenges, the new frontier.

If we set out to solve our problems, to make this a stronger and more prosperous nation, a safer and more peaceful world, we can meet the challenges and the problems of the new frontier of the 1960's. We can meet the challenge to the minds of men.

I think that the nation which unlocked the secrets of atomic energy can find the answers to heart disease and cancer. I think that the nation that has produced the world's highest standard of living can continue to do so. I think that the greatest system of public education in the world can provide the education for the minds of all its youngsters. I think the nation that has telephones and cars and refrigerators and television sets for nearly all its citizens can produce what is needed for the space age. I think that a country that can produce more food than it needs can lead the way in finding new uses for abundance and lead the way toward ending starvation in this country and in the world.

It will take daring. But it also took daring to open up America's West. It will take the best that America has.

But an America that is being led to greatness will once more rise to greatness.

When America once more puts its industrial production to work producing, when farm produce goes into use instead of into storage bins, when skilled workers go back to work, when our brainpower is harnessed both for shinier cars and for weapons and space ships, America will have met the challenge of the new frontier of the sixties. We will not have to worry about a challenge from Moscow or Peking or Havana.

When America does her best, she has no challengers. She will show the way to world peace and prosperity.

I know that all Americans know this. I hope all Americans will join with me in the prayer that the ideas, the drive, the brains of those who have begun the job of building a new America for the new frontier will be successful.

Our fear, if any, today is not of communism. Our choice of our system of Government was because we believed in freedom.

The aim of our representative democracy is not to destroy communism. Our aim is a full life in dignity and freedom and with individual initiative a valuable part in the operation of the whole.

Communism flourishes in a society where despair and hunger have become dominating forces.

A democratic form of government is basically one of a free society. There are no limits to a free society or of the people within it.

The REA is one of the Nation's greatest examples of people working together in freedom, with governmental help in a form of cooperative private enterprise. It is a great example of freedom, and benefit for people.

I do not need to tell you of how and why REA was started and of what it has accomplished. I do not need to tell you of the financial returns it has given the Federal Government.

Several cooperatives have paid out their loans; many are paying ahead.

The loans that were granted for rural electrification and which are being made are, in fact, investments in America's future. They have not alone lighted farms and small communities, they have produced markets for milking machines, washing machines, refrigerators, and hundreds of other electrical appliances. They have built a better America.

There are other such expenditures of the Federal Government which are literally paid back with interest in cold cash. And there are many others from which the benefits are paid back in other ways than in cash. There are conservation, reclamation, flood control, and development programs. There are loans to communities for waterlines and sewers, for schools, for college dormitories, and dozens of other things.

To consider these capital outlays, these investments, as expenses of government is a distortion. No private business does so. It would be as though a private power utility built a generating plant and carried the full value on its books as an expense all at one time. Instead, such companies amortize these capital investments over long periods.

It is much more sensible for the Federal Government to do likewise.

There have been over recent years several proposals for separating this kind of expense or outlay of funds. Generally, these plans provide for an operating budget—one in which all of the ordinary expenses of government are spelled out. In addition to this, the bills provide for a separate report on outlay for long-term projects which are investments in the country's future. This section, in turn, is broken down to show those capital expenditures which will be paid back. In this category belong REA loans.

Capital budgeting of this nature would reflect a true picture of expenses and investments. It would lead to a more intelligent understanding of what the Government is doing in the field of investments in America's future. It would show taxpayers what of their money is going for current operating expenses and what to capital expenditures.

This budgetary plan is endorsed by the platform of the 1960 Democratic National Convention. While this does not assure its passage, I am sure that the chances for this kind of legislation in the near future is good.

I think that this type of law will help create better understanding and greater acceptance of what we are trying to do in this field of investment in powerlines and dams and community improvement loans.

As we make our system work better, we shall no longer find those among us worried over whether we are being approached or overtaken by potential enemies. Our own successes will be enough to sustain us. As I said earlier, our aim is not to destroy communism or to best communism.

Our aim is a full life for all in freedom and dignity. When this system is working at its best, it need not aim to destroy any other. It need not worry about destruction at the hands of any other. Freedom will excell because freedom provides the environment which can bring out the best in men.

Myths Concerning Federal Spending Are Exposed

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ASHBROOK. Mr. Speaker, there is an increasing awareness everywhere of the fallacious assumption that has been fostered by those who spend our Federal revenues in the theory that what they send "back home" does not cost or does not add to the tax burdens of the local taxpayers. I for one am extremely happy to note this thoughtful resurgence of thought along more responsible fiscal lines.

The Mansfield News-Journal, one of the 17th district's outstanding newspapers, has published two thoughtful articles on its editorial page which contain a very concise appraisal of the subject of Federal spending and the dangers therein. I would respectfully commend the reading of these two succinct statements of fiscal responsibility to the entire membership of the House.

THE NEW SLAVERY

Stories about Abraham Lincoln are legion. This one has unusual significance in these times.

At the age of 24, Lincoln was named postmaster of New Salem, Ill. His annual salary was $55.70. The community was small and not a great deal of business was transacted.

In fact, New Salem dwindled instead of growing, and by 1836 the Government decided to abandon the post office there.

Lincoln turned to the practice of law.

Several years later a Federal agent showed up from Washington and announced that he had come to close the accounts of the New Salem post office. He checked Lincoln's records with his own reports and made a determination that $17 was due the Federal Government from the ex-postmaster.

Lincoln said he thought that was correct.

He went to an old trunk and took out a yellowed cotton bag. In it was exactly $17. He explained that he had put it away when he closed the office, adding: "I never use any man's money but my own."

In the century since Lincoln served as President and held the Union together at the cost of his own life, as well as the lives of thousands of young soldiers, the public concept about using someone else's money has changed.

This change has been brought about deliberately—first by the Socialists who preached economic equality achieved by the graduated income tax and public ownership, then by the economists who became fascinated with the idea of legal manipulation of money and business, and finally by politicians who saw vast opportunities for themselves in the public's gullibility. The politicians, in both Government and the unions, played skillfully on the old gambler's ruse of giving something for nothing. Business leaders joined in the game wherever it was to their advantage.

Our society is now fast approaching universal acceptance of the theory that whatever a man earns he is entitled to keep only what he needs with the balance distributed to individuals, groups, and areas which have the greatest political potential.

Lincoln, who found the enslaving of human beings repugnant, might well in this day consider that we have evolved a system of economic slavery of the individual.

We have, of course, no Lincoln to make this issue clear as the earlier slavery issue was defined in Lincoln's "House Divided" speech and his "Cooper Union" address.

But the issue is there and we are facing it even though it has not been crystallized in the words of a great leader.

It is the plain question of whether the Government shall serve the people or the people shall serve the Government.

A century ago when Lincoln saw the slave market in New Orleans he remarked, "Some day I'll hit that thing, and hit it hard."

Today he could see, if he were to return, all American workers and businessmen wearing the chains of Federal regulation and taxation and put up for auction at the ballot box.

IT'S QUITE A SYSTEM

If you are an average family skimping here and there to save money so your son or daughter can go to college, the educational program proposed by President Kennedy will give you an added burden. It will increase taxes by $5.6 billion and you, of course, will be expected to pay your share.

On the other hand, if you are in the "needy" catagory, you can relax. Your tax bill is probably very small so the increase will not be felt. You can't pay if you don't have it, obviously. And the new program would provide scholarships for 212,500. The thing to do is make sure your child gets one of those scholarships.

Similarly, if your community is paying high taxes to support its schools the new program will hike those taxes.

Mansfield is such a community. It will get Federal help, of course, under the proposal. But it won't get nearly all it pays in, because the communities which have not been doing such a good job will get more of the money. Again its the principle of helping the needy.

Once known as "soak the rich" this program has now been expanded—not only in education but in many other areas as well—to "soak everybody who has anything."

Total cost of the President's educational proposal is roughly $100 for each person employed in the United States. Probably most workingmen won't miss it. It's only a month's rent plus the cost necessary for gas for the family automobile for the same period.

It will mean giving the States an average of $15 per pupil for better teacher salaries and better buildings.

In Mansfield, through local and State taxes, residents are now providing about $395 per year per pupil for public education.

We do need more, it's true.

So the Kennedy program will take more away from us and give us back a part of it.

It's quite a system.

Address by Hon. Alexander Wiley, of Wisconsin, Over Wisconsin Radio Stations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. WILEY. Mr. President, our country, if it is to meet the great challenges of the times, needs, I believe, a revival of the adventurous, pioneering spirit, which has marked the history and progress of the United States.

For centuries the "rocking chair experts" at each stage of progress have said: "We have arrived. There is little left to be done."

By contrast, the enterprising spirit of current, and past, times, has found the heritage of history not a foundation to rest upon, but rather, to build upon!

The 1960's, I believe, offer such special challenges in almost all aspects of human life and world progress.

Recently, I was privileged to comment on what, in my judgment, is the need for revival of the spirit of pioneerism which has marked our history.

I ask unanimous consent to have excerpts of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

REVIVAL OF "PIONEERING SPIRIT" TO MEET CHALLENGES OF SPACE AGE

Today the Nation is attempting to find ways to more effectively resolve its economic problems; strengthen our defenses; reach further outward into space for new knowledge and control of the forces and elements of outer space; better meet fundamental human needs; withstand—and counter—the Communist threat to our survival; and create a climate in which social, economic, political differences among nations can be accommodated, or negotiated; and a greater percentage of the world's resources can be channeled into constructive—not destructive—programs.

Today, the world is spending about $14 million an hour on arms and armies. The United States alone spends about $46 billion a year on missiles, manpower, tanks, guns, ships, military explosives, and military aid to allies. This amounts to about 9.2 percent of our gross national product and requires a great concentration of resources and manpower. If we, and the world, could pool this great effort for peaceful purposes, living standards for all peo-

ple—particularly the less fortunate—could be increased substantially.

We recognize, of course, that the Communists, relentlessly, are attempting to gain control of the world. Consequently, we have no choice except to maintain deterrent power to thwart their goals. Until the Communist threat to freedom is defeated—or at least neutralized—it will be necessary to keep us the essential, though costly, defenses. Despite this burden, however, we can—and must—work creatively and confidently toward solution of the many problems that face us and the world in many areas.

Realistically, there are a great many frontiers confronting humanity. To adventurously explore them, we need a revival of the pioneering spirit. This is true, not just in space, but also in farming, industry, business, human welfare, and other fields of human endeavor.

To a large degree, progress is limited—or extended—by man's vision, imagination, adventurous spirit, and willingness to work to transform dreams into reality.

True, we live in fast-changing, complex—and sometimes perplexing—times. However, change is a law of life. Progress—based on the right kind of change—offers the great hope of humanity for attaining maximum physical, intellectual and spiritual maturity and progress.

With each generation, there are new dawns of understanding of the fundamental forces and values of the God-created universe. The great challenge is for man to learn to harness these forces to serve humanity.

In these challenging, through troublesome times, then, we must not lose heart. Rather, we—by optimism and confidence, well justified through experience—must revitalize the spirit of pioneerism. In this, lies the great hope of humanity: for success in solving its problems; for avoiding a world-annihilating war; and for the creation of a world in which the natural and human resources can bloom and bear fruit for better living of all people. * * *

WILEY AT WORK

Now, what has your Senior Senator been up to since he last reported to you?

As a member of the Judiciary, Foreign Relations, and Space Committees—and several subcommittees—I have been working with my colleagues on a variety of legislation, including: Strengthening our judicial system by the appointment of more judges to serve the overworked courts; consideration of nominees for important posts in the executive branch; consideration of treaties affecting the interests of the country at home and abroad; speeding up our space exploration program; and a variety of other challenges confronting the country.

I have also made recommendations in the following fields:

1. Establishment of a Manpower Commission. The purpose would be to (a) better determine manpower requirements for defense in the space age; and (b) to create a more efficient reservoir of experts, technicians, planners, leaders, and others essential to domestic life and progress for our country;

2. Legislation to provide stiffer penalties for violations of Federal laws on the distribution of obscene literature.

3. Urged a special study on nonvoting in the United States. In the 1960 election, about 35 million of our 104 million eligible voters did not—for one reason or another—exercise their voices at the polls.

4. Proposed a proclamation for a National Invest-in-America Week. The purpose would be to encourage more folks—whenever they can—to invest savings in our free-enterprise system. Currently, about 13 million Americans are shareowners in public corporations. Encouraging more people to invest would not only spur economic progress for the country, but would enable us to more effectively deal with our current economic problems.

5. Cosponsored legislation in the interest of the Menominee Indians. The purpose would be to equitably terminate Federal control; and better enable the tribe to hold responsibilities within our 72d county, created to accommodate the tribe's integration into the social, economic, political system of the State.

6. And urged action by the Departments of Labor, Agriculture, Commerce, and other Federal agencies, to help meet the serious economic problems of unemployment in hard-hit communities in northern Wisconsin and other areas of the State.

INTERNATIONAL

In a shrinking world, we are no longer isolated. Rather, peace or war may depend—in many cases—upon solution to crises in the far corners of the earth.

Now let's quickly scan the global horizons. In Africa, an explosive area of the world, conflicting internal interests in the Congo and other newly emerging countries are difficult to reconcile. Too, Mr. Khrushchev is doing everything possible to "brew up" trouble. The Reds' objective, of course, is to use the Congo as a steppingstone for taking over all of Africa. The non-Communist world must stop him. Looking ahead, we can expect Mr. K. and his troublemaking cohorts, as in the past, to continue to try to utilize the Congo or any other critical situation to promote the cause of communism—not peace. While we can expect that the Reds, if sane, will stop "short of total war," they are likely to push each crisis to the brink.

Turning to the economic picture, we are attempting to negotiate with West Germany and other Western European countries, as well as inaugurate domestic measures, to halt the outflow of gold; although the situation is complex, I believe we are making progress, and that we will be able to find a workable formula for correcting the imbalance of payments.

On March 7 also the General Assembly of the United Nations will reconvene. As of now, it appears that Mr. Khrushchev will not attend the session, although the Red leader is always unpredictable. We can expect, of course, that the Soviet delegation will make further attempts to control, neutralize, or destroy the United Nations. Why? Because experience has proven, time after time, that the U.N. acts as a bulwark against Soviet expansion. Global membership in the international agency brings world opinion to bear when the Communists attempt to flagrantly engage in interference in the affairs of other countries. In these times, when the balance of world power is being determined, even the hard-shelled Communists must consider, if not always heed, the will of other nations.

On the home front, Congress and President Kennedy are considering a number of pump-priming measures to give new economic life to the economy. As necessary, Uncle Sam needs to take action to help spur business and industrial activities, to create more jobs, and generally to improve our economic outlook. I am not one, however, who believes that Uncle Sam must do the whole job. On the contrary, I believe we are overlooking our greatest potential for economic progress if we ignore or attempt to usurp the responsibility of States and local communities to act effectively in promoting economic progress. Across the country we find that problems differ widely. Consequently, we need programs tailored to each specific situation. This requires constructive, creative efforts, not simply by the Federal Government, but also by States and local communities.

Message From the Adjutant General of Massachusetts

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the text of the address made by Maj. Gen. Thomas J. Donnelly to the troops of the Massachusetts National Guard at the assumption of command ceremony held January 15, 1961, at the Commonwealth Armory, Boston. The remarks were reprinted in the National Guardsman, official publication of the National Guard Association of the United States:

MESSAGE FROM THE ADJUTANT GENERAL

As I assume the duties of adjutant general, I do so not with a sense of personal elation, nor with a sense of personal success, but rather with a sense of humility—a humility born of the realization that to the degree of competence, of integrity, of dedication with which I execute the duties of this office I will affect, in direct proportion, the destinies, insofar as the military aspects are concerned, of over 17,000 National Guardsmen in Massachusetts.

I am appreciative of the distinctive position we occupy as the military forces of the home State of the President of the United States and the attendant added responsibility incumbent upon this position. Then, too, there is an acute awareness of the perilous times in which we live. No crises in our Nation's history is comparable to that with which we are presently faced. Not even 100 years ago, in January of 1861, when Governor Andrew called the Massachusetts militia to duty because the storm clouds of war were about to erupt between the North and the South, were the times as ominous as now.

The great crisis facing President Lincoln then is not comparable with that facing President Kennedy today. For not only is there the ever-present danger of either limited or thermonuclear war, but there is an even greater struggle being waged for the minds of men—a struggle in which there can be no compromise, and in which there can only be one victor.

Over 125 years ago, Alexis de Tocqueville correctly prophesied that there would some day be but two great powers on earth; one, he said, was Russia, the other, United States of America. One of these great powers, the Soviet, has spread its pernicious doctrines, based upon an erroneous dialectical materialism, throughout the surface of the globe, enslaving millions. While it is in error, it is positive and understandable. The free world looks to us for succor. They know what we are against, but as yet they do not know what we are for. Knowing this, and knowing that there must be a renaissance of spiritual and moral values that made this Nation great, our President Kennedy chose Massachusetts to proclaim his credo as guidelines for all of us to follow. We must prove to the world that we, as a nation under God, have the forces of history with us, and not with the Soviet.

We in the military in Massachusetts must not merely follow these guidelines, we must epitomize them.

This is not a time for meanness, for malice, for vindictiveness, for disunity. This is a time for courage, for integrity, for dedica-

tion. In short, this is a time for greatness in all of us. We must conduct ourselves in the military forces of this Commonwealth so that men of all walks of life will say once more, as they did long ago, both in whispered praise and loud acclaim, "Massachusetts, there she stands."

Help Sought for Senior Citizen

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. LONG of Hawaii. Mr. President, as I have pointed out in previous remarks, Hawaii faces a growing problem of care for the aged. As a member of the Special Senate Committee on the Aging, I am hopeful that steps can be taken to help solve some of these problems nationally. To point out one aspect of the problem in Hawaii, I ask unanimous consent that an article by Marcy Rosario in the Honolulu Sunday Advertiser of March 5, entitled "Help Sought for Senior Citizen," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELP SOUGHT FOR SENIOR CITIZEN
(By Marcy Rosario)

There is a growing welfare problem among Hawaii's aging and aged Filipinos. It concerns the population characteristics of the race and the impact of a fast-changing island economy.

The Filipinos were the last major immigrant group to arrive in Hawaii to work on the plantations. They replace other ethnic groups whose parents came to the islands for the same purpose and whose children had moved or were moving in urban areas for employment.

Due to mechanization in the sugar and pineapple industries or the desire to obtain higher paying jobs, many Filipinos left the plantations. The result is obvious in the reduction of the labor force on the sugar plantations from 52,000 in 1932 to 17,600 in 1960.

During World War II Filipinos were able to get better paying jobs. A supplementary importation became necessary on plantations in July 1946, to ease the labor shortage.

In 1950 25,000 of the 43,000 Filipino males were 35 years and over. Of the 25,000 98 percent were born in the Philippines. Because of their age, their lack of education and skills, this group has had the most difficulty in obtaining jobs. These 25,000 male Filipinos are now in the age bracket of 45 years and over.

More and more of Hawaii's aged Filipinos are becoming, and will be recipients under our Old Age Welfare Assistance program for the needy, 65 years of age and over. Four percent of the old age assistance recipients in Hawaii in 1957 were Filipinos. In 1960 this percentage has increased to 33 percent.

Reasons for the increase: Most Filipino men employed on the plantations were not covered by social security. Therefore, they do not have any old age and survivors insurance to fall back on. A large majority of the older Filipino men are either single or widowed, and so have no families on which to depend.

Because at the time of mechanization on the plantations these men were in the upper age group as far as the labor market is concerned, and also because of their limited education, they were unable to get other types of employment.

A breakdown of the Filipino group of 65 years of age now receiving help from the Department of Social Services is:

Of a total 1,434 old age recipients, 460 are Filipinos—404 men and 56 women.

Of the 460, 212 are on Oahu, 106 on Hawaii, 64 on Maui and 78 on Kauai.

Three hundred and sixteen are either single or widowed; 300 are between 65 and 75, 140 between 75 and 85, and 20 are over 85.

WHAT IS BEING DONE?

Other ethnic groups (Chinese, Japanese, Korean) have assisted in the problem of caring for their aged by establishing homes. The Palolo and Kuakini old men's homes are examples. However, the recent trend is away from institutional care for the aged. The new concept is development of boarding homes and personal care homes.

The Department of Social Services can assist these older Filipino men with money to pay room and board and other essentials, but needs the help of community groups in locating homes that will provide care for them. Also, the Department Social Service Agency policy disqualifies single men under 65 years of age who are able-bodied from obtaining economic assistance.

Fabianism in America: Creeping Socialism

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. MASON. Mr. Speaker, T. Coleman Andrews, former Commissioner of the Internal Revenue Service under President Eisenhower, is an unabashed patriot and a supporter of things American. He is leading a fight against our present system of Federal taxation and against the present trend toward socialism in our Federal Government; he is doing his best to direct our Federal Government back to its original purposes, purposes so well outlined in both the Declaration of Independence and in the Federal Constitution.

In an article entitled "The Fabians," Mr. Andrews has outlined briefly the Fabian movement and has pointed out how the New Deal and the Fair Deal have contributed toward the socialization of our American form of government. The article is well worth reading and I offer it as a part of my remarks:

THE FABIANS
(By T. Coleman Andrews)

For however many hours each day a man wears shoes, that many hours he devotes to earning a living, warding off one bill collector or another.

It is too bad, really, for had a man more time to mull over what is going on something better might be in store for him.

At least I think so. I don't believe our people want to live under socialism. Certainly I don't know anybody—if you ask him right out, flatfooted—who will say he does.

Nevertheless, we are headed for a Socialist government sure as shooting, and this in the very near future. The Fabians have just about pulled us down.

That being so it is only right we have some understanding of the pack that has snapped so successfully at our heels.

The Fabians take their odd name from the Roman general, Quintis Fabius, who finally bested Hannibal. Fabius would not fight "fair." Rather, he nibbled away at the Carthaginian's flanks, pecking at his army in a thousand places until the great man fell.

Today's Fabian Socialists, like their idol, pursue sidling, deceptive methods to achieve their end, the obliteration of capitalism, your right to own things. The same end, it should be added, as that sought by their bullyboy brothers, the Communists. Only their methods differ; the Commies will shoot you full of lead while the Fabians shoot you full of bull.

Their organization was put together in England in 1884. Its purpose then, as now, was "to spread socialism, gradually."

F. D. Roosevelt, always a patsy for left-wingers, gave them their foothold in our Government and they have been flourishing there ever since.

Thus the "gradualism" we know. Thus comes the inspiration to change our laws, little by little, year by year, to make us all alike. Judy O'Grady is to be merged with the Colonel's Lady; there are to be no rich, only poor; no white, no black, only gray; you are to own no more than I and neither of us is to call our soul our own.

Never in the 80 years of their being have the Fabians formed a political party of their own. They do not work that way. Instead, they take on the coloration of whatever element of society they mean to defile and work from there, rotting the core of everything.

It makes no difference to the Fabians whether it is a political party to wreck, or a church, or a labor union, or a communication medium such as television, everything is grist for their mill.

Roger Baldwain (Harvard, 1905) is credited with being the man behind Fabianism in America. He is reported as having written in "an advisory to a Socialist agitator:

"Do steer away from making it look like a Socialist enterprise * * * We want also to look patriots in everything we do. We want to get a good lot of flags, talk a good deal about the Constitution and what our forefathers wanted to make of this country and to show that we are really the folks that really stand for the spirit of our institutions."

Thus they deny themselves, thus they acknowledge their conspiratorial nature. For they know, as I know, our people would rout them out if their true beings were disclosed. So they deceive, so they preach "the Constitution" and patriotism, while destroying one and defaming the other.

Thus have the Fabian spiders woven their web. And the rest of us, flylike, busy in search of each day's bread, have unwittingly, thoughtlessly become enmeshed in their trap.

A Tribute to Gerald J. O'Donnell

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. HUMPRHEY. Mr. President, I wish to commend and bring to the attention of my colleagues in the Senate an outstanding, public-spirited citizen from the capital city of Minnesota—St. Paul.

Gerald J. O'Donnell has been a leader in both his State and his community, playing an active and vital role in all

phases of public life. No one can forget his many dynamic years as President of the St. Paul Trades and Labor Assembly, nor his constructive action as Chairman of the Ramsey County Democratic-Farmer Labor Party. But Mr. O'Donnell's interests are certainly not limited in scope. An example of his untiring service to the public is his 6 years of outstanding service on the St. Paul Board of Education. At a time when our educational system and standards have been under severe scrutiny and criticism, St. Paul's school system has moved ahead progressively. You can be assured that much of this progress can be attributed to the conscientious efforts of Mr. O'Donnell.

As stated in The Minnesota Union Advocate, "name almost any worthwhile activity of a community nature, and chances are ten to one that Gerald J. O'Donnell has played, and probably still is playing, an active part." At this time, upon Gerald J. O'Donnell's resignation from the St. Paul Board of Education, I wish to say "thank you" to this fine Minnesotan, and I ask unanimous consent that an editorial from the Minnesota Union Advocate be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRULY A LEADER

The recent decision by Gerald J. O'Donnell to resign as a member of the St. Paul Board of Education after some 6 years of outstanding service serves to focus attention upon an important function of the organized labor movement that is all too often taken for granted:

The distinguished services in public life and community affairs rendered by so many leaders, and rank-and-file members as well, of the trade union movement.

The story is a continuing one, but at this moment Gerald J. O'Donnell can be regarded as typical of all who have been true leaders, not only in labor activities, but in the State and community in which they live.

O'Donnell's service on the board of education is typical of the active interest he has taken for so many years in serving the entire area.

His many years as president of the trades and labor assembly are still fresh in the minds of most of us; his leadership and activity for constructive action as chairman of the Ramsey County DFL Party will not be soon forgotten.

Name almost any worthwhile activity of a community nature, and chances are 10 to 1 that Gerald J. O'Donnell has played, and probably still is playing, an active part.

The entire community as well as organized labor has reasons to be proud of Gerald J. O'Donnell as a good citizen.

The Annual Oscar Awards Show

EXTENSION OF REMARKS
OF
HON. JAMES C. CORMAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. CORMAN. Mr. Speaker, I direct the attention of my colleagues to an affair dear to the hearts of Californians—and to people the world over. I refer to the annual Oscar Awards Show, honoring outstanding film achievements, by the Academy of Motion Picture Arts and Sciences. The nominees for these awards were announced last week, and the selections promise another hallmark year for the motion picture industry's finest hour.

The industry long has been an important element in California's economy. Most of the studios are located in my own congressional district. The industry directly employs thousands of people and through its varied operations helps to employ thousands more in related industries throughout the country. More important, it brings untold enjoyment into the daily lives of millions, both at home and abroad, where it has won singularly warm acceptance as America's best-known export.

By encouraging higher cultural and technical standards of film making, the academy has helped make the American motion picture the finest in the world.

Oscar is 33 years old this year. He and the rest of the movie industry celebrate this birthday on Monday, April 17, and the "party," the awards show, will be seen and heard by millions on the combined radio and television facilities of the American Broadcasting Co. and the Canadian Broadcasting Co. As always, it will be an exciting and entertaining show and I urge all of you to watch it.

A Resolution by the Common Council of Oshkosh, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. WILEY. Mr. President, recently I received a resolution adopted by the Common Council of the City of Oshkosh, Wis. The resolution urges that cities be granted additional opportunities to acquire Federal surplus property.

In my judgment, it is extremely important that we find useful ways and means for utilizing such property. If we fail to do so, it would mean a further loss to the American taxpayer.

Believing the resolution to allow city governments the rights and privileges to acquire surplus property deserves the consideration of Congress as well as the appropriate administrative agencies, I ask unanimous consent to have this resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Federal Government now possesses, and will continue to acquire, considerable quantities of property no longer needed for their original governmental purposes; and

Whereas much of this property, declared surplus, is stored and ultimately sold through the offices of the General Services Administration; and

Whereas certain rights and privileges to the acquisition of this surplus property are accorded to nonprofit organizations, and to school jurisdictions; and

Whereas the rights and privileges of cities to acquire such surplus property are severely restricted and are generally limited to purposes of civil defense; and

Whereas much surplus property is purchased by private individuals for speculative purposes; and

Whereas, in effect, municipal jurisdictions do not have the same rights and privileges now enjoyed by school districts and by certain nonprofit groups; and

Whereas all such surplus property has been purchased with public funds and paid for by the taxpayers; and

Whereas it is generally deemed equitable that city governments should enjoy the same rights and privileges, insofar as surplus property is concerned, now accorded to school districts and to nonprofit organizations; and

Whereas the rights and privileges of cities should in all justice take precedence over the rights and privileges of private speculators: Now, therefore, be it

Resolved by the Common Council of the City of Oshkosh, That the Common Council of the City of Oshkosh hereby goes on record as favoring the adoption of legislation and administrative rules and regulations which will vest in cities the same rights and privileges now vested in school districts and other nonprofit organizations, with respect to the acquisition of Federal surplus property.

Cooperation Between the Races in the Alabama-Mississippi Flood Disaster

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an Associated Press article from the Mobile (Ala.) Register, with a Hattiesburg, Miss., dateline that will be very interesting to many of our friends all over this country.

I wish that I could put some of the pictures in, not only from Mississippi, but up from Demopolis, Ala., where one of our great friends, the head of civil defense, Jerome Levy, a great and good man, with the help of his organization evacuated over 800 people, white and colored, from these river bottoms that have overflowed. This has been the worst flood we have ever had. But it has done an awful lot to help keep the cordial relations we have had always with the white and Negro people. It has brought us close together and the Southerners are the ones who have helped in this great trouble, and it has always been a joy and a pleasure to do just that. We have no misunderstanding with our colored people down in our part of the country; it is just the outsiders meddling in their affairs and all of the right-thinking people, white and black, wish that they could be let alone where they have been so well for so long, where it is working and working well, and just the way both of them want it to work.

I also include an article by the Rambling Reporter appearing in the Demopolis (Ala.) Times, under date of March 2, 1961, in which she gives a graphic description of the flood conditions in the Demopolis area and of the wonderful cooperation between the races, the Coast Guard, the civil defense, the National Guard, the Salvation Army, and others, in alleviating distress and in evacuating the flood victims.

The articles follow:

NEGRO FLOOD VICTIMS LAUD WHITE HELP

HATTIESBURG, MISS.—Negroes lavished praise Wednesday on white citizens for what they called a tremendous job of helping the hundreds of Negro flood victims last week.

N. R. Burger, principal of Rowan Junior-Senior High School for Negroes, termed the work of white volunteers tremendous in aiding the 1,400 to 1,500 Negro evacuees housed in the school.

"There were young white women helping distribute diapers and mixing formulas for babies," he said. "Other whites aided in the distribution of clothing and food."

TELLS OF AID

Mattie Mullens, a Negro mother of five, said, "Whites of all ages came and sweated it out with us. I saw some of them helping with the babies. I can tell you this, it's something I won't forget."

The praise came in the wake of a Tuesday editorial in the Hattiesburg American on the teamwork of both races during the recent flood on the Leaf River.

The newspaper said such mutual help "ordinarily should not be singled out for any special comment. However, when our social order daily comes in for so much untrue and unfair criticism * * * we feel that the true nature of the white-Negro relationship is worthy of comment.

"We maintain that this basic compassion * * * can help us in time to solve any racial differences we face."

THE RAMBLING REPORTER

(By Elizabeth Cornish George)

If medals were presented for "Service Beyond the Line of Duty," they would have to make them by the carload to distribute to those who have given of themselves and their time in aiding the victims of the flood in this section the past week.

The organizations were here for handling the disaster, even though those participating in them had never had a similar experience. Men and women stopped what they were doing to save people and their possessions from the worst flood this section has ever known.

It was National Guards' "Muster Week." They mustered all right—day and night—wet, sleepy, and tired. When they could, they came into town for a meal at a restaurant, when they couldn't lunches were taken to them. Coffee, cookies, donuts, and sandwiches were furnished on the job by the Red Cross, the wives of the men and friends.

The civil defense organization, both from the local and State level, helped coordinate the rescue, feeding, transportation, and housing problems.

The Coast Guard was up and down the rivers way into the night working shoulder to shoulder with the National Guard and civil defense, bringing people to safety.

The Red Cross took care of financing the two meals a day which were prepared and served by Negro volunteer workers at U.S. Jones School. Certificates were issued from the Red Cross office for clothing, which was furnished at the Council of Church Women's clothing room, located in First Baptist Church.

The Salvation Army delivered food by helicopter and motorboat to those on dry land, but isolated from food supply. It also gave emergency food certificates to the flood victims.

People from all over brought clothes to the clothing room, all of which had to be assorted and put into some order by volunteer Red Cross workers.

Medical attention is also given by the Red Cross to the flood victims needing it. Fortunately, there have been very few to require this service at this point, but those who did had the service paid for by the Red Cross chapter. The Red Cross will also help to rehabilitate those in need of it.

Food will also be given to those who will need it when they return to their homes. This is food brought by civil defense from the surplus food program in Birmingham.

None of this, other than the clothing room supplies, is being done in the name of the religious groups of Demopolis.

Somewhere along the line, it seems, there should be mention of the fact that it is done because of the feeling of love and kindness toward our fellow man, as taught throughout the Bible. If there is a feeling of gratefulness in the hearts of these people who are being helped, that appreciation should be directed toward God, and not toward His servants who are doing His work.

The inspiration for the work comes from a tender heart, and a heart is made tender by the spirit who takes control of it.

The fact that the majority of people taken from the flooded areas were Negroes did not slow down the work of the white men and women who worked night and day for them.

Someone might ask why the Negroes were living in the low areas and the white people in the higher section of Demopolis. Thousands of Negroes do live in the higher sections. Across the river is farm land. Some land owners prefer living in town, while the Negroes seem to like the freedom of the country. The white people who lived in the low lands moved before someone had to go and move them, too.

Also, what was considered safe through the years, in this flood went under. Farmers lost cattle on what was thought to be "high ground".

No questions have been asked about their reasons for staying—except that it was home—nor about their race, beliefs or future plans.

The work for and with these people will be continued for many weeks. All through the years, things similar, though not so great as this, have taken place, and yet, in other sections of the world the white people of the South are pictured as hating Negroes.

Some of you who read this column are Negroes. Why don't you start a campaign to tell the people out of the South the real truth?

Youth Wants To Grow

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. JOHNSTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Miss Jonnie Flynn McCormac, of Dillon, S.C., the 1959 winner of the 4–H Club Electric Awards program. This address was delivered at the 19th annual meeting of the National Rural Electric Cooperative Association held in Dallas, Tex., on February 15, 1961.

The people of South Carolina are very proud of this young lady and the fine achievement which she has made.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOUTH WANTS TO GROW

I pledge:

My head to clearer thinking; my heart to greater loyalty; my hands to larger service; and my health to better living for my club, my community, and my country.

This is the pledge that is carried in the mind and in the heart of every 4–H'er. From the very first day that he joins 4–H this pledge becomes an integral part of not only his 4–H work but also of his entire life. As he takes part in the many activities that 4–H offers, this pledge assumes a deeper meaning for him, and ultimately he becomes a living example of the very aim of 4–H—he becomes a strong and useful citizen of our great United States. This is what 4–H attempts to instill in its members—the necessity for honesty, integrity, character, and leadership in us, the leaders and citizens of tomorrow. It trains our heads, our hearts, our hands, and our health to face the responsibilities that you, the leaders of today, will leave for us. And we want to grow in all these ways—so we will be better prepared to defend the American way of life.

The 4–H offers so many ways in which to grow that I could never name them all. A part of the 4–H creed is: "I believe in the training of my hands for the strength it will give me to be helpful, skillful, and useful." This is where our projects come in—to train our girls in cooking, canning, sewing, and such domestic activities and to train our boys in farming, raising cattle and swine, and the other many activities of the farm. But contrary to the opinion of most persons, we girls are not limited to merely domestic projects. For instance, when I joined 4–H my first project was a pig. I had quite an experience caring for her, feeding her, and watching her grow. Maybell was her name and she and I had much fun together. We even entered the county fair and much to the surprise of us both we won first place.

From that first project I wandered on to a few of the domestic ones—house beautification, room improvement, cooking, and sewing. But I'm ashamed to admit that I was never fond of any of them; neither was I very good at any of them.

Finally, about 5 years after I joined 4–H, I found my project—the one that I liked from the first and the one that has continued to hold my interest. It is, of course, electricity. My brother is now an electrical engineer. Before he went off to school he was always wiring houses or tobacco barns and I tagged along to hold the pliers and get in his way. That began my interest in electricity; so, when I found that 4–H offered a project in electricity, I joined it—so I could learn to do the things that my brother did. Needless to say, I've never learned to do even a mere fraction of the things my brother does, but I have learned a great deal and I've had fun trying and doing the things I could do.

Almost more than anything else, I enjoyed giving my electrical demonstrations. There is one that I think I shall never forget. The Kiwanis Club of Dillon invited me to give one of my demonstrations at their meeting which was held at a local restaurant. The demonstration that I chose to give emphasized the danger of overloading circuits.

I feel quite sure that my point went over perfectly, too, for before I finished my demonstration, I blew the lights in the restaurant about a half dozen times.

More than any of my electrical jobs, I enjoyed and still am enjoying my hi-fi set. I assembled the speaker and amplifier for it myself and completed the set with a turntable. The entire outfit cost me less than $120 and I fancy that I saved approximately $50. I doubt I could be any prouder of an outfit engraved in gold.

Yet, I know that nothing that I have ever achieved could have been possible without the encouragement and help of our local electric co-op. They have been so wonderful to me, just as they have been to everyone in our electric project. Several of my trips were sponsored by our power suppliers and there have been many snags from which I could have never withdrawn had it not been for their help.

The rural electric system, Marlboro Electric Cooperative, in helping me and my club, helps us raise the standard of living of our area. By many other activities of the cooperative, they have made jobs available, created a market for many products, and given our families the advantage of modern-day living. Marlboro Electric Co-Op provides, where no one else would provide, the ways and means for our rural people to be first class citizens of our communities. Rural electrification all over the country means that our farm youth of today look to the rural areas as good places to work and to live, not as "distressed areas" to leave as quickly as possible.

Help from power suppliers, as I have already pointed out, has been no problem for my club, for any time my agents or I need, Marlboro Electric Co-Op has always been willing to lend their assistance. I truly hate to think that any electric club has to manage without the sponsorship of its local power suppliers. Yet, there are clubs without this help. I hope that some day this will no longer be true, for I hope that some day power suppliers all over America will see how much 4–H needs them and will give their aid, not only because 4–H needs the American power supplier, but also because America needs 4–H.

America needs 4–H? That's a pretty broad statement, isn't it? And yet, I am willing to defend it. America tomorrow depends upon her young people of today. And 4–H is youth—thousands of youths growing together toward the fulfillment of one common goal, to serve our country well. The sort of club 4–H is makes it even more important, for there are no ridiculous requirements for a person to meet before he can become a member. He doesn't have to possess a high degree of social prestige or money in order to become a member. All he is required to have is a sincere desire "to make the best better" (the 4–H motto). Therefore, thousands of boys and girls, who without 4–H would never have been given a chance, are given the opportunity to grow into strong and useful citizens.

Never before has America needed these strong citizens as she needs them now. And never before has the youth of our Nation been given the opportunity to work as citizens, participating in the activities of our communities and Nation. Rural electric systems, prime examples of our democratic way of life, offer youth many ways to serve, and give us the basis upon which we can build today to become solid citizens of tomorrow. 4–H helps us grow in mind, spirit, usefulness, and health. We must continue to grow stronger and more useful so we can help guide those weaker than ourselves to form a better, stronger, and more tolerant Nation. May God give us the strength as he gave us the opportunity.

Can We Adjust to Change?

EXTENSION OF REMARKS
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. SMITH of Iowa. Mr. Speaker, Robert K. Buck, of Waukee, Iowa, was a member of the Agricultural Advisory Committee during the term of Ezra T. Benson as Secretary of Agriculture and has been an active participant in farm management conferences for many years. On March 2 he spoke to the National Pasture-Forage-Livestock Conference at Omaha, Nebr. Probably no farm commodity group, unless it is soybean growers, has had more Government protection in the past 2 years than the producers of feeder cattle. They secured this support through a program which set a low support price but no controls on corn production. The result has been diversion of acres to corn that otherwise would have produced millions of tons of soybeans and forage for livestock, at the same time there was increased demand for feeder cattle to eat the increased supply of corn. It amounted to the same thing as if soybean and forage acres had been put into a soil bank. Feed grain producers have lost heavily in terms of income and are now facing an emergency situation. The comments of Mr. Buck also deal with other problems involved and conclude that "we will close ranks behind a feed grain program very close to the one now before Congress."

At this time we are considering emergency farm legislation, and I think it would be worthwhile for others to read Mr. Buck's brief but potent remarks. I am therefore inserting them in the RECORD:

CAN WE ADJUST TO CHANGE?

(Address by Robert K. Buck before the National Pasture-Forage-Livestock Conference, Omaha, Nebr., March 2, 1961)

The theme of this 13th Annual National Pasture-Forage-Livestock Conference is "The Challenge of Change."

My subject is "Can We Adjust to Change?" My point of view is that of a Midwest commercial farmer concentrating on grain production and hog and cattle feeding.

In the 13 years this conference has operated new technology has given considerable economic advantage to grain production as contrasted with pasture and forage. This applies to a large acreage of Midwest land not subject to serious erosion or land that can be protected from erosion by such practices as terraces.

Among the new techniques important in this change are more and better fertilizers (especially nitrogen), improved insecticides, and developments in power and machinery for land preparation, planting, weed control, harvesting, and storing. Corn or sorghum silage has largely replaced hay as a roughage in many cattle feeding operations and the shift to confinement systems places much less emphasis on pasture for hogs. So, I would say that one of the major challenges faced by the Midwest farmers is (not can we but) how do we adjust to our exploding grain production?

Most of us agree on the basic facts of the situation. Grain yields have increased year after year. Year after year the Government removes several million tons of feed grain and wheat from commercial markets. In spite of very large disposal programs accumulated stocks are at an all time high, nearly $4 billion for feed grains alone. Even with this sizable takeover by the Government, enough grain has been fed in recent years to periodically depress livestock prices.

The hard fact staring us in the face is that we farmers are constantly and chronically overproducing our markets. Since 1952, 8 to 9 percent of each year's farm production has moved into Government hands rather than through commercial markets.

In a certain sense we livestock producers and feeders have been living in a fool's paradise. Surely it is obvious that we would have been in trouble much of the time in recent years if all our surplus grain production had been fed.

There is growing recognition that we have reached a time of decision—a crisis in farm policy. We cannot continue to pile up surplus stocks in Government bins over and above strategic reserve requirements. And we would not tolerate the lower prices and incomes that would result if all our excess production were fed to livestock and forced through commercial markets.

We are groping for an output balancing mechanism similar to that available in nonfarm industry. We must find a way to produce at something less than full potential capacity for the next few years and yet maintain the farm plant so as to meet the enlarged demand for food and fiber in the 1970's, the 1980's, and beyond.

There is growing conviction that farmers must retire enough land to keep grain production at needed levels so that (1) satisfactory grain and livestock prices can be maintained and (2) further accumulation of Government stocks will be stopped. In my opinion this is the most crucial change and adjustment facing Midwest grain and livestock producers. It isn't a matter of can we do it? Rather the question is how do we do it?

I believe we will close ranks behind a feed grain program very close to the one now before Congress.

* * * * *

Now, I would like to turn to the changes and adjustments being made on our individual farms. Here are some reactions that I get as a I talk with my neighbors.

I believe farmers get a bit impatient with the folks who seem to be clamoring for change for the sake of change. For a long, long time people have wrestled with two conflicting needs—(1) the need for change, for adjustment to new conditions and (2) the need for order and stability in their lives—change versus order. I believe farmers can be forgiven for having some of this same deep-seated need for order in their lives.

To hear some people talk, one would get the impression that farmers are very slow to change. The facts are just the opposite. What other major industry has made greater changes in the last two decades in terms of introduction of new technology, increased productivity per worker and the reduction of labor force?

Actually, to a large extent, our current problem of overproduction and downward pressure on farm prices and incomes is a result of overrapid introduction of new technology on American farms, of too rapid expansion of farm productive capacity, and of too fast expansion of nonfarm industry selling to farmers.

I believe it would only be fair for farmers to insist that greater attention be given

to the order side of this equation, change versus order. Changes for what purpose? What are our goals? What kind of farming society, what structure of farms do we seek? Certainly we do not want to create a new god—technology and efficiency at whose feet we bow down in worship. We are not pawns to be moved this way and that at the whim of every person or organization that has a new gadget or a new technology to sell us.

In my opinion, some farmers especially younger ones, are being confused and their faith in the future of farming undermined by a chorus of specialists crystal-ball gazing about the revolutionary changes ahead—the wave of the future—automation, ppshbutton feeding, eight-row equipment; bigger and bigger tractors; large scale, continuous, confinement hog systems, etc.

I'm not suggesting that a farmer turn his back on these and other developments. I'm sure, however, he must be hard-nosed about sinking his savings or borrowed money into major new developments. These are very major and very longrun decisions. A serious error can put a family out of business.

I like Bernard Collins' (Clarion, Iowa) rule—to pay very little attention to the articles about farmers who are planning a new setup or who are just starting a new program. He suggests that the "proof of the pudding is in the performance." One should analyze these new systems or new ideas after several years practical operation before judging their merit.

I'd like to add my voice to those who argue for the good future of the moderate sized, well organized family farm—the farm employing fully the labor equivalent of 1½ to 2 man-years.

Actually these farms are holding their own in numbers. They have sufficient volume to reap most of the economies of scale. They are tough competitors. In real rough going they would put the big operator out of business. Among their competitive advantages are close management, flexibility, high production per worker, and low costs of operation and overhead.

My advice to a young farmer would be to concentrate on getting moderate volume but keep his costs within reason. Big and fancy machinery and equipment, pushbutton feeding, etc., do add measurably to overhead costs, but do not insure necessary volume. I once heard an Iowa master swine producer observe that a farmer's success with hogs is usually in inverse relation to the elaborateness of his equipment.

* * * * *

I'm afraid what I have said sounds as if I'm constitutionally opposed to change. This is not true. Perhaps I am just baffled as are many other farmers with our conflicting beliefs and values.

A farmer observes a widespread enthusiasm and liberalism (among his friends on the farm, but especially among his friends in the colleges, the farm magazines, the farm organizations, and business' selling to farmers) for public and private measures to pump new technology, new power, new machinery, and new gadgets into farming—all in the name of progress and increased efficiency but all resulting in excess production.

The baffling thing is our deep-seated conservatism in developing new policies and programs to deal with the consequences—excess capacity for example—of this pell-mell drive to develop and disseminate new farm technology.

In closing I make two suggestions somewhat facetiously, but seriously too. Concerning public and private programs to expand productive capacity of farmers—through new technology, new machines, etc.—I suggest that we be a little more conservative. Concerning policies and programs to enable farmers to balance output with demand so that satisfactory prices and incomes result, I suggest that we be a little more liberal.

Tennessee and the Presidency

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. RANDOLPH. Mr. President, it has come to my attention that last week the very popular lecturer, Dr. Frederick Taylor Wilson, gave a most informative and interesting address to the Rotary Club of Charleston, W. Va., on the occasion of his 12th appearance before that splendid service organization.

Dr. Wilson has specialized for many years as a student of the lives of the Presidents of the United States, and in this instance he lectured on the contributions of the State of Tennessee to the Presidency, in the persons of Presidents Andrew Jackson, James K. Polk, and Andrew Johnson. His address contains information of interest, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TENNESSEE AND THE PRESIDENCY

Three citizens of Tennessee have served as President of the United States—Andrew Jackson, James K. Polk, and Andrew Johnson.

All were natives of North Carolina and all were Democrats.

The first two were born in the Charlotte area of North Carolina and Johnson, the third one, in Raleigh, the State capital. All were in the White House in a 41-year period (1829–69).

During that historic period, two other Tennesseans were voted on for President and carried Tennessee. The first one was Hugh Lawson White, of Knoxville, a native of North Carolina who carried Tennessee and Georgia in 1836. His running mate John Tyler of Virginia who 4 years later became President 30 days after becoming Vice President under William Henry Harrison. The second one was John Bell, a native Nashvillian, who in 1860 won the electoral votes of Tennessee, Kentucky, and Virginia. His running mate was Edward Everett, of Massachusetts, scholar and statesman.

Jackson, Polk, and Johnson all have a special place in American history.

Jackson, the only one to serve two terms, was our seventh President, a magic number, and his election as a war hero from Tennessee after 40 years of leadership by four great Virginians, Washington, Jefferson, Madison, and Monroe, and the two Harvard bred sons of Massachusetts, John Adams, and son, John Quincy Adams, represented a bloodless revolution in American politics.

Polk who was elected President 8 years after Jackson, our first dark-horse nominee for President, as fate would have it, defeated for the Presidency Clay the great Kentucky Whig leader who twice had opposed Jackson.

Johnson, our third President from Tennessee, and the only man from Tennessee ever to be Vice President, reached the Presidency by tragedy 42 days after he was sworn in as Vice President under the lamented Lincoln. He was the last southern citizen to become President. That was near 96 years ago.

Suppose we take a hasty look at the careers of this trio of Tennesseans.

The story of Jackson is largely the story of early Tennessee history.

He was born (1767) 2 years before the first cabin for whites was built in what became Tennessee.

He located in the far western North Carolina village of Nashville the year (1788) the Constitution of the United States was ratified and Washington became President. North Carolina had voted against ratification. Though never of the legal type, Jackson at 22, was a good prosecutor in Nashville's first court.

It fell to Jackson's lot to live under three flags in his remote western North Carolina home. First that of North Carolina then 2 years later under the flag of this newly ceded territory, and finally 6 years later under the flag of the new State of Tennessee, which Jackson helped establish and named.

Jackson had but limited experience as a lawmaker. He was chosen at 29 as Tennessee's first Congressman only to resign after 1 year to become again for 1 year only a member of the Senate. His major act as a Congressman was to unwisely oppose thanking the retiring President, George Washington, for his long services to the Nation.

Unhappy as a lawmaker far from his home and his faithful wife, Jackson left the Senate to accept a place on the highest court of Tennessee, a position ill suited to his taste and training.

After 6 years, Jackson quit his legal career forever and was thereafter Jackson the prosperous planter and merchant—and finally and unexpectedly a national war hero and President.

Strange as it may seem Jackson's military activities of a major nature took place after he was 45 years of age, and all within a period of less than 4 years. His fame as a soldier was won primarily in the battle of New Orleans (Jan. 8, 1815) and that 15 days after a treaty of peace with England had been signed in Paris.

Jackson lost in the free-for-all fight for the Presidency in 1824 though he led in popular and electoral votes. He was then again a Senator after a 26-year absence. The contest was decided by the House where Clay was Speaker and John Quincy Adams, who like Clay, had signed the Paris Peace Treaty was chosen President.

Four years later—Jackson easily routed Adams from the White House and then for a second term sent Clay his opponent into gloom and defeat.

Jackson as President carved out an era of his own. It was a mixture of success and failure. A domestic row all but broke up his first Cabinet. His acts once became so arbitrary as to win the censure of the Senate. But for the only time in our history the national debt was paid.

Despite that, a depression of great magnitude broke on the Nation soon after Jackson's Vice President Van Buren of New York became his handpicked successor. The Whig Party rose to power defeated Van Buren for reelection and in Tennessee was dominant for the next 20 years.

Jackson's last years were in quiet contrast to his earlier ones. The fiery fighting frontiersman now became the placid if not pious Presbyterian planter.

The Hermitage was a lonely place without his beloved Rachel, his wife for 37 years, whose death soon after his first election as President was hastened by campaign rumors of his early marital mistakes.

He died on June 8, 1845. His protege Polk was President, himself doomed to die 4 years later.

Devotees of Jackson now daily visit his Hermitage home and tomb. His human vices have long since been carried far out to sea by the tides of time. His great virtues shine on with ever increasing splendor.

James K. Polk became President March 4, 1845, a short time before Jackson's death.

He largely owed his unexpected nomination and election to Jackson's friends and followers.

Polk, born in 1795, had come to Tennessee as a 10-year-old lad with his prosperous and prominent North Carolina parents. His paternal grandfather also moved later to Tennessee. He was easily the best bred and best educated of our three Tennessee Presidents. An honor graduate of the University of North Carolina, he began life a prosperous and well-educated young gentleman.

Polk married Sarah Childress of Murfreesboro, herself educated in North Carolina who was his wise helpmate and secretary when President.

He served one term (1823) in the Tennessee Legislature which then met at Murfreesboro. His one big act there was to vote to send Jackson back to the Senate.

Two years later he became Congressman at 30 years of age. It was there he first won national fame.

He was Speaker of the House during the last 4 of his 14 years in Congress—a position now third in line for the Presidency. He was the only Speaker who ever became President. As Speaker at one time he had before him as fellow members, J. Q. Adams, a former President then a Congressman from Massachusetts and Millard Fillmore of New York, and Franklin Pierce of New Hampshire, both destined later to be President.

Polk reluctantly quit Congress in 1839 to rescue the Governorship of Tennessee from Whig hands. He was an able campaigner and his party needed him. He won for one term and was then twice in succession defeated for reelection by a wiry Whig named Jones, Tennessee's youngest and first native son to be Governor. Tennessee was a Whig stronghold, and elected Whigs as Governors in 12 out of 18 years (1835–53).

A sadder but a wiser man, Polk went back to his long neglected legal work. But the tide of failure became the flood of fame, and Polk through the influence of Jackson's men was made the democratic dark horse nominee for President when Van Buren now out of office for 4 years failed in this third effort to be nominated in 1844. By a close margin Polk won the Presidency over the popular Henry Clay in Clay's third and final fight to be President.

Polk was a success as President. He now rates as the greatest among the eight men in the White House between Jackson and Lincion. As President he saw the Oregon issue become a settled one, he saw Texas become a part of the Union, he saw a war with Mexico fought and won and a vaster area added to the United States than at any other period since the Louisiana purchase under Jefferson. He was not a candidate for reelection.

No President ever left office with his program more nearly completed than did Polk. But he wore himself out in doing it and came home a tired, gray-haired old man, died in 3 months and 11 days after leaving office (June 15, 1849) still under 54 years of age—the shortest life of any ex-President. His mother survived him.

He had just moved into his new Nashville home, once the home of Grundy, his law preceptor. He joined the Methodist Church in his last days.

Mrs. Polk lived on for 42 more years (1891), the longest life period of any ex-President's wife. For years her home was a shrine as the name and fame of Polk grew with the passing years. There were no Polk children.

The bodies of Polk and his wonderful wife rest in an impressive tomb on the grounds of the State capitol in Nashville.

Polk was neither gay nor glamorous but he served well and ably his day and generation.

Johnson, unlike Jackson, was never a soldier though he held the rank of brigadier general when military governor of Tennessee.

Unlike Polk the college trained scholar, and lawyer, Johnson was an illiterate at high school age (18) when he came to Tennessee, a tailor by profession.

He loved public office. Public speaking was his great delight. He ran for and was elected to more public positions than perhaps any other President during his less than 50 years of life in Tennessee.

A wise Tennessee wife, who aided him also in learning to read and write, managed well his earnings and he became prosperous where once he had been penniless.

Johnson served three terms in the Tennessee Legislature, twice in the house and once in the senate, all within 15 years after he had located in Greeneville, in upper east Tennessee. Polk was Governor during part of that time. For the next 10 years (1843–53) Johnson a Democrat represented in Congress what is now a Republican stronghold. Polk was President during 4 of those years.

Legislated out of Congress by a Whig Tennessee Legislature Johnson ran for Governor, took his cause to the people and routed a brilliant Whig opponent, a grandson of Patrick Henry. Sworn into office in the new State capitol he used a new broom and swept clean all traces of the Whig Party which had long held sway in Tennessee.

Himself unschooled, Johnson as Governor, championed Tennessee's first public school system.

It was easy for him after two terms as Governor to go to the Senate as the successor of James C. Jones (1851–57), who had twice defeated Polk for Governor years before.

The son of the Raleigh janitor, orphaned at 5 years of age had now traveled fast and famously in politics. The issue of secession which broke the careers of many southern men, indirectly made Johnson President of the United States. Alone of 22 southern Senators he stood firmly for the Union.

When the long pending war came, Lincoln as President who had known Johnson in Congress sent him back to Tennessee as its military governor. He was holding that position when chosen, as Lincoln's running mate in 1864. Tennessee now had its first and only Vice President, soon to become President.

No American President had more to overcome than did Johnson who tried unsuccessfully to carry out the pacific policies of the martyred Lincoln. The climax came 3 years after becoming President, when unfair impeachement charges were made against Johnson, a trial took place in the Senate and by a majority of only one vote he escaped removal from his high office.

Seven Republican Senators put patriotism above party and political pressure and saved the day for Johnson. The vote was 35 to 19 for conviction. One of that magic seven was Senator Willey of West Virginia.

It would seem that Johnson would have welcomed a return to private life, after his unhappy years as President. But politics was in his blood and twice he met defeat once for the Senate and once for the House until finally by a close margin, 6 years after being President he was again made a Senator from Tennessee—the only ex-President ever to be Senator. A few months later (July 31, 1875) Johnson died suddenly in his old congressional district, still under 68 years of age, honored and sung as a man of courage, character, and great ability.

He rests beside his wife, long an invalid,, who survived him for 6 months in Greeneville, Tenn. His burial place like that of Jackson is now a national park.

Polk declared an honest man the noblest work of God. Such were the three Tennesseans who became President..

Commercial Fisheries Rehabilitation and Development

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 17, 1961

Mr. RIVERS of Alaska. Mr. Speaker, today, I introduced a bill designed to assist in the rehabilitation and development of the commercial fisheries of the United States. Properly managed and utilized our commercial fisheries constitute a self-perpetuating resource which may be cultivated and harvested on the perpetual yield principal. Only research plus rehabilitation and development projects can make possible large yields enabling maximum utilization by us and our children and our children's children.

With regard to my own State of Alaska, the situation is extremely serious because of the depletion of Alaska's once great salmon runs, now depleted to almost the vanishing point because of industry exploitation and Federal mismanagement during the years when Alaska was a Territory. Now that the State of Alaska has assumed jurisdiction and abolished the fish traps, underwater corrals, fishing is being intensly restricted to allow adequate escapement of the salmon to the spawning grounds and thus sow the seeds for large runs in the future. However, I have considered in my bill the situation as pertains to all the commercial fisheries in all of the States to formulate a widespread and consistent effort toward proper conservation and utilization in the entire field of fisheries.

Using Alaska as an example, a brief historical statement of background will illuminate the overall problem:

The history of fishing for salmon in Alaska on a commercial basis goes all the way back to 1878 when the first canneries were established. By 1928 Alaska had become the world's principal salmon producer and the Territory's largest single source of revenue. The salmon pack increased from about 2 million cases in 1905 to over 6 million cases in 1928 and then to over 8 million cases in 1936. However, these mounting returns were obtained by increasing the use of fish traps which eventually prevented enough escapment to the salmon spawning grounds. Warnings were given, but under Federal management by an absentee bureau no attention was paid. The runs began to decline. By 1941 the pack dropped to 6,906,503 cases.

The continuing decline brought the Alaska salmon pack to the low ebb of 1,600,000 cases in 1959.

Through these years Alaskans fought vigorously for abolition of the traps, which, combined with seine boat activities and the use of other floating gear, constituted serious overfishing and depletion. Incidentally, Oregon, Washington, and British Columbia, managing their own fisheries, abolished such traps in the 1930's. Alaska, as a Territory, however, lacked the political strength to prevail upon the successive Federal regulatory agencies to abolish the traps, which was accomplished only upon the advent of statehood. Accordingly, when Alaska took over the fisheries and abolished the traps on January 1, 1960, it inherited the wreckage of canned salmon industry avarice, and mismanagement by absentee bureaus.

Because of the serious situation in Alaska, the Alaska congressional delegation is taking a leading role in this matter. Analysis to date indicates that the most feasible approach would be legislation to amend the Kennedy-Saltonstall Act under which the Secretary of the Interior presently administers a fund made available each year for fisheries research. In addition to Federal Bureau of Fisheries research, the Secretary now allots money to State fisheries departments and other qualified institutions on a contract basis, for technological, biological, and related research programs. The money put in said fund each year has been an amount equivalent to 30 percent of the gross receipts from duties collected under the customs laws on imports of fishery products during the preceding year. Based on 1960 figures, the amount in the Kennedy-Saltonstall fund for 1961, already budgeted, will be $5,321,000.

My bill just introduced would create another fund, also composed of an amount equivalent to 30 percent of the gross receipts derived from duties imposed on imports of fishery products, which would also be administered by the Secretary of the Interior. Instead of allocating moneys in this second fund under contract arrangements, however, as is done with the existing fund, the Secretary would apportion the money to the States according to a formula based upon the proportion which the value of raw fish landed and the value of manufactured fishery products of each State bears to the total of such items attributable to all the participating States. The money so apportioned would be distributed only for carrying out projects approved by the Secretary of the Interior. Under this formula, for example, and postulating approval of the projects, Alaska would get about $600,000 per year from the second fund to use under its own management for fishery rehabilitation projects including stream clearance and spawning ground development. This would be in addition to the above mentioned allotments from the existing fund for technological, biological, and related research programs. This proposed new fund, applying to all States managing commercial fisheries, should attract the support of Members of Congress from all such States, and I would appreciate the interest and support of my colleagues. This legislation will be introduced by Senator ERNEST GRUENING, of Alaska, in the Senate.

Aid for Small Business

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. JAVITS. Mr. President, American small business occupies a very distinct place in our economy. Congress has recognized the importance of fostering and stimulating the growth of small business, and has made possible a fresh recognition of the contribution it can make to our economy.

Private firms have emulated the example set by the Congress, and I have a report here which details the example set by a New York bank in this field.

I ask unanimous consent to print in the Appendix of the RECORD the article by Harold F. Klein, an officer of the Manufacturers Trust Co., of New York, entitled, "How M. T. Co. Helps Small Business," which appeared in the magazine Emteeco for November 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW M. T. CO. HELPS SMALL BUSINESS

(By Harold F. Klein)

In times when the demand for credit exceeds the supply and interest rates rise, the charge is often made by those who do not know the facts that "banks lend only to big business and small business can't get loans."

In October 1957, a time of so-called tight money, the Federal Reserve System surveyed all its 6,411 member banks, which account for over 86 percent of total loans of all commercial banks in the United States, and found that 78 percent of their 1,280,600 outstanding loans to business were to borrowers having total assets of $250,000 or less, the actual number of loans to businesses of this size bracket being approximately 1 million. Of course, there is no absolute boundary between small and large business, since both are relative terms, but it would seem reasonable to assume that no business with total assets of less than $250,000 could possibly be considered big. If one expands the definition of small business to enterprises having total assets of $1 million or less, the proportion of the total number of member bank loans to such businesses would rise to 90.3 percent.

Even less well understood is the fact that many businesses which are small today will be large within a few years—thanks to credit extended by banks, as well as the competence of their managements. Tucked away in the credit files of almost any bank, large or small, are case histories of businesses which started with limited capital a few years ago and which, with the help of bank credit, have since grown to be medium sized or large organizations today.

Every bank likes to render this kind of assistance to small business—whenever it can be done without undue risk of loss to the bank—because that is an almost certain way to build up good accounts which no competing bank is likely to take away. The proprietors of a business which was helped by a bank during the difficult days of early growth will seldom forget it, and the loyalty of depositors is the best kind of hidden asset a bank can have.

The voluminous credit files of M.T. Co., both at head office and the branches, contain enough case histories of loans to small and growing businesses to fill a thick book, but a few examples can be given to illustrate the point. Names of the businesses naturally are omitted because of the confidential character of all banking relationships. The following are typical:

Case No. 1: A manufacturer of women's foundation garments opened an account with the bank in January 1939. At that time the business had a net worth of $11,000 and working capital of $8,000. Eight months later this business borrowed $3,000 from the bank and repaid it when due. During the ensuing years, as the business grew, it became eligible for larger and larger loans. In 1959, 20 years later, the firm had a net worth of $1,654,000 and working capital of $1,900,000. It now has a credit line of $500,000 from the bank and similar lines from two other banks. Needless to say, it maintains a very substantial deposit balance with M.T. Co. today.

Case No. 2: A manufacturer of wooden butcher blocks had a net worth of $12,800 and working capital of $9,500 in 1936, when it obtained its first loan from the Bank in the amount of $1,000. Twenty-three years later its net worth had grown to $145,000 and its working capital to $118,000. During this period this customer has made and paid off loans of increasing amounts as the business grew, the maximum loan being $40,000.

Case No. 3: A jewelry manufacturer with working capital of only $3,500 opened an account in 1934 and borrowed $1,000. By 1942 his net worth had grown to $11,600 and he was borrowing $10,000. At present his net worth is $1,069,000 and his total credit line at the Bank is $475,000, of which $375,000 may be borrowed on his own notes and an additional $100,000 on his accounts receivable.

Case No. 4: A manufacturer of paper specialities began business in 1952 and started production in January 1953. At the end of March 1953, the business had a net worth of $54,000, representing the incorporators' investment, but nearly all of it was tied up in machinery, working capital being only $6,000. This business borrowed $10,000 from the Bank and paid it off within a year. Six years later the net worth of the corporation had grown to $73,000, and its sales volume had risen to $645,000 a year. During this period it borrowed frequently to meet seasonal requirements, always paying off the loans when due.

Case No. 5: A manufacturer of dolls, which began business in 1917, had gradually worked up to an annual sales volume of $192,000 and a net worth of $82,000 by 1939. The following year, this business was granted a loan of $30,000 and paid it off 6 months later. It has now grown to the point where annual sales volume exceeds $4,200,000 and net worth is $560,000. During the 20-year period it has borrowed up to a maximum of $280,000 from the bank.

Case No. 6: A manufacturer of quilted products, organized in 1949, had built up an annual sales volume of $300,000 by 1953. Purchases of new machinery had exhausted its working capital, and it borrowed from the bank June 15. In November of the same year it paid the loan off. Sales volume has since increased to $472,000 per annum.

Cases of the foregoing kind could be continued indefinitely. These histories do not imply, however, that any small business can apply for a bank loan and get it more or less automatically. The bank, in extending credit, must be ever mindful of the fact that

it is lending its depositors' money, and must have reasonable assurance that the loan will be repaid. It has been said that credit analysis is an art as well as a technique, and the credit man or loaning officer must consider many things outside the financial statements of businesses which borrow. As a part of the fundamentals of "character, capacity, and capital," he must appraise the ability and experience of the management, the market for the applicant's products and the outlook for the kind of business in which the would-be borrower is engaged. If the applicant shows up favorably in these respects, the chances are overwhelming that he will join the more than 1 million small businesses which are borrowing from banks today.

Response of Wellesley College Students to Peace Corps Proposal

EXTENSION OF REMARKS
OF
Hon. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mrs. CHURCH. Mr. Speaker, I am happy to include in the CONGRESSIONAL RECORD the following report showing the response of the students of Wellesley College in Massachusetts to the current peace proposal. The response from this college is another proof of its continued adherence, as demonstrated through its 81-year history, to the challenge of the college motto: "Non ministrari, sed ministrare."

RESPONSE OF WELLESLEY COLLEGE STUDENTS TO PEACE CORPS PROPOSAL

INTRODUCTION

Since the beginning of the 1960–61 school year, Wellesley College students have been interested in proposals for the establishment of a Peace Corps. Representatives of the campus political organization attended a conference on the Peace Corps at Princeton University in November. Since that time, discussion groups and a speech by a representative of the Harvard Nigeria program have focused campus attention on the question of including women in the program.

Wellesley College Forum and the campus committee of the National Students' Association distributed a questionnaire to the entire student body February 14–15 in an effort to determine general attitudes toward the proposed Corps. The results of this poll are enclosed in the following report. We hope that our findings will be of use to individuals involved in the final stages of planning, as an indication of the degree of interest among college women, and as a concrete proposal for the role that liberal arts graduates could play in the program.

RESULTS OF QUESTIONNAIRE

The total number of questionnaires received was 740, of a student body of 1,700 (44 percent). Ninety-nine percent of the returned questionnaires favored the inclusion of women in the program. Sixty-four percent indicated an interest in participating in the program (note: this group will be referred to as the interested group in future discussion). Twenty-six percent were not interested in participation, and 10 percent were undecided. The division by class of the positive and negative replies is as follows:

TABLE I.—*Breakdown by class*

A. INTERESTED GROUP

[492=100 percent]

	Percent	Number
Senior	22	108
Junior	23	115
Sophomore	26	127
Freshman	29	142

B. NONINTERESTED GROUP

[193=100 percent]

Senior	32	62
Junior	20	39
Sophomore	29	56
Freshman	19	36

The division of the interested group into major fields, desired employment, and preferred length of service may be seen from the following tables:

TABLE II.—*Breakdown by major fields (interested group equals 100 percent)*

	Percent
Social sciences [1]	29
English	25
Sciences [2]	18
Modern European languages	16
Other [3]	12

[1] History, sociology, economics, political science.

[2] Both physical and biological sciences, mathematics, psychology.

[3] Art, Biblical history, classics, music, philosophy.

Students who replied positively to the questionnaire indicated several types of employment in which they would like to serve. Of the total interested group, 69 percent chose teaching, 17 percent technical and agricultural projects, and 14 percent suggested other possible employment.

TABLE III.—*Tabulation of desired employment by major field*

Employment	Major field	Percentage of students interested in this employment, majoring in indicated fields
A. Teaching	Science	40
	Languages	21
	Other [1]	39
B. Technical and agricultural fields	Physical sciences	19
	Biological sciences	16
	Other [2]	65
C. Suggested employment:		
1. Social work	Sociology	54
	Political science	27
	Other [3]	19
2. Administration	Political science	60
	Mathematics, language, philosophy	40
3. Medical work	Zoology	62
	Chemistry	24
	Other (including some nonscience majors)	14
4. Interpreting	Language (Spanish, French)	100
5. Economic planning and research	Economics	100

[1] History, philosophy, music, economics, political science, art.

[2] Many of these were economics, political science, history, and sociology majors, who stressed an interest in planning and administration.

[3] History, Biblical history, philosophy, psychology.

TABLE IV.—*Preferred length of service of interested group*

[Interested group=100 percent]

	Percent
2 years	67
3 years	12
No preference indicated	21

The following table indicates the frequency with which students in the interested group listed specific geographical areas in which they would like to serve. (Note: students were allowed to indicate more than one area.)

TABLE V.—*Percentages of total area preferences (total preferences listed equals 100 percent)*

	Percent
Africa	28
Latin America	28
Asia	20
Middle East	18
No preference	6

Students in the interested group listed a number of reasons for wanting to participate in the program. Most frequently stated was the desire to improve international understanding through increased cultural contact. The needs of the underdeveloped countries themselves was also a strong motivating factor. To a lesser extent, students listed the desire to serve the United States by improving its image in the cold war rivalry, and to spread the ideals of democracy.

Many students mentioned personal considerations: the satisfaction of service; the challenge of a new situation and the excitement of travel; the further development of an interest in a particular region; the opportunity to gain useful experience in future vocational fields.

There was little indication that students felt strenuous conditions should prohibit the participation of women in the program. One student commented: "These [strenuous] conditions might lead to a greater sense of accomplishment than a less demanding situation." Of the 193 students who did not desire to participate in the program, only 11 gave strenous conditions as the reason.

TABLE. VI.—*Reasons listed by noninterested group for not wanting to participate*

	Percent
Personal objections [1]	32
Previous plans (marriage, graduate school)	24
No reason given	43
Opposed to program for women	1

[1] Personal objections included the following, in order of frequency: "Unwilling to leave United States for extended period of time;" "unsuitable temperament;" "physical conditions would be too strenuous;" "inadequate experience;" "health reasons;" "prefer to teach in United States;" reasons indicating lack of understanding of mechanics of proposed program.

EVALUATION OF QUESTIONNAIRE

It is difficult to assess the value of the results of the Wellesley questionnaire. In particular, we doubt that the large number of students who indicated an interest in participating (29 percent of the student body) represents the size of the group that would eventually apply. The wording on the questionnaire made it possible for students to check an interest without committing themselves to actual participation. However, the difference between the percentages by class of the interested group (see table I, A), seems to indicate that the program is as attractive to juniors and seniors, who are more realistically concerned with future employment, as it is to underclassmen.

Although the director of the college placement office concurs in a cautious interpretation of the degree of actual participation indicated, we as students feel that there are several new factors in the response to the Peace Corps that distinguish it from the reaction to extended volunteer service programs in the past. Among these factors are the following: The vigor and appeal to youth generated by the new administration; the increasingly accepted belief in the value of personal exchanges for furthering international understanding; [1] a greater awareness of the needs of underdeveloped countries, and a sense of responsibility toward them. We believe that the campus political organization and the committee of the National Students Association can help spread this awareness and with it the desire to express concern through action. We have already encountered an enthusiastic reaction to weekly study groups on Africa, inaugurated by International Relations Club with the aid of a UNESCO grant.

Student response to the questionnaire indicated several possible types of employment for women. Although students at liberal arts colleges such as Wellesley do not receive training in specific technical fields, we feel that they could be of benefit to the program. Teaching, the most favorable response on the questionnaire, is perhaps the type of employment most suited to liberal arts graduates. Preparation for teaching and other fields could occur in a variety of ways. If the Peace Corps in its final form includes a year of technical training in the field (as is true of the Columbia Teachers College program with Makerere College), students with liberal arts background would have an opportunity to develop special skills. A degree of initial preparedness in the field of future employment is suggested by the relationship between academic majors and type of employment preferred (see table III). Other possible sources of experience are summer jobs and work off campus during the academic year. (For example, the Wellesley Service Organization enables girls to work in mental clinics, neighborhood houses, etc.).

As indicated in table VI, most of the interested group expressed a preference for a 2-year rather than a 3-year term of service. This preference indicates a conflict for the liberal arts graduate between her lack of specific skills and her desire to serve. Several possible variations of the program might provide for the inclusion of less skilled applicants in the program for 2 years. Those students who present considerable experience in summer and extracurricular work or who start language study prior to their participation in the program might be able to eliminate much of the training period. Men or women with little training might be of use in positions of lower responsibility in areas where a trained person is available for supervision. The use of women especially for administrative positions in the United States offices of the Peace Corps is also a possibility.

THE ROLE OF WOMEN IN THE PEACE CORPS

We realize that there are certain inevitable difficulties in the inclusion of single young women in a project of this kind. With study, solutions could perhaps be found for some of these problems. For example, to alleviate the risks (imagined or otherwise) to the single woman, women might be sent as part of development teams to rural areas—though the groups should never be large enough to become enclaves of Americans—or they might be sent to urban areas. As indicated by the results of the questionnaire, strenuous conditions did not seem to be a deterrent to most students in the interested group. The experience of Crossroads Africa and American Friends Service Committee work camps is an example of the ability of women to adapt to difficult conditions.

The benefits of including women seem to us to outweigh the disadvantages. Women might make a unique contribution in certain areas. An example is India, where the Government's attempt to elevate the position of women through increased educational opportunities has encountered parental opposition because most of the teachers are men. American women could help teach Indian girls who could in turn become teachers, with additional training. Secondly, upon their return to American communities, women with the experience of a period of service in a foreign culture would be invaluable; hopefully they could develop the general level of tolerance and international understanding through their participation in parent-teacher and community organizations. The values they would inculcate into their own children would also be beneficial to society as a whole. Finally, the training of young women in the field would prepare greater numbers for employment in our foreign service, USIA and ICA.

CONCLUSIONS

We plan to send the results of this study to other women's and coeducational colleges throughout the country in hopes of encouraging increased interest in the participation of women in the Peace Corps. Once the plan has been approved, we intend to work actively on our own campus to encourage study of the relevant fields and to carry out the program in whatever form it appears. If the Peace Corps is to be organized under private auspices coordinated by a government agency, the student political organization, in consultation with the college administration, will explore means to initiate a program similar to the Harvard and Columbia plans with the other seven college conference colleges.

[1] Seen by the large number of young people participating in the Experiment in International Living and the American Field Service.

Bulgarian Liberation Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. RODINO. Mr. Speaker, under leave to extend my remarks I wish to include in the Appendix of the RECORD text of a message sent by me to the Bulgarian National Front of America, Inc., on the occasion of the celebration of Bulgarian Liberation Day.

The text follows:

MARCH 1, 1961.

Dr. KALIN KOICHEFF,
Secretary, Bulgarian National Front of America, Inc., New York, N.Y.

DEAR MR. KOICHEFF: May I extend my warm congratulations to the Bulgarian National Front of America on this memorable occasion. I deeply regret that my commitments in Washington will prevent me from joining you.

The celebration of Bulgarian Liberation Day has special significance to all people everywhere who cherish freedom. It is on this day that we recall the heroic Bulgarian effort of 1878, when Bulgaria was finally freed from the ruthless subjection of Turkish rule. It is on this day, too, that we tearfully remind ourselves that Bulgaria is once again ruled by a totalitarian regime not of their own choosing.

We are all very much aware that the Bulgarian people of today are just as determined to free themselves from Communist dictatorship as were their grandfathers in casting off the Ottoman Turkish yoke. Let each of us hope and pray that they will again meet with success and that freedom and liberty will soon reign once again in the Bulgarian nation.

Sincerely yours,

PETER W. RODINO, JR.,
Member of Congress.

Medical Care

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. SCHOEPPEL. Mr. President, I am in receipt of a letter under date of February 15, 1961, from F. E. Waterman, president of the Kansas Medical Society, Topeka, Kans., addressed to Frank Stanton, CBS, New York.

Since I have received considerable mail with reference to the manner in which this broadcast was presented, I think it would be well to have this letter printed in the Appendix of the CONGRESSIONAL RECORD for the information of those who desire to read the RECORD concerning this type of broadcast.

I ask unanimous consent that the letter appear in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE KANSAS MEDICAL SOCIETY,
Topeka, Kans., February 15, 1961.

Mr. FRANK STANTON,
President, the Columbia Broadcasting System, New York, N.Y.

DEAR MR. STANTON: We presume the Columbia Broadcasting System has received a considerable number of letters protesting the manner in which you presented the problems of health care in your television show "The Business of Health: Medicine, Money, and Politics." The Kansas Medical Society experienced the same feeling of helplessness in the face of this inaccurate attack which, undoubtedly, has been expressed to you by other medical organizations.

A few days have elapsed since the occasion of your show to give us time to consider the problem objectively. A meeting

of the house of delegates of the Kansas Medical Society scheduled prior to your show and attended by more than 100 physicians of this State on February 12, 1961, was held to continue our efforts to provide people of all ages in this State with the finest possible health care.

It was quite natural that your show should come before this meeting in a discussion of some length. The following observations and questions reflect the dilemma experienced by the Kansas Medical Society. It is our opinion medicine is not alone in this situation and we would sincerely appreciate your expression upon the validity of your contention and we welcome your suggestions.

The physicians of this State will defend the right of free speech as one of the major premises to which our Nation adheres. We believe an individual should use any means to which he has access for prevailing his opinion upon others but the integrity of the medium through which he speaks should, I am sure you agree, force such individual to identify himself and those he represents.

It is not the fact that someone utilized the facilities of the Columbia Broadcasting System to advocate socialism for the United States that distresses us; it is the impression the program went to some effort to convey to the public that your network was bringing the people of this Nation an analysis of several views on a question of moment about which there are opposing opinions and then gave only one side of the argument. Of even greater concern to us is that medicine was invited to assist in developing the debate and during its presentation was credited with this fact but almost nothing of what medicine said appeared on the program.

We are sure the American Medical Association was of the opinion that this program was sponsored by the Columbia Broadcasting System as a public information service. If that is not correct, if this program was outside your organization, we believe the Columbia Broadcasting System would have made that fact known. It leaves us, for lack of other knowledge, therefore only with the opinion that your network is committed to the argument as presented and that you intend to press for public support of your contention. But the program did not say this. Instead, it told the people of the United States that the American Medical Association had assisted in its preparation.

Our dilemma is of course apparent. The medical profession did assist in the preparation but was excluded during the presentation.

We think ours is also rapidly becoming a dilemma for the information media of this Nation. Permit us a little philosophy in an effort to clarify our statement. The problem before medicine at this time may shortly become a crisis for the Columbia Broadcasting System which, when it is apparent, will have advanced beyond the point of redemption.

We recognize the economic hazard of extended illness perhaps more acutely than anyone else because we see the people to whom this happens. We know you are aware of this and that the reduction of morbidity in terms of time represents an economic gain to the individual today. You also are aware that medicine is doing many things to still further alleviate not only illness itself, but the economic distress this may bring.

You are familiar with the fact that in every State as in Kansas, the doctors of medicine have pledged to the public their professional services regardless of the individual's ability to pay. All this and a vast amount of other information is available to you but we think it represents only the periphery of the problem or its solution. It is a treatment of symptoms rather than the cause.

We believe historians of the future may well conclude the real revolution of this period is the consumer's emergence into control over the manner in which he will purchase commodities and services. Whether right or wrong, he is already dictating this in a great many instances and health care is the present frontier in the consumer's list of objectives. The producer of the services might know beyond all question, including any hint of aggrandizement, that the proposed choice is not in the consumer's best interest. Unless he can impart the knowledge of his experience to the consumer, the ultimate choice could well be disastrous.

Today medicine faces this crisis. We believe the outcome of the issue of socialized medicine is of only negligible concern to the practice of medicine but of momentous import to the people of this Nation as citizens. But we cannot adequately tell our story and find ourselves especially helpless in the face of situations such as the recent event involving the Columbia Broadcasting System.

When efforts such as yours influence public opinion to where the consumer dictates to the medical profession the conditions under which he will purchase his health care, he will move to a new frontier.

Eventually, this will strike the information services and when it does, freedom of speech as we enjoy it today will be denied.

In case you think our argument is distorted, may we summarize: We heartily endorse the idea of public debate upon controversial issues but we believe an agency of the influence of the Columbia Broadcasting System should exercise exceptional care in the fair presentation of both sides of such issues. Particularly is this true where items of essential services are concerned because the public will elect how these are to be purchased. If their choice is made on less than full knowledge, the result can affect much more than the service in question. Therefore, we have not only a crisis to face but, due in part to this program, a dilemma in addition to our previous concern. Both the problem and the dilemma will react not only upon us as physicians but, we sincerely believe, shortly upon other essential services as well.

Your consideration of this condition is solicited and any advice you might care to give the medical profession on what we might do will be appreciated.

Sincerely,

F. E. WRIGHTMAN, M.D.,
President.

Adm. Bartholomew Hogan

SPEECH
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 6, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, Adm. Bartholomew Hogan has served the U.S. Navy and our Government faithfully and well. He leaves active duty with the glow of satisfaction that comes to a man who knows he has successfully served his country intelligently, competently, and with honor.

Many of us are reluctant to see him go because we have been the beneficiaries of his wonderful talent in the field of medicine. He is not only highly skilled in his profession but he knows men. His deep knowledge of human nature with its frailties and weaknesses is one of the many assets that makes him a great doctor of medicine.

He took over the Department of Medicine and Surgery in the Navy at a critical period in its history. He oriented its activities in the right direction. He leaves it knowing that he has builded well; that those who come after him will have an easier time.

I am glad to know Bart Hogan—to know his worth and to have his friendship. Verily here is a man who can "walk with kings nor lose the common touch."

Remarks of Col. Hubert F. Lee in Presenting the Man of the South for 1960 Award to Mr. Joseph T. Lykes in Tampa December 7, 1960

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. THOMPSON of Texas. Mr. Speaker, about the turn of the century, the Lykes family of steamship fame commenced its operations in the maritime industry. Mr. James Lykes, Sr., opened an office in my hometown of Galveston, Tex. The extent of their operations is too well known to require comment from me.

In 1910, one of the brothers, Mr. Joseph T. Lykes, Sr., began his individual career—also in Galveston. Subsequently with the passage of time, he has become the head of the Lykes family—a family which, in itself, is an American tradition.

Each year, an outstanding man of the South is elected to the South's Hall of Fame for the Living. On December 7, 1960, this honor was awarded to Mr. Lykes, known universally among his associates and his innumerable friends as "Mr. Joe." The award was made by the founder of the South's Hall of Fame for the Living, Mr. Hubert Lee, of Decatur, Ga. His tribute to "Mr. Joe" is something which should be recorded for posterity in the CONGRESSIONAL RECORD, and it is my honor to place his words in the Appendix at this time:

REMARKS OF COL. HUBERT F. LEE IN PRESENTING THE MAN OF THE SOUTH FOR 1960 AWARD TO MR. JOSEPH T. LYKES IN TAMPA, DECEMBER 7, 1960

Mr. Chairman, Senator HOLLAND, Mr. Donald Comer, members of the Lykes family, distinguished friends:

I regard this as the South's greatest hour, as we signal out one man to honor as the man of the South of the year.

I am here in the capacity of a reporter who records the world as it happens and not as a modern version of a King Arthur knighting a Sir Galahad of the 20th century, although the man we honor would wear with becoming dignity such a knightly mantle.

Mr. Joseph T. Lykes, we honor you tonight for your fine character and Christian prin-

ciples that have followed you all the years of your life. We honor you, Mr. Lykes, for your leadership while a student of Washington and Lee University and for the contributions you have made to the field of education.

We honor you, Mr. Lykes, for your part in helping your brothers make the name of Lykes a badge of honor identifying a team of pioneers in the development of the South and its contribution to the Nation.

We honor you, Mr. Lykes, for your civic leadership at Galveston, Tex., where you began your life's career.

We honor you, Mr. Lykes, for your business acumen which has served so well in the guidance of the affairs of the Lykes Bros. of which you are titular head and for the way you have guided the family enterprises and such institutions as your own alma mater, Washington and Lee University.

We honor you, Mr. Lykes, because all your life the lines have fallen in pleasant places because of your own self and because of the fine heritage you have as a member of the family of Lykes.

We honor you, Mr. Lykes, because you are at heart a modest and humble man who knows that living a life of leadership and service comes more by the grace of God than our own doing, and with you we honor all men of good will who would rather give the credit for their own works to others.

We honor you, Mr. Lykes, as a husband and father who has passed along the same fine traits your own father passed on to you.

We honor you, Mr. Lykes, because your life's record has been such as to prompt Mr. Reuben B. Robertson, the Man of the South for 1950, and a great American who pioneered in the making of book papers and in employee and community relations as head of Champion Paper & Fibre Co. for more than a half century, to write:

"You have brought honor to me by association as the man of the South 10 years ago."

We honor you, Mr. Lykes, because your selection as the Man of the South for 1960 honors the past men of the South: Messrs. Thomas W. Martin, 1946; Donald Comer, 1947; C. Hamilton Moses, 1948; the late Ernest L. Kurth, 1949; Reuben B. Robertson, 1950; the late David Ovens, 1951; the late James C. Self, 1952; Bobby Jones, the all-time golf champion, 1953; Bishop Arthur Moore, 1954; my newspaper boss of 1925 and 1926, Senator Wilton E. Hall, 1955; the late Senator Walter George, 1956; A. Dee Simpson, 1957; Frank P. Sanford, 1958; and Norman A. Cocke, 1959.

We honor you, Mr. Lykes, because you stand unique among all the men of the South since 1946 in that you have received more votes from more countries around the world than anyone during the 15 years it has been my privilege to report the life's record of the men who have earned the distinction.

We honor you, Mr. Lykes, because this is the 50th anniversary as a member of the Lykes Bros. Steamship Co., and with you we honor all these who over the years have had a part in making this one of the world's great steamship companies.

We honor you, Mr. Lykes, because Americans anywhere in the world are stirred whenever one of the Lykes ships are seen. To me, the sight of the Lykes flag is second only to that of our beloved Stars and Stripes because the Lykes honor and prestige over the world is so fine and heartlifting.

We honor you, Mr. Lykes, because you have brought honor through association to all those on the "South's Hall of Fame for the Living," the honor group which is limited to 200 living leaders and from which each year the man of the South is elected. This honor group includes our esteemed friend, Mr. Carl Brerein who is a man much loved and honored because of his 40 years of leadership in these parts, a typical example of which is his presence here tonight as chairman of this wonderful testimonial to the man of the South.

We honor your Mr. Lykes for your leadership in Tampa and in Florida over the years. I lived in Arcadia in 1927, 1928, and part of 1929 before starting my magazine Dixie Business in November 1929, so know of my own personal knowledge of the love and esteem you and the Lykes family are held in Florida. I bring you greetings from Mr. A. C. Polk, Sr. My 80-year-old brother-in-law in Arcadia, who devoted many hours this year telling your friends how they could help pay tribute to you.

Mr. Lykes, you are truly a great pioneer of southern industry and you have contributed much to the greatness of our beloved South and Nation, both personally and as a member of the Lykes Brothers team.

It has been my privilege to read letters from over the world as well as our own country, telling why you should be honored as the man of the South. I regard the annual poll as the greatest democratic election ever devised to honor living men. Anyone in the world may vote for the candidate of his choice.

I could go on reporting on what I have heard and read and know about you, Mr. Lykes, but that would take days.

I can only say that I hope all future men named man of the South will be as worthy of the honor as you.

So, on behalf of the past men of the South, the South's Hall of Fame for the Living and the editors of Dixie Business, I am honored to present you this distinguished service award officially designating you the man of the South for 1960. I also present to you a volume containing many of the letters received in your behalf and I am sure that reading them will bring you many moments of pleasure.

Labor-Management Cooperation in the Clothing Industry

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. KEATING. Mr. President, last month, President Jacob S. Potofsky of the Amalgamated Clothing Workers of America addressed the members of the International Association of Clothing Designers on the status and accomplishments of the American clothing industry.

In his speech, Mr. Potofsky outlines the progress of the men's and boys' clothing industry, both in terms of the product which it offers to consumers and in terms of the conditions of work and wages of persons employed in this industry. He warmly praises management in the clothing industry for the spirit of cooperation and constructive action which they have consistently displayed.

Appropriate for a leader of the clothing industry, Mr. Potofsky said in his speech: "I want to take my hat off to you—leaders of the clothing industry—for your foresight and social mindedness, for your willingness to share the burden." Mr. President, I want to take my hat off to the clothing industry too. I am impressed by the spirit of cooperation in which labor and management work together. They may not always agree—but they have always managed to disagree in a pretty fine way.

Mr. President, I want also to call attention to the final paragraphs of Mr. Potofsky's speech in which he speaks of the problems confronting the clothing industry as a result of the importation of low-wage produced goods from overseas. I have been in close touch with Mr. Potofsky about this problem. This is a very serious matter.

I have introduced a bill in the Senate (S. 675) which I believe represents a sensible and sound position in this controversial area. While my bill may not be the final solution, it contains much which I believe should be done to provide more equitable and realistic procedures for relief in instances in which domestic industries and their workers are injured as a result of low-wage produced products coming into this country in huge quantities and over relatively short periods of time.

Mr. President, I am proud to call attention to Mr. Potofsky's address and the fine spirit of cooperation which it typifies. I ask unanimous consent that the text of this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WE HAVE BECOME A FIRST-CLASS INDUSTRY

(By Jacob S. Potofsky)

I am honored by your invitation to address the members and guests of the International Association of Clothing Designers. Over the years, I have watched your fraternity of designers—dare I call you a union?—play an increasingly active role in the all-important job of selling our industry and our products to the American public. Your inspiration and artistry, and your ingenuity in creating more style-consciousness, have helped to give new importance to an old fact: that clothing is meant not merely to cover or protect, but also to adorn and enhance the human frame.

A NEW INDUSTRY REVOLUTION

In a way, what you are doing, along with the American Institute of Men's and Boys' Wear, is to fashion a revolution in our industry. It is not the first revolution our industry has seen. As a matter of fact, your accomplishments would not have been possible without earlier revolutions which laid the groundwork for you. You are building today on a foundation laid years ago—and I am proud that my organization, the Amalgamated Clothing Workers, has played and will continue to play a major part in the changes that occur as our industry grows.

The first great revolution in our industry started in the opening decade of this century, and it brought about the decline and fall of the sweatshop era. Some of you may remember those days—and nights—of merciless labor and inhuman treatment, with uncertain rewards. For years our industry had the unpleasant distinction of being one of the worst on the industrial scene. The sweatshop was bad for the workers but it was equally bad for you and for the public. Chaos and uncertainty were the common condition of the market: chaos in production, in quality, in sales, in price. The average employer had little control over his own standards, and the consumer could not depend on uniform quality or even on delivery.

It took many years of struggle, but that revolution is over. The sweatshop and homework are dead.

Today we are proud that we enjoy stable and productive relationships with the employers. Today the worker is assured of a decent wage, some measure of job security, and a voice in settling legitimate grievances. Today an employer can look ahead and plan for the future, and the consumer can depend on uniform standards of quality in any price range. We are still a highly competitive industry—one of the most competitive in the land. As a matter of fact, sometimes I think you make it more competitive than conditions warrant. But at least the competition is not at the expense of labor. Today, we are an efficient, progressive, growing industry.

WORKERS AS HUMAN BEINGS

The second revolution was an extension of the first, and it is still being played out. For when we overcame the problem of the sweatshop, we turned our attention to the welfare of the workers not only as workers, but as human beings. It doesn't sound very novel now, but in 1923, when we initiated our unemployment insurance program in Chicago, it was unheard of. Until that time it was widely believed that unemployment, illness or old age, were no responsibility of the employer. That belief is as dead as the sweatshop.

We know now that a worker's ability on the job depends in part on his basic sense of security. And the industry has benefited from that sense of security. We have come to appreciate, too, that the community as a whole benefits when everyone has some kind of protection against misfortune.

Through the years, we have steadily expanded this concept of our responsibility to workers as human beings. When the Federal Government instituted national unemployment insurance, our plan was converted into a health and welfare program. Later we added a retirement program, supplementing social security.

Because our welfare program is jointly managed and industrywide, we have been able to render efficient services through our own insurance companies. During the past 10 years we have struck out in new directions with the building of medical and health centers, along with extensive recreation and educational facilities for retired workers.

SHARING THE BURDEN

The union provided the major impetus for this widening area of activity. But I want to take my hat off to you—leaders of the clothing industry—for your foresight and social mindedness, for your willingness to share the burden.

There is one thing to be said of our industry—it doesn't stand still. Today, we are in the midst of a third revolution: a unified industry effort to promote itself and its products to the consumer.

This is an important educational job. The products of our labor are being shortchanged by the American consumer. The American male was—and still is—the most neglected member of the family when it comes to clothing. The average wife maintains an up-to-date, well-fitting wardrobe. And that's as it should be. But when the good lady returns from her shopping, her husband takes another look at his last year's suit and decides it will last a year or two more. It may be out of style; it may be a little worn—no matter. The figures tell the story: The average male buys less than half a suit a year. What a sad commentary on this, the richest country in the world, where we pride ourselves on our high living standards.

A little more than 8 years ago, I addressed the 20th anniversary dinner of the Clothing Manufacturers Association and urged that the industry mount an intensive campaign, using all the modern tools of communication, to promote its own products. We applauded the subsequent creation of the American Institute for Men's and Boys' Wear and we gave it substantial support.

AN IMPORTANT LINK

The AIMBW, along with the work being done by your association, is an important link in the chain of our industry's growing strength. We know that today the American male is not adequately dressed to meet his business and social needs. The average American male still regards clothing as protection, not adornment. As a matter of fact, he is not even adequately dressed for protection—against changes of climate or weather.

Clothing may not make the man, but it certainly helps. A decently dressed boy is less likely to become a menace to society than a boy in blue jeans and black leather jacket. A well dressed man takes more pride in himself and in his work than a man in old slacks and a T-shirt.

Our job is to bring to the American public a consciousness of dress, a pride in appearance, an appreciation of new styles and fabrics. Brand-name advertising by individual companies is helpful, but it is not enough. Our goal can only be met by a massive, industrywise campaign shared in by every company making men's and boys' apparel. We must show ingenuity, vision and daring in promoting our industry, in obtaining a larger share of the consumer dollar.

A FIRST-CLASS INDUSTRY

The American clothing industry has distinguished itself in producing the best garments that money can buy in any price range. It has brought good clothes within the reach of every consumer. It has demonstrated that clothing can be mass produced and still assure the buyer a high level of style, quality and variety.

These are no mean achievements. In lifting ourselves out of the sweatshop-and-homework era, we have become a first-class industry, a basic and stable industry in the Nation and an example for the world.

We are only too familiar with the picture of the clothing industry in other nations. Since it requires less capital than heavy industry, the making of clothing is traditionally one of the first ventures of nations trying to promote industrialization. In most of these nations, the clothing industry is at the same stage we were 50 years ago; wages are substandard, homework is common, working conditions are shocking, quality is uncertain, and style is poor.

So today we face a new threat, and that is the swift spread of products made under sweatshop conditions—the same conditions we abolished here long ago. Just as bad money chases out good, so sweatship products can undermine and eventually destroy products made under decent working conditions. We hope that the newly industrialized nations will follow our example in abolishing the sweatshop, but until they do, we intend to guard our own conditions.

I can tell you now that we of the Amalgamated have no intention of allowing the products of sweatshop labor to destroy our achievements of the past 50 years. And we know that you of management share that intention 100 percent.

As has been true in the past, the Amalgamated will continue to cooperate with the industry in meeting even higher goals. We have taken pride in our association over the years—an association that has brought stability and much benefit to all segments of our industry and to the community as well. We will look forward to an equally close relationship in the years ahead, and I know that we will continue our mutual progress. I for one, am hopeful about the future of our industry.

The Red Cross

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. COLMER. Mr. Speaker, a number of areas in my congressional district have been hard hit within recent weeks because of rampaging floodwaters. Although great financial loss has occurred, much human misery has been averted because of prompt action by local, State, and national agencies which have unhesitatingly made available what facilities they had available during this crisis.

One such agency, the American Red Cross, performed yeoman service. An editorial in the March 2 edition of the Hattiesburg American, a daily newspaper published in Hattiesburg, Miss., the heart of the most damaged area, points up the magnificent contribution of the Red Cross to the well-being of the people affected by the flood. In order that the general public may be advised, I submit below this splendid tribute to the effectiveness of the American Red Cross.

The editorial follows:

THE RED CROSS

Volunteer Red Cross officials from throughout south Mississippi will take the story of the valiant work of rehabilitation of the Hattiesburg floor area back to their homes today. They came here Wednesday, toured part of the disaster area and heard explanations from national Red Cross personnel of what has been done already and what is planned for the future.

When they left, they carried with them the heartening word that should disaster strike their own areas, trained men and women of the American Red Cross will join them and direct the job that the American people expect.

The Red Cross comes in for much criticism—some of it no doubt justified because no organization or individual is perfect—but the work that is being done here should convince even the most skeptical of the greatness of this agency.

Hattiesburg area flood news now is leaving the front pages of the newspapers, the top spots on radio broadcasts, and the screens of television sets. The glamour is gone, but the major part of repairing what the waters damaged and destroyed has only begun.

The Red Cross estimates that more than 80 cents out of every dollar spent during a disaster is devoted to rehabilitation. Dozens of trained workers in every field are in the Hattiesburg area and will remain to help in the monumental task of returning life to some semblance of normalcy.

In the months to come, the Red Cross coffers will loose into Mississippi more money than has been collected in drives during the past 2 years. This will be spent on work with the people and their living problems. Federal funds that have been allocated for Mississippi are restricted to use for public facilities—schools, roads, bridges, etc.

The rehabilitation of the citizenry itself lies with the Red Cross and the volunteers it can recruit. Many workers will be needed for weeks to come.

In the 14 counties affected in the recent flood more than 2,500 families are expected to go to the Red Cross for help. An anticipated 1,700 will be in Hattiesburg alone.

None of these will be turned away. In the brief days since the crest of the flood we in Hattiesburg have seen what teamwork, coupled with the hearts of our own people, has done to restore morale and living conditions. It is up to us to pass that word, and our appreciation, on to others.

Golden Gateway to the West

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. CARLSON. Mr. President, this is centennial year in Kansas and many excellent articles have been written in regard to the observance of our centennial year.

A very excellent article entitled "Golden Gateway to the West," was written by Bob Considine and appeared in the New York Journal American, issue of February 13.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOLDEN GATEWAY TO THE WEST

(By Bob Considine)

Don't look now, but Kansas is 100 years old. Statehood came to it on January 29, 1861, and it's taking a year off to mark that happy day. All Americans should. Just suppose Kansas didn't join us. We'd be the shape of a doughnut.

It was there before. An elegant Spaniard named Francisco Vasquez Coronado sampled its delights, but found no gold, 79 years before the Mayflower threw a line on the Plymouth Rock. And where would TV be today without Kansas? It not only produced Jesse and Frank James, Coleman Younger and the Dalton gang, but the fearless Wyatt Earp and Bat Masterson to bring them to book. Dodge City wasn't named for the car. It was called that after the principal occupation of natives caught between salvos.

John Brown's body, long before it began a mouldering, was active in Kansas. He led a raid around Pottawatomie in which five proslavery settlers were killed in retaliation for the deaths of as many Abolitionists murdered shortly before. He should never have taken that trip to Harper's Ferry.

Kansas was the gateway through which poured the amazing Americans who opened the West. The ruts their wagon wheels bit still stand like proud scars here and there. A boy named Ike Eisenhower, part of a poor family in Abilene, used to sit by the hour listening to men tell tales of their cattle drives from Texas and the Oklahoma Panhandle, over the Chisholm Trail that ended in his little town.

Washington Irving gave the place a bad reputation by writing of it as if it were a desert. Actually, it once was under water, a couple hundred million years ago, as any fool who has seen the salt deposits in central Kansas will tell you. They are as deep down as 1,000 feet, and as much as 500 feet in thickness. Kansas also has 41 lakes and several Federal reservoirs, and water-skiing is a favorite sport. One of the industries of Leavenworth is tugboat building. It is the only State that has both tugboats and buffalo. And the only one which produced Walter Johnson.

Kansas had more trouble getting into the Union than either Hawaii or Alaska. During the 7 years it had the status of territory, three State constitutions were drawn up and scrapped. It couldn't make up its mind whether to permit slavery or not. The fourth constitution, drawn at Wyandotte—now part of Kansas City, Kans.—touched off calamitous fireworks in Congress. For 16 months it hung (and aroused) fire as Abolitionists wrangled with States Righters. The walkout of many southern Senators on the eve of the Civil War swung Kansas into the list of Free States. President Buchanan signed the bill that added another star to Old Glory, the 34th.

At the outbreak of the War Between the States, Kansas had 30,000 men between the ages of 18 and 45. Twenty thousand of them joined the Union forces, including two Negro infantry regiments and a Negro artillery battery. No other State could boast of the same response—two-thirds of Kansas' eligible men had joined up. Some 8,498 were killed, the highest mortality rate of any State.

Many forget that the Civil War spread as far inland as Kansas. Generals Pleasonton, Blunt, and Curtis defeated a Confederate army under Gen. Sterling Price at Mine Creek in October 1864, and General Lee gave up all hope of taking that remote State. One of the finest men American journalism ever produced, William Allen White, found the Emporia Gazette the perfect pulpit. Kansas, a tremendous aviation industrial complex now, also produced the first woman to fly the Atlantic, the first one to fly it solo and the first to fly from Hawaii to California—Amelia Earhart.

Drop in and visit Kansas on its 100th birthday. The natives are friendly, speak perfect English, and you won't be confined to $100 worth of purchases to bring back home.

The Race in Space and F–1 Rocket Engine Progress

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. McDONOUGH. Mr. Speaker, one of my specific assignments as a member of the House Science and Astronautics Committee during the 86th Congress was to study and recommend funds for the development of the powerful F–1 rocket engine.

The F–1 rocket engine is the 1,500,000-pound-thrust single chamber powerplant which will be used to thrust into outer space a 45-ton spaceship with sufficient energy and propulsion to orbit Mars.

As a result of the recommendation of the Subcommittee of the House Science and Astronautics Committee of which I was a member during the 86th Congress a contract was negotiated by the National Aeronautics and Space Administration with North American Aviation of Los Angeles, Calif., and through the capable and expert work of the North American Corp. at their Rocketdyne plant in southern California, they have developed the powerful F–1 rocket engine to a point of positive capability, and we are assured that it will be ready for actual firing in the near future.

With the F–1 rocket engine in operation, we will then have closed the gap between the United States and the Soviet Union for powerful rocket thrust engines capable of placing in orbit or into interplanetary exploration spaceships with the necessary equipment to return to us the vital information we are seeking.

Mr. Speaker, I am submitting herewith an up to the minute review of the progress made in the development of the powerful F–1 rocket engine which I am confident all Members of the House will be interested in reading:

F–1 ENGINE DEVELOPMENT: LOOMING LARGE IN THE U.S. SPACE PROGRAM, THE TREMENDOUS F–1 ENGINE HAS MOVED WITH SURPRISING SPEED TO THE TESTING STAGE

(By D. E. Aldrich and D. J. Sanchini)

A comparison of satellite weights announced by the Soviet Union with the weights of satellites launched by the United States demonstrates a significant difference in capabilities. The first two Soviet satellites weighed 184 and 1,120 pounds, respectively. Our first satellites weighed 31 and 3¼ pounds, respectfully. The gap in weight-lifting capability has continued. For example, our first artificial planet, Explorer IV, weighed about 13 pounds. The first Soviet artificial planet weighed about 3,100 pounds. Our Discoverer series of recovery vehicles weigh about 1,700 pounds. The recovery vehicles launched by the Soviet Union weighed about 10,000 pounds.

Thus, it became obvious that we should "leapfrog" the next step in rocket-booster technology and begin immediately the development of very-high-thrust booster engines to accomplish the ambitious space programs of the near future. Manned orbital flight and instrumented probes to the moon and nearby planets are planned for the early 1960's. Relatively large manned earth-orbiting laboratories, manned space vehicles to the moon, and manned orbital trajectories to the nearby planets are planned for the late 1960's. The spacecraft accomplishing these later missions, the "wagon trains" of the space age, will be Nova-class vehicles, using clusters of F-1 engines, the subject of this discussion.

We can illustrate the capabilities of Nova-type vehicles powered with high-energy upper stages by discussing several typical missions which could be accomplished with the same booster. For purposes of illustration, assume the use of a booster with six F–1 engines clustered for a takeoff thrust of 9 million pounds.

A vehicle of this type would be capable of lofting up to 400,000 pounds into a low-altitude orbit. For example, a mission could be to establish a manned laboratory for astronomical and earth observation, as well as other scientific and technical studies. Or large space platforms could be assembled in 400,000-pound increments by multiple-launch and rendezvous techniques. In addition, a large lunar vehicle, or vehicles for manned interplanetary flight, could be assembled and fueled while in a parking orbit. The use of the F–1 engine would considerably reduce the number of missions required to assemble very heavy, multiple-unit space platforms or large interplanetary vehicles.

Another typical vehicle would be capable of launching a 65-ton payload into a 24-hour orbit for such diverse functions as astronomical studies, weather observation, earth surveillance, navigational systems, and radio and television communications. Such capsules, capable of being repaired and maintained, could very well be an economical solution to the lofting of a variety of satellite systems.

A vehicle of this type would also be capable of placing up to 90,000 pounds into a Mars

orbit. With such a payload capability, a capsule could be well equipped with instrumentation and telemetering equipment. It could launch robot probes to the surface of the planet and relay the telemetered information back to earth stations. With the F–1 engine in the typical six-engine cluster, and with high energy upper stages, we would be capable of accomplishing a manned moon landing and return with an earth-landing weight of approximately 20,000 pounds.

The Rocketdyne F–1 engine, being developed under NASA contract for a Nova-type vehicle, is the direct result of such planning.

Although the contract for the development of the F–1 engine was signed in January 1959, the development of a single-chamber 1,500,000-pound-thrust engine was already well started. Under the Air Force rocket engine advancement program, studies of the feasibility of rocket engines up to 1-million-pound thrust were begun as early as 1955. These culminated in 1957 with a detailed analysis of a single-chamber million-pound-thrust engine with supporting model testing and full-scale thrust-chamber design. Later in the year, the program was realined to include three full-scale thrust-chamber firing attempts. These tests were concluded in March 1959, with a brief mainstage test at 1-million-pound thrust that demonstrated stable combustion.

F–1 CONTRACT BACKED BY STUDIES

Thus, with this preliminary work, the hardware, the facilities, and other necessary capabilities were being developed at the time of the NASA contract award for the development of the F–1 engine.

The principal objectives in the design of the F–1 engine are reliability, simplicity, and a degree of ruggedness required to provide a greater margin of safety for future manned applications. Advanced metallurgy, together with proper application of proven component designs, are the tools being used to achieve this goal.

The basic comonents of the F–1 engine are a tubular-wall thrust chamber, a direct-drive turbopump, a gas generator, and appropriate controls. The engine weighs approximately 15,000 pounds.

For simplicity and compactness, the turbopump is mounted directly on the thrust chamber. All other components are either mounted on these two assemblies or are in the plumbing system between them. When the engine is gimballed, the high-pressure ducting is not flexed. Thrust-vector control is achieved by gimballing the entire engine. The high-pressure fuel is used as the hydraulic actuating medium.

The thrust-chamber assembly consists of a tubular-wall, regeneratively cooled chamber with an uncooled extension, a double-inlet oxidizer dome, four integral fuel valves, and a flat-faced injector.

The cooled portion of the thrust chamber extends to a 10-to-1 expansion area ratio. Its approximate measurements are 40-inch combustion-chamber diameter, 9½-foot-nozzle-exit diameter, and 11-foot length. The chamber is designed for the attachment of segmented, uncooled nozzle extensions to facilitate transportation and to accommodate any expansion-area ratio required by the vehicle mission up to 16 to 1.

Two tons per second of liquid oxygen and nearly one ton per second of narrow-cut kerosene (RP–1) are burned in the combustion chamber. The oxygen usage rate is equivalent to that of 60 million people in normal breathing. In 3 seconds of mainstage operation, the F–1 uses as much fuel as the average automobile uses in 1 year.

The oxidizer is fed through dual inlets to the dome to assure even distribution to the injector. The oxidizer passes through feed holes, and is injected through a pattern of 2,600 orifices into the combustion chamber. The fuel is also fed through dual inlets to a chamber feed manifold. From here, it flows through alternate tubes the length of the chamber, and then returns to the fuel collector manifold. The flow then continues through four valves spaced at 90 degrees around the chamber into an injector feed manifold. This manifold distributes the fuel through 32 spokes into the injector, from which it passes through approximately 3,700 orifices into the combustion chamber. The location of the valves downstream of the chamber provides a greater degree of control in timing and sequencing the fuel for engine starting. It also provides a repeatable minimum cutoff impulse.

For simplicity and reliability, the turbopump is a direct-drive unit. The fuel and oxidizer pumps are driven by a velocity-compounded turbine. Operating at rated conditions, it will develop approximately 60,000 horsepower. It is 4 feet in diameter, 5 feet long, and weighs 2,500 pounds.

The oxidizer is supplied to the pump through a single inlet, in line with the main shaft, and is discharged radially through dual outlets. The dual-outlet design provides a balance of the centrifugal loads in the pump and minimizes the pump diameter. The fuel pump design also includes dual inlets and outlets for balanced load distribution and minimum size.

GAS-GENERATOR OPERATION

The gas generator operates fuel-rich, and burns about 2 percent of the total propellants used in the engine. The partial sphere is approximately 10 inches in diameter. The design makes use of a double-wall combustion chamber, through which the fuel flows to cool the body regeneratively. This feature adds to the safety of the engine by eliminating a hot outer surface which could ignite leaking propellants, and it reduces heat radiation to adjacent components.

The main controls are four fuel valves integral to the thrust-chamber assembly, two oxidizer valves mounted on the thrust-chamber dome, a gas-generator valve, a fuel- and oxidizer-flow regulator for the gas generator, and a four-way solenoid valve. This four-way solenoid valve is one of the only two components in the engine requiring electrical wiring or energy; the other is the spark exciter for gas-generator ignition. The oxidizer and fuel valves are of the poppet type. The poppet eliminates the turning moment associated with large butterfly and ball valves, simplifies sealing problems, and minimizes the package size.

The major F–1 engine test facilities consist of two engine stands and a thrust-chamber stand located at Edwards Air Force Base. An interim stand for thrust chambers and a turbopump stand are located at Rocketdyne's Santa Susana facility.

The thrust-chamber test facility capable of the full 1,500,000-pound thrust level that has been provided at Edwards Air Force Base requires huge, high-pressure, heavy-wall tanks to feed the propellants to the chamber. The tanks are constructed of stainless-steel plate approximately 5 inches thick, and have control valves that weigh more than 6 tons each. It was not economically practical to build these tanks large enough to supply the thrust chamber for durations of more than 20 seconds.

The engine-test facilities consist of a converted Atlas missile stand and a new two-position stand at Edwards. This new stand accommodates the side-by-side installation of two F–1 engines. This structure is an 11-story-high complex of heavily reinforced concrete with a girder framework anchored in granite. The stand construction permits the addition of concrete and anchoring structure to accommodate the testing of clusters of F–1 engines.

INJECTOR—A MAJOR HURDLE

Concerning development testing, experience has shown that the injector presents the first major hurdle. Stable combustion must be attained before injector cooling and other thrust-chamber development problems can be investigated. It seems logical to scale up designs which have proved successful in smaller engines. However, this did not prove to be an easy and quick solution for the 400,000-pound-thrust E–1 engine. It took 1½ years to evolve a stable injector configuration for the E–1.

The F–1 injector test program got underway within 2 months after the start of the NASA contract with the test of full-scale hardware. This was possible becuse of previous work which provided a test stand and some experimental hardware. Heavy-duty thrust-chamber hardware, which is inexpensive and easily fabricated, was used.

A series of water-flow and calibration tests was conducted to determine the start sequence which should be employed for the first hot-firing test. The initial series of hot tests consisted of ignition and transition tests. This is one of the most critical stages in an injector development program.

Unstable combustion explosions, and other destructive effects occurred in these tests, which ranged from 100 to 500 millisec in duration. However, a marginal degree of stability was achieved on the third test, and a stable injector configuration was then evolved 8 months after the start of the program. A large number of injector tests have now been conducted at or above the 1-million-pound thrust level.

The turbopump requires more design and fabrication time than any other component of the engine. To evaluate turbopump-design criteria, an intensive program of model testing was conducted. This model hardware has been successfully used to evaluate the fuel pump, oxidizer pump, inducers, and turbines from the standpoint of performance and durability. First tests of a full-scale turbopump began in November 1960. Calibration and development tests are underway.

Gas-generator tests were started on schedule in March 1960 with a successful short-duration test. Since that date, numerous successful tests have been conducted without failures associated with the combustion process.

The gas generator has been tested to the full facility capacity of 135 sec, and has performed satisfactorily over wide rages of mixture ratio, temperature, and pressure. Also included in the test series were simulated engine-start sequences, demonstrating suitability of gas generators for engine use.

The control components, including the oxidizer and fuel valves, the gas-generator valve, the four-way solenoid, and the gas-generator regulators, are all in development testing. These consist of flow, pressure, timing, and actuation tests. In the first phase of testing, water is normally used as the working fluid. However, the development program has progressed to the use of the actual propellant associated with each valve. Prior to installation in the engine, the components undergo tests in the subsystems in which they function. For example, the fuel and oxidizer valves are being tested in thrust-chamber assemblies simulating engine operation, and the valve-assembly regulators are being tested with the gas generator.

The first engine system is scheduled to be tested early in 1961. The components being assembled into this engine have completed hot-firing and bench tests. The first phase of the engine program will consist of short duration tests to perfect the engine-start and shutdown sequences. These tests will be followed by performance, durability, repeatability, and relia-

bility programs, all designed to prepare the engine for the start of a preliminary flight-rating test (PFRT) in late 1962. The engine, after approximately 18,000 sec of development testing, is scheduled to complete PFRT early in 1963.

Development of the F–1 engine is proceeding on schedule. With this high-thrust engine available in early 1963, and through the experience gained in engine clustering in the Saturn program, the way will be cleared for launching, in the mid-1960's, of advanced vehicles capable of establishing the first true outposts of man in space.

Mr. Speaker, I am also submitting herewith a summary of the comparison of space exploration by the United States and the Soviet Union which removes all doubt as to which of these nations has accomplished the most in specific and sophisticated scientific information. From the satellites launched by the two nations, the United States is far and away in the lead over the Soviet Union.

This should be interesting and valuable information to the American public and especially to the Members of Congress. Insofar as I am personally concerned as an original Member of the House Science and Astronautics Committee, and having heard expert testimony from all sources both civilian and military on the position of the United States in space exploration, I have never conceded that the Soviet Union was ahead of the United States in vital and important scientific information which we have been able to obtain from the satellites we have launched especially in reference to the United States superior position to Russia on weather reporting and photographing cloud masses, navigation aids, and communications progress of which there is no evidence that Russia has made any progress in these vital fields to date.

The following summary of a comparison between the United States and the Soviet Union on space exploration should prove interesting and valuable to those interested in the progress we are making in space exploration:

THE RACE IN SPACE: UNITED STATES VERSUS RUSSIA

A new air of confidence about U.S. progress in space is beginning to filter through official Washington.

Reasons are found in a report of the National Aeronautics and Space Administration that has had little public attention.

From a study of actual space achievements by the United States and Russia, NASA concluded this:

After a fast start, Russian space work slowed, missed many scientific opportunities.

After a slow start, the U.S. space program is paying off in a rush of discoveries.

The United States it appears, still lags in rocket power. But it leads in everything else.

A burst of speed in the U.S. effort to conquer space has brought this country closer to a par with Russia in fields where it has been lagging and far ahead in most branches of space science.

A report just made to Congress by the National Aeronautics and Space Administration gives a new appraisal of the race.

In this report, released February 27, NASA credits the U.S.S.R. with "great achievements of space technology." But the report's final conclusion is this:

"In summary, the U.S.S.R. space science program has dissipated some of its momentum after the initial successes of the sputnik launchings, while the U.S. program has picked up momentum from a standing start and now surpasses the U.S.S.R. effort in its breadth of interest, originality of concept, and volume of research."

A look at what both countries have actually done in space, as pictured in the chart on pages 42 and 43, shows what NASA is talking about. Through March 3, the United States had put 38 vehicles into space compared to Russia's 11. The U.S. total included several successful experiments in fields Russia had not even entered.

At the same time; Russia has kept its edge in rocket power, and that has given it the lead in "spectaculars" which attract world attention.

THE TIDE TURNS

Events in space itself within the past few weeks show how the tide has been turning in favor of the United States, as far as overall space experimenting goes.

Since January 31, the United States has done this:

Put a spacecraft designed for a man through a crucial test—a rocket trip from Cape Canaveral, Fla., at 12,850 miles an hour.

Started three astronauts on final warm-ups for the first man-in-space shot. Outlook is that a man will be sent on a short space trip in April, into orbit around the earth before the end of 1961.

Rocketed a 37-pound chimpanzee, named Ham, 155 miles into the sky over the Atlantic Ocean and recovered him without difficulty.

Launched a Transit satellite, carrying a piggyback vehicle named Lofti. This was registered a partial success as a navigation device.

Sent three satellites—Discoverers XX and XXI and Samos II—into orbit from Vandenberg Air Force Base, Calif., to help perfect systems for maneuvering vehicles in space and to develop sky spies that can photograph Russia and warn of missile launchings.

Put up, from Wallops Island, Va., the first satellite powered by a solid-fuel rocket—Explorer IX, now measuring air densities in nearby space.

In the same period of time, Russia produced one spectacular—an interplanetary rocket aimed at Venus on February 12. That shot, the Russians now say, will miss Venus by perhaps 100,000 miles. Radio contact with the rocket has been lost.

ROCKET-POWER GAP

The Venus shot, however, is a near miss considering the problem involved. It shows that Russia is far advanced in the mechanics of controlling spacecraft. It may be 3 to 5 years before the United States can close the booster gap—the difference to power between its most potent rockets and those that launched the Venus craft.

This lead in rocket power makes it likely that the Soviets will be first to get a man into space.

Brig. Gen. Don D. Flickinger, Air Force director of life sciences, on February 26 restated his personal belief that the Russians already have made several unsuccessful attemps and may have killed a number of astronauts.

If the Russians do get a man into space before the United States does, it will be another spectacular first. But the United States will be, at most, only a few months behind. And in the meantime it probably will be widening its lead in other experiments.

NASA, for example, will fire about a dozen satellites and five to eight deep-space probes before next January. Ranger, a spacecraft designed to make a rough landing on the moon, will be flight tested. The Army, Navy, Air Force, and NASA will be expanding experiments in weather forecasting, navigation, communications and reconnaissance. Three major programs to leapfrog the Soviets in rocket power will be pushed, including the effort to develop an atomic rocket. "Astounding successes" in ground tests of a nuclear rocket engine were announced by NASA February 27.

Why have the Soviets failed to keep up with the United States in basic space science, after their head start?

NASA's report notes that "the average quality of Soviet scientific research is the same as that of the United States." Yet, the report adds, "It is a striking fact that, in spite of equality of talent in U.S. and U.S.S.R. science, nearly all the highly original work has come out of the U.S program."

WHY RUSSIA IS SLOWER

Three reasons account for the Soviet lag, in NASA's opinion:

1. Russia "has concentrated on a small number of flights [in space], and has chosen its missions for these flights with close attention to their impact on world opinion and their effectiveness in reinforcing the public image of U.S.S.R. strength in science and technology."

2. It may be that "Soviet scientists are not in close contact with their program-planning authorities and have not been able to participate effectively in the formulation of their space program."

3. Where the United States has "a powerful base for scientific operations" with "many large laboratories with highly trained staffs," the base of research in Russia "is new and relatively thin. For this reason, the U.S.S.R. scientific effort is spotty. * * *"

The report warns that the Russians are training many scientists, and "it is entirely possible that the U.S.S.R. may strengthen the weak spots in its scientific structure and move ahead in an effort to overtake us."

As of now, however, the United States leads the world by a wide margin in basic scientific investigations into the mysteries of space. Soviet Russia has the edge in rocket power. Time will tell which advantage is the most important.

HOW EXPERTS APPRAISE THE SPACE RACE NOW

EARTH SATELLITES

Russia opened the space age with Sputnik I in October, 1957. Later, Sputnik II took up a dog, Sputnik III some instruments.

United States eventually got up three Vanguards, seven Explorers, yielding important new facts about radiation, Earth's shape, magnetism.

Russia's satellites were the first, and biggest. But United States has put up more, got back far more information of scientific value.

SUN ORBITS

Russia shot Lunik at the moon; it missed, went into silent orbit around the sun.

United States put two Pioneers around the sun, got back radioed data on sunspots, radiation.

Another first for Russia; another win, in solid information, for United States.

MOON PROBES

Russia planted Lunik II on the moon, with a Red-flag marker; took photos of moon's hidden side with Lunik III.

U.S. moon shots all have failed.

Russia is at least 2 years ahead.

WEATHER WATCHERS

Russia has no known experiments.

U.S. Tiros series photographed clouds, other weather signs helping to forecast storms.

United States is years ahead in a field that can be of immense practical value.

NAVIGATION AIDS

Russia has no known experiments.

U.S. transit series—artificial stars to guide ships and planes—foreshadows a precise navigation system.

Another field of great practical importance where United States stands alone.

COMMUNICATION AIDS

Russia has no known experiments.

United States put up first satellite to send recorded messages back from space. Then Courier sent and received photos; Echo bounced signals from one place on earth to another.

United States is well on the way to a vastly better system of communications, using space—a third field where Russia lags.

SKY SPIES

Russia may have secret tests, but there's no evidence.

United States put 15 Discoverers up to pave the way for the Samos "spy in the sky" satellite now orbiting the earth and presumably taking photos. A sister satellite, Midas, has been tested. It will detect missile launchings by heat indications.

A fourth field of enormous practical importance where United States leads.

EXPLORING THE PLANETS

Russia fired a rocket at Venus, now expects it to be a near miss. The shot, from an orbiting sputnik, showed advanced guidance and weight-lifting techniques.

United States has made no shot comparable to the Venus probe.

United States may be 2 or 3 years behind in the race to reach other planets.

MAN IN SPACE

Russia sent three spacecraft aloft in 1960, each weighing 5 tons. One took animals into space, sent them back safely—paving the way for similar trips by men soon.

United States named three candidates for a space flight within 2 or 3 months, after sending a chimpanzee 155 miles up, testing a man-in-space capsule.

Russia has appeared to be about a year ahead in manned space flight.

Citations for Brotherhood Activities

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. SCHNEEBELI. Mr. Speaker, we have recently participated in the observance of National Brotherhood Week. This annual event, originally initiated by the National Conference of Christians and Jews, has once again given all of us the opportunity to dedicate our activities to the promotion of mutual understanding and concern for people of all faiths. Two fine citizens of Williamsport, Pa., have already demonstrated their devotion to the advancement of ideals of brotherhood by countless daily efforts to defeat discrimination and prejudice in their community. These efforts received their deserved recognition this month when Mrs. Charles A. Lehman, Jr., and Mr. Alfred A. DiCenso were honored for distinguished service at the Lycoming County Chapter of the National Conference of Christians and Jews Citation Dinner.

Mr. Speaker, under unanimous consent, I include the citations in the Appendix of the RECORD, as follows:

Mrs. Charles A. Lehman, Jr.:

"For devoted and successful service in the interest of equal and fair opportunities in education for young people regardless of race, creed or national origin.

"For devotion in the welfare of all in the community in terms of service to the needy, the distressed, the aged and the sick without reference to faith and color.

"For unstinted giving of herself, her time and her strength to make this community a better place in which to live for all people and thus to broaden and strengthen the ideal of the fatherhood of God and the brotherhood of man.

"For work in line with the high ideals of the National Conference of Christians and Jews that stresses the high dignity of every person regardless of race, creed, or national background."

Alfred A. DiCenso:

"For his interest in the cause of brotherhood between races, creeds and other groups on the basis of the fatherhood of God and the unity of humanity without regard to race, creed or national origin.

"For employment policies that are fair and based on merit only thus giving to every individual the right to work for a fair wage and the right to advancement regardless of racial or religious differences.

"For his deep concern in the interests of the aged, the needy and welfare of the sick and those who need guidance and wise direction, for the maimed whose handicap can be turned into fruitful living."

"For many works in line with high ideals of the National Conference of Christians and Jews that strives constantly to heal the wounds of prejudice and discrimination and holds high the truth that under the fatherhood of God men need to be brothers."

Communist Foe Succumbs at 77

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. SIBAL. Mr. Speaker, on February 10, one of the most valiant American fighters against communism died at his home in New Canaan, Conn. He was Archibald Ewing Stevenson, brilliant attorney in New York City, geologist and civic leader in New York State and Connecticut.

Mr. Stevenson was one of the first to recognize the threat of Communist infiltration in the United States. I would like now to insert an article that appeared on Mr. Stevenson in the New Canaan Advertiser following his death:

COMMUNIST FOE SUCCUMBS AT 77

Archibald Ewing Stevenson of South Main Street, a New Canaan resident for nearly half a century and a former town official who achieved widespread fame as a stanch foe of communism, died Friday at the age of 77.

A New York City lawyer, he served as counsel for many metropolitan and New York State committees and spent much of his life fighting Communist and other groups he felt were trying to overthrow the Government of the United States.

Locally he was active in the revision of the town charter and served on the board of finance from 1934 until September 1939, when he resigned to accept the appointment of first selectmen for a few weeks between the resignation of the late George T. Smith and the town election in which Clinton M. Cruikshank was named to that office.

Born in Uniontown, Pa., Mr. Stevenson was graduated from New York University in 1904, received a degree in engineering there in 1905 and another from its law school in 1909.

As a law student he served as an instructor in mineralogy and later headed the geology department at NYU prior to his admission to the bar in 1910.

WAR ON COMMUNISM

His war on communism began in 1918 when he was named chairman of a special committee of the Union League Club of New York to study the Bolshevist movement.

The previous year he headed the committee on aliens of the [New York] Mayor's Committee on National Defense. He also served as special agent of the U.S. Department of Justice, studying propaganda, was a member of the Army's military intelligence staff and prepared a list of 62 "pacifist and radical intellectuals" alleged to have been part of the organizations that opposed the war.

In 1919 he was special counsel for the New York State Lusk Legislative Committee that looked into radical and seditious activities. In one move of this committee about 25 men were arrested in raids on Communist Party headquarters and charged with criminal anarchy.

The following year he served as counsel to a judiciary committee inquiring into the qualifications of five Socialist New York State assemblymen, for 2 years was general counsel to the National Civic Federation and later to the National Economic Council.

During the 1930's Mr. Stevenson sought to have Earl Browder, then Communist leader in this country, barred from radio and protested to the Secretary of State when the United States made a trade agreement with Russia. He warned that Communist unions had been organized to work discontent in labor, charging that academic freedom had sometimes been used to place a fifth column on America's public school payroll.

On several occasions in New Canaan, Mr. Stevenson was the moving force behind town meetings which protested such New Deal measures as President Franklin D. Roosevelt's Potato Control Act, the plan to enlarge the Supreme Court, and the governmental reorganization bill.

SPECIAL INTEREST

One of Mr. Stevenson's interests was constitutional law and he spent a great deal of time and money in research on the background history of various State constitutions, exploring their impact on the National Constitution.

He was the author of "States' Rights and National Prohibition" and "New England in Washington's Day," and was known for his letters to the editors of local and metropolitan newspapers. He also accumulated a comprehensive library on the American Revolutionary period which he donated to the New Canaan high school library.

At the time of his death he was working on a modern version of "The Vision of Piers Plowman," an allegorical poem written in middle English in about 1362, typifying the trials of the pious English laborer and Christ himself.

Surviving are three daughters, Mrs. Anice Mogabgab and Mrs. E. Stanley Glines of New Canaan, and Mrs. Thomas W. Richey of

St. Petersburg, Fla., and six grandchildren. His wife, Mrs. Katharine DeLaVargne Stevenson, died in 1956.

A memorial service was held Wednesday morning at the Franklin Hoyt Funeral Home with the Reverend Grant A. Morrill, rector of St. Mark's Church, officiating. Interment took place privately.

Dissatisfaction With Supreme Court

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. TALMADGE. Mr. President, a penetrating analysis of the growing dissatisfaction with the Supreme Court's persistent attempts to exercise legislative powers is contained in the column of George E. Sokolsky featured in the March 4 issue of the Washington Post and Times Herald. Mr. Sokolsky emphasized that this dissatisfaction is national rather than sectional in scope as apologists for the Court contend. His presentation puts the issue in its true perspective and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPRESENTATIVE REPUBLIC
(By George E. Sokolsky)

This is a representative republic, controlled by a written Constitution and by acts of Congress as interpreted by the Supreme Court.

By a representative republic is meant a government chosen by the people at elections for specific terms of office and with limited responsibility. Under the American Constitution, these limitations are stated in very general terms, but as the economic and political life of the country has grown increasingly complex, laws have had to be passed which in 1787 would not have been thought necessary. The Constitution has been modified to meet these new conditions. This particularly applies to matters of interstate commerce, of public welfare and of the general defense.

When Theodore Roosevelt and Robert La Follette favored the referendum and recall, they were regarded as wild radicals. Today, both these ideas are recommended by men and women who regard themselves as conservatives. They agitate for direct action against the Congress, the Court and other Government officials with whose views and actions they disagree.

This would be the referendum and recall. It would bring us closer to a democracy than to a republic.

The dissatisfaction with the Court arises from the "Communist decisions" and from the Brown decision which dealt with the question of segregation. The principal objection to many of the recent decisions of the Court is that they are, in reality, acts of legislation, the Court assuming a function to which it is not designated.

This is a profound emotional response to a grave sense of injustice. There is too great a tendency to call everything crackpot which is not currently fashionable. The fact is that over the country groups are organizing themselves in opposition to what they regard as a negation of the American philosophy of government.

There are, for instance, about 100 conservative clubs on campuses and the number is increasing. Young Americans for Freedom is an exciting youth body, outspokenly conservative. The John Birch Society consists of adults, organized all over the country, to advocate special causes such as the impeachment of Chief Justice Earl Warren. They publish a magazine, "American Opinion."

The principal conservative publication is the National Review, the circulation of which increases although it does not receive much advertising from business firms. This weekly publication has gathered together a group of brilliant writers, mindful of the New Republic in the days of Walter Lippmann and Herbert Croly. Russell Kirk in Chicago, edits a quarterly, the University Bookman, which is conservative and intellectual.

For the Sake of Freedom

EXTENSION OF REMARKS
OF
HON. WILLIAM T. MURPHY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. MURPHY. Mr. Speaker, under unanimous consent, I include in the RECORD the speech delivered by Joseph Kajeckas, Chargé d'Affaires of Lithuania, to the American Lithuanian Society of Washington, D.C., at a commemoration of the 43d anniversary of Lithuania's declaration of independence.

The context of the speech follows:

FOR THE SAKE OF FREEDOM

February 16—how significant and full of memories is this day of Lithuania's resurrection: Before this day became a reality, a whole nation longed for it, suffered for it, fought for it, and sacrificed for it during 120 years. But with that day, the innumerable sorrows of so long a time paled before the reality of the act establishing Lithuania's independence.

Let us briefly recall that act and the circumstances of its proclamation. The unanimous declaration reads, as follows:

"The Lithuanian Council, sole representative of the Lithuanian people, in conformity with the recognized right to national self-determination, and in accordance with the resolution of the Lithuanian Conference held in Vilnius from September 18 to 23, 1917, hereby proclaims the reestablishment of the independent state of Lithuania, founded on democratic principles, with Vilnius as its capital, and declares the rupture of all ties which formerly bound this state to other nations.

"Likewise, the Lithuanian Council declares that in order to fix definitely the foundations of the state of Lithuania and its relations with other states, a constituent assembly, elected by the inhabitants in accordance with democratic principles, will be convoked as soon as possible."

In this act, there is solemnly underscored a whole list of principles, and these principles form the foundation of the Lithuanian state. They are very important, especially today, when enemies of Lithuanian freedom seek to call into question the repository of Lithuanian sovereignty.

We observe that the act proclaims the Lithuanian nation as the highest expression of sovereignty, and that the council is acting as the only representative of the nation.

The act is proclaimed according to the principle of self-determination of nations, and the conclusions of the Vilnius conference. The act makes very clear that the proclaimed Lithuanian state is to be one organized according to democratic processes, with its governmental form to be determined by a constituent assembly.

When the Red Army occupied Lithuania in the summer of 1940, bringing with it a Communist form of government, the Lithuanian nation's principle of sovereignty was broken and made sport of. Moscow doesn't recognize a nation's sovereignty: that right is absorbed by the Communist Party. In none of the countries now under Communist control was the then-existing order changed by the will of the country itself, but always by bald Communist lies or force.

There has never been a nation which would exchange natural human freedoms and liberty itself for chains and slavery. And the enslavement of Lithuania is Moscow's eternal shame, an ineradicable blot in history. It was gratifying to note that the President of the United States, in his state of the Union message, called for renewed respect of the human right of freedom, especially in regard to Eastern Europe. Only several days ago, the majority leader of the House of Representatives, the Honorable JOHN W. MCCORMACK, made the point that "The Soviet Union would not dare permit the people of Lithuania to have a secret ballot, supervised internationally or by the United Nations to determine their own form of government." It knows that the free choice of the Eastern European peoples would overthrow even the minutest traces of communism. And truly, if Mr. Khrushchev and his cohorts in the Kremlin think otherwise, why don't they put their convictions to the test? That is to say, if they're so convinced, why should they be afraid of letting the people freely express their choice? Of course, our rhetorical question becomes, in addition, academic when we realize that, in the Soviet scheme, there is no such thing as people's free choice.

This is why the struggle for regained Lithuanian freedom is at the same time a struggle for man's right of free choice, a struggle for the essential freedom of the peoples of the free world and of all peoples.

It is noteworthy that the act of February 16 did not create a new state, as it occurs in Africa today. The new nations of Africa remember only colonialism. But when the Lithuanian nation experienced her rebirth, it was a rebirth that spanned the centuries and returned us to the time of Gediminas, back to the time when Lithuania extended its boundaries from the Baltic Sea to the Black Sea. Thus, the notion of Lithuanian statehood is nothing new; it refers back to a historical tradition of centuries. And this is admirably reflected in the Lithuanian national anthem, which conveys the fact that a Lithuanian is always born into a tradition of freedom. Moscow cries colonialism ad nauseam to those countries which are thousands of miles from Moscow, but with studied indifference turns her eyes from the suffering and enslaved nations on her very doorstep.

The act of February 16 also provided that Lithuania was free of all ties with other nations which may have been contracted in the past. This was done with an eye to the future, when it could be expected that there would arise pretenders to Lithuanian territory who would want to dictate the terms of Lithuanian relations with other countries.

The Soviet Union tried in the past and continues to try to justify, by every hypocritical means, the Lithuanian annexation. But the Soviets will never be successful; already the so-called incorporation of Lithuania into the Soviet Union has come to be universally regarded by freedom-loving peoples as a classical example of aggression. But

in spite of this, the Soviets continue to try, by every devious means, to obtain recognition of the status quo from other nations. They even make such attempts in regard to Lithuanians in the free world, usually under the guise of cultural exchange and cooperation. Lithuanians in the homeland have not succumbed to this temptation, since less than 1 percent have joined the Communist ranks. And neither will free Lithuanians succumb to that insidious temptation.

Soviet efforts to speak for the Lithuanian nation is but an absurd parody of the free will of the people. This fact, as well as similar facts of Soviet shamelessness and hypocrisy, is reflected in the findings of the Select Committee on Communist Aggression.

It is a most happy circumstance that our commemoration today coincides with the birthday of Abraham Lincoln, who serves as a comforting example to all who struggle for human freedoms in the world today. The memory of Lincoln carries hope to the enslaved Lithuanian, and supports everyone who fights for a brighter tomorrow for Lithuania. Let us glance at just a few of his immortal ideas:

In the Declaration of Independence of the United States it is solemnly stated that "all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." Speaking of this Declaration in Philadelphia on February 22, 1861, Lincoln emphasized that it "gave liberty not alone to the people of this country, but hope to all the world, for all future time. It was that which gave promise that in due time the weights would be lifted from the shoulders of all men." On other occasions he stated: "It is my desire that all people everywhere be free." "Those who deny freedom to others deserve it not for themselves; and, under a just God, cannot long retain it."

Thus, we may take hope in our fight for the liberation of enslaved Lithuania, not only from our past, but also from Lincoln, the hero of this day.

President Kennedy, in his inaugural address, expressed a similar concern for the rights of suffering peoples when he proposed, in the words of Isaiah, that we "undo the heavy burdens [and] let the oppressed go free." Was not this precisely Lincoln's greatest desire? I consider it more than a mere coincidence that, on February 8 at a White House reception for the chiefs of diplomatic missions, President Kennedy chanced to point out to me an impressive portrait of Abraham Lincoln hanging on the wall. I would like to express to him today, on behalf of enslaved Lithuanians in their homeland and Lithuanians abroad, deep public thanks for his encouragement of the oppressed Lithuanian people, and for the American Government's continued nonrecognition of the Kremlin's illegal occupation of Lithuania.

And while thanks are in order, I would like on behalf of the present gathering and on behalf of Lithuanians everywhere, to express the deepest gratitude to the Honorable Loy W. Henderson upon his retirement from the Department of State. At the very dawn of Lithuania's independence—on Easter morning of 1919, in fact—Mr. Henderson arrived in Lithuania to observe one of the most fascinating stories of modern democracy: the growth in freedom of Lithuania and her sister Baltic Republics. Mr. Henderson has always remained a good and true friend of the Baltic States, and on this occasion we express our deepest thanks and very best wishes for the future to his wife and himself.

We are heartened by this example of a non-Lithuanian's sympathy for our beloved homeland. But at the same time we are reminded that we must never grow lax ourselves in our support of the mother country in her very worst days. It is a fact of recent days that Bishop Julijonas Steponavicius was deported for refusing to ordain Communist agents as priests. And this is the fate of any man who defends basic freedoms under the Communists, especially religious freedoms.

Lithuania has suffered much for the sake of freedom. On this occasion, let us resolve to repay her as we can.

Let this commemoration be the day of rededication for us in our efforts to support the aspirations of the Lithuanian nation. Let us resolve to do everything in our power to hasten the dawn of a new birth of freedom and independence for Lithuania, and a surcease of her sorrows. In truth, let us "undo the heavy burdens [and] let the oppressed go free."

On Urban Affairs

EXTENSION OF REMARKS
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. SIBAL. Mr. Speaker, my good friend and very able colleague, BRAD MORSE, recently called upon the House to create a Select Committee on Urban Affairs to help unsnarl the tangle of problems besetting our Nation's burgeoning cities and towns.

Congressman MORSE's idea was met with enthusiasm by his home city of Lowell, Mass., as the following editorial from the Lowell Sun evidences:

ON URBAN AFFAIRS

A Select Committee on Urban Affairs has been proposed by Congressman BRAD MORSE of Lowell which may be the forerunner of a department within the Federal Government at Cabinet level.

The increasing problems of all American cities, large and small, have led to the Morse proposal.

"We must accept the need for fully coordinated programs of renewal, redevelopment, and other vital changes if our cities are to be rewarding places in which to live, work, and play," MORSE has stated in presenting the thought to his colleagues in Congress.

The older cities of the Nation are beset with complex problems which have primarily developed since World War II and made more perplexing by the general movement toward the suburbs.

As the situation now stands, each city faces its peculiar problems more or less alone. It has no recourse to a central office that would have the facts, figures, records of experience, and other data that could be so helpful in general guidance.

Mr. MORSE should get maximum support for his idea from all city fathers, especially in the East and Middle West. It comes at a time when most of these urban groups are going through a stage of insecurity, when they are not fully confident of what the future may have in store.

A pooling of all urban ideas with advice and information coming from a central agency that has the answers to the questions should be most helpful at this particular time.

Analyzing Republican Defeat

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. LONG of Hawaii. Mr. President, Columnist Ralph McGill in the Washington Evening Star of March 6 points out that the Republican congressional leadership may be repeating an old mistake in its apparent policy of trying to downgrade President Kennedy. Mr. McGill states: "That this is not good politics is underscored by the latest poll figures which show that 72 percent of the people like the way the new President is conducting the Nation's business."

I ask unanimous consent that Mr. McGill's column, entitled "Analyzing Republican Defeat," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANALYZING REPUBLICAN DEFEAT—COMMITTEE BLAMES CITY VOTE, IS URGED TO SEEK NEW PARTY LOOK IN CONGRESS

(By Ralph McGill)

Since the obvious is not always true, the Republican National Committee wisely analyzed its defeat of last autumn and finds that it occurred, as suspected, in the larger cities.

Of 40 cities with populations of 300,000 and more, Mr. Kennedy carried 26 and Mr. Nixon 14. There are eight States in which the largest urban vote can be the balance of power in any close election. These are New York, Pennsylvania, Michigan, Maryland, Missouri, New Jersey, Illinois, and Minnesota. In 1942 Mr. Eisenhower won all but Missouri. Yet in 1960 all eight gave majorities to Mr. Kennedy.

Republican research broke down the vote in Philadelphia. Mr. Nixon, despite a very earnest effort to capture the minority groups, failed to do so. His visit to Warsaw, Poland, after the Russian journey in the summer of 1959, was expected to win the Polish vote, which is substantial in several cities. Yet the GOP breakdown disclosed that in Philadelphia Mr. Nixon received but 21 percent of the so-called Polish vote, 30 percent of the Irish vote and 18 percent of the Negro vote.

A GOP task force committee will seek to find out how its party may win support from the ethnic and minority groups in cities. It will not be easy.

The task force might make a start in Washington with Republican congressional leaders. These gentlemen already have done the party harm by their seeming reluctance to vote aid for the depressed areas and by their criticism of Mr. Kennedy for talking about a recession and unemployment.

This error was compounded by declaring the recession to be "a statistical one" and not a reality. The almost 6 million persons without jobs and the 2 million working part time do not consider themselves and their plights as statistical. They did not view the tour of the distressed cities and towns by Secretary of Labor Goldberg as politics, which the GOP declared it to be. The people visited said they were glad to have a Government with heart enough to take an interest in their misery.

Senator MUNDT's gross distortion of President Eisenhower's conversation into a denunciation of President Kennedy as too far to the left, a statement Mr. Eisenhower repudiated, is another case in point. If the Republicans and Southern Democrats join to defeat medical care for the aged under the social security program, they will thereby erect still another barrier to GOP hopes of capturing city votes.

The present Republican leadership as practiced by MUNDT, GOLDWATER, BRIDGES, DIRKSEN, et al. is repeating the errors of the party leadership of the 1930's. In that decade the partisan zeal to defend Mr. Hoover and the party's failure to anticipate or cope with the depression caused a great majority of Americans to see the Republican Party as cold and lacking in any sympathy for the problems of human beings caught up in the tornado of distress and suffering brought on by the economic crash.

The Republican Party was not lacking in humanity, but it permitted its extremely partisan leadership to make it appear devoid of any consideration for people in trouble. Farmers called their mule-drawn pickup trucks "Hoover carts." Smokers reduced to "the makings" spoke of the sack tobacco as "Hoover dust." A man who lacked food for his family and obtained it by going out and shooting a rabbit spoke of it wryly as "a Hoover dinner."

One may be sure the present Republican congressional leadership hasn't meant to repeat this error. But it is in the process of so doing because it apparently gives priority to trying to downgrade John F. Kennedy. That this is not good politics is underscored by the latest poll figures, which show that 72 percent of the people like the way in which the new President is conducting the Nation's business.

The most articulate Republicans are those who, in their bitterness, seemingly blame Mr. Nixon for defeat. In their desire to get back at Mr. Kennedy, they already have created the image of a Republican leadership which is reluctant to assist the distressed and the unemployed and which is even more unwilling to help old people who need medical care. If they also defeat the school bill, the GOP task force won't have much research to do. It will early know why the party won't win back city votes.

The Department's Soybean Program

EXTENSION OF REMARKS
OF
HON. RALPH F. BEERMANN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. BEERMANN. Mr. Speaker, I want to call the attention of the House today to the Department's soybean program.

This program is to raise the support price for soybeans from $1.85 a bushel to $2.30 a bushel. The Secretary of Agriculture has the authority to increase the support without legislative action. He already has announced that he plans to do so.

Yet, this hoist in soybean supports is closely related to the pending legislation. It is an example of disregard for the farmer and of the overall program for a Government-controlled and dominated agriculture.

It is an example of complete bureaucratic disregard for the wishes and interests of farmers. It shows clearly that the professors and planners at the Department feel they know what is good for the farmers. They plan to force their views on the farmers, regardless, and today we are being asked to help them to do so.

Incredible as it may seem, the decision to raise soybean supports was made without consultation with the soybean producers.

Not only that. The producers do not want this increase, and have so informed the Department.

Nevertheless, the Department intends to go right ahead.

This situation is astounding. Let me repeat the circumstances so they can be fully understood.

The soybean growers, the farmers who make their livelihood from the crop, were not consulted when the Department made the decision to raise supports from $1.85 a bushel to $2.30 a bushel.

The growers, once they learned what was happening, informed the Department that they did not want the increase, and begged the Department not to raise the supports.

The Department holds their views in contempt, and will force the $2.30 on them.

What is the relationship to the proposed action on soybeans and the bill before us today, H.R. 4510?

Well, as I understand it, the excuse for the increase in soybean supports is to take land out of corn and other feed grains and to divert it into beans.

Apparently, the fact that the market price for beans is above the proposed support price does not count. If it is profitable to farmers to grow soybeans, they will do so. The Government, it would seem to me, does not have to point out the fact. Our producers have built the most marvelous agricultural plant the world has ever seen. They have done so by producing the most profitable crops, and products in the most efficient manner possible.

The bill before us is a part of the Government's scheme to get land out of feed grains.

Section 3 proposes to punish farmers who do not cooperate with the Government.

It would give the Government the authority to sell corn and grain sorghums at a comparatively low price so that noncooperators would not benefit from the higher support price—$1.20 or more for corn—to those who take part in the Government's program.

What this does is to give the Government control of the entire marketing machinery for corn and other feed grains.

On the one hand, the Government would raise the price to cooperators through higher supports.

To get this higher price, they would have to turn their corn and other feed grains over to the Government for the Government beats down the price by dumping on the market. The Government then establishes the ceiling and the floor for corn and feed grains.

We are told this is an emergency 1-year program, but how often have we heard this before? The emergency programs become permanent. They go on and on. We have with us today some so-called emergency programs which have been in effect since 1933.

Back to the soybean producers whose wishes the Government has disregarded. The question is: Who did the Department of Agriculture listen to? Who sold this program to the Department?

Apparently reliable reports say the architect of the soybean program was Roswell Garst, of Coon Rapids, Iowa.

Garst is a seed breeder and farm manager, whose chief claim to fame is that he is a good friend of the Soviet Dictator, Nikita Khrushchev. He was host to Khrushchev when the latter toured the United States in 1959. Garst, it is said, has sold a lot of hybrid seed to the Russians and has also been their adviser on ways to improve their agriculture. If he raises soybeans, this activity is overshadowed by his other operations. Most assuredly, he is not regarded by the soybean producers as their spokesman.

But the Department listens to him rather than to the soybean growers themselves.

Why do the soybean producers oppose the increase in their support price from $1.85 a bushel to $2.30 a bushel?

They are afraid that the hoist will get them into trouble and will put them in the unenviable position of the wheat, feed grain, and some other producers.

As is well known, the support prices on these products have been too high. The support dominates the market and tremendous surpluses have piled up in Government hands.

The Government owns about $10 billion in farm products which it has acquired through high supports.

The holdings of wheat alone amount to almost $3 billion and about $500 million is spent annually on subsidies.

The holdings of corn and other feed grains are more than $3 billion.

Let the fears of the soybean producers be expressed in the somewhat plaintive words of their president, Charles V. Simpson, of Waterville, Minn.:

Any moves by Government—

He said—

which will upset the equilibrium established within the soybean industry through the announcement of support price levels which will make it difficult or impossible to sell our products can only result in surplus stocks, Government ownership, storage costs, and the loss of years of work in the creation of markets. The transfer of the problems of feed grains to our commodity actually solves no problems, but merely transfers them from an already surplus crop to one which has made a determined effort to sell its products. Soybeans must be kept in their proper price relationship to crops such as corn, which compete for acreage, but they must also be kept competitive to other oilseed crops both domestic and foreign. Proposed support levels will, it is feared, stimulate production of competitive oilseed crops in other countries and cause loss of present exports as well as making it impossible to continue expansion of soybean product markets.

We will get needed acreage in 1961 without price supports established at too high levels. The proposed support levels might well make it impossible to continue building our markets at home and abroad, might turn our crop into just another surplus commodity in spite of the determined efforts of an industry which was not consulted in the establishment of the proposed price support levels.

But, as I have stated, the Government does not pay any attention to Mr. Simpson and the other men who raise the soybeans. They are listening to Roswell Garst, friend of Khrushchev.

We cannot do anything here today about the soybean program. We can do something about the companion scheme, H.R. 4510, the so-called feed grain program. We can defeat it and throw a real body block in the drive toward an agriculture controlled by bureaucrats and planners who pay no attention to the farmers themselves.

Municipal Government in Transition

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. DINGELL. Mr. Speaker, on February 18, 1961, Commissioner Robert E. McLaughlin delivered a significant address at the Annual Meeting of the Greater Washington Association of the Unitarian Church in Washington, D.C., on the subject of "Municipal Government in Transition."

Commissioner McLaughlin served for several years as President of the Board of Commissioners of the District of Columbia, and before that was the chairman of the Public Utilities Commission of the District. In these posts he has had a unique opportunity to meet, and devise solutions to, a wide variety of the problems which beset the municipality of the District of Columbia. Within the past few months he also toured many of the great cities of Europe and the Middle East to study how they deal with their municipal problems.

In his speech of February 18, Commissioner McLaughlin surveys the problems of municipal governments in the modern world and how they affect the nation and the Nation's Capital City. He stressed the need to follow the principle stated by Franklin D. Roosevelt that a liberal government must use its power and resources to assure "to the average person the right to his own economic and political life, liberty and the pursuit of happiness."

I particularly commend Commission McLaughlin's comments on the importance of improving the processes of democracy and eliminating discrimination and bigotry. His speech is Lincolnesque in its perception and its felicity of expression. I believe his views on municipal government in transition will be of interest to every Member of Congress and also to other readers of the CONGRESSIONAL RECORD. I therefore, under unanimous consent, insert his speech in the RECORD:

MUNICIPAL GOVERNMENT IN TRANSITION

When Dr. Howlett invited me to speak to you tonight, I was both elated and depressed—elated at the opportunity to cast my bread upon such rewarding waters, and depressed at the thought of following such able statesmen and orators as the pair of Douglases on this rostrum. When I thought of you in the audience I would be addressing, a group of liberals in politics as well as religion, I was reassured, with the conviction that if I be condemned for political reasons, I shall at least warrant your reprieve as a fellow-liberal in religion.

A very quotable American (whom I have had few occassions to quote) has said: "The liberal party is a party which believes that, as new conditions and problems arise beyond the power of men and women to meet as individuals, it becomes the duty of the Government itself to find new remedies with which to meet them. The liberal party insists that the Government has the definite duty to use all its power and resources to meet new social problems with new social controls—to insure to the average person the right to his own economic and political life, liberty and the pursuit of happiness."

These are the words of Franklin Delano Roosevelt; and if we substitute the word "policy" for "party" we have the basis for much that I am going to say tonight.

Mr. Webster defines "liberal" as "befitting, or worthy of, a man of free birth; free; not servile; not restricted; not bound by authority, orthodox tenets, or established forms in political or religious philosophy; independent in opinion; not conservative." And, as examples, he cites: liberal thinkers, liberal Christians and liberal ideas in politics.

While I am busy defining words, I might as well complete our own frame of reference by pointing out that Washington, D.C., does not even qualify as a "municipality," inasmuch as that word, derived from the latin "municipalis," meant a citizen of a city that had the privileges of Roman citizens.

We have vast new problems in government—international, national, and local. They must be solved, and not the least of them are our local problems. New concepts, new forms of government must be adopted to meet these needs; and liberal minds must conceive and effectuate them.

I should like to talk about transitions which are common to municipalities throughout our land, and to compare our problems and solutions with some cities in other lands. I may at the same time reflect a transition that has been taking place in my own views.

First of all we need a bit of review. We in America have become a highly mobile people. Over 20 percent of the Nation's population—some 35 million of people—change their residence each year. I have read that, of these 35 million, about 11 million move across county lines, and half of this group move across State lines.

People are moving from rural areas to urban centers, primarily in response to better job opportunities. We have become a predominantly urban society within the lifetime of most of us here this evening.

At the turn of the century, about 30 percent of the population lived in cities while about 70 percent lived in rural areas. Today the situation is reversed: about 70 percent of our people are now living in urban centers.

Paradoxically, while some people are moving from small towns and farms to the city, others are moving from cities to the surrounding countryside. They are seeking, primarily, what they think will be better environment for their children.

The flight to the suburbs during the past decade has resulted in a net loss in population for almost all of this Nation's larger cities, and the evacuees have been our most affluent taxpayers. The District has seen a 4.7-percent increase in population, while Boston and St. Louis have decreased 13 percent. As for the decrease in other cities of our population group Pittsburgh has lost 11.7 percent, Detroit has lost 10.6 percent, Buffalo has lost 8.7 percent, Minneapolis has lost 7.5 percent, San Francisco has lost 7 percent, and Cleveland and Philadelphia almost 5 percent.

We hear that cities like Houston, Los Angeles, and Milwaukee have had population increases during the decade. But people neglect to say that these cities have doubled their land areas; and that others have suffered losses despite territorial increases.

These changes present many problems for municipal governments—for us in the District as well as our large cities from coast to coast. We now face new and increased municipal functions and services, and more expensive local government than ever before. Moreover, our cities, which are, of course, creatures of State governments, are now being forced to look to the National Government for financial aid and assistance heretofore provided by their State governments.

Our problems are serious, but not insurmountable. We are concerned with the improvement of our transit facilities. We have got water supply and pollution problems, traffic congestion, inadequate housing and slum clearance. Urban renewal programs are essential and take up a large portion of our time, patience, and funds. We are concerned with improving our educational system and facilities.

We are charged with the development of adequate zoning, to combine the best features of residence, industry, business, recreation, and other essential and integrated community needs.

We are working to assure that the social welfare needs of our community are properly recognized and humanely met. To these add: crime prevention and detection, efficient, modern fire protection, alert and adequate public health services with ample hospital facilities; a highly ethical and conscientious judiciary, and a modern penal system.

But, our major problems are really minor ones compared to the problems some European cities have had to face. It is only by facing up to their problems that cities like West Berlin and Warsaw have been rebuilt.

Take Warsaw as an example: Despite its Communist rule, the people of Warsaw undertook, and did, what was necessary to rebuild that Nazi-demolished city. It was systematically dynamited, by special order of Hitler, but they had the spirit, the drive, to rebuild their capital city from mounds of ashes and rubble. They have duplicated their old historical buildings; and at the same time erected a 110,000 capacity stadium from the rubble not usable for other purposes. To rebuild this city for 1 million people required 15 years. This kind of result requires spirit in any community; but in communist lands, where the people are motivated by dictates rather than desires, evidence of this kind of spirit intrigues me.

De Toqueville said, "To labor in the direction of democracy is in my eyes a sainte occupation, and one in which one must spare neither one's money nor one's time, nor one's life."

Let's get back to Washington. Here we are in a beautiful city, our Nation's Capital, a world respected capital.

Where is our spirit? Where are the tens of thousands of people who should be standing ready to do their part to correct the conditions confronting us?

We live in a city in which our every act and our every omission occurs in a show window. This is true because of the tremendous concentration of power and responsibility located here.

We have over 100 excellencies, scores of Mr. Secretaries, hundreds of honorables, and if all the stars on the shoulders straps of our generals and admirals should be put alongside they would resemble the Milky Way. We have about 30 full-time protocol officers to keep the traffic of precedence and hospitality moving smoothly. In spite of this, we are expected to remain an unsophisticated country town in spirit, where Americans from all economic levels and geographic areas find their home.

It is a challenging task for us to be luxurious, yet economical; pompous, yet simple; ceremonious, yet democratic; impressive to our international friends, and at the same time, homelike to our simplest citizens, and correct, becoming, and appropriately formal with the simplicity consistent with democracy.

I am not among those who believe, either, that all wisdom and competence derive from long residence, or that those who have spent their lives, or their best years, in this community are so lacking in vision and enterprise that they must rely on others for direction and stimulation and forward motion.

Certainly the dramatic population changes of the past decade, and before, have intensified old problems and presented fresh challenges. But they have also brought new resources—of spirit, intellect, and energy—which mutual effort must discover, develop, and convert into assets for the total community, if progress is to be achieved.

In every group, old and new, there are workers and, let us say, nonworkers. Nineteen years ago Pearl Buck told the graduates of one of our local colleges that among those receiving degrees, that day, were those who would get in harness and help to push the wheels of progress, and those who simply would ride behind the efforts of others. She was not, she said, assigning blame; but merely stating the facts which must be faced.

We, likewise, must face the fact that in our total community, here in the Capital—and in our business community—there are those, old and new, who would rather ride than push, who have resigned themselves to a smug or fearful abstinence from effort, "playing it safe" on all fronts. This, as Miss Buck pointed out, 19 years ago, is true everywhere.

Many of our city's religious and privately endowed agencies, as well as those maintained by public subscription, are attempting to alleviate undesirable community conditions. Much constructive work remains to be done with these groups, to the end that duplication and overlapping of effort are eliminated. We can accomplish this by careful planning and by the coordination of our activities, so that no individual or problem area is overlooked or overemphasized.

In recent weeks, I have come across a passage from Washington's Farewell Address, which is a legacy of wise counsel.

I wish that more of our millions of citizens would, in this period celebrating his birthday, bear in mind what Washington reveals as his regard for the spiritual foundation on which our national life should be built:

"Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness—these firmest props of the duties of men and citizens.

The mere politician, equally with the pious man, ought to respect and to cherish them. A volume would not trace all their connections with private and public felicity. Let it simply be asked, Where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason, and experience both forbid us to expect that national morality can prevail in exclusion of religious principle.

Observe good faith and justice toward all nations. Cultivate peace and harmony with all. Religion and morality enjoin this conduct. And can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened and at no distant period a great nation to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt that, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it? Can it be that providence has not connected the permanent felicity of a nation with its virtue?

As we talk about the building of our great municipalities, realizing the greater the cities the greater the nation, there comes to mind a meditation on the lives of nations, as written by Franklin Roosevelt during a period of low ebb. The aptness and the timeliness of the Roosevelt statement come home today in February 1961.

"Lives of nations are determined, not by the count of years, but by the lifetime of the human spirit. The lifetime of man is threescore years and 10; a little more, a little less.

"The life of a nation is the fullness of the measure of its will to life. A nation, like a person, has a body—a body that must be fed and clothed and housed, invigorated and rested, in a manner that measures up to the standards of our time. A nation, like a person, has a mind—a mind that must be kept informed and alert, that must know itself, that understands the hopes and needs of its neighbors—all the other nations that live within the narrowing circle of the world. A nation, like a person, has something deeper, something more permanent, something larger than the sum of all its parts. It is that something which matters most to the future, which calls for the most sacred guarding of its present."

We Americans are now living in the most critical era of our Nation. We are at the point where previous civilizations have broken down through luxury, softness, and degeneration. We are now being brought to face—some perhaps are being forced to face—the real values of life. We are being forced by a powerful, false ideology to demonstrate that we can and will practice what we preach—and that it is good. We are forced to face up to the anachronism of a ruthless, feudal culture of the machine in this modern age, as it reveals the incongruities of our pursuits of selfish motives and interests.

In order to be strong enough—strong enough to win the struggle for free minds and the freedom of the world—we must be honest enough to recognize the need to utilize all of our resources. Like it or not, we, all of us, are the Americans who are pitted against subversion and communism. And we had better be wise enough to like it; because it is only by uniting in good fellowship, and accepting with total color blindness, the common cause, that we shall attain the necessary strength and worthiness to prevail.

As we plan our big buildings and new roads, we must plan far beyond the drawing board and blueprints. We must superimpose on our blueprints a plan that includes the human and the social aspects of all that is about us; because everything that we do involves people. Whether we are building a road, a bridge, or planning urban development, people are affected. And we must make certain that these people are always considered when we make our initial plans, rather than when we reach the final stages.

As you may know, I recently visited a number of countries in Africa and the Middle East, and I have been concerned, as your Commissioner, that some of our local problems reflect so badly on our community abroad.

It is disturbing that, on an international level, the integrity of the United States is measured by hundreds of millions of people on the basis of our racial practices. And it is good that it is disturbing.

The delegates and diplomatic missions of nonwhite countries have been encountering difficulties and embarassment as they seek appropriate places to live and work in our country—which is the seat of the United Nations.

Too many of us don't give a second thought—or even a first thought—to the fact that these difficulties will influence the personal and international attitudes of officials in other nations toward the United States. In this year of 1961, it is imperative that we in Washington—and our citizens throughout the land—reexamine their consciences.

Many a monument stands with an inscription: "Erected by the people—of whatever the place—in honor of the martyrs who fell and the heroes who fought in defense of liberty and union." This inscription is dated 1861–65.

We are now meeting nearly a full century after the close of the war which these monuments commemorate. Today we can, in honesty, say that the indissolvability of the Union is all but universally accepted.

If, however, we should speak to the fallen who have fought in freedom's cause at any time in the long history of man, tragically would we have to report that victory is not yet won.

The struggle for the rights of man is endless. Each past generation has witnessed, and each future generation may expect assaults on the dignity of the individual and onslaughts against liberty and justice. The annals of history disclose the discouraging difference between man's intended state and his reality. In the past, and even now, man has been relegated to second-class status, denied his liberty, or deprived of his life, because those in power and authority disagreed with his religious beliefs—or lack of them—his racial identification, his economic theories, his national allegiance, or his politics. Those who do not believe in, and those who do not trust, the democratic processes have been given aid and comfort by such indifference.

Abraham Lincoln once said: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew and act anew. We must disenthrall ourselves."

There is an audible drumbeat in the halls of history that cannot be stilled. Men who value freedom march to its cadence. Today, the drummer increases the tempo, and no one, in the ranks of the free, dares stand at parade rest.

Those who have experienced freedom must give guidance to those who seek after it, lest they lose their way, marching to an undetermined destination is all but futile.

In some parts of the world, I have observed that the expulsion of colonialism,

and the growth of nationalism, are pale substitutes for the development of respect for individual liberty and social justice.

Lest it be forgotten, let the record show that despotic leadership—be it foreign-imposed or homegrown—is tyranny; and tyranny is the assassin of freedom and justice.

Fully convinced that a just and free society is the highest goal attainable by man on this earth, let us turn all our efforts in that direction and march with purpose to the drummer's beat.

Democracy is the most demanding form of society—demanding in that it calls for a balancing of individual liberty and community responsibility; demanding in that it calls for a citizenry which participates in decisionmaking; demanding in that it calls for an almost universal commitment to the sanctity of the individual; demanding in that it calls for a high degree of self-discipline.

Democracy is also the most rewarding form of society—rewarding in that it gives recognition to the dignity of each individual; rewarding in that it lends encouragement to each citizen to develop fully his potentialities; rewarding in that it grants equality of opportunity to each according to his merit; rewarding in that it grants no sanctions to bigotry.

If free men but use it, democracy, with these drumbeats, will set the pace, will win the pennants, and one day will free the world.

Again, thank you for the honor you have bestowed upon me this evening.

Resolution on Area Redevelopment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 28, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the Textile Workers Union of America, AFL-CIO.

The resolution follows:

RESOLUTION ON AREA REDEVELOPMENT

The need for a Federal program of action to assist people in economically distressed areas has been established so clearly and so many times that further delay in adopting such a program is unconscionable. The most recent study of this problem, by the Kennedy task force, found that "the social impact of chronic unemployment is staggering."

Textile workers are well acquainted with the social impact of chronic unemployment. The communities in the New England and Middle Atlantic States left stranded by mill managements after the people had built their entire economies around the operation of the mills know full well what it means to face the future without job opportunities and without hope. The communities in the Southern States dependent on the textile industry for employment suffer from the disabilities of an underdeveloped economy. Thousands of able-bodied persons are discouraged from looking for work where there are no jobs.

The efforts of these communities to help themselves have been strenuous but unavailing. The resources of State and local government are inadequate to the task of rebuilding the economies of the distressed areas. The problems transcend local and State boundaries. This is a national problem and it requires a national solution.

The solution will not be found along the lines of the business-as-usual techniques which promoters have employed to build up industrial sites in the past. We need an entirely different approach, one which will be based on a careful appraisal of the human, social, and physical resources of the affected areas. We must plan for the development of a well-rounded industrial base for these communities so that they may create the conditions for sustained long-term growth.

This is a task for a new, independent Federal agency. None of the existing departments of the Government is equipped to handle it. It requires an agency capable of calling on and coordinating the resources of all Federal, State, and local groups. The U.S. Department of Commerce has neither the experience nor the breadth of view and competence required for this significant undertaking: Therefore, be it

Resolved, That the Executive Council of the Textile Workers Union of America urges the Congress to adopt without further delay an area redevelopment program to assist in the rehabilitation of areas suffering from chronic economic distress and to place the responsibility for the planning and execution of this program in the hands of an independent agency.

Humanitarian Endeavors of Variety Clubs International

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 7, 1961

Mr. CLARK. Mr. President, more than 10,000 members of our Nation's entertainment industry rededicate themselves, each year, to the task of curing the ills and soothing the pain of the Nation's handicapped children.

These men and women are members of Variety Clubs International. They have just celebrated Variety Clubs Week and during this period pledged their time and energy during the coming year—as they have for the past 33 years—to unselfish humanitarian endeavors.

Thus, these splendid Americans now embark on their 34th year of providing for underprivileged and unfortunate children of every race, every creed, every color. They will this year, as in years past, take time from their busy lives in the theatrical world and devote it to showing the handicapped how to repair their broken spirits and crippled limbs.

Most of us will agree, I am sure, that charity is never at its more glorious best than when it touches children. And those who quietly enlist in the fight against pain, hunger, and fear that shadow helpless children everywhere ennoble themselves and surely deserve a salute from their fellow Americans.

For that reason, I believe it more than appropriate to take notice today of the often unsung accomplishments of Variety Clubs International. To that end, I ask unanimous consent to have printed in the Appendix of the RECORD an inspiring review of the various projects undertaken by this humanitarian organization.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

RÉSUMÉ OF PROJECTS: VARIETY CLUBS INTERNATIONAL

The charitable work of Variety Clubs International had its start 84 years ago, when an infant was abandoned in the lobby of Pittsburgh's Sheridan Square Theater.

Attached to the sleeping infant's blanket was a note expresing faith "in the goodness of show people." That faith was not misplaced, as 11 showmen adopted the baby and provided for his care and education.

Imbued with their success in caring for one child, the showmen determined to protect and care for others. Thus, Variety Clubs International was born.

Today, Variety Club activities include the sponsorship of children's hospitals and convalescent homes; of clinics for treatment and research of such diseases as cancer, cerebral palsy, polio, heart diseases and rheumatic fever; of orphanages, foundling homes and schools for handicapped children.

Thirty-four years ago, in 1928, the founders of Variety provided a name and a home for one child. Today, thousands of children in five lands receive security and solace from more than 10,000 members of Variety Clubs International.

From London to Los Angeles, from Mexico City to Minneapolis, Variety's show busines members raise more than $3 million each year to fight disease, pain and poverty in the United States, England, Ireland, Canada, and Mexico. And they raise this money not through public appeal but from revenue received from the various exhibitions, shows and other entertainments for which Variety has become justly famed.

In addition to its general charitable projects, every Variety chapter today is pledged to support one main charity. Down through the years, the Variety chapters known as "tents" have raised more than $80 million to crusade against pain and war on disease.

To call the role of Variety tents and their various projects is to understand the scope of the charitable activities sponsored by Variety and to realize, why Variety ranks today as one of the world's leading humanitarian organizations.

Variety's Tent No. 1, in Pittsburgh, has as one of its main charities the operation of Camp O'Connell, which offers to handicapped children of every race, creed, and color a summer camp retreat from the filth and heat of city slums. Not too long ago, this pioneer tent completed a new hospital building for the Roselia Foundling Home. Cost: approximately $1 million.

In Dayton, Variety sponsors the Variety Manor for Children—a place of new hope for emotionally disturbed children, through Variety-pledged support.

Variety's Boston chapter built what is recognized today as a world center for cancer-afflicted youngsters—the Jimmy Fund buildings. Here, in a center built at a cost of $4,500,000, more than 3,000 children not curable by surgery have been treated by new forms of chemical therapy under research in the Children's Cancer Research Foundation. At present more than 500 children are being cared for, under the direction of Dr. Sidney Farber. Also maintained here by Variety are diagnostic laboratories and clinics from which physicians all over the world receive free advice concerning the treatment and care of children suffering from cancer. The annual Jimmy Fund drive is familiar to all Americans, especially those residing in New England States.

Moving to Buffalo, you'll find that the children's rehabilitation center sponsored by the Variety Club of Buffalo is considered to be without peer. In Atlanta, Variety members maintain a school and clinic for children suffering from cerebral palsy.

In Las Vegas, Variety members support a day nursery and school for special education. Modeled after the vocational training school for crippled children which was designed, built, and equipped by the Variety Club of Toronto, Canada, the Las Vegas school is gaining nationwide recognition as "Variety Village."

Industrial rehabilitation of the mentally handicapped—often overlooked—receives the full attention of Variety's Cincinnati chapter. And hundreds of children are the better for it.

Worldwide praise has been the reward for the care and training of blind children conducted by the San Francisco chapter's Blind Babies Foundation.

Across the Atlantic, in London, Variety members have established the Heart of Variety, Ltd., to assist smaller charitable organizations—such as orphanages, hospitals, and playgrounds for children—in their work.

Here, in Washington, Variety members have contributed toward the construction of a new research building at Children's Hospital. The new building—known as the Variety Club Research Center of Children's Hospital—provides facilities for research in allergic diseases, antibiotics, cancer, cerebral palsy, and virus infections.

The most modern camp for handicapped children of its kind, in the world. That's the reputation earned by the camp operated in Philadelphia by Variety Club members. Their counterparts in Chicago sponsor La Rabida Sanitarium, an institution for children afflicted with rheumatic fever. The New York Variety Club joins in the fight against cancer by supporting the Cancer Control and Research Foundation.

Hospital care of 18,000 patients annually—that is the staggering responsibility assumed by Variety's Miami chapter. In addition to this care for handicapped children, much of the clinic work for doctors of the Florida Crippled Children's Commission is done at the Variety-sponsored Children's Hospital in Miami.

In Des Moines, Variety members have pledged support of the Cystic Fibrosis Association, while in Minneapolis the sponsorship of care and treatment of heart diseases is the special project of Variety.

The principal charity in Milwaukee is the highly regarded Variety Club Epilepsy Center. In Baltimore, Variety members have pledged to support numerous established charities—all of them for handicapped children.

Los Angeles, Variety members help more than 3,500 boys to become good citizens, each year, through their sponsorship of the Variety Boys' Club.

The Albany tent is small but the hearts of its members are big, as this chapter proves by financing of Camp Thacher, which provides under-privileged boys of the city with 2 weeks in the country. Mexico City's tent operates the successful Luis R. Montes Boys' Club. This camp provides a wholesome environment for youngsters whose families can provide them with nothing but the bare necessities of life.

In Charlotte, Variety members erected a children's clinic as part of the Charlotte Memorial Hospital. Two public health centers have not only been built but are being maintained by the Oklahoma City Variety Club. A day nursery care program receives the attention of St. Louis' Variety Club; blind children of Ireland benefit from the care provided by Dublin's chapter; Seattle's members work long and hard to comfort children at the Orthopedic Hospital's Children's Heart Clinic.

And so it goes, through the rollcall of Variety Club tents in five countries. And so it has gone, through the years, as Variety-sponsored charities have emptied thousands of wheelchairs, straightened hundreds of young bodies, replaced despair with hope and taught hundreds of thousands of unfortunate youngsters how to take their places—with heads raised—in society.

This week, all of this effort and good work is being honored as Variety Clubs International celebrates its 34th anniversary.

Most Variety members wear a cloak of anonymity that befits their humanitarian efforts. Their reward is a smile on a little girl's face, the crutches thrown away by a young boy thrilling to sturdy legs and the thousands and thousands of children all over the world who have benefited—in mind and body—from their humanitarian programs.

Through the hospitals they have built and the medical research they sponsor, Variety Club members have made it possible for handicapped children to laugh again, to walk again, to believe in the future again.

No pain or affliction is too small for the attention of Variety Clubs International and certainly no praise too high for their dedication to the cause of making the world a better place for children.

Their constant labor to rescue children from the twilight world of pain and suffering should be an inspiration to us all.

Jobs for the Handicapped: A Community Challenge

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks I wish to include in the RECORD the winning essay of the statewide contest sponsored by the Oklahoma Governor's committee on employment of the handicapped. The winner of this year's contest is Miss Sharon Davis of Northwest Classen High School, Oklahoma City, Okla. The general theme of Miss Davis' composition deals with the community's responsibility toward those who are unfortunate enough to be handicapped. I feel that its message is a challenge to the Nation as a whole, and one to which we all should direct our attention and action:

JOBS FOR THE HANDICAPPED: A COMMUNITY CHALLENGE

You walk down the street, head high, eyes flashing, legs carrying you to your destination, and arms holding your packages easily. Then you see a man with the white cane of the blind guiding his way, or a woman in a wheelchair, legs helplessly resting on the supports, or a man clutching his bundle with one arm and a hook. You silently give thanks for your blessings and continue on your way as before. But stop. Is that all you're going to do—just count your blessings and continue on your way? No, they don't want your pity either. They only want your understanding and an opportunity. What can you do as a person or as part of a community? Listen a minute to the facts and make your own decision as an individual and a community.

Joe Smith is an average American—an average handicapped American, that is. He's one of the 17 million Americans who are working to make a life of their own. Joe Smith can't walk. He's among the 12 or 13 million Americans who have a disability involving limited motion. But Joe Smith could be blind or deaf and still be in the majority of handicapped Americans, for 960,000 people are blind and over 6 million people are deaf or have hearing impairments. Joe Smith has amazing hands, though. They can do any intricate job given them. But they weren't given the chance for a long time. He made the rounds of every employer in his community, and he received the same polite "No" each time. Why? Prejudice. Employers aren't informed, and people aren't informed. And then Joe Smith, average handicapped American, heard about the local division of the State vocational rehabilitation agency. He went to the agency, and now he has a job painting delicate designs on similarly delicate china. You ask how the agency can do this? Then you know nothing of its work? Most people don't.

Many services are offered to the disabled by the community agency. Joe Smith took advantage of those which especially suited him. Medical help is the first of the services offered. If any medical help would make it possible for the person to work again, it is given him. The agency pays part; the person works off the rest. So it is not all charity. If physical aids, like braces, hearing aids, etc., are needed, they are given; often the person can't pay for these, and the agency must. Remember, it's a State agency, and this money comes from your taxes.

Advice for the right job comes next. The person's interests and abilities are tested and considered first, and after the right job is found, training for it begins. Vocational rehabilitation usually pays costs. Often the disabled person needs room and board and travel while he's continuing his counseling, and again costs are either split or handled by the agency. The other services are both a help in finding jobs, securing tools, and obtaining licenses, if needed, and a help on the new job in working out any difficulties that might arise.

Joe Smith found the aid invaluable, and through the efforts of the Oklahoma State Employment Service and a special counselor for the handicapped, he is now employed. He is employed by a company whose officers are informed of the abilities—not the disabilities—of its workers. He is working to pay back the agency that helped him, and he is helping by participating in surveys and in the production of information to help overcome public prejudice. He knows the problems of the handicapped, and he wants to make it easier for the next guy.

So where does this leave you? Maybe you are now a bit informed as to what a man or woman must do, if he is physically handicapped, to earn his own way in the world. Perhaps you see where you can help. Understanding is your first concern. Knowing the facilities in your community is second, and most important, use them. Once the first is found, the second is easy. You'll find opportunities everywhere. That small businessman, who is your best friend, needs an assistant. The only requirement is a good brain. Your influence on him might mean the hiring of one or more handicapped persons. Opposition? Quote accurate facts. If 81,000 handicapped people add their job-hours to those of other workers, 121 million more hours of work would be contributed toward America's industrial future. Handicapped workers are just as reliable as, or more so, than any other worker. They know what a privilege it is to be able to work and earn a living. Handicapped workers are as skilled as, and usually harder working than, other workers. They have the desire to make up for any physical disability by mental capacity and work output.

There are not many physically perfect people who have the desire to make up for a mental or a personality disability. Still opposition? Quote history: Franklin Delano Roosevelt, a polio cripple; Lord Nelson, one eye, one arm; Beethoven, deaf; Steinmetz, the engineering wizard, a hunchback; Thomas Edison, deaf; Homer, blind; Lord Byron, clubfooted; John Keats, tubercular; Helen Keller, blind and deaf; Julius Caesar, an epileptic; John Milton, blind.

So you see, it isn't hard to convince others, if you're informed, and after you've talked to one person, others will be easier. But convincing isn't enough. You must work too. Work to promote the Goodwill Industries, the Governor's Committee on Employment of the Handicapped, and all other agencies of your community to help these wonderfully ambitious people. You aren't alone, either. You are part of the community, and it's the community's job to find the best solution to the problem. Every time one more person is added to the ranks of informed citizens, the community's work is strengthened and the cause of the physically handicapped is carried one step further.

You will walk down the street, head high, eyes flashing, legs carrying you to your destination, and arms holding packages easily. You will see a man moving with the white cane of the blind guiding his way, or a woman in a wheelchair, legs helplessly resting on the supports, or a man clutching his bundle with one arm and a hook. You will silently give thanks for your blessings and continue on your way—but not as before. For now you will add to your gratitude the knowledge, desire to help, and understanding that will make hiring of the handicapped successful. As a group of individuals and organizations, a community can plan programs to help the handicapped help themselves. It is your challenge, not only as an individual, but as a community.

A Farm Woman Speaks on Social Security Medical Care Plan

EXTENSION OF REMARKS
OF
HON. GEORGE A. GOODLING
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. GOODLING. Mr. Speaker, it was my rare privilege last evening to listen to a very sound exposition of the social security medical care plan and I feel that I should share this fine statement with my colleagues. Mrs. David Holt, of Lincoln University, Chester County, Pa., delivered a masterful address before the Pennsylvania Farmers Association at its annual congressional dinner held yesterday at the Dodge House. Mrs. Holt is a constituent of our colleague, PAUL DAGUE, but Congressman DAGUE has kindly consented to accord me the honor of placing her fine statement in the Appendix of the RECORD. In commending her address to your attention particular emphasis is placed on the fantastic levels that must be anticipated in social security payments during the next 20 years if we continue to use this basic retirement system as a catchall for recurring socialistic proposals.

The address follows:

SOCIAL SECURITY AND MEDICAL CARE

The Constitution of the United States of America was conceived and purposely designed to make secure the God-given liberties of each individual against the domination of government. This provision was made by a division of authority among the legislative, executive, and judicial branches of our Federal Republic; the diffusion of government powers; and the retention by the people of those powers not specifically delegated to government.

America's unparalleled progress is based on the freedom and dignity of the individual initiative, and equal opportunity, sustained by our faith in God and our basic moral and ethical values.

The principles of our competitive enterprise system are consistent with our religious values and the highest goals of mankind. Through this system the American people have produced abundant goods and services and provided widespread educational advantages and religious opportunities.

The full realization of man's dreams as envisioned by our Founding Fathers can only be achieved if each individual assumes active responsibility for maintaining and strengthening the principles upon which our Republic was founded and vigorously opposes all programs and policies which erode the very foundation of our American system.

The present generation of oldsters are getting a handsome subsidy. We, in no sense, begrudge them this benefit. We only say that it should be understood for what it is. We not only are taxing present workers to support the oldsters, but we are creating liabilities for our children and grandchildren. If medical care is added to the present social security system, inevitably, taxes will be paid by many who can't afford them, to provide medical care for many individual elderly people who can afford to pay their own bills, or who have insurance that will cover them. Meanwhile the social security approach would leave out in the cold many people who have no resources at all. There are 4 million now not covered by social security.

Those who know the condition and capabilities of the social security system recommend that the whole structure not be endangered by placing upon it a new load that it was never designed to carry. Present social security reserves are about $20 billion, while obligations already incurred are more than $300 billion. In 1957, $128 million more was paid out than was taken in. In 1958, $528 million more was paid out than was taken in. In 1960, $1,724,000,000 more was paid out than was taken in. Each month there are 30,000 more persons added to the social security payment list.

Under Government payment for medical care, the Government would have control over services rendered and would be in position to regulate the doctor, the hospital and even the care involved. Why should the Government meddle with medical care when we already have the highest medical standards of any country in the world.

The United States is already one-third socialized. You can socialize just as surely by a steady increase in the burden of taxation as you can by outright Government seizure. The very imposition of heavy taxes is a limitation on a man's freedom. By past experience we know that the Government can change its contracts at will and how do we know that benefits will not gradually be extended to cover all ages or socialized medicine? That is something to think about before we wade in any deeper. There is a limit to how far we may safely go out on the social security limb.

Let's take a look at these charts. Chart No. 1 is a graph made from the statistics shown on chart No. 3. Here we see a maximum payment in 1937 of $60 or 2 percent of a man's salary, 1 percent paid by the employer and 1 percent by the employee. In 1960 we see a maximum payment of $288 or 6 percent of salary, 3 percent paid by each employer and employee. Next, under the present law, we notice the increase is such that by 1969 the amount will be $432 or 9 percent of salary 4½ percent paid by the employer and 4½ percent paid by the employee. And now we wonder what the future holds. At the present rate of increase, in the year 2001 only 32 years from now we would be paying $3,110 out of salary or wages.

Now let us check the figures for the self-employed and notice the increase there also. In 1951 when the self-employed person became eligible for social security he paid a maximum of $81 at the rate of 2¼ percent of his income. In 1960 his payment increased to $216 at the rate of 4½ percent of his income from self-employment. Now, under the present law he will pay in 1969, $324 or 6¾ percent of his income. What does the future hold for the farmer? Can he continue to pay these increases in social security taxes alone and can he afford to pay the increased levies to add medical benefits to the present benefits?

Companies offering financial medical protection policies for the individual have been forced to increase their premium payments, so how can social security offer more benefits without increasing the cost?

The social security approach to providing for and financing medical care for the aged would represent a real and distinct departure from the present mode of operation. It would represent a shift in emphasis from a voluntary to a compulsory contribution for health insurance. It would represent a shift from personal responsibility for our own health care to State responsibility for it. We question seriously whether the best interests of all are served by this shifting of responsibility for health and medical care from the citizen, the family, and established private organizations to the Federal Government.

The monthlong strikes, riots, and violence in Belgium, when the Government proposed very moderate reductions in the social security benefits which some groups had become used to, were ominous warnings to other nations of the political as well as economic dangers of over commitments. Social security benefits are easy to increase, but enormously difficult to reduce.

Will our children and our children's children and their employers be happy about paying social security taxes when they discover that the same money would buy substantially more retirement benefits for them if purchased voluntarily from a private insurance company?

Most people believe that social security is similar to private voluntary insurance and consider the taxes they pay equivalent to premiums bought and paid for. They have been led to believe that their contributions along with the similar amount paid by their employer is being held in an earmarked fund which will be ready and waiting for them upon their day of retirement.

This practice of erroneously comparing the social securtiy program to a voluntary private insurance plan has led to wide misunderstanding. There is no contractual relationship between the individual and the Government as there is between the insurance company and the individual policyholder. The individual rights under the social security program are statutory and are bestowed upon him by the Congress. Congress has the power to change the program and to alter these rights in the future if it so wishes.

The Farm Bureau's policy on this program is that it should be so designed to supplement rather than replace individual thrift and personal responsibility. The increasing costs of liberalized benefits are becoming a serious financial burden. We, therefore, recommend that existing programs be modified so that they will require no further tax increases.

Social security taxes should not be increased to pay medical costs for any portion of the population. The need for medical insurance should be met by expansion of existing private insurance programs without Federal subsidy.

Farmers should consider the degree of burden from increased social security tax rates. In many instances, the social security tax that a farmer pays is higher than his Federal income tax.

The generally accepted purpose of the social security system when it was first introduced was to provide a basic foundation of protection against want and destitution. It was expected that individuals and employers would construct additional security programs and retirement plans as inclination and capacity to finance would permit. This was and still is a sound basis for protection.

Lincoln once said that the Government should never do for an individual anything he can do for himself.

No one knows more at firsthand about the medical problems of older people than the doctors and no group cares more about the medical problems facing the country, yet they are against the social security approach. The average doctor already has more than adequately demonstrated his good will toward older citizens by treating many of them who could not afford to pay or who could pay little. In fact the doctor as an individual has made a greater contribution to the elderly than any other individual in our society.

With Government benefits there will be an increased demand for hospital care and this will flood the already overcrowded hospitals. There is a possibility of creating many hypochondriacs. In fact, 40 percent of the people using these benefits would not need to be hospitalized if they had someone to care for them.

One of the Ten Commandments is "Honor thy father and thy mother." How can our younger generation fulfill this commandment when they place this responsibility upon Government? With the shortening workweek, we have more time, more pleasure and accept less responsibilities.

And of further concern—young people today may never receive full benefits, if the social security system is not kept financially sound. Sweden, often displayed as the example of a perfect socialist state, has not met her social security obligations. Only 65 percent of the guaranteed payment is being made. We can profit by the costly lessons learned by other countries who have tried the road to socialism.

We must not let our sympathy and concern blind us to the facts and the long-range implications of medical care financed by the social security system. More than the physical welfare of our older citizens is at stake when this issue is finally decided. The very principles by which we live and are governed are being tested. May I repeat a statement that I made in the beginning. The full realization of man's dreams as envisioned by our Founding Fathers can only be achieved if each individual assumes active responsibility for maintaining and strengthening the principles upon which our Republic was founded and if each individual opposes all programs and policies which erode away the very foundation of our American system.

Tribute to a Good Soldier

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. COLMER. Mr. Speaker, on yesterday the House, without dissent, passed a most meritorious bill, H.R. 845, sponsored by our distinguished colleague from Texas [Mr. TEAGUE], the chairman of the Committee on Veterans' Affairs. The bill provides for an amendment to an existing law raising the pension for holders of the Congressional Medal of Honor from $10 to $100.

I am sure that this will meet with the approval of all good, patriotic American citizens. It is something that should have been done long before now. The deeds of valor performed by the holders of this award have often left in their wake casualties other than physical.

I believe that my congressional district has furnished as many of these heroes as any congressional district in the United States. One of these was James D. Slayton, a man whose acquaintance and friendship I felt honored to have. Some 10 days ago James Slayton died, a victim of the hellish experiences which brought him the coveted Congressional Medal of Honor as surely as if he had died in the act which brought him this honor.

I regret that he never lived to enjoy the benefits extended by this bill.

A wonderful and deserving tribute was penned in the form of an editorial in his hometown paper, the Leader-Call of Laurel, Miss., on February 27. The author of the editorial is unknown to me, but I do know that whoever wrote this touching and true tribute felt what he wrote in a "Tribute to a Good Soldier."

This editorial follows:

TRIBUTE TO A GOOD SOLDIER

Tomorrow the warm, soft Mississippi loam takes home the frail, world-weary body of a good soldier who is safe at last from the wounds of war.

James D. Slayton, 48, decorated by four countries and winner of the highest honor the United States can convey for valor—the Congressional Medal of Honor—is dead.

He wore the medals of war quietly, and proudly, but he could not solve the problems of peace. So Saturday he folded his hands as if in prayer and went into a deep sleep. The verdict was carbon monoxide poisoning.

Death came as he lay in the seat of his automobile on a rutty road beside Lake Bogue Homo. Only inside his tortured mind was there darkness. Outside the fastened windows of his automobile the eternal mystery of spring began again. The weathered cypress stumps showed faintly green with new Spanish moss. Nearby the finches and orioles preened yellow and gold feathers in the Southern sun, readying themselves for the long flight northward. The first blush of redbud stained the woodland and the whited plum trees accented the green of the pines and live oaks.

If a man can select the scene of his passing no one would pick a more peaceful setting. Here were the aromatic piney woods of his boyhood. Here the loblolly and the cypress sing a requiem more fitting than the vested choir of any cathedral. This would be the music he loved to hear, the clean wind in the lacy tree limbs.

Born on April 2, 1912, he went to grammar school in Laurel but quit when he was 16. From 1927 to 1942 he was a truckdriver. He transported freight over long hauls on all types of roads. To some this sounds romantic but repairs on a wrecked truck on a lonesome road at night is a man's job.

Then came Pearl Harbor. He entered service on June 8, 1942, and after basic training became a rifleman. Every military man knows the rifleman has the toughest job in the Army. A rifleman depends upon himself for his own safety. He digs his own foxhole, hunts his own cover and concealment, and makes his own battlefield decisions.

Soon he was shipped overseas and assigned to Company K, 157th, U.S. Army, in Italy. He was promoted to corporal. Then, on September 23, 1943, near Oliveto, Corporal Slayton, while lead scout for an infantry squad, had an opportunity to take things into his own hands. Enemy resistance had succeeded in pinning down two attacking platoons. Working ahead of his squad, Corporal Slayton crept upon an enemy machinegun nest. He assaulted it with his bayonet and succeeded in killing the gunner. He detached his bayonet and killed the other gunner with rifle fire. At that time he was fired upon by a machinegun to his left. He then moved over the ground, under constant fire, to within throwing distance. Then, on his second try, he scored a direct hit by grenade on the enemy machinegun nest killing two gunners. At that time a third machinegun fired on him 100 yards to his front and he killed both of these gunners with rifle fire.

As a result of his heroic action, the two rifle platoons, which were receiving heavy casualties, were enabled to withdraw to covered positions and again take the initiative. Corporal Slayton withdrew, under mortar fire, under order of his platoon leader at dusk that evening.

This conspicuous gallantry and intrepidity at the risk of his life brought him the United States greatest military award—the Congressional Medal of Honor—and also the British Military Medal, the Italian Cross of Military Valor, and the Russian Order of the Patriotic.

Although appreciative, he never wore the foreign decorations. But always on his breast, when in his suntans, was the blue and polished silver combat infantryman's badge and the red and white ribbon signifying the enlisted man's Good Conduct Medal. He had earned both.

When he was rotated to the States he was sent out on war bond rallies. Then he was assigned to Camp Shelby, near Hattiesburg, where he served, first, as a noncommissioned officer in the advanced infantry replacement training center and, later, as a truckdriver.

He told his buddies there he wanted to go to work for the post office in Laurel when he got out of service but somehow or other that ambition never materialized. He was working as a crew leader of a group stacking boards in the warehouse of Masonite Corp. at the time of his death.

Within recent years he is known to have become disturbed over his military role. He became deeply dedicated to religion. This happens often to those brave enough to look death in his face unafraid.

As he went by the spillway at Bogue Homo Lake he undoubtedly thought of the disillusionment still in the world. He must have mused that life was like a stream, rushing downward toward the eagerly awaited quiet pool beyond the troubled spillway's bottom. So may have seemed the problems of war and peace.

At first his family, knowing he was troubled by his military role, did not believe he would want a military burial. But that is settled now and he will be buried with all the military honors appropriate to a man who wore the blue ribbon with 13 white stars on it.

Those who knew him well say they believed in his final hours he bore no one malice; no more than the slight spring wind which now passes over the place where he will sleep.

They are confident his days of religious revelation told him the rebellious heart is but a human instrument that returns to the dust from whence it came; that man sleeps but a while in the redded Mississippi clay of his birth then goes to eternal peace and life everlasting, safe at last from the wounds of war and the arrows of peacetime adversity.

Remarks of Hon. John P. Saylor on Imporation of Residual Fuel Oil

EXTENSION OF REMARKS
OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. MOORE. Mr. Speaker, I cannot comprehend the necessity of the order of Hon. Stewart Udall, Secretary of the Interior, in increasing the import quota on residual fuel oil from 530,000 to 630,000 barrels per day for the quarter ending March 31 and I have registered my strong protest thereto.

Oil importers have long made it a practice to exhaust their quota long before June 30 and then with anguished cries that critical users of residual oil are without fuel, attempt to use this as a basis of warranting an upward adjustment in the residual allotment for the period.

When residual supplies pile up in overseas refiners, the oil giants turn to the industrial market of the American eastern seaboard where utilities are large consumers of fuel.

Under the price-depressing effects of an oversupply of oil and with stocks of residual oil mounting rapidly, the disposal of residual oil becomes more important than the revenue it yields. Under these circumstances, prices are slashed ruthlessly to undersell coal to the utilities which can switch their boilers from fuel to fuel.

The mandatory control program on residual oil was adopted in order to give the coal producers, the consumers and the miners some basis with which to plan their operations. There must be some consistency in order to regulate production. The coal producers cannot operate blindly with the prospect of operating their mines full time for one quarter and suddenly because of an increase in import of oil, find that they will operate on a 2-day week schedule for the next quarter.

At recent open hearings conducted by the Secretary of the Interior, I was most impressed with the outstanding presentation of the gentleman from Pennsylvania, Mr. JOHN P. SAYLOR, and I ask consent to include among my remarks his most cogent statement in opposition to any further increase in the amount of residual fuel oil allowed to come into this country and respectfully refer the same to the Members of the House for their consideration:

STATEMENT OF REPRESENTATIVE JOHN P. SAYLOR, REPUBLICAN, OF PENNSYLVANIA, DEPARTMENT OF THE INTERIOR, FEBRUARY 20, 1961

Mr. Secretary, I appear at this time to make a brief statement for two reasons.

First, I want to add my voice to those who have disagreed with the order you issued last Friday in permitting an additional 9 million barrels of residual fuel oil to be imported into the United States during the next 6 weeks.

And, secondly, I want to urge you in the strongest terms possible to continue the import control program on residual oil and to take action to cut down the increasing amounts which are coming into this country, even under controls.

As for your order of Friday, Mr. Secretary, I simply cannot understand why you acted as you did, when you did, especially when you had arranged this hearing. It gives one the impression that you make the decisions and then in an effort to placate the coal industry you allow us to appear and testify after the order for more oil has been granted. I believe that in all good conscience you should have waited for a while to see if the alleged shortage of oil in New England is as serious as represented. The weather has been unusually cold, but would not unseasonably warm weather in the coming weeks make the additional allotment unnecessary? If the weather turns warm it will then be too late to do anything about the 9 million barrels of oil.

This latest increase is just one more bit of evidence to the effect that oil importers have found a way to get around the quotas. They constantly cry shortages of supplies, create a false sense of emergency on the part of a lot of well-meaning persons who bring pressure to bear at the highest level to force an increase in imports.

This has become standard operating procedure on the part of the oil importers. I hope you will constantly keep this in mind when you are being importuned by their pleas.

As for the import control program itself, Mr. Secretary, to me it would be unthinkable for you to recommend its removal. That would mean complete and utter chaos for the coal industry. Some people might think the coal industry is expendable—they have certainly indicated they feel so by permitting other fuel to enjoy consistent competitive advantages. But I contend that the coal industry is absolutely essential to this Nation's peacetime economy and to the Nation's security in time of emergency.

Believe me, Mr. Secretary, there is a limit to what the coal industry can bear and continue to operate. If we had to contend only with residual oil the situation would be serious enough. But in addition, we find the growing practice in the natural gas industry of dumping gas for boiler fuel in industrial plants at prices way below that paid by householders and oftentimes below actual costs to transmission companies. Also, because coal is produced so efficiently in this country, we find foreign nations have erected artificial trade barriers to keep it out.

On every hand, the coal industry is beset with serious problems. Residual fuel oil is probably the most serious right now because it can be sold at any price necessary to undercut coal. And the oil could be brought in in almost unlimited quantities if controls should be removed.

It does not take much imagination to picture what would happen along the east coast. All the international oil companies, holding oil concessions abroad, would use the east coast to dump their tremendous production of residual. Coal simply could not compete in a price war of this magnitude.

There could be only one result—and that is the complete elimination of coal from this market.

Is this what New England, which has opposed the import control program so violently, really wants? Do large industrial consumers of fuel want to be absolutely dependent upon imported oil as the sole source of fuel?

If that is what they want, they could certainly achieve their purpose by getting import controls taken off or by wrecking the present program through a series of extra allocations—such as the added 9 million barrels you, Mr. Secretary, approved last Friday.

I urge our New England friends to consider what will happen when and if residual fuel oil ever achieves a monopoly in their fuels market. Perhaps they believe that given monopoly conditions, the oil companies will continue to cut prices and make abundant supplies of cheap fuel available there. I do not share this faith in the oil industry's dedication to free competitive prices in a monopoly market.

The hope of New England in the future lies in a sound, expanding coal industry that will be able to maintain low, stable prices. But coal cannot maintain this stability in supply and price as a protection for New England if its markets are being constantly eroded by cheap residual fuel oil imports.

The coal industry is the most efficient in the Nation. But it is being forced to operate at little better than standby levels—producing only a little more than 400 million tons of coal a year. Employment is down to less than 180,000 from a figure just about three times larger than just a few years ago. Unemployment, economic stagnation, breadlines, hunger and despair—these are the heritage of the men who have labored in our coal mines and of the coal areas which have contributed to much to the Nation's progress.

Mr. Secretary, I can only say to you that the people in my congressional district were shocked by your recent order. They took heart that relief would be forthcoming if Senator Kennedy were elected President. He had stated in West Virginia—when he deployed the plight of the coal industry that a part of their problem was directly attributable to the importation of residual oil.

My people took increased hope when Mr. Kennedy was elected President of these United States. Their hopes were further raised when President Kennedy said that the first order of business of his administration would be relief for the distressed areas of this country. This promise seemed to be borne out with the announcement by the President that the Secretary of Agriculture was to increase the allocation of surplus foods.

They believed that it would be only a matter of weeks until relief was felt at home. Their spirits were reassured when your fellow Cabinet officer, the Secretary of Labor, Mr. Goldberg, was dispatched to these chronic depressed areas to bring to President Kennedy a firsthand account of present conditions.

They were jubilant when Secretary Goldberg reported that conditions were even worse than both he and President Kennedy had been informed.

And their feelings were reassured when President Kennedy issued the Executive or-

der that all decisions made by his administration would be made as a team and that they would all be consistent.

In view of the statements made in West Virginia last fall, and the recent actions by President Kennedy in increasing surplus food allotments and surveying the depressed areas, I cannot believe that he is in accord with your recent order to increase the amount of fuel oil to be imported into the United States.

When your order, increasing the import quota was announced, the thoughts of my constituents have been—"Well, it was too good to be true—relief is not in sight—our plight has not moved our Government in Washington."

Like the wards of our Government—also under your Department—our Indian brethren in olden days said "White man speak with forked tongue."

I plead with you, Mr. Secretary, to make it clear before this hearing adjourns that you have absolutely no intention of removing controls—that you will oppose efforts of any other Government agency to remove them—and that you are going to tighten up on imports and make sure they are held to reasonable levels.

America Recognizes Amerigo Vespucci

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 23, 1961

Mr. SANTANGELO. Mr. Speaker, I have today introduced a resolution to commemorate on March 9 of each year the birthday of one of the world's greatest explorers, Amerigo Vespucci. America, which adopted the name of this explorer, has failed to do honor to the birthday of the man and I have therefore introduced this belated resolution to correct the omission.

The story of this great navigator teaches a lesson which we should learn very well. It is noteworthy that while this great country of ours was discovered by Christopher Columbus, an Italian, it is named after Amerigo Vespucci, another Italian. While Amerigo Vespucci's first voyage to America was 5 years after that of Columbus, his letters and reports were widely circulated in Europe. In one of these letters, he called this continent the mundus novus, New World, and in 1507 Martin Waldseemuller of Friberg, a professor of geography, drew up a new world map. In this map he used the printed word "America" for the first time. As a consequence, our continent was called America, after Amerigo Vespucci.

The anniversary of Amerigo Vespucci serves to remind us that the bridge of understanding and cooperation between Italy and America was not constructed recently. It is a process which has developed over many centuries, from the very beginnings of the discovery of this continent. First it was the early Italian explorers, such as Columbus, John Cabot—Giovanni Caboto—Amerigo Vespucci, Verrazano, and others. Then there were small groups of settlers from Italy who found their way to America. And during the past century there was the mass immigration of Italians who came here with a burning determination to improve their lot and to help build a free and a great America.

Thus, Italian immigrants have brought to this country the rich heritage of their wonderful culture, along with their passionate love for freedom. They have made lasting contributions to America in every sphere of activity, and the imprint of these contributions to American life and culture are visible all over this great land. They have become a vibrant and meaningful asset to American democracy. They constitute a hard-working and industrious group to whom American ideals and traditions are precious. The Italian immigrants and the children of these immigrants are loyal and devoted to the American democratic system.

The bonds of blood, understanding and friendship between the people of Italy and America continue to grow over the years. Not only are the two countries linked as allies diplomatically, economically and militarily, but there is also a growing link between the cultures of the two nations, an increasing interchange in education and the arts, and most of all there exists today a chain of understanding which is becoming stronger each day. Let us continue to strengthen that chain of friendship between Italy and America, and in this way we shall make both countries more secure in the future.

The Federation of the Italian-American Democratic Organizations of the State of New York, Inc., annually grants awards to outstanding Americans of Italian origin who demonstrate a pioneering spirit into new frontiers, called the Amerigo Vespucci Awards. The recipients of these awards for the year 1961 and in whose honor a testimonial dinner dance is being given, are as follows:

Joseph P. Addabbo, Member of Congress, New York State, fifth District.

Guy James Mangano, Brooklyn, assemblyman, New York State.

Michael J. Fusco, deputy commissioner, Department of Sanitation, New York City.

E. Howard Molisani, manager and secretary of the Italian Cloakmakers Union, Local 48, I.L.G.W.U.

Mrs. Angela L'Episcopo, civic and charitable worker.

I salute them.

Proposed Tax Increases

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 7, 1961

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a fine article written by Mr. Paul Martin, chief of the Washington bureau, Gannett News Service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON, February 28.—President Kennedy is asking Congress to raise Federal payroll taxes on wage earners and businessmen by more than $6 billion in the next 2 years.

In addition, he is supporting former President Eisenhower's longstanding request for $843 million more in postal rates, including a new 5-cent stamp for personal letters.

Kennedy also wants to raise $300 million in new highway funds, either by higher user charges on truckers, or by a one-half-cent-a-gallon increase in the Federal gasoline tax on motorists.

All in all, the new Democratic administration wants to collect $7.2 billion in new taxes annually by January 1, 1963, to finance new or increased Government spending programs.

These taxes would hit primarily wage earners, consumers, and businessmen. They would amount to an additional 2 percent levy on gross income up to $5,000 a year per individual, without any deductions or exemptions, in all employment covered by social security.

The administration makes the point that taxes so collected would be paid back to the public in the form of higher social security, medical care, and unemployment benefits, thereby increasing consumer power and stimulating business.

But the revenue also would have to be collected from the paychecks of individuals and the payrolls of industry, thereby reducing consuming power of many workers, raising operating costs of business, and perhaps contributing to price increases.

The cost of doing business in America would go up at a time when domestic manufacturers in many lines are under increasingly severe competition from foreign producers who operate with labor costs one-half to two-thirds cheaper than union wage scales in the United States.

The proposed $6 billion boost in payroll taxes includes $3.9 billion to finance the administration's new social welfare bills, plus a $2.2 billion hike in social security taxes scheduled under existing law to take effect on January 1, 1963.

Of the total tax bill, wage earners would have to pay $2½ billion, while $3½ billion of the extra costs would fall on business. Here's what it would mean:

INDIVIDUALS

A cut of $56 a year in take-home pay for every worker making $5,000 a year in any endeavor covered by social security. The worker who has $144 deducted from his paycheck now would be paying $200 a year in 1963. He would then be taxed at a rate of 4 percent of his gross income up to $5,000. The rate would rise to 5 percent by 1969.

BUSINESS

An increase of $78 a year to the businessman for each $5,000 employee on his payroll. To a company with 1,000 employees, this would mean $78,000 a year in additional operating costs. By 1963 the businessman would be paying $375 a year for each wage earner on his payroll. The rate would rise to $425 a year by 1969.

SELF-EMPLOYED

A hike of $75 a year for the self-employed person coming under social security, or a 7½-percent earnings tax by 1963 amounting to payments of $375 a year. The payment would rise to $450 a year by 1969.

Under present or proposed tax law, the social security tax by 1969 will become in effect a 10-percent gross income tax, without any deductions or exemptions, divided equally between employer and employee.

Representative JOHN W. BYRNES, Republican, of Wisconsin, ranking minority member of the House Ways and Means Committee, says that the average worker in America, with a wife and three children, will then be paying more to the Government for social security than he does in income taxes.

Administration proposals for new health, social security, and unemployment benefits envision a "spend now-pay later" plan, by deferring the effective date of most new taxes until 1963.

However, the social security trust fund already is one-fourth of 1 percent "out of balance" according to actuarial studies. To keep the fund from getting further in the red, the administration must increase "current taxes" for every dollar of new benefits that Congress votes this year.

The Kennedy tax program would accelerate a 10-year trend toward higher Government spending. Tax Foundation, Inc., a nonprofit institution, says spending by Federal, State, and local governments has more than doubled in the last decade.

Government expenditures, which amounted to only $70 billion in 1950, jumped to $153 billion in 1960, or approximately 30 percent of the total gross national product, and 40 percent of all personal income in America.

The proposed tax boost of the Democratic administration is larger in amount than either the $4.8 billion income tax cut made by the Republican 80th Congress in 1948, or the $5.4 billion reduction in income and excise taxes made by the GOP 83d Congress in 1954.

In the last 46 years, or since the graduated income tax was adopted in 1914, there have been 33 major changes in the Internal Revenue Code; 23 tax changes were enacted by Democratic Congresses; all but 3 were tax hikes; 10 major changes were made by Republican Congresses; all but 1 were tax cuts.

Progress of School Construction in Peoria

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. MICHEL. Mr. Speaker, on two successive days, March 5 and March 6, there appeared in the Peoria Journal-Star, articles relating to education which to me are very timely and significant. The first article concerns the approval by the Richwoods Township voters of a school bond referendum and is self-explanatory. The Richwoods Township area is just outside the city of Peoria.

The second article by Art Andrews entitled "School Half-Day Sessions Just a Memory," gives a capsule account of what we have done locally in the Peoria area to meet our educational requirements. Both of these articles tell the story of what we are doing without the benefit of Federal aid, and it would seem to me that all other communities ought to be doing the same thing throughout the country.

One thing is for sure. We are getting more schools and classrooms built for our money by financing them locally and having the primary and secondary educational programs completely autonomous under the direction of locally elected school boards.

Mr. Speaker, under unanimous consent, I include both articles in their entirety in the RECORD:

RICHWOODS VOTERS OK $950,000 SCHOOL BOND ISSUE

In a big turnout, Richwoods voters passed Saturday a $950,000 high school expansion program by a margin of 453 votes.

The final vote was 3,361 "yes" and 2,927 "no."

The most talked about part of the bond issue was the proposal for a $198,000 swimming pool in the expansion plans. Classrooms and laboratories form the bulk of the bond issue.

Although high school swimming pools have been a part of some Illinois high schools for many years, Richwoods will become the first Peoria area high school to have such a facility.

The bond issue excited considerable interest. The Journal Star switchboard received hundreds of calls on the outcome beginning shortly after the polls closed at 7 p.m.

Here is the vote by polling place: Peoria Heights School, 505 yes, and 657 no; Hines School, 609 yes and 440 no; Woodrow Wilson School, 512 yes and 486 no; Art & Bob's Shell Service, 46 yes and 97 no; Sipp School, 1.041 yes and 800 no; Kellar School, 590 yes and 284 no, and Murray's garage, 66 yes and 152 no.

Dr. Fred C. Endres, board president, said: "I wish to say that the board and the administration of Richwoods Community High School is gratified and pleased with the positive vote on this issue.

The timing to bring this issue to vote was dictated by the need for the facilities because the children are here to receive a good education. But the timing was poor because of the recession.

"The confidence of the people in the board's policy expressed by the results of this ballot is appreciated by the board and the administration."

Superintendent Fred McDavid said that he was "very happy to have the issue passed * * * real pleased," he added.

Supporters of the bond issue point out that the pool will benefit students in teaching them swimming, water safety, and add to the physical education program. The pool was rejected in a 1958 special election.

It is also expected that grade school pupils in the Richwoods district will use the pool to learn to swim. Also, the pool will be open 1 night a week to adults during the school year and open in summer to families at a fee.

The school expansion program features 12 additional regular classrooms to meet enrollment growth increasing capacity by 500 students. The present enrollment of 1,489 is expected to grow to 2,265 by 1966–67.

Other special features of the expansion plans are a language laboratory, where students can hear recorded voices speaking foreign languages. Richwoods offers five foreign languages, one of which is Russian.

Additional science laboratories, including a combination physics and chemistry laboratory and general science and biology laboratory are a prominent part of the building program.

A reading laboratory intended to help students improve in their reading is a part of the addition, as well as a homemaking laboratory.

Other aspects of the construction program provide for a power mechanics shop, a typing room, and an addition to the guidance facilities.

An addition to the cafeteria is expected to meet the demand of feeding 1,200 to 1,300 students each day. The cafeteria was originally designed to feed 500. They now eat in four lunch-hour shifts.

ELEMENTARY BUILDING PROGRAM SOLVED CROWDING—SCHOOL HALF-DAY SESSIONS JUST A MEMORY

(By Art Andrews, staff writer)

Four years ago almost 1,000 Peoria children were attending school on half-day "split sessions."

Parents besieged the board of education with petitions to end the "inequality of education," one commenting that both home life and education were suffering.

The State department of public instruction threatened to withdraw accreditation of Peoria schools if steps were not taken to abolish crowded conditions.

Makeshift proposals for transporting pupils from school to school and remodeling basements, halls, and third floor gymnasiums into classrooms were studied and rejected in favor of seeking a more permanent solution to the problem.

But finally, after months of careful planning, in April 1958, the voters of Peoria approved a $5,800,000 bond issue for additions and rehabilitations affecting all 24 of the city's elementary schools.

Gradually, the number of schools with split sessions decreased from nine down to four—Loucks, McKinley, Irving, and Lincoln—and in the fall of 1959, for the first time in 6 years Peoria schools opened with a seat for every child.

Looking back on this elementary school building program, just how effective was it? Are school officials happy about the way it worked out?

The answer, schoolmen indicate, is an unqualified "Yes."

Charles M. Greeley, director of business for Peoria schools, points out that all unsatisfactory rooms—basement rooms, parts of two buildings (Franklin and Whittier) considered unsafe, third-floor gymnasiums and small rooms which were costly to operate—were eliminated by the new construction.

He totes up the other results as follows:

Elimination of split sessions by additional classrooms. Improvement of lighting. Improvement of heating and ventilation. Improvement of plumbing. General improvements such as new floor coverings, painting, tuckpointing, roof repairs or replacement, and some acoustical ceilings in aging buildings.

Major advantages were the addition of science rooms to the 14 kindergarten-through-eighth grade schools and addition of libraries.

Including interest on the bonds, the school board realized $5,916,084 on the bond sale, of which $5,760,778 was spent on the building program, leaving a balance of $155,306. The board has set aside $100,000 for construction of a new school on North Sterling Avenue, when needed.

Meanwhile, the money will draw interest.

At present all rooms are in use. But this does not mean the schools already are pinched for space. A few standard classrooms are being used as art, music or audio-visual rooms and these could easily be converted back to classroom use, if enrollments warranted.

Principal Ervin Zehr, of Glen Oak School put it this way:

"Frankly, when I compare the list of repairs and equipment which were needed during the summer months a few years ago with the list for this year I'm amazed. There used to be 50 or 60 items, some of them asked for every year. Now there are half a dozen."

As an example, he cited a new ceiling for the auditorium, which had been requested for 23 years.

"Spacewise, we're in good shape," commented David Pankake of Tying School.

"It's been wonderful," exclaims John Dunlop at Loucks School where parents once organized a protest on split sessions.

Principal Harlan Litchfield's dream of having a room for every teacher at the opening

of school came true at Lincoln School, formerly one of the most crowded schools.

Principal Ervin Koch, of Irving School has found, "Since we've been off split sessions, it's made the difference between day and night in our program."

The new addition is located across the street from the old school, which raises some administrative problems.

All in all, it appears that the elementary school building program, under leadership of Supt. Mark Bills and the school board building committee headed by Frederick M. Bourland, was remarkably well planned and executed.

Now the second phase of providing a sound, modern house for developing young minds to dwell in, the junior and senior high school building program, is about to begin.

True Picture

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. COLMER. Mr. Speaker, because of the distorted picture that is too often painted about race relations in the South, I should like to submit for the RECORD an editorial from the Hattiesburg American, entitled "True Picture." The editorial, in fact, does present a true picture of what happens in my section of our great common country when the real and true interest of the Negro is involved. The editorial, of course, is based upon the relation between the races during the recent disastrous flood which visited this particular section of Mississippi. I have every reason to believe that similar situations were experienced in other sections of the South during this flood. This is nothing new and is as it should be.

As a matter of fact, I have witnessed many similar occurrences throughout my area when disaster struck. As far back as 1927, when the mighty Mississippi River flooded the rich delta lands of Mississippi and the adjoining States, and before governmental agencies were set up to meet such disasters, I was among a group of Mississippi coast men who went to the relief and rescue of many people, mostly Negroes, in that distant section of my State. We loaded boats and volunteer personnel upon freight cars and went to the relief our fellow men of both races. Yes, Mr. Speaker, the white people of the South are genuinely and sincerely interested in their black brethren.

The editorial follows:

TRUE PICTURE

The harmonious and heart-warming cooperation and mutual help among whites and Negroes during the flood disaster ordinarily should not be singled out for any special comment, being traditionally the natural order of things in the society of the South.

During times when our social order daily comes in for so much untrue and unfair criticism, however, from those outside the South who simply don't know what they are talking about, we feel that the true nature of the white-Negro relationship in the Hattiesburg area is worthy of comment.

So many throughout the Nation, having been fed lies and distortions for various reasons and therefore picturing us at at each others' throats, could have had their eyes opened by observing what happened during the flood.

Whites volunteered their services freely at Negro evacuation centers, caring for the sick and feeble, taking care of babies, pitching in at the most menial tasks that needed to be done, and wherever possible Negroes rendered assistance to whites. Lives were risked and major discomforts were endured.

We maintain, from having lived here and observed and having our roots here, that the disaster merely brought into focus the kind of fundamental white-Negro relationship that has always been in existence in Mississippi, despite the occasional violent and undesirable acts which occur in the normal course of any society. The ordinary acts of kindness and good will which are practiced in this area every day of every year go unpublicized except under unusual circumstances, which is as it should be.

No demonstrations of good will were staged or put on with any idea of proving some point to our detractors. This was not propaganda in action. It all developed quite naturally out of the basic human compassion that always has motivated a majority of southerners, white and Negro.

We maintain that this basic compassion, which is always ready to spring forth in time of mutual need can help us in time to solve any racial difficulties we face.

We also maintain that the sort of outside agitation and hate-mongering with which we have been bombarded in recent years can in time turn compassion and understanding into human tragedy.

The hearts and the pocketbooks of white individuals and white agencies were opened freely to Negro victims of the flood. It is our fondest hope that they always will be.

To the best of our knowledge, the NAACP did not set up any sort of flood relief headquarters during the emergency to come to the aid of anyone when the need was immediate, physical and very real.

"Election Emphasizes Freedom" Editorial by George A. Scott, Editor, the Progress, Clearfield, Pa., Wins George Washington Honor Medal

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1961

Mr. VAN ZANDT. Mr. Speaker, the Freedoms Foundation at Valley Forge, Pa., has awarded a George Washington Honor Medal to Mr. George A. Scott, editor of the Clearfield (Pa.) Progress, for the editorial he wrote on October 28, 1960, titled "Election Emphasizes Freedom."

The award was 1 of more than 825 to individuals, organizations, and schools throughout the United States for their contributions in helping to bring about a greater appreciation and understanding of the American way of life during 1960.

Mr. Scott was 1 of 21 awarded honor medals for editorials. His editorial follows:

[From the Clearfield (Pa.) Progress, Oct. 28, 1960]

ELECTION EMPHASIZES FREEDOMS

Nothing like the current presidential election campaign which reaches the decision stage November 8, emphasizes more the basic freedoms that we enjoy as the keystone of the American way of life. However, such freedoms are too often obscured and overlooked by the heat of such a campaign and so it is well to call attention to them at this time.

There's the right to free speech and press. Certainly it can never be more clearly defined than during a presidential election campaign. Contrast the newspaper, radio, television and magazine opportunities given political candidates and their spokesman or followers in our United States with the suppression of both rights to the citizens of Cuba and the Iron Curtain countries including Soviet Russia. Where else, except in America and other free nations of the world, can you find the party in opposition permitted to criticize those in power and contend that they can do better? Where else can you find the newspapers and magazines divided on support of the opposing parties and with radio and television offering full space or facilities to both parties to present their views? Where else does the average citizen have a right to express his political views at his job, on the street, in the taverns and elsewhere without fear of reprisal from the government in control?

In the United States we enjoy these rights of free speech and free press, radio, magazine and television because our forefathers established such freedom as the American way of life and the generations that followed fought and died for these ideals.

Our same forefathers and their children over the years established our right to free elections and to a personal secret ballot. This right has not been completely achieved, but look back over the years and say we have not made progress toward such a goal. The right of women to vote, increasing prohibition of such voting deterrents as the poll tax, racial discrimination, etc., the increasing approval of absentee voting are signs of progress in the battle for free elections and secret ballot. And contrast our free election-secret ballot system with the Soviet Union's one-party, open-vote system that has been forced on its satellite and coexisent nations and ask yourself if the American way of life isn't better.

There are other freedoms that this important presidential and the less spectacular but equally important State and local election emphasizes. It emphasizes especially this year the all important freedom of religion in these United States, the right to worship God in one's own way; it emphasizes the right to assemble, whether the citizens be Republican, Democrat, or a minor party; it emphasizes our right to work in callings and localities of our choice or to go into business, compete and make a profit without fear of political or governmental reprisal. Less apparent but involved in the coming election are such political and economic rights guaranteed by our Constitution but ever in danger of loss through neglect of voting as the right of privacy in our homes, the right to trial by jury, the right to move about freely at home and abroad, the right to own private property, the right to bargain with our employers and employees, the right to government as a protector and referee and the right to freedom from arbitrary government regulation and control.

All these are basic human rights promised all of us in our American way of life and guaranteed to us if we will only take advantage of them by voting in each election and especially this coming election November

8. No matter how we vote, let us remember that it is essential that we vote. And let us vote with an appreciation of the freedoms we enjoy.

Civil Defense Program: Resolution Adopted by the Board of Supervisors, County of Los Angeles, Calif., on Tuesday, February 21, 1961

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. DOYLE. Mr. Speaker, the County Board of Supervisors of Los Angeles County, in which my great 23d District is located, at their board meeting recently unanimously passed the following resolution in regard to civil defense program, resolution requesting President John F. Kennedy to exert leadership to stimulate construction of public and private facilities for civilian protection.

I think you and my distinguished colleagues will find the resolution interesting, pertinent, and timely:

BOARD OF SUPERVISORS,
COUNTY OF LOS ANGELES,
Los Angeles, Calif., February 21, 1961.

The board met in regular session. Present: Supervisors Ernest E. Debs, chairman (presiding), Frank G. Bonelli, Kenneth Hahn, Burton W. Chace, and Warren M. Dorn; and Gordon T. Nesvig, clerk.

IN RE CIVIL DEFENSE PROGRAM: RESOLUTION REQUESTING PRESIDENT JOHN F. KENNEDY TO EXERT LEADERSHIP TO STIMULATE CONSTRUCTION OF PUBLIC AND PRIVATE FACILITIES FOR CIVILIAN PROTECTION

On motion of Supervisor Hahn, unanimously carried, it is ordered that the following resolution be and it is hereby adopted:

"Whereas the Federal Government logically and historically has primary responsibility to provide for the common defense of the people of the United States as set forth in the preamble to the Constitution of the United States; and

"Whereas the tremendous difficulties and complexities of protecting the civilian population of the United States in this thermonuclear age when primary target areas are within 20 minutes of potential attack by unfriendly nations, has resulted in a general public spirit of apathy, indifference, and hopelessness; and

"Whereas unpreparedness at either the military or civilian level invites aggression and the civilian defense activities of the United States have not kept pace with that of our allies of Western Europe or that of our potential enemies—thus increasing the possibilities of a new Pearl Harbor type of attack against the people of the United States with thermonuclear weapons being used; and

"Whereas leading scientific opinion, including that of Dr. Edward Teller, the "father of the H-bomb," is that there is much that can be done to protect the people of the United States and that intelligent, positive action at all levels of government can save millions of civilian lives—which otherwise might be lost—in the event of a major disaster, provided that the people of the United States are educated to face up to the realities of the situation and trained as how best to protect themselves and strong dynamic leadership is exercised at the Federal, State, and local levels of government; and

"Whereas the American people have always met and overcome the great problems of each generation, but no problem in our history has approached the magnitude of the present threat of thermonuclear warfare, with our major civilian population centers as potential primary targets, and by meeting this challenge head on and realistically we will be strengthened as a nation and our economy will be stimulated as an incidental benefit; and

"Whereas the major steps which must be taken immediately to provide for effective civilian defense and protection are:

"1. The public must be made aware that there are practical means of protecting the civilian population from the effects of a thermonuclear attack through an education and information program stressing the steps which can be taken individually and collectively. The effectiveness of such a program will depend to a great extent on the quality of leadership exerted at the presidential level.

"2. There must be continuing dynamic leadership to direct and make effective a strong civilian defense program as an integral part of the Nation's total defense program.

"3. There must be an emphasis upon providing and adapting physical facilities for the protection of the public and incentives must be developed to stimulate construction of private facilities for civilian protection; and

"Whereas all levels of government must immediately exert positive leadership to accomplish these steps, with the Federal Government assuming the primary responsibility and leadership, strongly augmented where appropriate by State and local governments: Now, therefore, be it

"*Resolved*, That the Board of Supervisors of the County of Los Angeles respectfully requests President John F. Kennedy, as Chief Executive of the United States, to:

"1. Exert strong Executive leadership to establish and implement a more effective civilian defense program geared to meet today's needs and to strengthen the entire defense program.

"2. Promote an education and information program to inform every American that his only effective defense against thermonuclear warfare is to be informed and prepared in basic civil defense procedures.

"3. Take immediate steps to stimulate and provide incentives for construction of public and private facilities for civilian protection by:

"(a) Requiring that all new Federal buildings (including post offices, custom houses, office buildings, and military installations) be provided with adequate shelter facilities.

"(b) Requiring that all buildings constructed with Federal assistance or grants be provided with shelter facilities.

"(c) Providing Federal funds for both public and private schools to be used in construction of defense shelters.

"(d) Requiring that all private firms having defense contracts with the Federal Government must provide adequate shelters for their employees, just as local government requires businesses to provide off-street parking for the public good.

"(e) Providing a tax incentive for private enterprise to encourage construction of defense shelters at plants and factories by accelerating depreciation rates for privately built civil defense shelters or such other financial incentives as would be appropriate.

"(f) Providing a similar tax incentive program for private individuals building defense shelters at their homes.

"(g) Establishing matching funds on a dollar for dollar basis to be allocated to local governments to be used in building shelters at local public buildings; and be it further

"*Resolved*, That certified copies of this resolution be transmitted to President John F. Kennedy, to Senators Clair Engle and Thomas Kuchel, each Congressman from California, and the chairmen of the appropriate committees of the Congress concerned with civilian defense.

"I, Gordon T. Nesvig, clerk of the Board of Supervisors of the County of Los Angeles, State of California, do hereby certify that the foregoing is a full, true and correct copy of a resolution which was adopted by the board of supervisors of said county on February 21, 1961, and entered in the minutes of said board.

"In witness whereof, I have hereunto set my hand and affixed the seal of the board of supervisors this 27th day of February 1961.

GORDON T. NESVIG,
Clerk.

Prof. Edward D. Re, an Excellent Kennedy Choice

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ANFUSO. Mr. Speaker, President Kennedy recently named Prof. Edward D. Re, of Brooklyn, N.Y., as Chairman of the Foreign Claims Settlement Commission. This is a most excellent appointment which was well received in many circles throughout the country. I have known Professor Re for many years and consider him among my close personal friends.

Dr. Re is professor of law at St. John's University in Brooklyn. He received B.S. and LL.B. degrees from New York University. From 1943 to 1947 he served as legal officer and instructor at AAF Officer Candidate School. He was chairman of the committee of civil procedure and practice of the American Bar Association. He is a trustee of the Italian Board of Guardians, and for a number of years has been a member of the Board of Higher Education of the city of New York.

Professor Re has written extensively in various law journals and is also the author of several law studies, among them "Foreign Confiscations in Anglo-American Law" and "Brief Writing and Oral Argument." Several years ago he published a 46-page study in the Northwestern University Law Review dealing with jurisdiction over U.S. Armed Forces serving abroad. This study was based on a lecture he delivered in New York under the auspices of the Bar Association of New York City and the New York County Lawyers Association. A shorter version of this article was subsequently prepared, and this latter version I inserted into the CONGRESSIONAL RECORD of January 12, 1956, page A231. That article was undoubtedly the most thorough and analytical treatment of the problem of the NATO status of forces agreement and international law.

Shortly thereafter, at hearings of the House Committee on Foreign Affairs on the status of forces agreements, Congressman Stewart L. Udall, of Arizona, now the Secretary of Interior, testified before the committee and introduced Professor Re's article into the RECORD of the hearings. From part 2 of the committee hearings, held on February 1, 1956, page 503, I quote the following excerpt from Mr. Udall's testimony:

We have never had an alliance system like NATO—a peacetime military alliance where countries stand neither as conquered or conqueror, but on an equal basis, and the question arises, "We want to have a base in your country and bring in our troops and the troops of other countries."

The question arises, What shall the terms and conditions be under which they come in? I think this presents an entirely unprecedented situation. I don't think that what Caesar or Hannibal did is significant here, or that anywhere down through the pages of history you can point to a similar situation.

I might refer to this committee, and I think it should be made a part of the record—I would ask that it be made a part of the record—a review that was printed in the Northwestern Law Review magazine. Mr. Lavery has undoubtedly already seen it. Mr. Anfuso placed it in the RECORD. It appears in the Appendix of the CONGRESSIONAL RECORD at page A-231. It is by Prof. Edward D. Re, professor of law at St. John's University.

He has made a study of this whole matter. It is a scholarly treatise, and is the best presentation I have seen.

He states that the principle laid down by Justice Marshall in the Exchange case is that where troops are permitted to enter with consent and to pass through a territory, once such consent is allowed and the troops enter, then they are subject to the discipline of their own forces. The key to the thing is the consent.

Obviously, with the NATO countries, they haven't granted any blanket consent; in fact we had to sit down with our allies and work out interim arrangements while the treaty was pending.

I would commend that article to you, and I would ask that it be placed in the record because it does throw a great deal of light on at least one point of view on this international law question.

Mr. Speaker, I also wish to insert into the RECORD several recent articles and editorials lauding President Kennedy's appointment of Professor Re. These include an article from the Tablet, Brooklyn, N.Y., issue of March 4, 1961, "Dr. Re's New Post Tailor Made"; an editorial from the same newspaper, "Dr. Re's Appointment"; an editorial from the Brooklyn Spectator, issue of March 3, 1961, "Dr. Re Goes to Washington"; and an editorial from the Catholic News, New York City, issue of March 4, 1961, commenting on Dr. Re's appointment. They are as follows:

[From the Tablet, Mar. 4, 1961]

DR. RE'S NEW POST TAILOR MADE—FOREIGN CLAIMS OFFICIAL WROTE PAPER, BOOK ON THE SUBJECT

(By Frank DeRosa)

Dr. Edward D. Re's appointment as Chairman of the Foreign Claims Settlement Commission by President Kennedy puts him in a post that "seems to be tailor made for me," according to the 40-year-old St. John's Law School professor.

Almost 20 years ago, while a student at St. John's Law School, Dr. Re wrote a paper on the subject of foreign confiscation of American property for the Law Review and in 1951 he published what is considered to be the first authoritative book on the matter of foreign confiscation.

Dr. Re's duties will entail determining claims of U.S. nationals against foreign governments for compensation for losses and injuries sustained by them.

The Commission possesses the powers and has the jurisdiction of the former War Claims Commission and the International Claims Commission.

A versatile teacher, writer, lecturer, and public official, Dr. Re has been a member of the board of higher education for the past 3 years.

Born in Santa Marina, nestled in the Aeolian Islands between Sicily and the Italian mainland, Dr. Re came to the United States at the age of 8.

Educated at Brooklyn's P.S. 176 and New Utrecht High School, Dr. Re began a long association with St. John's University when he enrolled in the school of commerce. After graduation he began the study of law at the Vincentian University and later became a member of the law school faculty. At the law school he organized and supervised the moot court system.

The educator earned a doctor of juridical science degree from New York University in 1950.

Divisional vice chairman on the section of international and comparative law of the American Bar Association, he was invited by the State Department to lecture in Mogadiscio, Somalia, 2 years ago.

FATHER OF EIGHT

Father of eight children, the Bay Ridge resident is married to Margaret Corcoran, who was a student in Dr. Re's classes at St. John's Law School. An attorney, she studied at Our Lady Queen of Martyrs School, Forest Hills, Maplehurst Convent of the Sacred Heart, Manhattan, and Manhattanville College of the Sacred Heart.

Three children attend Our Lady of Angels School: Mary Ann, 10; Anthony, 9; and Marina, 7. The others are Edward D., Jr., 5; Victor, 4; Margaret, 3; Matthew, 2; and Joseph, 1.

A 4° Knight of Columbus, Dr. Re is a member of Long Island General Assembly and John Hughes Council. A member of Our Lady of Angels' Holy Name Society, he is a governor of the Catholic Lawyers' Guild of the Brooklyn Diocese.

Last year Dr. Re was cited by the Italian Government and by Italy's University of Aquila. He received the Order of Merit of the Italian Republic for contributions to the cultural life of the Italian-American community and to legal literature of common law and civil law. The university bestowed on him the honorary degree of doctor of pedagogy.

[From the Tablet, Mar. 4, 1961]

DR. RE'S APPOINTMENT

The President's appointment of Dr. Edward D. Re as Chairman of the Foreign Claims Settlement Commission (an independent agency of the State Department) has been well received both at home and abroad because of his eminent qualifications for the post.

Father of eight children, Dr. Re is a nationally recognized lawyer, lecturer and author, with extensive administrative experience. He has taught law at St. John's University for 14 years, has lectured in many parts of the United States, and has addressed bar associations, conferences, and universities in France, England, and Italy. He is an authority on international law and author of several texts used in the leading law schools of the country. During World War II, he served in the Air Force and is presently a major in the Active Reserve of the Judge Advocate General's department of the Air Force.

Besides his intellectual and professional qualifications, Dr. Re brings to his office a sense of equity and justice based on the moral law. His attitude in constantly keeping in mind the moral issue of any question can be gleaned from a talk that he delivered in 1954 in Monte Carlo while addressing a conference of the International Bar Association on the legal aspects of the confiscation of private property.

Taking sharp issue with previous speakers who had maintained that it is not within the province of lawyers to discuss moral issues, Dr. Re declared: "Although we are discussing property rights, we are also discussing human rights. Property rights are human rights because they relate to man's right to retain the fruits of his labor."

In carrying out his duties as a member of the Board of Higher Education of the City of New York, Dr. Re has manifested a like regard for moral principles. He has had the courage of his convictions and has persistently and fearlessly held to what he considered right notwithstanding the opinions of the other members of the board.

The presence on the board of a man of independent judgment is surely needed. For this reason, we are happy to learn that Dr. Re will retain his residence in Brooklyn and has not severed his connection with St. John's Law School, but rather has taken a leave of absence. This proves that he still maintains his interest in education and the civic affairs of the city. In the light of this, we can hope that he will remain on the board of higher education. A man of his moral courage, educational experience, knowledge, and ability will be valuable especially at this time when our municipal colleges are expanding in scope and entering on new fields of endeavor.

[From the Brooklyn Spectator, Mar. 3, 1961]

DR. RE GOES TO WASHINGTON

Congratulations are in order all around on President Kennedy's apopintment of Dr. Edward D. Re as Chairman of the Foreign Claims Settlement Commission.

The President is to be commended for having made an excellent choice for this post, which is just below Cabinet level in importance. He has not only given well-deserved recognition to the fine legal talent possessed by Dr. Re, but has paid a high compliment to Bay Ridge and to the entire Italian-American community of which Dr. Re is such a shining exemplar.

Dr. Re's Commission meetings will keep him in Washington most of the time, but is good to know that he will be back home in Bay Ridge for weekends with his lovely wife and family, and among his many friends and neighbors.

We all wish him Godspeed in the important work ahead.

[From the Catholic News, Mar. 4, 1961]

A distinguished member of the board of higher education, Dr. Edward D. Re, has been named to a high post in Washington, as Chariman of the Foreign Claims Settlement Commission. Dr. Re's appointment has been well received both in this country and abroad because of his outstanding qualifications and his high moral courage. In congratulating Dr. Re, it is pleasant to note also that he will retain his Brooklyn residence and has not severed his connection with St. John's University Law School where he has taught law for 14 years. Dr. Re thus evidences his continued interest in the educa-

tional and civic affairs of the city, and justifies the hope that he will continue on the board of higher education, where his term still has 6 years to run and where his knowledge, experience and fearless independence are assets of very special value.

Community Development and Agriculture in India

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mr. FASCELL. Mr. Speaker, I call to the attention of the Members an article by Mr. Don Shoemaker, editor of the editorial page of the Miami Herald, in which he outlines the problems involved in modernizing and diversifying community development and agriculture in India today:

Life is hard on the Indian farm—hard but, so the visitor is told, happy.

However, it does not seem to be as hard as life in town—in the great, cruel cities where poverty grinds very fine indeed.

Most of India's leaders regard the farm, and hence the Indian village, as the root structure of the country. S. K. Dey, Minister of Community Development, and a character with rare fire in his guts, says without blushing that the Indian village is "the greatest source of strength to democracy in the world."

Mr. Dey's department began 8 years ago, as the Community Projects Administration, with pilot projects to develop the life of the people.

What India has been trying to do, in other words, is to catch its Okies before they go upstream and spawn.

In this process, Mr. Dey is a controversial character. Even as he sits in the green garden of his comfortable villa and sips tea with you, his eyes flash in reflection of the plight of what might be called the Indian peasants, if there were peasants any more in this egalitarian country.

The minister thus is a subject of controversy. He says he is a whipping boy of the Nehru government. Whatever he is, he is lively.

India's villages of course can be described as the "source" of anything because they are the centers for nearly 80 percent of the population. Indians as aggressive as S. K. Dey, who is a graduate of Purdue, contend that the villages were sorely neglected by the British Raj, and that this is one of India's problems. Gandhi called the village, as a source of rural labor which must be transferred to industry, the "problem of problems."

The farm and the village as the repositories of population are also the main constituencies of the government. One object of the government of this teenage republic is to light a fire under the rural people who—like rural people everywhere—want no change and are suspicious of reform.

Morarji Desai, the finance minister and likely heir of Nehru, sat with folded hands at his desk and vowed that the rural people were not apathetic but contented, and that this contentment, while not intelligent, was inherited.

India must keep these people "happy"—content, that is—but anxious to work harder. One problem is how to create demands.

The visitor would think that the Indian countryman must be a chronic griper. Prime Minister Nehru believes that his lot has been improved; that often, for the first time, he has a bullock cart of his own. But he seems by our inflated standards to have very little—"nothing to get nothing with."

The village also reflects the caste system, which Mr. Desai believes has vanished in the cities. The city slums are like slums everywhere, only more and more and more so, but they are relatively sophisticated on caste. Though the government opposes caste and has "outlawed" it, the system remains in the countryside.

Like Mr. Dooley quoting Teddy Roosevelt on the trusts, Mr. Desai would stamp out caste—but not so fast. After all, as he points out, castes have been around for 2,000 years.

The chosen instrument of leveling, in any case, is the community development program. It builds on the "block" scheme, which is 100 villages (60,000 to 70,000 people) with a sort of farm agent and home demonstration worker for each six to seven villages.

The government's third 5-year plan sets forth that community development has been extended to 2,900 blocks and now "serves a population of 194 million." The target is to extend it over all the country by 1963 at a plan cost of around $750 million.

Community development is a complex of organizations which seeks a better rural life through education, marketing advice and formation of cooperatives for marketing, training, credit and actual farm management.

Credit co-ops have a membership of 17 million in some 200,000 rural societies. Co-op processing has less flashy statistics, but it extends to rice hulling, jute baling, fruit canning, oil crushing and so forth.

The fact is that Indians do not co-op very well. The candid administrator admits as much. Farmers everywhere are individualistic. They change their notions slowly.

As in industry, agriculture occupies both the public and the private sectors. Mr. Dey sees a certain cooperation between the two areas in that the state farms (for demonstration purposes) may influence or at least instruct the individual farmers in better methods of agriculture.

He thinks further that land pooled by marginal owners and the nearly landless who have principally their labor to contribute can produce a cooperative effort of great utility, part-time industry. This is a familiar U.S. pattern.

What Indian community development and agriculture really air at, in Dey's book, is "elimination of the middle man." This operator, he infers, makes Indian agriculture a poor man's pursuit.

Now, this sounds for all the world like farm collectivization.

Perhaps it is. There are no farms in India today of more than 500 acres, and even these are being eliminated.

The goal—the maximum—is 30 acres of irrigated land, with pastures generally held communally. The community development people figure that this is all a man can handle while feeding his family, contributing food to the national breadbasket, and keeping his land together.

The big tracts have been broken up. With adequate compensation, says the government. Nothing of the sort, say some "intervened" landowners. Who can be sure?

It is clear anyway that India for the present is an agricultural state even though it ranks eighth worldwide and second in Asia as an industrial power.

India in 1958–59 produced 75 million metric tons of food. The second plan target was 80.5 million tons. As the needlers of the India Merchants Chamber contend, there is a shortfall of 5.5 million tons.

Pointing to a Ford Foundation survey, they maintain the agricultural target should be 110 million tons of foodgrains, with 10 million held in reserve.

S. K. Patil, Minister of Food and Agriculture and enough of a character to be known as the "Jim Farley of India," is quite unworried by India's food problem. He thinks it just isn't.

For instance, Mr. Patil, who used to be Minister of Transport and Communications but who has pictures of fat cows and dairy farms around his sumptuous villa, think that India is at the marginal point in food self-sufficiency and is about to tip over to the sufficient side.

More for instance, he regards loans of foreign grain as unnecessary. India's basic planners, who figure grain loans as part of the deficit, don't agree.

Mr. Patil believes that India's food stockpile situation is the best in 10 years. But he really doesn't believe in food stockpiles. Maybe he has been reading of the trials of the United States of America.

He also believes that Indians set too much store by a diet of grains. He would diversify. You feel, also, that he might tip over—given enough time politically—and come out for beef.

India, he says, will move a pace into industrial farming. At present it has no farm tractors in domestic production. But four tractor companies are projected.

Mr. Patil is also a gentle rebel against another Indian custom. This, simply stated, is the "sacred cow."

Cow dung is widely collected, especially in the rural areas, for fuel. Thus it is lost as a natural fertilizer.

Otherwise, cows roam the strects in all rural areas and all but the main drags of the principal cities. An unlettered sector of Indian life considers these animals "sacred." But they are both a drag on the economy and a traffic hazard. The very fact that 70 percent of the heating and cooking fuel in rural India comes from pressed cow dung depresses India's agricultural leaders.

In good time this will be overcome. But the rural areas will be the last to succumb to modern ways. They will act as a halter on the cities.

In the long reach this may not be amiss. As in everything else, India must approach agricultural "progress" cautiously, lest it be not progress but retrogression. Few systems of agriculture are older or—come famine or high water—more successful.

India's problem is to improve on what it has, and not to replace it willy-nilly.

Our Wilderness

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. WESTLAND. Mr. Speaker, as a Representative of the people of the Second District of Washington State, I am concerned about any legislation concerning the management of our forest resources. Others are concerned, too.

The Arlington, Wash., Times in an editorial March 2, 1961, expresses its thinking about certain aspects of the rugged, unsettled regions of the north Cascades. I believe what the publisher has to say is of interest to Members of this body, and, under leave to extend my remarks in the RECORD, I include this editorial:

OUR WILDERNESS

It is noted that Edward Park, author of "Washington Wilderness, the North Cascades," in this month's National Geographic, enthuses over the wonders of the Glacier Peak wilderness area. Mr. Park made the trip in company with members of the Sierra Club, and the influence of that club is noted in references to the ghost mining town of Holden, and reference to possible mining activities in the Suiattle Pass area, which would be discouraged if the Sierra Club could so dictate.

These conservation interests, living in other parts of the country, care little about the local economy.

An extensive exploration is being conducted by a mining company in the Suiattle Pass area, and it is understood that a townsite has been laid out all in preparation for the day when mining activities may commence there. To local people, and Darrington in particular, this would mean a great boost to the economy.

Would such an activity spoil the scenery for all time? Would a ghost town, after the mines are worked out, be a detriment?

Mother Nature seems to take care of these things. In Snohomish County, at this time, one of the greatest tourist and scenic attractions we have is the Monte Cristo district. Here at one time was heard the whistles of locomotives, the clanking of machinery, the roar of the ore bunkers, and the blasts in the mining operations. All this activity ceased many years ago. The railroad has disappeared, as have most of the mine buildings and the homes of those who resided there; the story of Monte Cristo adds to the interest of the tourists who visit the area; the same rugged mountains look down on the scene, and are as grand in their scenic beauty as they were before the miners arrived.

It has always been our contention that the Glacier Peak area is a potential tourist attraction that could have been developed to become of great economic value to the county. It is now locked up in a wilderness area, and will be visited each year by a few hundred people, where at least portions of it could have accommodated thousands without lowering the mountains or destroying the wilderness.

Three cross-State highways now penetrate the Cascade range and carry thousands of people a year, yet it is noted that a few minutes' hike from any of these highways takes the hiker into unspoiled wilderness.

H.R. 5153, a Bill To Increase the States' Share of Estate Tax Revenues

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 17, 1961

Mrs. DWYER. Mr. Speaker, I want to call the attention of our colleagues to legislation which the gentleman from North Carolina [Mr. FOUNTAIN] and I have introduced, which would have the effect of making available to the States a greater share of the revenues from the combined Federal and State estate taxes.

This legislation, H.R. 5153, implements the recommendations of the Advisory Commission on Intergovernmental Relations, whose members and staff have devoted much time and thought to the need to simplify and make more equitable the operation and administration of estate, inheritance and gift taxes. This particular field of taxation has long been the source of confusion, trouble and frustration, for taxpayers and administrators alike. I believe this legislation can do much to help simplify estate tax administration, reduce the costs of collecting the tax, help stabilize States' revenues from this source and in general remove inequities and increase standardization in this important area of taxation.

As a member of the Commission, Mr. Speaker, I should remind our colleagues that the fact that the Commission is composed of members actively representing all levels of Government in our Federal system gives to this recommendation an unusually authoritative flavor. I hope the House will give it the consideration it deserves.

Under leave to extend my remarks in the RECORD, I include the text of a press release issued by the Commission which describes its recommendations in greater detail.

The release follows:

The Advisory Commission on Intergovernmental Relations today made public the Commission's report and recommendations for the coordination of State and Federal inheritance, estate, and gift taxes.

This report, the first to be made by the Commission to the President, the Congress, the Governors and the State legislatures, "contains a blueprint for coordinating State and Federal inheritance, estate, and gift taxes and for increasing the States' share of the revenues they produce," Commission Chairman Frank Bane said.

The Commission's recommendations were developed against the background of more than two decades of agitation for legislative remedy by Governors, legislators, tax practitioners, and various national organizations.

The Commission recommends to the Congress that it increase the Federal estate tax credit for taxes paid to States so as to reserve for the States a relatively large proportion of the estate tax in the low tax brackets and a small proportion in the middle and upper brackets. This will stabilize State collections from these taxes and improve their distribution among the States. The new credit would be available to taxpayers only after their respective States simplified their tax laws and adjusted their tax rates to avail themselves of the estate tax revenue to be relinquished by the Federal Government.

The Commission recommends to the States that they adopt estate taxes in lieu of inheritance taxes to reduce tax complexity, ease the compliance burdens of taxpayers and improve tax administration. It recommends against a Federal credit for State gift taxes because this would force gift taxes upon all the States. Instead, it urges the States to forgo gift taxation. The Commission's program could ultimately result in relinquishing several hundred million dollars of annual Federal revenue to the States, depending upon the level at which the Congress sets the new tax credit. The loss of Federal revenue, however, will not begin for several years because the States will have to be given time to bring their tax laws into conformity.

"Federal and State legislative implementation of the Commission's proposals," said Chairman Bane, "will make a major contribution to improving intergovernmental tax relations and tax simplification."

The Commission selected this group of taxes for priority attention, its report explains, because legislative developments since the mid-1930's have impaired the effectiveness of the Federal credit for inheritance and estate taxes paid to States. This credit provision was enacted by the Congress 35 years ago to safeguard the States' share of these revenues and to facilitate interstate tax uniformity. These objectives have not been realized.

The estate-inheritance tax area, the Commission found, is now characterized by tax overlapping and complexity, heavy tax compliance burdens for taxpayers, and relatively high administrative costs, out of all proportion to the small contribution these taxes make to most States' revenues. Property bequests at death are now taxed by the Federal Government and by 49 States (all States except Nevada). Gifts are taxed by the Federal Government and 12 States. This group of taxes now contributes annually about $400 million to State and $1.6 billion to Federal revenues.

The report represents the unanimous recommendation of the Advisory Commission on Intergovernmental Relations, a permanent bipartisan commission established in December 1959 under Federal legislation. Its 26 members include representation from the executive branch (3), the Senate (3), the House (3), Governors (4), State legislatures (3), mayors (4), counties (3), and the public (3).

The Interstate Highway System and Billboards

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Harry O'Mealia, Jr., president, Outdoor Advertising Association of America, Inc.:

On reading President Kennedy's statement on the Interstate System and billboards, we feel that his advisers have given him a distorted picture.

Most of the Interstate System is, as yet, unbuilt. That which is built has not provided a "windfall" for a "handful of large advertisers."

Historically, highway advertising has been dominated by the thousands of small businesses which must reach the traveling public to survive. These include the motels, restaurants, hotels, gasoline stations, garages, food shops, novelty stores, scenic attractions, and others. Numerous studies have shown that highway advertising serving local businesses predominates by 8 to 1, and that advertising of so-called national products is very limited unless local gasoline stations, food stores, restaurants, and so forth, which attempt to identify their products, can be charged with advertising national products. Because highway advertising is the lifeblood of local business, we have always maintained that the rigid controls set up under the 1958 act would have its greatest effect on these small businesses. Our medium, standardized outdoor advertising, is mainly located in urban areas.

Recently, in Wisconsin, small businessmen along Interstate Highway 94 from Milwaukee to Kenosha filed suit to stop the State of Wisconsin from putting into effect rigid billboard controls. These businessmen reported extensive losses in business since the interstate highway in their area was built

and many contended they will have to go out of business if billboard controls are carried out. One, in fact, had lost 75 percent of his working force since the Interstate Highway was built and he was selling a local product—Wisconsin cheese. He said, "I must have advertising signs or close my doors."

Most of the other States have realized the hardship these controls would mean to small businessmen and have rejected the "bonus" or "bribe" set up under the 1958 act. They have also resented the extension of Federal controls into areas which traditionally come under State jurisdiction.

This Federal domination is quite evident in the case of Maryland, which recently became the first State to sign an agreement with the Federal Government. A careful reading of this complex, difficult to administer document shows that Maryland has sold its rights in perpetuity for a "bonus" which may or may not materialize.

We know of no highway where billboards "line the highways" and the charge that outdoor advertising is a traffic hazard has been refuted by laboratory and field studies at Iowa State College and in Michigan. These charges are echoes of a small but vocal minority which is exceedingly unvocal when asked to prove their charges.

This same minority has said the public doesn't like outdoor advertising. Yet, when the people were allowed to express their opinion in Oregon, they rejected billboard controls by nearly two to one. The measure was defeated in every county of the State.

The last paragraph of the President's statement says: "Should this measure still prove to be insufficient, it may be necessary to adopt more direct means of control." Does this mean the Federal Government is prepared to force the States to act in this area through measures contrary to the Constitution of the United States?

All in all, we're shocked at the atttempts to eliminate the advertising which permits so many small businesses to exist—at a time when "full employment" seems to be one of our national goals.

Higher Morals in Government

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 7, 1961

Mr. MORSE. Mr. Speaker, more and more these days we hear a call for higher ethics and spotless propriety in government. This is a significant—and magnificent—indication that the apathetic and the unaware are being shaken awake to their responsibilities as citizens to assure clean, honest management of public affairs. An outstanding example of this kind of splendid drive for better government is outlined in the following editorial from my hometown newspaper, the Lowell Sun. Under leave to extend my remarks, I now insert it in the RECORD:

FOR HIGHER MORALS

A growing demand for higher ethical standards among men in public and political life is noted on all sides. Yesterday, for example, Governor Volpe addressed a joint session of the legislature, urging enactment of a moral code "that would restore and preserve confidence in our State government."

Last Sunday Richard Cardinal Cushing of Boston issued a strongly worded pastoral letter on politics, education, medicine and law, in which he pointed to "a dangerous decline" in the morality of America.

And the general court is considering various proposals for a constitutional convention, which, hopefully, would not only improve the machinery of government in Massachusetts, but would also remove some of the loose and lax conditions which frequently lead to corruption.

The Governor proposed a watchdog commission on conflicts of interest "to establish and enforce appropriate standards of conduct" and to advise officials if and when they may be faced with unusual situations calling for fine decisions.

Men in public life must give immediate and serious thought to the rising public demand for higher and better standards. In his broad and comprehensive consideration of the degeneration of public morals, Cardinal Cushing used his strongest language in discussing politics.

Declaring that no language can properly describe those who "poison politics with dishonesty and corruption," the Cardinal continued:

"When we hear murmurs of graft and bribery, or payoffs and grabs, we know that these charges are not the products of the imagination of fanciful people."

And one of the most significant comments by His Eminence explained that the present anxiety is "not so much that the present moral situation is alarming, but rather that too few people are really alarmed."

That apepars to be the crux of the situation as so many thinking people, concentrating on so many personal matters, maintain an indifferent and disinterested attitude to the performances of the men who run their government at Federal, State and local levels.

This is not a deliberate attitude, it is more one bred of carelessness.

It is therefore in the general public interest that men in high places, such as the Cardinal and the Governor, now call for the enforcement of higher ethical standards in government and in the American way of life.

The warnings of this week cannot be ignored—and we do not think they will be.

We expect that the legislature will take positive action on the Governor's proposal for a watchdog committee to help public officials do a better job with a higher appreciation of moral values. We likewise expect that the first steps toward the calling of a constitutional convention will be taken. This may come through the creation of a blue ribbon representative group that will make a thorough study of the matters that should be brought before the convention to improve efficiency, stability and morality in all State operations.

Stern calls for action have been issued; they must be heeded before corruption becomes so rampant as to start destroying the fundamentals and standards that have for so many years worked to make this Nation strong and great.

Depressed Areas Bill Robs Peter To Pay Paul

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1961

Mr. QUIE. Mr. Speaker, the editor of the Photo News newspaper of Owatonna, Minn., Mr. Pat Maloney, has effectively presented some serious questions about the advisability of passing the administration's depressed areas bill into law. Writing editorially, in the February 9, 1961, edition of the newspaper, Mr. Maloney stated that he had no dispute over the objectives of the proposed legislation. But he did point out the threat that some industries in areas not designated as distressed areas might be lured to reestablish in distressed areas. Since part of the attractiveness of relocating an industry would come from Federal funds, the question is raised as to whether this would not—in the final analysis—result in a case of robbing Peter to pay Paul. I recommend this thought-provoking editorial to my fellow Members:

REDEVELOPMENT BILL ENDANGERS CITY

Activated recently in Owatonna was a congressional action committee of the chamber of commerce designed to keep local businessmen informed of pending legislation coming before the U.S. Congress and State legislature, and how these bills, if passed, would directly affect the merchants on our main streets as well as local industries.

Being pushed hard in Congress now as the result of the current economic slump is S. 1, an area redevelopment bill that was introduced by Senator DOUGLAS, of Illinois. The bill will undoubtedly draw much popular support, since its intentions are honorable—that of channeling industrial expansion into so-called depressed areas where unemployment figures are abnormally high.

But the means to the honest end are exceedingly controversial and, as far as Owatonna is concerned, are highly detrimental. What the bill proposes to do is actually relocate industry, or simply "rob Peter to pay Paul." When you happen to be "Peter"—as Owatonna is with its wealth of diversified industry—that becomes alarming, since it hits close to home.

Let's use a hypothetical example of what could conceivably happen if this legislation gets through Congress and is signed into law by President Kennedy. The iron range of northern Minnesota would surely be classed as a depressed area under this law and would become eligible for Federal subsidies. The inducements for industries to locate in that area would be considerable. It would be hard to resist the attraction of a free new factory building, complete with all necessary machinery and equipment, on a choice location, supplied with all necessary public facilities, and workers for the factory even trained for their jobs at Government expense.

Suppose then that one of our industries, say Josten's or Owatonna Tool Co., took this "bait," either by moving out entirely or deciding to expand its operation in the depressed area of northern Minnesota rather than here. Thus the Federal tax dollars of Owatonnans could be used to lure our industries away, which would be a substantial blow to the economy of Owatonna. In effect the area redevelopment bill as written might eliminate some depressed areas but couldn't help but create others. Putting it bluntly and focusing the impact of the bill on the local level as the congressional action committee is obliged to do, Owatonna would have nothing to gain and everything to lose by passage of such legislation.

Passage of the bill into law would also bring about Federal interference into the competitive field of attracting new industry. Most cities, proud of what they have to offer, have formed industrial development corporations designed to attract new industry, and Owatonna is one of them. If the Federal Government gets into this "game" with subsidies for one at the expense of another, it amounts to unfair competition.

There are still other major flaws. Merely building industrial plants in an area does not guarantee its economic revival since the

Government with all its funds cannot offset the deterrents to private investment in a bad business climate. The program as planned now would be terribly costly and there is an urgent need to avoid unnecessary Government spending in order to balance the budget and maintain a sound dollar.

DOUGLAS' S. 1 bill is not for us. Tell or write your Congressman.

Clichés of Socialism

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 7, 1961

Mr. ALGER. Mr. Speaker, the Foundation for Economic Education, Inc., has rendered our private enterprise system a distinct service by publishing a series of articles exposing the fallacies of socialism and showing how those with little faith use many shopworn clichés to undermine our free way of life. I would like to include in the RECORD for your attention, the first of these "Clichés of Socialism."

CLICHÉS OF SOCIALISM

Argued a college president at a recent seminar: "Your free market, private property, limited government theories were all right under the simple conditions of a century or more ago, but surely they are unworkable in today's complex economy. The more complex the society, the greater is the need for governmental control; that seems axiomatic."

It is important to expose this oft-heard, plausible, and influential fallacy because it leads directly and logically to socialistic planning. This is how a member of the seminar team answered the college president:

"Let us take the simplest possible situation—just you and I. Next, let us assume that I am as wise as any President of the United States who has held office during your lifetime. With these qualifications in mind, do you honestly think I would be competent to coercively control what you shall invent, discover, or create, what the hours of your labor shall be, what wage you shall receive, what and with whom you shall associate and exchange? Is not my incompetence demonstrably apparent in this simplest of all societies?

"Now, let us shift from the simple situation to a more complex society—to all the people in this room. What would you think of my competence to coercively control their creative actions? Or, let us contemplate a really complex situation—the 177 million people of this Nation. If I were to suggest that I should take over the management of their lives and their billions of exchanges, you would think me the victim of hallucinations. Is it not obvious that the more complex an economy, the more certainly will governmental control of productive effort exert a retarding influence? Obviously, the more complex our economy, the more we should rely on the miraculous, self-adapting processes of men acting freely. No mind of man nor any combination of minds can even envision, let alone intelligently control, the countless human energy exchanges in a simple society, to say nothing of a complex one."

It is unlikely that the college president will raise that question again.

While exposing fallacies can be likened to beating out brush fires endlessly, the exercise is nonetheless self-improving as well as useful—in the sense that rear-guard actions are useful. Further, one's ability to expose fallacies—a negative tactic—appears to be a necessary preface to influentially accenting the positive. Unless a person can demonstrate competence at exploding socialistic error, he is not likely to gain wide audiences for his views about the wonders wrought by men who are free.

Of all the errors heard about the bargaining tables, or in classrooms, there is not one that cannot be simply explained away. We only need to put our minds to it. FEE seeks to help those who would expose fallacies and accent the merits of freedom. The more who outdo us in rendering this kind of help, the better.
